But any study of the Commission's work quickly corrects the impression that it was simply trying to save money. Its proposals are directed toward making Government more effective. A Government that will carry out the will of Congress and the people more responsibly and responsively is the aim. The Commission remarks that efficiency in itself is no guarantee of democratic government, but that "the highest aims and ideals of democracy can be thwarted through excessive administrative costs and through waste, disunity, apathy, irresponsibility, and other byproducts of inefficient government."

Already vested interests are building backfires against the Commission's proposals. The battleground is Congress, and minority groups of every type are already bombarding the Capitol with pleas to make one agency or another "untouchable." One Senator had 2,000 letters objecting to any effort to consolidate the construction agencies in one place. Mr. Hoover points out that even the American Bankers Association is opposing changes in the handling of Federal finances.

Much of the necessary reform can be achieved by Presidential order under the reorganization authority Congress appears about to grant. But further action by Congress will also be required in practically every field. The largest opportunity lies in the military establishment. This should be the first goal.

We do not urge blind or blanket acceptance of the Hoover Commission's proposals. They should be examined thoroughly. But on their face they offer so much in the way of reasonable, logical, and businesslike reform that the public can safely put the burden of proof on those who would block them.

Atomic Energy Secrets

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1949

Mr. POULSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial by Virgil Pinkley, editor of the Mirror, Los Angeles, Calif. This article definitely expresses my viewpoints.

All week long the Atomic Energy Commission has been under fire in Washington.

Gradually more people are becoming aware of the fact that atomic energy secrets, and especially pertaining to military aspects, should be kept as secrets. We have tossed around freely and with little restraint, information which any would-be aggressor could use to tremendous advantage.

With conditions as they are in the world today, it is simply too dangerous to announce or publish many of the details pertaining to top atomic energy secrets. Especially appalling are the facts about location of our atomic energy plants, their physical and geographical factors and other such information which could enable a perfect bomb pattern.

Senators are correct in rebuking the Atomic Energy Commission for granting scholarships to known or self-pronounced Communists. Not only should we avoid spending money in this fashion but we must not teach Communist scientists everything we know and discover about atomic energy.

FOOLISH QUESTION

Has anyone heard of Russia offering to take young Democrats, Republicans, or true liberals to Moscow and let them work and study in Russian scientific laboratories or research arsenals? Of course, the question is foolish and the answer is "No."

Until we are convinced over a period of years that the Russian leaders and Communist Party sincerely desire, want and work for peace of positive deeds, and until full reciprocity prevails in the exchange of scientific information, we should not and we must not pass on top secrets.

One fallacy in the present Atomic Energy Commission's attitude is a fear it won't be considered liberal—that it will be charged with being reactionary.

Concerning atomic energy there is very little question of being liberal or conservative. The issue is life and death.

Many facts about our atomic-energy production, and especially for military purposes, simply should not be debated.

In fact, the time has come to review the entire atomic situation in this country and to change the controlling set-up.

A solution which would bring about better security and simultaneously promote atomic-energy developments for civil purposes, would be to appoint a new Atomic Energy Commission.

SUGGESTED COMMISSION

This group could be composed of the three Chiefs of Staff—Army, Navy, and Air—and three civilians selected by the President with the concurrence of the Senate, with the Secretary of National Defense serving as the seventh member.

It seems to me and many who have studied the atomic-energy question an almost perfect solution.

The Joint Chiefs of Staff would make certain that security was not jeopardized.

The three civilian members would assure that atomic energy was developed for civil as well as military use.

The Secretary of National Defense, being a civilian, would give the civil side the deciding vote, but it would place any deciding vote in the hands of the man who on the final count is charged with our national security.

PRESENT SYSTEM BAD

Our present system for the Atomic Energy Commission headed by David Lilienthal, composed of five civilians with no military representation, is extremely dangerous. Events of the last 2 years have amply demonstrated this fact.

Checks which have been made by the Mirror show that much of the information, especially physical and geographical, connected with our production of atomic energy has been released or published without the knowledge of the Chiefs of Staff.

As a matter of fact, several months ago when General Eisenhower, who was temporarily in Washington on leave of absence as president of Columbia University, was fully informed of some of the recent leaks, he was appalled.

Numerous top-ranking generals and admirals, who assigned and lost hundreds of fine American soldiers, sailors, airmen, and marines to secure vital information of German or Japanese military and industrial installations, are staggered and alarmed by our willy-nilly handling of atomic information.

PRECIOUS INFORMATION

They state frankly and flatly that information we have given out in some cases is more detailed and exact than we were able to secure about Germany and Japan after we had been at war for several years.

Information and details which mistakenly already have been released would enable a would-be aggressor nation to plot and prepare a detailed bombing and sabotage campaign against this country.

With the possibility of fifth column activities inside the United States and with the distinct likelihood of enemy planes being able to reach this country should we be forced into war, it is little short of suicidal and criminal to permit free dissemination of vital atomic energy secrets.

VIRGIL PINKLEY.

MAY 21, 1949.

Eisenhower Dissents

EXTENSION OF REMARKS

OF

HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1949

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a recent editorial from the Boston Herald on the pronouncement of General Eisenhower on the issue of Federal aid to education:

EISENHOWER DISSENTS

The plan of distributing Federal money to all the States to perk up public schooling is regarded so fondly by its proponents that dissent is held to be a sign of a misspent youth and a perverted mind. If you are "agin" it, you are "agin" better education, is their view. So when an educator comes out on the other side, it is unpardonable heresy, and when Columbia's President Eisenhower does, he's a—well, he's not an educator at all, he's just a military leader, incompetent to make pronouncements on the public-school system.

That, anyhow, was Senator WAYNE MORSE's retort to General Eisenhower's declaration that Federal aid should be limited to those States which definitely lack the revenue potential to provide proper education, and not spread out over all the States. It was the general's contention that "unless we are careful, even the great and necessary educational processes in our country will become yet another vehicle by which the believers in paternalism, if not outright socialism, will gain additional power for the Central Government."

We think General Eisenhower is perfectly competent to make pronouncements on the matter, and if public education policies have become the proper concern solely of a pedagogical elite, then we all better take a new and still more suspicious look at the Federal-aid-to-education bill. Is that to be a plan to remove public schools from the public?

Norway's Traditions Exalt the Individual and His Rights

EXTENSION OF REMARKS

OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1949

Mr. HAGEN. Mr. Speaker, of interest to readers of the RECORD, I am sure, is an editorial from the St. Paul Pioneer Press of May 17, 1949, entitled "Syttende Mai," which in English means 17th of May, Norway's national holiday, similar to our Fourth of July.

The editorial follows:

SYTTENDE MAI

Today is the Norwegian Fourth of July, the anniversary of Norway's modern constitution, promulgated at Eidsvold on the 17th of May in 1814.

St. Paul's traditional observance, among American descendants of Norway, was held last Saturday night. The occasion is commemorated tonight in Minneapolis, and the day is one widely observed outside Norway itself. It has so many features common to our own Fourth of July as to make the central theme one well worth honoring among those who do not share ties of kinship with it.

What the Norwegians did 135 years ago was to assert their independence anew, resisting the trend of the post-Napoleonic era typified by the endeavor to hand them about like a collection of chattels. They had been ruled by the Danes for years. In remaking the map of Europe after Napoleon's bloody revision of its borders, Norway was to be handed over to the Swedes. Through a flowering of nationalism marked in music and literature as well as in statecraft, those Norwegians of the early nineteenth century decided to recapture the spirit of their own earlier era of independence, issued a declaration much like ours in 1776, and wrote a modern constitution that has many parallels with our own.

The Norwegians at Eidsvold even elected a king—a prince of the Danish royal house—thus indicating that sovereignty with them, arose in the people themselves, who could alone delegate powers to others. That arrangement was not a permanent one. Union with Sweden was effected, but it was a union of coequal kingdoms, joined only by the bond of a common constitutional monarch. That tie was peaceably broken in 1905, but the foundations of that final step as laid 135 years ago provide the basis of the country's national holiday.

The traditions of ancient and of modern Norway are those exalting the individual and his rights. Indebted as we in this area are to the many who came from that country to help build Minnesota and neighboring States, we can all join in the congratulatory greeting: "Til lykke med dagen."

Public Housing

EXTENSION OF REMARKS

OF

HON. FRANK BUCHANAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1949

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I should like to include two editorials, one entitled "Mr. Truman on Housing," which appeared in the New York Times of Sunday, June 19, and the other entitled "Cost of Public Housing," from the Washington Post of Monday, June 20.

These editorials are comments on the President's letter to you, Mr. Speaker, on the Housing Act of 1949. Both editorials point up the consistent misstatements and misrepresentations put out by the real-estate lobby and its propaganda in opposition to its legislation.

[From the New York Times of June 19, 1949]

MR. TRUMAN ON HOUSING

Mr. Truman's attack of last Friday on what he called the little group of ruthless men who are opposing the administration's housing program has the merit of dramatizing the housing problem. The members and backers of the housing lobby may not be as wicked as Mr. Truman thinks they are. For all we know every one of them may be completely sincere. Nevertheless, forgetting for a moment the extremely personal nature of Mr. Truman's letter to Mr. RAYBURN, the arguments therein presented are powerful.

The program presented in the House bill, which is to be taken up Wednesday, would probably cost, over a period of about 30 years, $10,000,000,000, not $20,000,000,000. A great part of this sum would take the form of annual Federal contributions to local housing authorities for the benefit of low-income families. These families would be selected from among those who could not possibly pay for decent housing. The cost of contruction would be kept down under the House bill to an average of $8,465 for each dwelling unit. There would be aid to farmers and some money spent in research. The whole program is a continuation of a previous housing program. It should benefit by the experience and even the mistakes of that program.

There are two points to be noted about any Federal housing plan. One is that subsidized housing with the aid of the National Government, the States, and the cities could not take care of all the need. There remains an enormous field for private enterprise. If private builders can get their costs down sufficiently, they may in time make subsidized housing unnecessary. The building industry faces a challenge. We can hope that, like the automobile industry of a gen-

eration ago, it can eventually modernize itself. Meanwhile, low-rent housing and slum clearance are legitimate objects of governmental activity.

In order to get his housing legislation Mr. Truman will need Republican support to offset Democratic desertions. He should have such support and, on the past record, he will have it. Even though the housing plank in last year's Republican platform was almost meaningless, there are many Republicans—Senator Taft among them—who have worked for progressive housing legislation. Compromises may be necessary. There is a wide gap between the Senate bill providing for 810,000 public housing units in the next 6 years and the House bill calling for 1,050,000 such units in a 7-year period. But the need for low-rent housing is so great and we still have so many veterans living in crowded and unwholesome conditions that Federal action is certainly called for. Those who denounce such action as socialistic can make their own answer by working to bring down the costs of private housing.

[From the Washington Post of June 20, 1949]

COST OF PUBLIC HOUSING

President Truman threw a good deal of righteous indignation into his letter to Speaker Rayburn on the public housing bill. The letter is one of the most effective statements of the case for slum clearance and low-rental housing that we have seen. It blasts the real estate lobby's propaganda by a skillful combination of facts and common sense. If the Members of the House will read this statement with open minds along with the flimsy reply of the National Association of Real Estate Boards, the housing measure will be in no danger of defeat.

One has to begin with the fact that slums are a cancerous growth in every American city. They can be eliminated only by governmental action. Experience has shown that each city can best deal with its own slum problem, using the powers of eminent domain, but the cities must have financial aid if they are to undertake any extensive rehousing programs. Such Federal aid is provided in H. R. 4009, soon to be considered by the House. It is true that this program will cost a good deal of money, but there is no excuse whatever for the gross exaggeration of the costs in which the real estate interests have indulged.

The chief items of expense are (1) grants to the localities to aid them in wiping out their mistakes of the past in permitting residential areas to deteriorate into slums and (2) rental subsidies to enable low-income families to occupy the new housing that is provided. If the job of eliminating these cancerous growths in our cities is to be done, these expenses cannot be avoided. Crime-breeding neighborhoods cannot be cleared, replanned and redeveloped without providing decent housing for the displaced slum dwellers. It is not necessary, as the President points out, that the new projects be located in the areas that are reclaimed. Often the cleared land can be more appropriately used for parks, schools or commercial buildings in accord with city-wide, redevelopment planning. The important point is to remove the slums and to relieve the pressure on other blighted housing by providing decent low-rental dwellings at least as numerous as the slum houses that are destroyed.

It would be possible, of course, to make these new projects self-sustaining. But experience has shown that if they are to serve their primary purpose of rehousing the displaced slum dwellers and of relieving the critical pressure upon low-rental housing, the rents which their occupants can afford to pay must be in some measure supplemented by a Federal subsidy. In its effort to make certain that there will be no competition between public and private housing, the Senate provided that the projects authorized may be occupied only by families with incomes 20 percent below what is necessary to afford decent private housing. The result will necessarily be to increase the amount of subsidy required.

We hope the House will pass the bill. But it could reduce the amount of the rental subsidies by eliminating this unwise restriction and allowing city housing authorities to accommodate any family now living in substandard housing, without trying to maintain this artificial and discriminatory 20-percent margin. If the argument of real-estate interests that the program would discourage thrift had been aimed at this provision of the bill, it would have been dead right. For families living in public housing are not going to increase their earnings, if the result would be to throw them into the no-man's land between public housing and the lowest rentals that private housing can provide. Minority Leader MARTIN and his friends who are worried about the cost of the bill could most profitably direct their efforts toward elimination of this restriction that will make subsidies unnecessarily excessive.

Compulsory Health Insurance

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1949

Mr. MILLER of California. Mr. Speaker, maybe the AMA is right. Perhaps we do not need some form of compulsory health insurance to assure people with limited incomes medical services.

I am of the opinion, however, that the high-priced lobbyist employed by the medics with their $25 a head tax would have a hard time converting courageous Mrs. Archie Olson of the soundness of its position.

Let me read you a United Press story coming out of San Diego, Calif., under a June 4 date line:

FINANCIAL APPEAL: SOUTHERN CALIFORNIA WIFE OFFERS LEFT EYE FOR SALE TO AID STRICKEN SPOUSE

SAN DIEGO, June 4.—A Lemon Grove housewife yesterday offered to sell her left eye and appealed to the San Diego Union to help find a purchaser.

Mrs. Archie Olson, whose husband is bedridden with coronary thrombosis, made the offer.

Olson is an upholsterer by trade. He was stricken with a heart ailment 2 years ago and medical and hospital expenses have exhausted their savings, Mrs. Olson explained.

"We get some help from the boys," Mrs. Olson said, "but we have to pay $60 a month rent and I find it a problem to buy food and pay for the medicine my husband requires. I have decided to sell an eye as the only way I know to take care of him. I know he would do the same for me."

The Olsons formerly lived in Minnesota. They came to San Diego in 1945 and have five sons, one of them in grammar school. The eldest boy is employed on a Texas ranch. Another is in New Jersey working as a television engineer. A third one is employed in England and one grown son living at home has a part-time job at a San Diego filling station.

Testimonial Banquet for Secretary of the Navy, Hon. Francis P. Matthews

EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1949

Mr. STEFAN. Mr Speaker, many distinguished people gathered together at Omaha, Nebr., on Monday night, June 13, to pay tribute to our new Secretary of the Navy, the Honorable Francis P. Matthews. Among the speakers at this historic gathering was Admiral Louis E. Denfeld, Chief of Naval Operations. By leave granted me, I include in my remarks the following address of Admiral Denfeld delivered on that occasion:

It gives me extreme pleasure to be with you tonight. As Chief of Naval Operations for the United States Navy, I appreciate the honor of speaking at the headquarters of that other illustrious navy—the great navy of the sovereign State of Nebraska.

Every military force values allies, and it makes me glad that the close ties between our respective naval services have been further strengthened by our acquisition of one of Nebraska's most prominent sons to be Secretary of the Navy.

When Francis Patrick Matthews was in your midst, he gave of his talents without stint to enrich materially and spiritually many diverse Omaha endeavors. You could always count on him—but you couldn't hope to keep him for yourselves alone. I think you must have known that the time would come when you would have to share him—and you have, for never in our Nation's history have we needed such ability as he possesses.

Gathered here in pleasant, peaceful surroundings, it is difficult to realize how perilous is the road ahead, for our country and for the world.

Five years ago when the agony of war still held the earth in its iron claws, civilization's fervent hopes were buoyed by the startling news that a successful landing had been made on the continent of Europe. It was the beginning of the end of the long and cruel European conflict.

Thereafter, every battle, every campaign was fought with increased determination, for the hearts of all decent men yearned for the defeat of nazism. Once that pestilence was destroyed we knew we could turn all of our effort toward the remaining partner in crime.

Then, and only then, could we have peace. The elusive ideal would become a reality.

We believed that we and our Allies, men of all races and creeds, united as we were in a common endeavor in war, would turn our mutual talents toward the establishment of an enduring peace.

But our men were hardly home, the soil of the battlefields barely dried of the blood that had won them, before that ideal was shattered.

Hope, however, is not dead. Nor will it be so long as there remains the single tick of one honest heart. Indeed, without hope that the United Nations can effect a workable plan, there would be little purpose in our present efforts.

It is not enough that we have hope alone. With it we must have the wholehearted effort of everyone at home and abroad to foster mutual understanding among nations. And although clouds of mistrust and enmity linger on the horizon today, they will vanish once all peoples have a sane and balanced

knowledge of the affairs of the world in which they live. It is our task, more than that, it is our privilege to carry that light to dispel darkness and doubt.

Noble as our aims may be, we must be prepared for opposition to them, no matter what form the opposition may assume. During those periods of distress let us preserve a calm outlook: let panic be no part of our moral fiber.

Historically, peace seems to have been all too ephemeral. The pages recording the acts of man are drenched with his own blood more often than not. I wish this were not so—I pray that it may never be so again. But at this stage of the world's morality it seems that the only insurance, the only guaranty, of peace of any sort is for us to maintain a strong and efficient Army, Navy, and Air Force.

To admit this is to apologize for all mankind. Yet this is no less than the truth about the world's present attitude. Staggering as the financial burdens are that go to maintain protective forces today, sobering as the realization is of the ruin those same armed forces may vent on the world in but a matter of days, we must, nevertheless, continue to support them until there can be no question about the wisdom of banishing them forever.

But of even greater importance than the arms we possess is the high and strong character of the men who direct their use. We must have men of integrity, men of unquestioned patriotism, men who would not place into action these terrible weapons except as the final way out. I refer specifically to Francis Patrick Matthews.

Our Secretary of the Navy has entered his high office at a time when the world is sadly torn by two opposite ideologies. On one side is a community of nations which adheres to a democratic system, believing in and permitting freedom of the individual. On the other side is a community of nations that believes the welfare of its citizens depends upon the absolutism of a small group of rulers—men who dictate what or who the individual may believe in, what he may and may not do—and that same community rationalizes its stand by saying that the state is the supreme being, that the individuals are but mere cogs in the machinery of the society.

Whether these two communities will ever satisfactorily resolve their differences I shall not venture to predict or discuss now. I do not believe that recourse to war will aid in solving them, for war, in the last analysis, has never in the thousands of years of known history resolved anything satisfactorily. Rather wars have always brought a host of new and more complex problems that have been the seeds for deadlier future conflicts. But this belief that I hold, joined in it as I am by millions of my fellow countrymen, does not mean we should relax our vigilance.

We must be realists—prepared for any eventuality. Scientific advances have so shrunk the world, that we must be ready to repel instantaneous attack. No longer can we rest behind our ocean barriers, secure in the belief that the vast distances across the oceans afford us immunity.

All of our potential enemies and most of our friends are across the seas. If world disaster comes again and we want to help our friends and our allies, we will have to supply food, materials, men, and guns. They must go by sea—in ships. Unless our allies receive help we risk their collapse, and if that tragedy happens America won't be isolationist—America will be isolated.

The Navy's responsibility is the seas that surround our continent. Ours is the duty of denying the enemy the use of the seas, in order not only to defend our country but also our bases from sea-borne invasion. Ours is the duty of providing sea-borne tactical air support no matter where it may be required.

Strategic air offensive is the duty of the Air Force and I am in complete accord with my colleague, Gen. Hoyt S. Vandenberg, Chief of Staff, United States Air Forces, who recently stated: "For our own protection from direct or air-borne attack, for the maintenance of our freedom of maneuver, for the retention of our bases and sources of supply, we need an effective Army and Navy. Any realistic plan for our security which can be drawn up today requires the complete participation of all members of our national security team."

Without control of the seas, our whole machinery for gaining victory would bog down disastrously. And ships will arrive at their destination only if the United States has control of the seas. Shipping must be protected against enemy aircraft, submarines, and surface ships. Protection means naval forces—strong United States naval forces—capable of destroying enemy aircraft launched to seaward, capable of defeating submarines, and capable of sinking enemy surface ships.

As we learned during the last war, we can't protect shipping by defensive methods only. We need defensive methods—strong convoys, for example—but that's not enough We must have offensive naval forces equipped with the weapons to destroy enemy aircraft—to destroy his home bases—before he launches his attacks. We don't want to be surprised by the enemy. We must surprise him.

We must have naval power sufficiently strong to strike submarines at their bases before they go to sea. We still need to have the capability of mining submarine egresses. Only by infesting the enemy harbors with our own weapons will we keep the enemy submarines from infesting the high seas.

The intimate relationship between our economy and our ability to use the seas makes it almost impossible to separate them. That is why we are a maritime Nation—and why American naval forces are needed to preserve and protect our national sea power throughout the world. In support of our economic security, naval forces maintain our freedom of the seas for movement of trade with every nation.

It has been said that diplomacy is as strong as the forces behind it and no stronger. The Navy, free to proceed at will to any port of any nation, is an impressive evidence of American power. Especially is this impressive when I tell you that our fleets are self-sustaining at sea. Our ships in the Mediterranean today operate there without local shore facilities—they are supplied and maintained from the United States.

These fleets of ours that roam the world are able, in the event danger threatens our nationals abroad, to bring our citizens to safety. They are able too, by their mobility to press our attack in the event of war.

The essence of American strategy, once we become involved in war, is to attack. And we are determined that should war come, it will not be fought on American soil. This means that we must have a balanced fleet of surface, air, and underwater elements to keep the waters surrounding us—our oceans.

Our modern Navy is not a static organization. Naval research and development is a continuing process. Improvements, based on the experiences of the past steadily change the outward looks of the Navy. And although the looks may change, the fundamentals are the same. The Navy of today has the same mission that the Navy of yesterday had. It will have the same mission a century from now, as long as we exist—the security of the United States. This security it will maintain by the proper use of sea power.

What the future Navy will be like can only be imagined. Just as the ironclad superseded the frigate, just as the carrier has superseded the battleship, so might the dreadnaughts of the deep—the progeny of our modern submarines—become the capital ships of tomorrow. No one knows. But all of us know without question that the geographical position of the United States will not change, and that to reach us, an enemy would have to pass over, on, or under the seas surrounding us. The future Navy will prevent him—just as our enemies have been prevented in the past.

We will prevent him. And by "we" I mean the Army, the Navy, and the Air Force—the team that makes up our National Military Establishment. That is the feeling, the belief of the Joint Chiefs of Staff, and I can do no better than to quote another colleague of mine, Gen. Omar N. Bradley, who so aptly said: "American armed strength is only so strong as the combat capabilities of its weakest service. Overemphasis on one or the other will obscure our compelling need—not for air power, sea power, or land power—but for American military power commensurate to our tasks in the world."

World leadership has been thrust upon our country. We have the strength and the spirit to discharge our trust. We will not fail. We cannot fail, for we have a birthright of freedom that has enabled our country to bring forth citizens who are blessed with the wisdom and the strength of character to guide us when we need it most.

The Navy looks to its new Secretary as such a man. The loyalty he gave and in turn received amidst his fellow Nebraskans now encompasses the entire Navy. Under his leadership we face the future with high resolve and confidence. It will be an era of continuing naval progress of incontestable national security.

Brotherhood of Railroad Trainmen Are Against the Recent Suggestion That the Social Security Administration Should Absorb the Functions of the Railroad Retirement Board

---

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1949

Mr. VAN ZANDT. Mr. Speaker, Mr. A. F. Whitney, president of the Brotherhood of Railroad Trainmen, speaking for the large membership of his organization, is strongly opposed to Congress disturbing, in any way, the Railroad Retirement Board.

At my request Mr. Whitney has furnished me a statement outlining why the Brotherhood of Railroad Trainmen strongly opposes the proposed merger.

The thousands of railroad employees residing in my congressional district are in accord with Mr. Whitney's views contained in the following article:

The Railroad Retirement Board was established by the Railroad Retirement Act of 1935. The other principal authority of the Board derives from the Railroad Unemployment Insurance Act of 1938 as amended. Under these two statutes the Board administers (a) a retirement system for aged and disabled railroad employees and survivors, and (b) an unemployment insurance system including unemployment, maternity and sick benefits. The system takes in the railroad industry, affiliated companies and joint associations and employees of the national

railway labor organizations and employee representatives. The Board is composed of three members appointed by the President and with the advice and consent of the Senate. The President appoints the Chairman independently, but the other two members are nominated one each by the carrier representatives and employee representatives.

The Railroad Retirement Board activities are much broader in scope than the welfare functions to be included with social security. That part of the Board's functions that belong with the unemployment compensation service, if merged with the social security system, would work a direct hardship to the transportation employees and the entire railroad industry.

The Railroad Retirement Board, as an independent agency of the executive branch of the Government as now constituted, serves the entire industry to old-age annuities, survivor annuities, monthly benefits for widows and children, in addition to the unemployment compensation and sick benefits.

Under social security the unemployment would be administered by the various States. The excise taken from employers would be limited to the various States, and chaos would be the result of the transportation employees who are in interstate service such as assignments through one or more States. Unemployment and sick benefits would be prorated among the States, which would delay benefits and in my opinion the service would be inefficient.

Under the Railroad Retirement Act railroad employees are eligible for monthly annuities if they have 10 years' compensable service, regardless of age, and are totally and permanently disabled for employment. If an individual has 20 years of service or is 60 years of age and has a disability that prevents him following his regular railroad occupation he is eligible for a monthly annuity.

Under the social-security system no individual is entitled to benefits until reaching age 65 as there is no provision for disability under the Social Security Act. The Social Security Act makes no provision for sick or accident benefits.

As the Railroad Retirement Board is comprised of a public member, employer and employee member, we feel that the labor member has an opportunity to formulate the policies and regulations of the Retirement Board in administering the law. Being practical men from the railroad industry is a great asset to administrating. There is no similar provision under the Social Security Act.

I am further of the opinion that administratively there is no economy or efficiency to be achieved by destroying the present well-integrated system and transferring it in whole or in part to one or more agencies. The present system is uniquely administered and is a completely, privately supported system operated under Government auspices. The actual collection of taxes is the only part of the system financed by the Government. The system is completely Federal, and if a change or merger was effected the employers would pay taxes for unemployment and sick benefits to the States. However, nothing would be gained in efficiency by segregating the employer functions, which are so interrelated with retirement functions throughout the Board's organization.

Under the Railroad Retirement Act of 1935 and subsequent amendments, all annuities that have been granted to date have a prior service record based on earnings between 1924 and 1931 to be considered as a base period for all creditable service prior to 1937. This record has practically been completed by the Retirement Board at a tremendous expense to the employers and will continue to be a factor on each individual's annuity until the year 1967.

The following statistics present superior protection under the Railroad Retirement Act as compared to the inadequate Social Security Act:

Railroad employees have a guaranty that their survivors will receive benefits in excess of taxes paid.

Any credits established under the Railroad Retirement Act assures an individual of a retirement benefit at age 65.

Approximately 100,000 employees have been awarded annuities under the Railroad Retirement Act who would not have qualified for any benefit under Social Security Act.

It is true that railroad employees pay considerably more for their retirement and survivor protection than do employees covered by social security. However, they are aware of the greater value they will receive. Present average railroad retirement annuity is approximately $84 per month as compared with the average primary benefit under social security of $29 per month. Monthly death benefits under the railroad system average 25 percent higher, and lump sum death benefits 67 percent higher than if paid under the Social Security Act.

Authorities in the field of social insurance agree the railroad plan is superior to any other. In fact, it is considered to be a model which other systems have tried to emulate.

The fact of efficiency, benefits, and employee satisfaction and tradition all militate against transfer of the Railroad Retirement System to the Social Security Act.

Farm Abundance or Scarcity

EXTENSION OF REMARKS

OF

HON. CHARLES R. HOWELL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1949

Mr. HOWELL. Mr. Speaker, under leave to extend my remarks, I am including an interesting editorial from a recent issue of the Trenton (N. J.) Sunday Times Advertiser commenting on the Brannan plan:

FARM ABUNDANCE OR SCARCITY

Secretary of Agriculture Brannan has brought imagination and a high degree of courage to his program of Government aid to farmers. Whether it is wholly sound and practical are questions to be answered by the economists and the farmers, among whom there will be no agreement. At least, however, it is challenging and the fact that it has been approved by Democratic farm leaders of the Midwest is an important point in its favor. These leaders, of course, are political-minded but not to the extent of placing their own economic interests in danger.

Economy of scarcity has been the Government peacetime policy since 1932. It has involved practices which Americans have found it difficult to reconcile with common sense—the plowing under of surplus crops, killing of pigs, payment for crops not raised, all designed to support prices to farmers. Secretary Brannan proposes that there shall be a radical turn toward "economy of abundance."

As he has explained his program to the farm leaders of the Midwest, this purpose is to be accomplished by public contributions to farmers' income instead of supports to their prices. The distinction is vital. Supporting prices means creating artificial scarcities. Mr. Brannan proposes that the consumer be given the benefits of abundance through low prices. To this end he would encourage the production of fresh foods by assuring the producers of these foods a larger fraction of the Federal-aid money than they have had in the past.

This country has had good crops in recent years, and another is coming up. Farmers and consumers want to see it eaten, not wasted or plowed under. Secretary Brannan is a sincere and practical man. His program is undoubtedly an honest approach to the solution of a difficult problem. But it should be considered carefully.

Letter to Tighe Woods

EXTENSION OF REMARKS

OF

HON. WINGATE H. LUCAS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1949

Mr. LUCAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper article:

THE HOME TOWNER

(By Walter R. Humphrey)

LETTER TO TIGHE WOODS

Mr. TIGHE WOODS,
United States Housing Expediter,
Washington, D. C.

(Or should you be addressed at Austin or some other State capital?)

DEAR SIR: So you have flown to Texas to ask the Governor of this sovereign State to veto a State rent control bill.

For pure insolence and bureaucratic interference with the functions of the State government, this incident is unmatched.

Your job and business, as I understand it, is to administer your department under the laws passed by the Congress.

And it is strictly none of your business what the State of Texas does, or how.

For you to fly to Austin (presumably at the taxpayers' expense) to attempt to circumvent the decision of the Texas legislature and to influence the decision of the Governor is an insult to Texas.

The question is not whether rent control is good or bad or whether the law which has been passed is good or bad.

The question is one of Federal interference with a State function properly granted to it. In this case, by the Congress itself.

And every Texan ought to resent it.

You are quoted as going so far as to say if Mr. Jester does not knuckle under to you and veto the bill that your office will not recognize the law if there is any way to prevent it; you implied a threat that your office would see the matter in court in an effort to erase this State's judgment on the decontrol issue.

"Washington is worried about decontrol," you said. (A great many Federal jobs are at stake, you might have added.)

A great many individual citizens are worried, too, and that's all right. In this State, as elsewhere, there is an honest difference of opinion whether the time for decontrol is here.

But Texans are worried about Washington too, Mr. Woods, and they are concerned about your political invasion and your brazen attempt to dictate to our Governor what he shall do.

If it is in the best interests of the people of Texas that pressure be put on the governor to veto this bill, you'll find plenty of good honest Texans capable of putting on that pressure.

You don't have to come down here to do it.

If Mr. Jester had any idea of vetoing the bill, I don't see how he now can do it with a

clear conscience after your little Washington squeeze play.

Your interference is typical of all the evil things about Federal bureaucracy. Where you might have made friends, you have made enemies.

You can't club Texans into line and get by with it. Texans don't like your tactics; and you have rendered your own program and your own branch of the Federal Government a grave disservice by putting it on a basis of cheap pressure politics, applied with the big stick of Federal authority.

It will be a dark day for our State when its own elected public officials bow to this kind of dictatorial interference.

THE HOME TOWNER.

Indiana State Teachers' Association

EXTENSION OF REMARKS
OF

HON. JOHN R. WALSH

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1949

Mr. WALSH. Mr. Speaker, the executive secretary of the Indiana State Teachers' Association recently presented to the Subcommittee on Education a very clear statement of his views on Federal aid to education, and how it would affect the great State of Indiana.

I know the membership of the House would like to read these remarks:

STATEMENT BY ROBERT H. WYATT, EXECUTIVE SECRETARY, INDIANA STATE TEACHERS' ASSOCIATION, INDIANAPOLIS, IND.

The Indiana State Teachers' Association, with a paid membership of 24,000 teachers, which, incidentally, is 100 percent of the profession, is desirous of calling to the attention of the members of this committee the grave needs existing in the schools of the Nation and would like to have these remarks recorded in the report of these hearings.

Our association has been on record for many years in favor of action by the Federal Government to insure a minimum education to all children of this Nation and on numerous occasions has presented facts to congressional committees on this important subject.

I should like to add at this time that the events of the past 2 years have greatly accentuated the needs as well as the wide discrepancies in educational opportunity. They have brought us as a Nation face to face with a crisis.

We have witnessed a mass exodus of our teachers from the schools to other vocations in order to maintain an acceptable standard of living. Some 350,000 of our 900,000 teachers in addition to normal turn-over have left the profession.

This exodus has been more striking among men than among women and has brought us a condition where eight of our States have a total teaching force comprised of over 90 percent women and 11 of our States have elementary school teaching forces comprised of more than 97 percent women, as reported by the United States Office of Education. There were exactly the same number of men teachers in the United States in 1900 as there were in 1944, 126,000, while women teachers increased in number from 296,000 to 701,000 or 137 percent. These facts need little interpretation since it is recognized by educators and laymen alike that a much more equal balance between men and women in the profession is necessary for a well-balanced school environment.

In our own State of Indiana we have seen similar conditions prevail though not nearly as serious as those in numerous other States. In our own State, however, we have lost many of our teachers, and as a result have found it necessary to issue some 2,000 special teaching permits to persons not qualified under the law to teach, and have found it necessary to suspend our retirement laws to attract back into the schools some thousand or more persons beyond the retirement age.

At the same time, teaching as a profession has failed to attract the graduates of our high schools, and as a result our enrollments in teacher-training institutions have fallen to a very low point. A recent survey of our 32 teacher-training institutions in Indiana showed that we had available for graduation this year only 166 elementary teachers including some 13 men for a probable demand of at least 1,500 positions.

These facts and many others that have been presented to this committee indicate that substantial action must be taken.

The bill now under consideration by this committee offers a most just and equitable solution to the problem. It is particularly sound in its approach because of its three basic provisions, namely:

1. The automatic formula for distribution of funds to be administered solely by the State;

2. The basic distribution of $5 per child; and

3. The equalization factor which guarantees to every child within this Nation at least a fair education.

Whether one views this problem from humanitarian considerations or from the cold-blooded considerations of national self-preservation, there is no escape from the inexorable logic of a necessary solution. The opposition to this proposal is placed upon philisophical grounds and may be summed up as either:

1. Dangerous from the standpoint of what might develop from Federal control;

2. Not the responsibility of the Federal Government to consider education; or

3. Out of harmony with our beliefs in local self-government.

The first of these objections, that it will lead to Federal control, is disproved by the history of Federal aid to schools.

An impartial study of Federal grants to schools in the past indicates that with few exceptions they have not led to Federal control when provided by Congress on a uniform basis. The land laws of 1785 and 1787 and the Morill Acts during the Civil War granted money from the sale of land equal in area to 25 States the size of Connecticut. This money has been used and controlled entirely by the States. The Morill Acts and acts subsequent thereto have granted millions of dollars to land-grant colleges in the various States amounting at the present time to $233,000 a year of Federal money for each such land-grant college, including our own State University of Purdue. The various vocational education laws, including Smith-Hughes, George-Deen, and others, have for many years provided Federal money to every high school in Indiana and throughout the country that sought it to the extent at present of $21,000,000 per year.

These laws have not led to Federal control, but on the contrary have proved a tremendous boon to education. They are responsible in a considerable measure for the ability of our schools in the recent emergency to provide the technicians to fight our war. To say that the present movement for Federal aid is the beginning of a movement for Federal control can evidence nothing less than an ignorance of history. The danger of Federal control, if such a danger exists, lies in the establishment of a Federal system of schools with a separate overhead, administration, and personnel. Such a development would be not the result of Federal assistance to public schools but rather the alternative if the individual States cannot find assistance for the existing public-school systems.

I might point to the development during the depression and during the war when our needs became very great and very critical, to the necessity for instant and immediate action in this very direction which caused considerable concern among educators.

It is time that the citizens of this Nation cut through the maze of propaganda in opposition to providing an enlightened citizenship. It is time that we outline clearly the impending doom that will overtake any democracy that will not provide for its own intellectual preservation.

The second objection that is held before the eyes of the general public is that it is not the responsibility of the Federal Government to consider education. This is an assumption that never had any validity, as indicated by the history of Federal grants to schools discussed before. A mere superficial examination of this principle indicates its fallacy. Here in America we have established a Government that must depend upon the intelligence of citizens to make right decisions and thus preserve the form of government. How can such a government stand if it permits the boys and girls of the poor areas to grow up in ignorance and thus become the victims of demagogs and dictators?

Our democratic Government in America was founded on the principle that all men are created equal before the law. Education is a prerequisite to the development of human personality and there can be no equality and no freedom unless a minimum education is offered by all.

The third objection to Federal aid to education, found in the emphasis upon local self-government and the alleged responsibility of each State to provide all of the education of its children, has been distorted to an extent that has obscured certain hard, cold, economic facts.

A striking example is the fact that in 1946 the State of Mississippi had income that produced a total of only twenty-three one-hundredths of 1 percent of Federal revenues, whereas it has eight times as high a percentage of the Nation's children to educate. At the same time, the income of New York State was sufficient to provide some 20 percent of Federal revenues, while only some 8 percent of the Nation's children have to be provided for by that State.

These shocking inequalities grow particularly out of the great variations in natural wealth and in the size of families. To say that the people of the poorer States are responsible for their condition simply ignores economic facts. Are the people of New York responsible for the location of the New York harbor and all of the tremendous wealth-giving power that goes along with it? Are the people of Chicago responsible for the presence of Lake Michigan plus this natural gateway to the West? Are the people of southern Indiana responsible for the barren condition of their soil? Such a concept is indeed elementary.

These inequalities grow out of the two factors mentioned above and are being accentuated by two existing social conditions, namely, the rise of the corporation as an instrument for owning and managing wealth and in the educational poverty which binds down the people of the poorer areas with a yoke which in their poverty cannot be thrown off. There is no way to counteract the present economic trends toward still greater inequality other than to tax the wealth where it is and educate the children where they are. This practice is, of course, odious to some who now are escaping their social obligations to the children of the whole country, by advocating a doctrine of local self-government that would claim responsibility for the education of only those children who live within a stone's throw of the center of

wealth. This ignores the fact that wealth was created, and will be protected and increased by all the children of all the people.

My home State of Indiana is a proud State. She is not a rich State as compared to all the States of the Union, standing as she does almost at the median as far as income payments of her citizens are concerned. Some of our citizens have been taking the position that Indiana can and will support her own public schools, but a rapidly growing number of those citizens are gradually coming to understand the major developments referred to above, and as a result, are rapidly accepting the premise of Federal assistance to schools. They are coming to see that the tremendous concentration of wealth in fewer and fewer places within the Nation, the widening gap between the ratios of children to be educated in the various sections of the country, and the absolute necessity for a relatively high level of education if we are to preserve democratic government demand a reappraisal of previous conclusions on this subject.

Any American who takes the position that a child deserves only the kind of an education that his local community can afford is ignoring the basic principles of democracy and what is much worse is flirting with the death of free government. At the same time he demonstrates an ignorance of economic facts which have been so ably brought to light by the United States Chamber of Commerce showing the absolute parallel between educational attainment and the economic welfare of the community.

More than one-fourth of the people residing in Indiana have migrated there from other places. It is obvious, therefore, that the economic life of our State as well as other States is determined in considerable measure by the level of education of the citizens of the whole country.

In Indiana we have 2.6 percent of the population of the country, while our people will pay some 2¼ percent of the Federal revenues. This means that we are a median State in the matter of ability to educate our own children. There are, however, within the State of Indiana enormous variations in wealth behind each child, ranging all the way from several hundred dollars per child to $15,000 per child, with expenditures for education ranging all the way from $100 per child to $353 per child.

The result of these discrepancies within our State makes it absolutely necessary for the State as a whole to bear the major portion of the cost of education. With the free flow of commerce throughout the Nation, which now prevails, there are many sources of taxation that are completely outside the grasp of State-taxing agencies, as for example, the New York stock-transfer tax, some 90 percent of which is collected in New York State. It therefore becomes more and more imperative as our economic life becomes more and more complex, that a reasonable amount of equalization on a national basis should be practiced. The State as a unit of taxation is slowly but surely finding itself challenged in its race with scientific and industrial progress.

It is a source of great satisfaction to all of us in Indiana that H. R. 4643 incorporates the same two basic principles of distribution, namely, the $5 per child minimum to all States, and, secondly, the amount necessary when added to a given minimum effort on the part of the State to produce a $50 education for each child. H. R. 4643 is an excellent bill. It harmonizes completely with the principles underlying our whole philosophy of government. It guarantees to each child in this Nation at least a $50-a-year education. When it is considered that the average expenditure for education in the whole country last year was more than three times that amount, it is obvious that anyone who would deprive children of such a pittance would indeed find difficulty in squaring his views with the basic tenets of our Federal Constitution. It matters not whether one bases his argument upon what the child deserves or upon what the Nation must have. There is no escape from the conclusion that somehow or other this Nation should and must provide its children with at least that modest beginning for life.

The future of the public schools in America rests with the citizens of America. We are one Nation, not 48. We will continue to live as one Nation or we shall fall into sectional or class groups and destroy ourselves by internal disunity. National unity can be achieved and maintained only if the wealth of the Nation and all its resources bear their fair share of the burden of defending, preserving, and building the future of the Nation. We have passed the day when a man, because of his residence, his wealth, his family, or his creed, shall be condemned to play an inferior part and to remain in a subservient class in this Nation. It cannot be that way in America.

Therefore, I should like to urge this committee to give consideration to this excellent proposal for legislation.

Truth Is Out—Hoffman Warns Cut in ECA Funds Is Threat to Our Economy

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, when Paul Hoffman appeared before a Senate committee last week in opposition to a cut in ECA funds he confessed that any reduction in the amount would seriously affect our domestic economy. For a long time the charge has been made that the program was designed to sustain the New Deal efforts to bolster our own situation but this is the first affirmation of that fact. I am inserting at this point an article that appeared in the New York Herald Tribune on this subject:

HOFFMAN WARNS AID CUT WOULD REDUCE EXPORTS—TELLS SENATORS REDUCTION OF BILLION MEANS SHARP DECLINE IN FARM SALES

WASHINGTON, June 16.—Paul Hoffman told Senators today that a $1,000,000,000 cut in European recovery spending would mean a sharp drop in purchases of American tobacco, cotton, wheat, and other commodities. The Economic Cooperation Administration chief outlined for the Senate Appropriations Committee what such a reduction would mean to both Europe and the United States.

He added: "A set-back of this magnitude at this time would surely make it apparent that we have given up hope of achieving recovery in Europe."

For Europe, Mr. Hoffman said, the cut would mean a loss of $3,000,000,000 to $4,000,000,000 in exports, in addition to upsetting western Europe's food supply. If the cut fell solely on goods for Europe's industry, the loss might run from $4,000,000,000 to $6,000,000,000, he said.

Mr. Hoffman gave his estimates in answer to demands from Senator KENNETH WHERRY, Republican, of Nebraska, that he produce a memorandum to show what effect a $1,000,000,000 cut would have on Europe's recovery.

Mr. Hoffman listed these cuts which would have to be made in dollar purchases: Tobacco, $50,000,000; dairy products, $30,000,000; other foods, $40,000,000; wheat, $30,000,000; fats and oils, $25,000,000; corn, $75,000,000; protein feeds, $10,000,000; cotton, $100,000,000; lumber, $35,000,000; metals and ores, $85,000,000; fuels, $100,000,000; other raw materials, $63,000,000; machinery, $125,000,000, and shipping freight costs, $50,000,000.

Security for the Aged

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1949

Mr. DAGUE. Mr. Speaker, my attention has been called to an editorial which appeared in a recent issue of the Philadelphia Inquirer calling for the liberalization of old-age benefits. I think that all fair-minded persons will agree that the present average of less than $26 per month for the retired worker touches the depth of niggardliness in the light of the almost profligate way in which we pour money into foreign nations and apparently plan to embark on new and costly experiments.

I cannot help but take issue, however, with that portion of the Inquirer article which states that—

The only possible objections would be on grounds of economy, and these are not valid.

To me objections on the grounds of economy are the most valid that can be raised against any legislation and certainly we will be doing our older citizens a great disservice if we undertake to provide for their security with borrowed money. An insolvent America is a threat to the security of everyone.

It would also seem that while there is a compelling urgency to more adequately take care of those who are already on the rolls there can be no sound argument for extending the coverage to other groups until we have determined as a Nation to live within our means. Social-security benefits must be paid out of taxes and under the present pernicious system, whereby social-security receipts are paid directly into the Federal Treasury, we have a set-up in which in times of stress we may be called upon to pay anew for benefits for which both the retired worker and his employer have already paid. The first step toward bringing security to the beneficiaries of this program would be to place it on a sound actuarial basis. Certainly if our much-maligned private insurance companies undertook to operate along the lines followed by our Government they would be put out of business. The Inquirer editorial follows:

SPEED THE LIBERALIZATION OF OLD-AGE BENEFITS

Reluctance of the House Ways and Means Committee to take decisive action in reporting out a bill to liberalize old-age benefits and social-security legislation is an injustice to many thousands of older persons.

Unless Congress undergoes a quick change of heart, the bill at best will be made to wait until next year for action by both Houses.

Senator LUCAS, Senate majority leader, has indicated priority for the reciprocal trade program, the North Atlantic Pact, and the

Taft-Hartley Act, in the rush to get the session's business wound up in time for an adjournment by the end of July.

This means that in spite of devout preelection pledges that social-security legislation would be high on the list of preferred measures, the Democrats have smothered the program in committee, and are now attempting to hold off on the issue altogether.

This is made all the more disillusioning by the fact that the measure is strictly nonpartisan, according to precampaign promises. Supporters of both parties want the present totally inadequate payments, averaging less than $26 a month for the retired worker under the old-age and survivors' insurance, to be raised. Everyone seems agreed on the manifest injustice of the provision banning any earnings over $14.99 a month.

There doesn't seem to be one good reason why a sound measure to liberalize the present law should be rejected if it were allowed to come to a vote. The only possible objections would be on grounds of economy, and these are not valid.

There is no economy in condemning the bulk of our elderly people to accept charity, or to live in want.

The House committee should stop its dallying over this measure, and call it immediately to the floor in a form that the Senate could accept without any further delay. It is nonsense to say that there isn't time left to consider a measure over which there is no real disagreement.

The issue is squarely up to the House committee. It should report this bill without further stalling, and both Houses should push it to enactment.

Crisis at Prague

EXTENSION OF REMARKS
OF
HON. MARY T. NORTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1949

Mrs. NORTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post:

CRISIS AT PRAGUE

The pattern of battle recently developed at Budapest between the Roman Catholic primate and the Communist rulers is now being repeated in detail at Prague. By every sign it will be but a matter of days or possibly hours before Archbishop Beran becomes, like Cardinal Mindszenty, a prisoner of the Communist political police. Whether the archbishop, too, will one day reemerge from prison to play the leading role at another propaganda trial remains to be seen, but he has publicly instructed his followers to disregard any confessions that may be issued in his name. However, the terror in Prague is evidently neither as complete nor as efficacious as it was in Budapest on the eve of the seizure of Cardinal Mindszenty. This is shown in the fact that the archbishop was able to leave his palace and repair to a monastery outside the city for a celebration of the feast of Corpus Christi and that several thousand persons found courage to gather there in an impressive demonstration of loyalty.

He also found means to smuggle from the palace a pastoral letter attacking the "anti-Christian ideology" of the state and asserting that in matters affecting the freedom of the church further compromises were impossible Thus Archbishop Beran, like Cardinal Mindszenty, has met the challenge head-on, and by totalitarian logic, the regime has no choice but to destroy him. It is probable that the Communist leaders would have preferred to move slowly and cautiously, suppressing some church organizations and activities piecemeal, and assuming control and direction of others, with the view to forcing an ultimate breach with Rome and the establishment of a national church that would be a submissive instrument of propaganda and government, such as the orthodox churches appear to have become in most of the satellite countries.

But while such prelates as Archbishop Beran remain these tactics are destined to failure. As long as the church is able to assert its independence it must gain strength and influence as the only remaining highly organized center of resistance to a regime that is hated as well as feared by the great majority of the people. Of course Protestant groups in Hungary, Bulgaria and perhaps also in Czechoslovakia, have also offered resistance and have their own lists of martyrs, but the Catholic resistance has been more effective because, like communism, it is organized on an international basis.

In short, the consolidation of totalitarian rule in any of the satellite countries where the church continues to exist is impossible. Thus the crisis in Czechoslovakia is certain to be followed by another in Poland, where resistance to the regime is even more formidable. Nor has it yet been shown that, with all the resources of terror at their command, the advantage in this conflict necessarily rests with the Communist rulers.

Singing Salesmanship

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1949

Mr. GOODWIN. Mr. Speaker, singing salesmanship has been introduced into the United States savings bond Opportunity Drive, which opened May 16 and will extend through June 30.

Twenty-seven thousand members of the Society for the Preservation and Encouragement of Barber Shop Quartet Singing in America, Inc., are matching their chords with dollars to help Uncle Sam sell $1,040,000,000 worth of series E bonds.

These business and professional men of SPEBSQSA, who sing the old songs in four-part harmony for fun and fellowship, hope to have the whole country singing and saving as they make their distinctive contribution to the Opportunity Drive.

To accomplish this objective, SPEBSQSA conducted a bond song contest among its members. The 7 best songs out of 43 entries, as selected by Fred Waring and his fellow judges, have been published by the Treasury Department. This folio of original bond songs is available to all singers on request to State offices of the United States Savings Bond Division. It is worthy of note that the gentleman from Illinois, Mr. Arends, the Republican whip, is a distinguished member of SPEBSQSA.

One of the songs in the folio is entitled, "Bonds for Happiness." It was written by Ed Place, former Boston newspaperman, and until recently a harmonious assistant to the gentleman from Pennsylvania [Mr. MCCONNELL]. Ed, whom I have known for many years, believes in saving for bonds and also saving our natural resources, as he is currently associated with the National Wildlife Federation, headed by David A. Aylward, of Boston.

I also note that Ed Cronin and Pat Sands, of Boston, employees of the Internal Revenue Bureau, are represented in the folio by a prize-winning song entitled "Freedom Rings."

Bonds for Happiness expresses a theme that the possessor of savings bond not only contributes to the Nation's security but also to personal happiness by having a nest egg to fall back on in time of possible future need. The lyrics go as follows:

Happiness is knocking at your door,
The future has many joys in store.
Savings Bonds will see you through,
So be ready when that man comes up to you.

(Chorus)

Sign up for Savings Bonds today,
Buy your limit, don't delay.
Uncle Sam needs you and me
To keep a sound economy.
Savings Bonds you will agree
Are vital to security.
Sign up for your bonds right away,
Buy your bonds today.

Do Not Forget the Farm Homes

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1949

Mr. BURDICK. Mr. Speaker, in the frequent discussions we hear about the housing measure soon to come before us, I note a common tendency to forget a part of that measure that is of great interest and concern to me. I refer to title IV of the bill, providing aids for housing on the farm.

The housing needs of farm families are all too often forgotten needs. The farm is the basis for our national productivity and our national prosperity. Its economic problems have very properly received constant attention from all of us in the House. I think it is fitting now that we give some belated attention to the family that makes our agricultural productivity possible.

I know all of us have traveled the highways that cross our vast farm lands and have admired their beauty. How many of us have thought that, off the highway and sometimes hidden from view, are some of America's worst slums, the homes of American farm families? How many of us realize that our daily sustenance comes from men, women, and children who suffer daily hardship because they are not adequately housed?

The farm housing problem is no small matter. It is not something that affects a scattered handful of farmers. A Census Bureau survey made as recently as a year ago revealed that 1,400,000 farm dwellings—roughly one-fifth of all farm dwellings—were in urgent need of major repairs to make them livable. What is more, over half of the other farm homes had no running water, no bathtubs, no inside toilets.

These are the facts which lie behind the concluson expressed by our own Banking and Currency Committee that this Nation must be prepared to build between 200,000 and 300,000 farm homes each year in the next decade if we are to make any substantial progress in bettering farm housing conditions.

I know I do not need to tell my colleagues who come from congested cities how pressing the housing problem is in their localities. We have had many vivid descriptions of that aspect of the housing situation laid before us.

But I say that the farm housing problem is even more urgent than the city housing problem. The available statistics tell us that 8 percent of the nonfarm dwellings are in need of major repairs. Compare this need with the fact that 19 percent of farm homes are in that deplorable condition.

We have been told many times about overcrowding in the cities. Yet how many of us are aware that overcrowding in farm homes is proportionately twice as prevalent as in city homes?

The result, of course, is the same as in the cities. It is social and economic erosion. It means undermining the health and well-being of the children in whose hands the future of this Nation will rest. It would be true economy to put a halt to these inroads at the foundation of our society.

It does no good to respond to these facts and figures by pious reference to the traditional hardiness of American families. Housing is something that cannot be separated from economics. And the central economic fact we must face here is that more than 2,000,000 farm families in 1947 produced farm products valued at less than $1,500. Obviously, these families can do nothing to improve their housing conditions without financial assistance.

The farm housing provisions of the pending housing bill are specifically designed to meet this problem. They constitute recognition that improvement of farm housing standards is essential to a sound and secure rural economy.

I do not say that passage of this bill will solve the farm housing problem. As a matter of fact, when compared with the extent of the problem, the provisions of the bill are modest to a fault. Nevertheless, this bill would permit a significant start to be made in improving family life on the farm.

Fundamentally, the farm housing provisions are planned to meet three major types of farm situations in which housing needs become particularly acute.

The first situation involves the owner of a self-sustaining farm who is unable to improve his farmhouse or other buildings because the normal sources of credit are not available to him. For such a farmer, the bill would provide loans with terms up to 33 years at not more than 4 percent interest. The loans may be secured by the farmer's equity in his farm.

The second problem situation concerns a farm which is not now self-sustaining but which offers reasonable prospects for becoming so by application of improved farm practices, by farm enlargement or development. For farmers in this situation the bill would make available similar loans, supplemented by annual contributions where needed for a period up to 10 years.

The third situation treated by the bill is that of the farm that has no prospect of becoming self-sustaining. Small loans, and a limited amount of outright grants, are made available for families living on such farms. The purpose of this assistance is not to provide new housing of a permanent nature but to make it possible for the families to make repairs and necessary improvements to their housing so that they and the rural community will have the benefit of essential health protection and a decent minimum shelter.

The loans and grants will be small and are to be used for such purposes as proper sanitation, providing a pure water supply, screening doors and windows, making roofs weather-tight, and similar minimum repairs and improvements. The object is to protect the health and well-being of a family that is caught in an impossible economic trap. It is a matter of salvaging a priceless human resource, not of subsidizing an uneconomic farm.

This bill holds the only hope in sight for the thousands of farm families who are desperately in need of adequate homes. I earnestly urge my many friends and colleagues who represent the farmers of America to join with me in supporting this bill. I also appeal to representatives of cities where the housing question is acute; I appeal to representatives of labor who know what it is to live in homes that are far below the standard of what an American home should be.

Britain Still Short of Dollars—When Will It Stop?—Cripps Says Situation Getting Worse

---

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, notwithstanding the great sacrifice by the American taxpayer, Cripps of Britain says the dollar shortage is getting worse. And all this, Mr. Speaker, when the ECA program is pouring billions of dollars into that country. In view of what is going on, how long can that program be justified?

Mr. Speaker, I am including as part of my remarks a news article that appeared in the New York Herald Tribune under a date line out of London on June 16:

CRIPPS TERMS BRITAIN'S DOLLAR SHORTAGE WORSE—TELLS PILGRIMS TIGHTENING OF WORLD MARKET MEANS NEED FOR MORE UNITED STATES AID

LONDON, June 16.—Great Britain's dollar problem is growing worse because the world no longer offers a sellers' market, Sir Stafford Cripps, Chancellor of the Exchequer, said tonight. Because of the changed market situation, he said, Britain is having increased difficulty selling goods and getting American dollars.

Sir Stafford spoke at a dinner of the pilgrims in honor of Thomas K. Finletter, retiring chief of the Economic Cooperation Administration in Great Britain. He joined Mr. Finletter in crediting the ECA with turning back communism in western Europe.

America's unprecedented financial help "changed the whole political as well as economic outlook of Europe," Sir Stafford said.

"The vast reliance we in this country still have to place upon gifts and loans of dollars from the United States and Canada demonstrates how far we are from a solution of our problem of a balance of trade and payments with North America, nor do our problems at the moment appear to be growing less.

"Indeed, they are becoming temporarily greater as the gap tends to widen again due to changing economic conditions as we emerge from the period of acute world shortages into a less inflationary situation.

"Europe still needs Marshall plan aid on a scale that will enable it to maintain the dollar imports essential for its recovery over the period of the aid program."

Mr. Finletter called for a continuing drive to tear down barriers against travel and trade among western European countries. "Those which affect the movement of persons could be done away with tomorrow," he said.

CALLS UNITED STATES DIPLOMATS FOOLED

LONDON, June 16.—The right-wing British weekly, Truth, today labeled three high-ranking American diplomats "ventriloquist's dolls" for the ruling Socialist government. It expressed amazement at "their capacity to be duped and humbugged and bamboozled."

The three mentioned in the article are Lewis Douglas, Ambassador to Britain; W. Averell Harriman, roving ambassador in Europe for the Economic Cooperation Administration; and Thomas K. Finletter, administrator of the Marshall plan aid in Britain.

The writer complained that all three Americans in public statements praised the "extraordinary effort of recovery" by the Socialist government. They ignored mentioning, he said, that Britain "has kept afloat from the beginning by American dollars and by nothing else."

What Is Justice in This Case?

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1949

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Times-Herald:

WHAT IS JUSTICE IN THIS CASE?

President Truman was right the other day when he said the spy trials and other disclosures of communism have sent a wave

of hysteria across the United States. Uncle Sam has looked under the bed and, by gum, finds a burglar is waiting for him down there with gun in hand.

IT'S TIME TO BE BOTHERED

Who wouldn't feel a chill? Anybody who doesn't have concern for the safety of the United States of America in present circumstances, just lacks ordinary common sense.

Mr. Truman went on to say that the present agitated state of the public mind is only to be expected as the aftermath of great upheavals and disturbances of war, and pointed to historical precedent.

Does he mean by that the agitation and disturbance have no sound basis in fact? If so, why is the Department of Justice so hard at work prosecuting cases involving communism?

Let's just have a look at some of the items that have the public agitated in its mind.

Alger Hiss: Former assistant to the Secretary of State, former president of the Carnegie Endowment for International Peace, indicted December 15, 1948, for perjury because he denied that he had ever given secret and confidential United States Government information to a Communist agent. The Communist, who has quit the party, has testified against Hiss in court under oath.

Hiss went on trial in Federal court in New York City, May 31, 1949, with the United States Department of Justice presumably straining every nerve and muscle to prove its charges against him.

Does Mr. Truman think that such a matter should be ignored by the American people?

Judith Coplon: Department of Justice employee in a position of trust and confidence who had been complimented for her work by Attorney General Tom Clark himself, indicated March 17, 1949, by the Federal grand jury in this city. Charge, theft of United States Government documents with intent to injure the United States and aid a foreign power.

She had been nailed in New York City 13 days before with extracts of such documents in her purse, as she walked along a street in company with a Russian agent.

On April 25, 1949, she went on trial here and like Hiss in New York is now in the process of offering her defense.

William Z. Foster, Eugene Dennis, et al.: On July 20, 1948, these and 10 other officers of the Communist conspiracy were indicted by a Federal grand jury in New York City on charges of advocating the overthrow of our Government by force and violence.

They went to trial January 17, 1949, in the United States district court of New York City.

In addition to these world-shaking cases, the Criminal Division of the Department of Justice has indictments and presentments in other cities from coast to coast. Trials are scheduled in New Orleans, Detroit, Kansas City, San Francisco, Seattle, and other communities.

WHY THESE PROSECUTIONS?

We don't profess to know what will come out, wouldn't tell if we did, but it is safe to guess there will be shocks and sensations, equal to if not surpassing those in the three trials now running.

It is obvious that the United States Department of Justice is locked in a death struggle with the Communists in our Federal courts.

Why?

Is all this some kind of political sideshow to get votes for Mr. Truman, just because the people of the United States of America want action against the Communists? Or is it because the Government of the United States is literally fighting for its existence?

If Attorney General Clark and the head of his criminal division, Alex Campbell, have ordered these prosecutions just to catch votes, they should be impeached and all the defendants freed with the apologies of the Republic.

If, as we believe, Messrs. Clark and Campbell have ordered these prosecutions because they are good patriots doing their proper duty, they should be supported by the President and the people.

What is justice, here anyhow?

COMMUNISTS HAVE ONLY CONTEMPT FOR THE UNITED STATES OF AMERICA

Communists have no hesitation in saying that the Government of the United States is their enemy, and must be destroyed.

The hallmark of Communist tactics before a court of this country is contempt and ridicule for our constitutional processes.

If such tactics succeed, not only are our courts reduced to a mockery and a laughing stock, but also our Republic is gone.

These are serious times, a deadly danger to our Nation, and people had better look on them as such.

We compliment Attorney General Clark and Mr. Campbell for bringing these prosecutions and we urge them to drive harder, and keep on driving until communism has abandoned these shores in retreat and defeat.

The Iron Hand of General Pick May Be Softened

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1949

Mr. BURDICK. Mr. Speaker, the President can now remove all clashes between the Bureau of Reclamation and the Army engineers as the Hoover Commission Report recommended. The Army engineers were pretty well entrenched in the House, but the Senate applied the Hoover Recommendation to them as well as other departments of the Government. The conference between the House and Senate resulted in making the Army engineers subject to the same recommendations as others.

The President can consolidate and eliminate and arrange matters in view of efficiency and expenditures and his plan can be vetoed by both Houses of Congress within a given period. In the case of the Army engineers in civil functions, the President will undoubtedly follow the recommendations of the Hoover report, which say, eliminate them from this function. If the President does that, he will be supported by both the House and Senate, because of the high-handed performance and unauthorized and excessively unnecessary expenditures. These engineers care nothing for expense, because they still think they are in the war. They still think they are building coastal roads where the cost was triple what it should have been during the war. When a large cat slipped off the grade, they didn't stop to haul it back, but buried it, and called for a new one * * * and they got it. They could have anything in time of war. But now that the war is over, the people of the United States don't want them ordering people around in peacetime and blowing in at random the taxpayers' money.

The Pick-Sloan plan was authorized at $200,000,000 for the Garrison Dam and $200,000,000 for the Missouri-Souris diversion. According to the way the engineers have unlawfully purchased land, and built a city at Riverdale, the best estimates now are that this project will cost a billion if the engineers run the show. When the work has been completed, Riverdale will become another Virginia City—a ghost town—and will finally be sold in chunks and moved away.

The outstanding engineers of the country are not found only among the Army engineers. They know that themselves, and hence hire engineers to aid them. I think there are only 187 Army engineers in the whole corps and to think that this great Nation cannot run its own business in peacetime without men who are schooled in destruction and used to unlimited money, is to admit that this Nation is in a bad way.

This Pick-Sloan plan can be carried out without a hitch and great benefit result if business sense and observance of the law now is adhered to. An end will be put to the propaganda campaign carried on by the engineers to stir up the people in the area to support them in constructing a different dam than that authorized by Congress. They should be builders and not perform like a bunch of ward politicians in the location of a post office.

General Pick's unauthorized and arrogant conduct in the upper Missouri Basin has brought discredit on the United States Army which is an institution for which every citizen wants to feel proud. General Pick is the direct cause of the intense and bitter difference among the people of North Dakota, which can never be settled or abated while he is connected with the project.

He started all the trouble himself. He first said a water pool of 17,000,000 acre-feet was enough, but when he came out to this area the first thing he said was that the pool was to be 23,000,000 acre-feet, and that is what he campaigned on before commercial clubs, meetings, and interviews with news reporters. There was not and is not now an authorization by Congress for a pool of 23,000,000 acre-feet of water. That is what Pick wants and he has spent more time on that propaganda and building Riverdale than he has in creating a pool level that will take care of 17,000,000 acre-feet of water as authorized by law.

He is impossible—those with who he was to cooperate from the Bureau of Reclamation he in substance calls liars and tells about the understanding arrived at in a meeting at Omaha, when he was not there and was not even in the United States. He said there never was anything said about a pool level of 1,830 feet. That is correct. But he fails to state that there was also nothing said about a pool level of 1,850 feet. The question was to the area of the pond in acre-feet, and Pick himself fixed the area at 17,000,000 acre-feet. If the area was to be increased, the law provided that the Army engineers and the Bureau of Rec-

lamation, by agreement, might enlarge it. To this very hour, no such agreement has been made, and a pool of 23,000,000 acre-feet is a pure product of the general's imagination and nothing more.

The engineers' activity in the basic law was limited to flood control and navigation. Irrigation and power development was placed under the authority of the Bureau of Reclamation. Does General Pick follow this directive? Not on your life. He has more irrigation schemes than there is water. The more irrigation he develops at the Garrison Dam, the less water there will be for navigation, because the law places irrigation first. By his very own scheme of irrigation, he destroys any chance of navigation. He wants full power development at Garrison—full development, mind you—but his scheme of irrigation and a canal to Devils Lake will, to that extent, lessen power development. This scheme of irrigation and canal, according to his plan, is to draw the water from the pool above the Garrison Dam—not below the dam, as at Fort Peck. The more water is lowered for this purpose, the less power will or can be developed. His schemes, if analyzed, contradict themselves.

What on earth does he want two canals to Devils Lake for? The Bureau of Reclamation has a plan for that very purpose which the Army engineers approved. His ditch to Devils Lake was never approved in the basic law, or since the law was passed. That makes no difference to this genius of engineering. He is going to have his own ditch.

The sad part of the whole thing is that there never was, is not now, or ever will be water enough in the Missouri River to carry out General Pick's wonderful schemes. Still, that does not deter him in the slightest degree. He will arrange nature some way—make it rain more—make it snow more than it has since we have a record of the river. Any engineer who can use all the water in the river for irrigation, and at the same time, maintain a 9-foot channel in the Missouri River from Sioux City to the Mississippi, can make it rain or snow at his pleasure.

The general says that if he cannot have this extra 6,000,000 acre-feet of water, his whole plan will be disrupted. Knowing now what his schemes are and how they contradict themselves, it is barely possible that a little interruption might be a good thing for the people who live in that area, and a good thing for the taxpayers of the United States.

Federal Aid to Education

EXTENSION OF REMARKS

OF

HON. JOHN R. WALSH

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1949

Mr. WALSH. Mr. Speaker, one of the most pressing needs of this Nation at this time is adequate schools and teachers for our youth. The House of Representatives will soon present a proposed bill for Federal aid to education.

I am in receipt of an article appearing in the May 20, 1949, issue of the Marion (Ind.) News-Herald in the form of a letter from a school teacher of that city. I feel it will be of interest to the Membership of the House.

The article follows:

"EDUCATION FOR ALL MUST BE ATTAINED THROUGH FEDERAL AID TO EDUCATION," SAYS MARION TEACHER IN LETTER

DEAR EDITOR: For about as many years as I have been a teacher, I have seen articles about Federal aid for education in the local daily newspapers—all against. "Guest" editorials from such neighboring cities' presses as Kokomo, Logansport, et al., appear at decent intervals between local papers issues and/or lift the finger of warning, the voice of protest, concerning education for all American youth.

It would seem from these articles that Marion's opinion surrounded by Hoosierdom's other good opinion is a unanimous outcry against the slow-in-coming but at-last-in-sight best hope for the Nation; equalization of opportunity in schools throughout the United States.

"Seem" only. What of the voices of parents—organized, teachers—organized, voters? I don't see their opinion newsspread in this section. However, their work toward Federal aid has been of at least 30 years' patience; but apparently opinion of parents (organized), educators (organized), and voters (ditto) is either discounted altogether as the work of a few dangerous creatures or puffed up as the propaganda of blind-lead-the-blind agitators.

Now I have used the "organized" (popular-word No. 1) advisedly, because we do know that it is through organization that the splash is made. This-and-that is accomplished through organization, and we see Federal aid for schools is on its way. It will look as though, again, the organized way is responsible.

And yet I wonder if there have not been some very vital factors at work which are, in their very nature, highly unorganized.

Take parents. Odd creatures! They try to take their youngsters to places of "opportunity unbounded." They move. From the South they have come North; from the mountains they move to the flatlands; from the rural winterlands they have gone to urban areas, where—bless them—they felt their kids would have a better chance in life. That chance always carries the idea that "the schools'll be better there." These moves, I've noticed, are one-family, two-family migrations. Nothing highly organized, but we who know who go to school to us see how effective these ingressive families are in maintaining upping or lowering the standards of our particular schools. How happy the community which adds a nicely adjusted, educated family. And how disconsolate the neighborhood which has to take in another one of those families whose kids aren't "eddicated up to nithin'."

With Federal aid aimed at equalizing school opportunities, I believe America is going to have fewer worries about its neighbors' movings-in. If the "readin', writin', and 'rithmatic' " chances are about the same for all of us, we can devote our good griping time to considering more important aspects of our community relationships, morale, character.

Too, the unorganized teachers, I believe, have made their tiny weights felt down capitol way. Such tiny weights. Their unorganized way is this: Miss Annie Laurie Tatum teaches in Red Mountain, Miss., for 2 years after her license is issued. Not a very good job, but one does have to get a start. Brother Ansleigh Tatum is set up as a doctor over in Meridian; he (Annie Laurie's favorite brother) is only one reason she moves there to teach. Besides the obvious (quarters, friends, kinfolk), there's a better salary and better working conditions. So Annie Laurie hies herself to Meridian. Red Mountain loses a fine teacher; and Red Mountain cannot afford to lose. Next to Birmingham (we'll say) and then to Long Beach, Calif. In this first new school city, we'd have to cut the parenthesized obvious to quarters and friends while retaining better-yet salary and better-yet working conditions.

In the second new school city, the parenthesis is entirely cut; now we have left salary and working conditions.

Annie Laurie may not have been part of the letters-sending educators group. She wasn't even a member of the National Education Association, but her name was legion. There's a teacher migration as well as a parent migration. It happens, not only in Mississippi, but also in Center Township, Marion, Grant County, Ind.

With Federal aid to equalize school opportunities, I believe America is going to have fewer worries about its teachers leaving. If opportunities for working and earning are more nearly the same for all of us, we can devote our good planning time to more important aspects of our teaching life: community betterment through the schools and through the teacher's own life in the community.

Then, there is the third unorganized whose little squeak has been heard. He is no dues-paying member; he does not trot down to the State house, probably doesn't even know the name of a county chairman; but he does vote. Yes, the un-nondis-organized little voter went to cast his ballot. He voted for the fellow who said education must be better provided for (the other candidate hadn't been too clear on the subject and he voted that way without a noncommittal warning that he liked all of Harry's program except the Federal aid for a decent school program.

With Federal aid as promised by his President, I believe America, etc., etc.

So, Mr. Editor, although I please to be a highly organized parent, teacher, and voter, I still think we should see in the newspapers some castigation of tribute to these others whose very actions have so impressed the nation's lawmakers that last week the Senate, led by converted ROBERT TAFT, of Ohio, passed a good basic bill which will go a long way in bringing about education for all American youth, a consummation devoutly to be wished. I'm glad News Herald shows tendencies in that direction and don't worry about your competition. Print the truth and the people will read.

HIGH SCHOOL TEACHER.

Arlington of the Middle West

EXTENSION OF REMARKS

OF

HON. PETER F. MACK, JR.

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1949

Mr. MACK of Illinois. Mr. Speaker, Recently it was by privilege to attend the rededication service at Camp Butler Cemetery, the "Arlington of the Middle West," in Springfield, Ill. The original tract of land for this national cemetery was selected upon the recommendation of Abraham Lincoln, while he was President of the United States and has served this section of the country as a national cemetery since the Civil War. It now is

the burial site of several thousand men, including over 500 from World War II, who gave their lives so that others might live.

Under leave to extend my remarks, I would like to include the following article by V. Y. Dallman, editor of the Illinois State Register:

(By V. Y. Dallman, editor Illinois State Register)

A great general, who had counted 10,000 casualties in his division—2,000 of them dead—in the Philippine campaign in World War II, had spoken to approximately 10,000 people in Camp Butler National Cemetery.

Taps had echoed across the burial ground. There had been sacred music, a military parade, the tender placing of flowers on the "little green tents" of departed heroes.

There had been prayers for peace, a synchrony of tears for the departed and reverential hopes for the future safety of mankind.

Thus the "Arlington of the West" was dedicated yesterday in a sun-kissed ceremony which will be written into enduring history.

The gallant soldier who flew to Springfield from Washington to sound the keynote of the occasion, and who won a place in the hearts of all who saw and heard him, was Maj. Gen. William H. Arnold, combat hero of Pacific operations against the Japanese in the recent war. He emphasized moral and spiritual values as transcendent to military power. He paid tribute to the dead. He honored future generations by insisting that the future peace and progress of the world depend upon everyday righteousness.

JOSEPH RIDER, CHAIRMAN

The chairman of the committee of the Inter-Veterans' Council, Joseph S. Rider, who presided at the ceremony at the cemetery, presented leaders of all groups who had cooperated to make the dedication a success. The Five Hundred and Fifth United States Air Force band led the parade of flag-bearing units past the reviewing stand. Rabbi Karl Rosenthal gave the invocation. Rev. James J. Haggerty spoke of the fundamental values of peace and practical righteousness. Rev. Richard Newhall gave the benediction.

Louis B. Hellmeyer, cemetery superintendent, was honored, as was Gold Star Mother Mrs. Norman Larson, to whom a memorial folder was presented for all Gold Star Mothers. The Springfield Harmony Club and the Harmonettes of the Riverton High School were vigorously applauded for their songs. James E. Zook was the efficient coordinator. W. R. C. White, as grand marshal, was given a big hand for a great job well done.

Among the guests presented by Chairman Rider was Peter F. Mack, Carlinville, Member of Congress; United States Senators Scott W. Lucas and Paul H. Douglas, of Illinois, unable to attend, were publicly thanked by the chairman for obtaining the active cooperation and attendance of General Arnold. The latter was met at Capital Airport in the late morning, entertained at luncheon at the St. Nicholas by members of the Inter-Veterans' Council, escorted by them to the Butler cemetery, and also to the airport where he departed in a Navy plane at 5:30 p. m.

GENERAL ARNOLD'S ADDRESS

General Arnold spoke briefly but to the point. He held his great audience despite the hot sun which boiled down upon them. His hearers were manifestly conscious of a great and memorable occasion. He quoted Lincoln and sought Divine guidance for all. He said "the world is looking for leadership, both spiritual and political." In conclusion he said in part:

"We cannot long remain a prosperous Nation economically without accepting the responsibilities of political leadership. Our good intentions, inspired by democratic ideals, cannot continue indefinitely to perform the miracle of the 'loaves and fishes.' The nations to whom we have extended the hand of friendship and support are growing stronger. They are recovering from the ravages of war. They are looking to us for moral and spiritual support as surely as they looked to us for economic aid. One is as important as the other. We must never again substitute the seemingly easy expedients of the moment for the more difficult decisions of leadership.

"Bridging the broad gulf between opposing systems in the family of nations is now our chief responsibility. To be equal to the task, it is necessary to make clear that our interests are open-minded and sympathetic; that we are not worshipers of mechanical technocracy, obsessed with its inanimate products, but that we are a people who view with understanding the field of mankind's problems. Let others understand that we threaten no rash exploitation, that instead we offer the promise to plow into the soil as much or more than we take from it—and we shall achieve thereby international friendships as surely as we have achieved national unity. No force, no matter how vast, nor any world organization, however representative, can be effective for peace, if we lose sight of the need for friendship and determination.

"Centuries of thinking and habits must be revised before we can reach our goal. Peace, we have learned, is a more calculated thing than a wish. Democracy is based on Christian ethics. By its precepts of responsibility of each man to his neighbor we may perhaps be able to bring the miracle of peace to reality.

"Thus, while we may still be in the stage of laying the foundation, I think we must acknowledge that it is the spirit of honesty and courage of the type rendered by the men we honor today that will count in the end. Without this spirit which in the past has formulated the ideals of our own people, we would have no religion worthy of the name, no ethics of any value. And in the field of broad politics, without such spirit, there can be no bill of rights, no true government for the people.

"Here before this hallowed spot we stand with grief in our hearts and renunciation of war in our minds. We now know that the time to stop war is before it starts. By statesmanship, honesty, and a steadfast adherence to well-defined principles, we may prevent the resort to arms and the loss of all the things these men to whom we pay tribute today fought to protect.

"In dedicating Camp Butler National Cemetery we should recall the words of the immortal Lincoln with whose life this fair city is so closely associated—'It is rather for us to be here dedicated to the great task remaining before us—that from these honored dead we take increased devotion to that cause for which they gave the last full measure of devotion—that we here resolve that these dead shall not have died in vain, that this Nation under God shall have a new birth of freedom, and that government of the people, by the people, for the people shall not perish from the earth.'"

Palestine's Holy Places

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1949

Mr. CELLER. Mr. Speaker, despite a few propaganda pieces that have been put forth, the fact remains that the Israeli Government has been most scrupulous in protecting the holy places in Palestine. Had it been otherwise, more than a few propaganda pieces would have reached the press for so serious an offense. By this time, when news from Palestine has been featured in all newspapers and periodicals, friendly or hostile to Israel, the stories of vandalism on the part of Israel would have received a wide and inclusive coverage. That it has not been so is testified to by the absence of such stories in the press. The eyewitness report of the American Christian Palestine Committee emphatically states that the holy places in Palestine have been most scrupulously protected even during the heat and height of battle. I saw this myself when I visited Israel. It was pointed out to me by the Israelis themselves, and with pride, how careful they had been in preserving the holy places. The Arabs themselves have not dared make that accusation in open discussion before the United Nations, powerful as they knew such an argument would be. The evidence was too much against it. As the Palestine Post puts it:

The Jews have no desire to overrun or possess places that are holy to other religions. All they want is safe access to their own.

The few propaganda pieces that have appeared are obviously tied to the issue of the internationalization of Jerusalem. Following the partition plan of the UN, the internationalization of Jerusalem was put to trial and failed miserably. When the Arabs invaded Israel, Jerusalem was left wide open to attack. It had been previously believed that the whole world would rush to the defense of Jerusalem, but the sorry fact remains that Israel and Israel alone defended Jerusalem, and alone defended the demolition of the new city, together with the holy places. Jerusalem was under siege for weeks, without water, light, or food, but the whole world kept silent. I believe this one fact shocked Israel more than any other indifference to Israel's fate, for here were not only the Israelis concerned, but the sanctity of the city of three religions.

This must not be permitted to happen again. A realistic and honorable peace precludes the internationalization of Jerusalem.

The following article on the holy places will be, I am sure, of interest to all:

[From the Palestine Post of May 2, 1949]

HOLY PLACES

It may have been chagrin at the friendly agreement between the French consulate general in Jerusalem and the Israel military commander there, providing for the return of part of the Notre Dame Hospice to civilian use, that caused Ramallah Radio yesterday to emit the canard that Jews were occupying monasteries and convents in Ain Karem and that the French consul general had protested. Charging an opponent with the very offenses which one commits is a common form of propaganda, but if used too often tends to defeat itself. And in these particular matters the facts are plain. Jews are not engaged in occupying religious buildings of any kind in Ain Karem; as the French consulate general informed the Palestine Post yesterday, no protest against the alleged occupation had been lodged. In fact, nothing whatever was known there of the matter; and, in response to a French request, the

Israel military commander in Jerusalem had agreed to the evacuation of part of the Notre Dame Hospice, the French consul general appreciating that the rest of the building was needed by Israel for defense purposes.

So much for the facts. Certain lessons may be drawn from them. Apart from the east wing of the Notre Dame Hospice, which faces the Arab lines only a few yards away, the Christian religious institutions in Jerusalem in Jewish occupation are the Ratisbonne Monastery and St. Joseph's Convent, the former by generous permission of its owners, housing Jewish refugees—it is apt to be forgotten that the Arab invasion created a Jewish refugee problem—and the latter, again by kind permission of the owners, serving as a hospital to replace the Hadassah Hospital, which was bombarded by the Arab Legion and made inaccessible. All the other Christian religious institutions in Jerusalem and the Christian holy places, to say nothing of the Jewish holy places, are in that part of the city which is in Arab hands. In the discussions on the future of Jerusalem that, too, is apt to be forgotten.

The Jews have no desire to overrun or possess places that are holy to other religions. All they want is safe access to their own, and the ability to provide that protection against attack on their habitations which the events of the past year and more have shown to be imperative. For their part, they have every intention of giving all necessary safeguards to the religious institutions of other faiths in their own territory, and the return of part of the Notre Dame Hospice is the latest demonstration—it is not the first—of their good will and good faith. The armistice agreement with Transjordan stipulated free access to the holy places. It is not Israel's fault that no progress in the detailed arrangements for this has been made.

Bob Feller Youth Foundation Encourages Leadership

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1949

Mr. DOYLE. Mr. Speaker and colleagues, recently I was privileged to fly to the city of New York and there participate in what appeared to me to be a very significant and memorable dinner. For, Mr. Speaker, it was in honor of two distinguished American lads of high school and junior high school age, respectively, who had saved human lives during the preceding 12 months. It was the Popsicle youth award dinner on the evening of May 18, and in attendance were the following distinguished American citizens, amongst others: Bob Feller, of baseball fame; Chancellor Tolley, of Syracuse University; Hon. Vincent Impelleteri, president, NYC Council; Brother Potamian, dean, Manhattan College; Charles Brecht of St. Johns University; Mr. Joe Lowe, president, Joe Lowe Corp.; Lt. Glenn Davis, United States Military Academy.

I considered it a great privilege and honor to be asked by the Bob Feller Youth Foundation to present a 4-year scholarship in Syracuse University to John Paul Cunningham, of San Marino, Los Angeles County, Calif. And while the lad does not reside in my congressional district, it is in the same county, and the lad had saved the lives of a father and son from drowning in one of the mountain lakes in the nearby majestic Sierra Nevada Mountains. To me, Mr. Speaker, it was significant that Mr. Joe Lowe, the outstandingly successful president of this commercial corporation of Nation-wide spread, should conceive it as conducive to the American way of life that he and his associate owners contribute some of their money profits to encourage the youth of America in terms of successful leadership and unselfish devotion to the helpfulness of others.

The other distinguished lad who received a 4-year scholarship in Syracuse University was Joseph Fisher, of 707 Somerset Place NW., Washington, D. C. The parents of both of the lads were brought to New York at the expense of the foundation.

In speaking with Bob Feller, of baseball fame, he made it clear to me that he felt that emphasis upon leadership of youth by youth was a very desirable and necessary emphasis and Mr. Lowe, the president of the Popsicle Corp., made it clear to me that he felt that by rewarding leadership and responsibility in American youth the foundation would be making the wisest expenditure of its money in terms of American youth.

It was a very happy occasion, very largely attended, and I returned to my work in the United States Congress the next morning at 9:30 with renewed and inspired vigor and determination to do that each day which would more nearly lead to cause American youth to think in terms of doing good for others.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1949

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a letter to the editor of the Granite City (Ill.) Press-Record from the Madison (Ill.) Federation of Teachers, local 763, endorsing Federal aid to education:

THE FORUM

TEACHERS FEDERATION FAVORS SALARY FUND BILL

Mr. C. E. TOWNSEND,
Manager, Granite City Press-Record,
Granite City, Ill.

DEAR MR. TOWNSEND: So much has been said concerning Federal aid to education among educational circles that we should like our many friends to know that our organization is backing the following bill which came up, along with the Taft-Thomas bill, for hearing on June 2, and that the following telegram was sent to our Washington correspondent to be inserted in the hearing on Federal aid:

"The Madison Federation of Teachers, Local 763, wishes to go on record as sponsoring the Lesinski labor bill for education. After reading the various bills, we are confident that this Federal aid to education bill meets the needs of schools and teachers more effectively than any other Federal aid bill. We heartily endorse that 75 percent of funds be set aside for teachers' salaries; that funds be made available for only public school teachers' salaries; that funds be made available for the services of all children in the States; that if a State or person believes it or he has not received just allocation, that the right to an appeal to the Federal courts from the decision of the United States Commissioner of Education be granted; that full benefits of the law be given United States possession; that it is the only bill which will actually equalize educational opportunities; that services to all children, scholarships to needy students, public-school construction, eradication of adult illiteracy are not only highly desirable but absolutely necessary if the great institution of democratic public schools is to perpetuate itself. We endorse the Lesinski bill, urge its support and passage."

Thanking you for your fairness and many past courtesies, I am,

Yours truly,

MARJORIE SMITH, *Secretary.*

Control of Tidelands

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 13, 1949

Mr. HÉBERT. Mr. Speaker, the very able and thorough Bernard L. Krebs of the staff of the New Orleans Times-Picayune has prepared a series of five articles on the attempt of the Federal Government to grab the tidelands of the coast States. Mr. Krebs in his articles draws a comparison between Federal and State operation of oil leases.

If you will but take the time to read these very informative articles you will be able to understand a great deal better some of the things which are involved in this land grab, or attempted land grab, by the Federal Government.

I am presenting three of these articles for the consideration of the House and will later present the remaining two articles in order to complete the entire series which bears not only reading but also serious thought and consideration by each Member of this House.

Here are the first three articles:

FEDERAL-STATE OIL LEASES

(By B. L. Krebs)

The United States and three States are engaged in a contest to determine who shall control the tidelands—the offshore lands which still are under the ocean at low tide.

Oil-producing California, Texas, and Louisiana are fighting to keep control of these tidelands. The United States has asked its Supreme Court to support its claim to them. In addition, several Federal bureaus have suggested legislation to guarantee Federal control.

The belated contest raises questions in which residents of all sections of the Nation have an interest. How are the tidelands being managed under State authority? How would they be managed by Federal bureaus? How would financial returns from tidelands under Federal management compare with returns under State management?

In four years the State of Louisiana has leased for oil development more than 2,500,000 acres of its offshore tidelands in the Gulf of Mexico—an area almost equal to that of the State of Connecticut.

A dozen major oil companies have paid $25,744,000 in bonuses for the first year's rental and an additional $10,350,000 in subsequent rentals to hold the lands that are not being drilled or have not been abandoned to the State.

This $36,095,000 in bonuses and rentals is an average of $14.16 per acre for the gross amount of water bottoms leased.

From million-dollar drilling platforms out in the open waters of the Gulf the State's lessees have already proven up 17 leases which either are producing oil or contain closed-in gas wells.

Had the United States Government been in control of these tidelands in the same 4-year period and leased an equal amount of acreage under its policies and existing Federal laws, it would have netted 50 cents an acre, or $1,275,000 against the $36,095,000 obtained by the State of Louisiana.

Under Louisiana law, the State mineral board grants leases to the highest bidder after advertising for bids.

Under Federal law, the Department of the Interior grants leases on a flat price basis, without competitive bids.

Secretary of the Interior Julius A. Krug on a recent visit to New Orleans said that the States have nothing to lose through transfer of the tidelands to the Federal Government.

"Government control of the tidewater oil fields," Secretary Krug told the Times-Picayune, "would actually put the States in a more profitable position than at present. The charge that the States will lose millions of dollars is ridiculous. In the west the States get 37.5 percent of the royalties paid by private companies operating on Government lands.

The State of Louisiana now gets 100 percent of the royalty from oil produced from the State's water bottoms.

Just how much oil the tidelands will eventually produce is of course an unknown factor. First production out in the open waters of the Gulf of Mexico came near the close of 1947—although there had been a small producing field a mile offshore for several years.

Actual proof of the existence of oil in commercial quantities in the open waters of the Gulf of Mexico brought a burst of activity by major operators, and additional producing areas were soon discovered.

Tidelands oil royalties to the State so far have amounted to $52,000 not including the royalty due on oil held in storage but not sold. The royalty figure is expected to increase rapidly. June production in the Gulf is at the rate of 1,000 barrels a day, and the figure will rise as additional wells are drilled in areas now producing.

The highest price paid for a lease in the Gulf of Mexico was a year ago. Superior Oil Co. acquired a tract of 5,000 acres of tidelands 30 miles out in the Gulf, and more than that distance from the nearest oil field, for a bonus of $103 an acre, or $515,000, and an annual rental starting with the second year of half that amount.

Superior has already constructed a drilling platform and is ready to start in search of oil. By turning the drill stem before the second year of the lease starts it can save the $257,500 rental, since actual operations will serve to hold the lease without further payment of rental.

The substantial prices that the State has obtained for its leases is the key to rapid development of the area. If the Federal Government had been in control of the tidelands and Superior had been able to get the 5,000-acre lease for the 50 cents per acre over 3 years that the Bureau of Land Management of the Department of the Interior has been getting for inshore leases in Louisiana, Superior would have been without the strong inducement to drill immediately in order to save the $257,500 per year rental.

Forty or more leases have been made in the tidelands at figures which would cost the operators $50,000 or more a year to hold them without drilling.

Up to the time the State discontinued leasing tidelands, following suit by the Federal Government to assert paramount rights to the oil, the amount received for the leases was constantly rising.

In August 1945, when the first tidelands were leased, the State received a bonus of $5.12 per acre. In three succeeding years the average rose to $10.87 per acre.

Then the oil fields began to come in, and prices advanced sharply. Between May and October 1948 the State mineral board at competitive bidding let 429,028 acres of tidelands for $7,339,491 or $17.11 per acre.

A letting on October 6 disposed of 130,095 acres for a bonus of $3,058,322 or $23.51 average. Had these acres in the Gulf of Mexico been disposed of the way the Department of the Interior has been handling Government lands in the State, they would have brought $65,000.

Two-thirds of the Gulf of Mexico waters between the shore line and 30 miles out are still unleased by the State. The tidelands were estimated to contain 6,000,000 acres, of which 2,500,000 have been leased, with 500,000 of these acres surrendered by the companies and returned to the State.

With interest in the tidelands at a peak, due to recent discoveries, millions of dollars of additional bonus and rental money would be rolling into the State treasury, were it not for the Federal Government's suit seeking to take control of the water bottoms away from Louisiana.

FEDERAL-STATE OIL LAND HANDLING

(By B. L. Krebs)

The United States Government has granted oil leases for 50 cents an acre after the State of Louisiana leased its lands in the same area for $1v.22 an acre.

Within the same marshland area near the mouth of the Mississippi River in Louisiana, the United States Government owns the land surface, which it operates as a migratory wildlife refuge, and the State of Louisiana owns the water bottoms.

In July 1948, the State mineral boards, after competitive bidding, leased its water bottoms to the California company, large oil operator, for a bonus of $15,130 for the first year, and an annual rental of $7,565 for each of two subsequent years.

The State water bottoms were estimated at that time to contain 1,480 acres, but engineers for the State board of public works now estimate the bayou beds and small ponds at half that acreage.

However, on the original estimate of 1,480 acres the State received $10.22 per acre for the first year of its lease.

On March 1 of this year the Federal Government's 9,742 acres of land surface were leased by the Bureau of Land Management of the Department of the Interior on a noncompetitive basis. The lessees paid the Government 50 cents per acre for the first year, with the second and third years rental free.

Thereafter if they wish to continue holding the leases, and no drilling for oil has started, they will pay 25 cents per acre for the fourth year, with the fifth year again rent-free. That would make an average return to the Government of 15 cents per acre per year for the 5-year period.

This is in accordance with the law passed by Congress a couple of years ago, with the active support of the Department of the Interior. This law placed the leasing of minerals in acquired public lands under the Bureau of Land Management.

Within a 6-mile half circle of the wildlife refuge, leased by the Government March 1, 1949, for 50 cents an acre, the State mineral board in the past couple of years has negotiated at public bidding a score of leases which have netted the State in bonus and rentals from $3.30 per acre to as high as $103 per acre.

There have been four public lettings by the State for the area, most of them on tidewater lands. Bids have been approved on a total of 56,156 acres, which have brought bonuses and rentals amounting to $1,941,880 to the State of Louisiana by three big oil companies. The average paid for prospective oil lands was $34.58 per acre.

One of the profitable deals made by the State was on July 22, 1947, when Shell Oil Co. was high bidder on three tracts of tidelands 6 miles northwest of the migratory game refuge. Their three leases contained 10,722 acres. Shell paid a total bonus of $595,592. It is now holding one of the tracts by drilling, and has paid rental of $163,748 for the second year on the other two.

Return to the State to date on these leases has been $759,341, or $70.82 per acre, plus a drilling program that may bring in an oil field from which the State would receive a one-eighth royalty.

The 50-cents-per-acre leases on the Government's land were applied for August 6, 1947, under the provisions of the public lands leasing law which at that time was being extended by Congress to lands acquired by the United States Government for various purposes. It had previously applied only to mineral leasing in the original public domain.

The applicable provision of the law under which these applications were filed reads:

"Any person qualified to hold a lease who, on the date of this act had pending an application for an oil and gas lease for any lands subject to this act, which on the date the application was filed was not situated within the known geologic structure of a producing oil or gas field, shall have a preference right over others to a lease of such lands without competitive bidding."

The question of the tidelands was at that time before the Supreme Court, and they were specifically exempted from the law, pending final court determination as to whether the United States Government or the States had title to their oil and gas.

This act was approved August 7, 1947. The applications filed the previous day by Allen L. and Frank J. Lobrano of Pointe-a-la-Hache, La., were thereby pending and they had priority in leasing the land. These applications were for four leases, covering about 2,400 acres each in the Delta Migratory Waterfowl Refuge and the Big Delta Migratory Wildlife Refuge.

While the lease applications were following their leisurely progress through the Fish and Wildlife Service and the Bureau of Land Management of the Department of the Interior, the State mineral board held three additional public lettings on water bottoms in the general area of the wildfowl refuges.

Six leases with a total of 11,670 acres, mainly tidelands, were granted to two bidders December 9, 1947, for an average return to date of $43.11 per acre. One of these leases brought an initial bonus of $153,000 for 3,000 acres, and was subsequently drilled and brought into oil production. It lies a few miles southeast of the combined Government-State leases to the California company and the Lobranos.

In April 1948, the State mineral board let two more leases, one for $504,700 bonus on 4,900 acres, or $103 average per acre. This tract, 4 or 5 miles northwest of the California company-Lobrano leases, is now being drilled. Last July the State held its fourth letting, receiving an average of $4.47 per acre on 13,451 acres of land, but including the lease to the California company of the water bottoms in the wildfowl areas for $10.22 per acre.

The leases by the Bureau of Land Management to the Lobranos for 50 cents per acre of the land surface in the wildfowl area where previously the State had leased its water bottoms for $10.22 per acre, was brought to the notice of the State mineral board at a meeting April 21, 1949. An attorney for the California company told the board that the Lobranos had obtained the Government areas and had entered into an agreement with with his company whereby the latter would drill a wildcat well.

The California company's attorney asked the mineral board to agree to unitization of the State and Government leases. This would mean that regardless of whether a well was drilled on Government surface lands or State water bottoms, the royalty would be divided on the basis of the amount of acreage owned by each in the unitized lease.

Over the opposition of Harley B. Bozeman, of Winnfield, one of its members, the board approved the project 4 to 2. Bozeman dictated into the minutes the following statement:

"In voting against the motion to unitize State-owned lands under lease by the California company with United States Government lands leased by the Department of the Interior I did so because I oppose in principle the practice of said United States Government lands being leased by the Department of the Interior without competitive bids."

Prior to the unitization application to the State mineral board the arrangement between the Lobranos and the California company had been approved by the Bureau of Land Management on April 19. A Washington representative of the Times-Picayune was requested to ask the Bureau of Land Management:

"(1) The amount of the overriding royalty reportedly received by the Lobranos from the California company, or any other consideration involved, and

"(2) Why the Government itself couldn't have gotten this extra consideration by making direct leases to the California company, which already held the water bottoms."

To which the Bureau replied:

"That the Government under the leasing law can't accept more than a one-eighth royalty;

"That the owners of leases may do whatever they please about arranging for overriding royalties, except for a limit of 5 percent on wells producing 15 barrels or less per day, and

"That any considerations involved in the deal between the Lobranos and the California company are confidential, so far as the Bureau of Land Management is concerned."

FEDERAL-STATE OIL LEASES

(By B. L. Krebs)

In Winn Parish (county) in central Louisiana, private landowners in the 12 months ending March 3 leased 11,680 acres of land for oil and mineral development. They received $165,042 in bonuses, and will get a dollar an acre rental for each succeeding year.

In 3 years the private landowners would receive in bonus and rentals, $188,402, or an average of $16.13 per acre for the period.

The Bureau of Land Management of the United States Department of the Interior has been handing out, on a noncompetitive basis, oil and gas leases in the Kisatchie National Forest in central Louisiana to bring 50 cents an acre for the same 3-year period.

This is the reason officials of the parishes of Winn, Rapides, Grant, Natchitoches, and Vernon, in which the half-million-acre Kisatchie Forest is located, want to see something done about the leasing law under which the Department of the Interior handles its minerals business.

Revenues of the national forests, whether from minerals, timber of other sources, are of vital interest to the parishes and counties throughout the country in which the forests are located, because one-fourth this revenue goes back to the local subdivisions. This is to compensate them for the tax-exemption the lands enjoy.

It is true that some of the Kisatchie Forest leases made by the Department of the Interior are of questionable title, until proceedings now pending in the United States courts are settled. But Winn Parish officials contend that even in these circumstances the Department of the Interior could get a great deal more than 50 cents an acre by asking for competitive bids, even if it didn't want to wait for the suit to be decided.

This is the reason Harley B. Bozeman, Winn Parish citizen and member of the State mineral board, recently voted at a board meeting against approving unitization of State and Federal leases near the mouth of the Mississippi River, where the State netted an average of $10.22 for its water bottoms in competitive bidding, and the Department of the Interior leased the Government's land surface without bids for 50 cents an acre.

The Department of Agriculture handled the leasing of the national forest lands up to June 1946, when the presidential reorganization act became effective and obtained more than $3,000,000 in competitive bidding. After that the jurisdiction of leasing passed to the Department of the Interior. The leasing law under which the Department of Agriculture had operated, however, remained effective for another year.

Then in August 1947, Congress, under vigorous urging from the Department of Interior, decreed that mineral leases on acquired public lands should be handled under the same law which had prevailed in the leasing of the original public domain. The effect of this change was to preclude competitive bidding for leases on lands thought to be potentially productive of oil and gas, but which were not a part of a geological structure actually procducing oil or gas at the time the lease was effected.

First qualified applicant for a lease on a tract was given the land on a schedule providing for a rental of 50 cents an acre covering the first 3 years, 25 cents an acre covering the second 2 years, and $1 an acre yearly thereafter. Bonuses were not required, and the Government's royalty was held to 12.5 percent. The agriculture department had a sliding scale of royalties which pumped to 15 percent on a 70-barrel-a-day well, and went as high as 32 percent.

Oil development in the areas where the Kisatchie Forest is located has become active only in the past few years. Consequently only a minor part of the forest is now under lease, and a change in the national leasing law could retrieve the situation.

The Department of Agriculture negotiated two leases in the forest before its functions were taken over by the Department of the Interior. On 3,752 acres of land it received $22,515 in bonuses, and 3-year rentals totalling $5,629, or a return of $7.50 per acre.

The Department of the Interior up to March 22 of this year had made six leases for a total of 9,969 acres, bringing $3,984 in rentals. Had it done as well as the private owners in Winn Parish in its leasing program the return would have been more than $150,000.

The State of Mississippi has not been so fortunate with the Department of Interior leasing policies. Several oil fields were developed in central and south Mississippi, where the Homochitto and Heidelberg Forests are located, and before the Interior Department took over, the Department of Agriculture, through an active program of competitive bidding, collected more than $2,000,000 in oil bonuses from the national forest lands, of which one-fourth went to the counties in which the lands were located. Since the Department of the Interior took charge, with its "50 cents per acre for 3 years" schedule, the Bureau of Land Management, according to a list furnished by it to the Times-Picayune, has without competitive bidding negotiated 147 leases in the national forests of Mississippi, covering 192,000 acres of forest lands.

Proceedings of the House and Senate Committees on Public Lands, show that a vigorous effort was made at the 1947 session by Charles F. Brannan, Assistant Secretary of Agriculture, to have the law amended so as to provide for competitive bidding for oil and gas leases, but without result.

Oscar L. Chapman, Under Secretary of the Interior, in a letter dated May 2, 1947, advised the Senate Public Lands Committee that he favored the enactment of the measure putting acquired lands under the public domain leasing law. He noted the fact that the Department of Agriculture had been letting after competitive bids on prospective oil and gas lands, that it had derived substantial bonuses from the practice, and that the counties in which the leased lands were located shared in the revenue. Without expressing himself as to whether or not he favored this method, he suggested how the proposed law could be amended "if the committee feels that this practice should be continued in the interest of the United States and the local governments which participate in the returns."

Assistant Secretary of Agriculture Brannan in his report to the Senate committee on the same day said he favored the placing of the administration of mineral deposits under one agency, but that his Department was opposed to applying the "too generous" public domain disposal policies to acquired lands purchased for a particular purpose.

Discussing the competitive bidding policy hitherto followed by the Department of Agriculture, he declared:

"As a result of this practice, in the 2 years ending July 1946, the Department of Agriculture obtained approximately $3,200,000 in bonuses alone from leases principally for oil and gas, on lands which although of a competitive nature were not within any known structure of a producing oil or gas field. * * * Under the provisions of Senate bill 1081, which would apply the nominal filing fee provisions of the mineral leasing acts to such lands, this important source of revenue would be eliminated."

In reporting the bill favorably on May 12 the Senate committee said that the measure was designed "to further stimulate the discovery of new petroleum reserves and to promote the development of oil and gas on acquired lands."

India's Independence Day

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1949

Mr. CELLER. Mr. Speaker, I rejoice with the good people of India on the advent of India's emergence as an independent republic on August 15, 1949.

The people of the United States view with great interest the setting up of the new democracy of the East. India and the United States have much in common, and may the democracy which unites us

continue to grow from strength to strength.

The leaders of India, Jawaharlal Nehru and Sardar Patel, and other renowned men of India, have done a remarkable job of bringing India out of her age-worn chrysalis into independence. These brilliant minds have steered India past the shoals of disaster that accompanied partition, they have resisted the extremists, and by tact and statesmanship have set up a government which enables the Moslem minority to live in security, and we view with amazement the skill with which these men have solved the problem of the princely states.

Many problems lie ahead, however, and they cry out for solution. Most important of these are the economic problems, and it is hoped that the many attractive schemes, including a dozen projects modeled after our own Tennessee Valley development, will soon go beyond the blueprint stage. It is hoped that there will soon be consummated a treaty of friendship, commerce, and navigation between the United States and the Republic of India—a treaty which will give great impetus to the enhancement of trade between the two countries. India needs capital goods and machine tools, and the wherewithal to set up a workable merchant marine and shipbuilding industry. I am one of those in the United States Congress who wishes to aid India uninhibitedly in this regard. This aid should be given to India by the United States in an enlightened self-interest. I am one of those who would be willing to loan dollars to India to help her procure the necessary machinery and capital goods. I also know that if the United States would come forward and render such aid, Indian capitalists would take much of their money out of hiding and do their share to help India prosper by expanding her production, and by supplying the capital for the creative ventures of the Indian Government.

One cannot let this occasion go by without paying a tribute of respect and honor to the great Gandhi who has gone to a martyr's death. The Congress Party under Gandhi's leadership became a great mass party which claimed the allegiance of every Indian—from millionaire to the untouchable. This Congress Party was the sine qua non of the independence of India.

Gandhi has left an ineradicable impression upon India and upon the world. His benign influence will live forever. Jai Hind.

Southern Crossing Over San Francisco Bay

REMARKS

OF

HON. RICHARD J. WELCH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1949

Mr. WELCH of California. Mr. Speaker, the United States Government has jurisdiction and control over all navigable streams and bodies of water within the United States and its insular possessions. Just and reasonable discretion is always exercised in granting a crossing in keeping with the importance to the security of the Nation of the stream or body of water and with due consideration for the safety and economy of the communities in the vicinity.

The great San Francisco Bay, which in reality is an arm of the Pacific Ocean, by reason of its geographical and strategic location contains more military establishments than any other given part of the United States.

While a member of the legislative body of the city and county of San Francisco, I introduced and secured unanimous approval by that body of the original and all other resolutions directed to the United States Government which made possible the now world-renowned Golden Gate Bridge. The publicly owned Golden Gate Bridge was built during the depth of the depression at a cost of $35,000,000 and without one dollar of financial aid from the Federal Government. During my time as a member of the board of supervisors of San Francisco I was chairman of the Trans-Bay Bridge Committee, appointed in connection with the building of what is now the San Francisco-Oakland Bay Bridge. This bridge, like the Golden Gate Bridge, was also built during the depression at a cost of $85,000,000, of which the Federal Government likewise did not contribute one dollar. The construction of these bridges was bitterly fought by the San Francisco Bay ferry interests.

I finally appealed to President Herbert Hoover who appointed a commission, a part of the commission being appointed by the then governor of California, the late Honorable C. C. Young, at the request of the President, and the President naming the majority of the Hoover-Young Commission. After long and exhaustive studies, the Hoover-Young Commission worked out a plan and location for the present San Francisco-Oakland Bay Bridge. This bridge was built pursuant to an act of the California State Legislature creating a toll bridge authority, which under the provisions of the act authorized the issuance of revenue bonds. These bonds were purchased by the Reconstruction Finance Corporation. The bridge was opened for traffic on January 15, 1939, and it is expected to be fully amortized in 1951 or 1952.

Mr. Speaker, the traffic on this bridge has exceeded all expectations, and in less than 5 years after its completion its capacity during peak hours was reached. Traffic has continued to increase until today a second San Francisco Bay crossing has become an imperative necessity. In 1941 and again in 1946 I introduced the following resolution:

House Resolution 529

Whereas the city of San Francisco, its bay, and the territory adjacent thereto are of the highest strategic importance to any adequate defense of the entire Pacific coast; and

Whereas in recognition of this importance there have been located in or near the city of San Francisco the Presidio Military Reservation, Fort Winfield Scott, Fort Mason, the Army transport docks, the United States Risdon Naval Plant, the United States naval base at Hunters Point, Mare Island Navy Yard, Oakland Naval Air Base, Oakland Naval Supply Base, the United States Army Moffett Air Field, Fort Barry, Fort Baker, the United States Bombardment base, the Suisun Air Base, and many other military and naval establishments in the San Francisco Bay area; and

Whereas the lessons of the recent war have demonstrated the necessity of adequate highways between national defense activities; and

Whereas the natural development of the great international seaport of San Francisco makes it imperative that additional highway and railroad facilities be made available; and

Whereas the San Francisco-Oakland Bay Bridge constitutes the only direct approach by highway to San Francisco from the Oakland-Alameda side of the bay: Therefore be it

Resolved, That the Secretary of War and the Secretary of the Navy are requested to review their report submitted to Congress in response to House Resolution 158, Seventy-seventh Congress, first session, for the purpose of investigating and reporting upon the need and feasibility, from the standpoint of the national defense and the development of peacetime economy, of constructing a bridge from San Francisco to Bay Farm Island, or a system of dams across San Francisco Bay as provided for in the so-called Reber plan, and to be forwarded to the Congress as soon as practicable by the Secretary of War and the Secretary of the Navy, who are further requested to transmit therewith their recommendations in the premises.

The resolution was referred to the Committee on Naval Affairs, the distinguished gentleman from Georgia, Hon. CARL VINSON, being the chairman. The resolution was reported unanimously by the committee and passed this House by unanimous vote.

Mr. Speaker, with the assistance of President Truman, the Joint Army-Navy Board provided for in the resolution was appointed without delay. After long and exhaustive public hearings and studies, lasting well over a year, the board of engineers recommended what has come to be known as the "Southern Crossing." I include herewith report of the Secretary of Defense, the Secretary of the Army and the Secretary of the Navy, as provided for in the resolution:

HOUSE OF REPRESENTATIVES,
COMMITTEE ON ARMED SERVICES,
Washington, D. C., June 17, 1949.

Hon. RICHARD J. WELCH,
House of Representatives,
Washington, D. C.

DEAR MR. WELCH: As you know there are a number of bills pending before the Armed Services Committee granting easements in connection with the proposed San Francisco Bay crossing.

In view of your interest in the subject I inclose a copy of a letter I have just received from Secretary of Defense Johnson commenting on a bill introduced by Representative LEROY JOHNSON, H. R. 4079, on this subject.

With best wishes, I am,
Sincerely yours,

CARL VINSON,
Chairman.

THE SECRETARY OF DEFENSE,
Washington, June 16, 1949.

Hon. CARL VINSON,
Chairman, Committee on Armed Services, United States House of Representatives.

MY DEAR MR. CHAIRMAN: The views of the National Military Establishment with re-

spect to H. R. 4079 have been requested by your committee.

The Army, the Navy, and the Secretary of Defense are all on record in favor of what has come to be known as the southern crossing of San Francisco Bay, as the preferred location from the military viewpoint.

In view of our position in favor of the southern crossing, we recommend against the enactment of H. R. 4079.

A copy of an earlier letter on this subject, addressed to the mayor of San Francisco, is attached.

The Bureau of the Budget has been consulted and advises that, while there is no objection to the submission of this report, the expression for the preference of the southern crossing should not be construed as an indication that the National Military Establishment would support a request for Federal funds to assist in construction should that route be finally decided upon.

With kindest regards, I am,

Sincerely yours,

LOUIS JOHNSON.

After 2½ years delay, due to unwarranted objection on the part of the California State Administration, the California State Assembly, now in session, took the matter in hand and appointed a bipartisan committee from that body. The committee secured the services of a board of outstanding bridge engineers, including O. H. Ammann, who was the chief of engineers who built the George Washington Bridge across the Hudson River. Mr. Ammann was also the chief consultant on the Golden Gate Bridge and the San Francisco-Oakland Bay Bridge. This board of engineers, after exhaustive studies, reported in favor of the southern crossing of San Francisco Bay. Under unanimous consent, I include the report by the board of engineers:

REPORT ON SAN FRANCISCO BAY VEHICULAR CROSSINGS, MAY 25, 1949

Prepared for Assembly Interim Committee on Reclamation of Tidelands and Related Traffic Problems of the Legislature of the State of California, Mr. George Collins, Mr. Arthur H. Connolly, Mr. Randal F. Dickey, Mr. Francis Dunn, Mr. Edward M. Gaffney, Mr. Ernest R. Geddes, Mr. Robert I. McCarthy, Mr. John F. Thompson, Mr. Richard J. Dolwig, chairman.

MAY 25, 1949.

Hon. RICHARD J. DOLWIG,

Chairman, Committee on Reclamation of Tidelands and Related Traffic Problems, Assembly Chamber, Sacramento, Calif.

DEAR SIR: On behalf of your honorable committee, you have requested us to submit our comments and advice in connection with the plan for additional toll crossings of San Francisco Bay as prepared by the Division of San Francisco Bay Toll Crossings of the Department of Public Works of the State of California and embodied in its report of November 1948.

That plan contemplates the construction of two additional crossings; one, the so-called Parallel Bridge, located about 300 feet north of the present San Francisco-Oakland Bay Bridge and parallel to the latter; and the other, the so-called southern crossing, which would cross the bay from the vicinity of Army Street in San Francisco to Fifth Street in Alameda, with connection to Oakland.

In view of the decision of the California Toll Bridge Authority to build the parallel bridge first, and to defer the construction of the southern crossing until it can be financed, you have asked us in particular to give you our advice as to which, if either, of the two crossings should be built first.

We have attended the hearings which have been held by your committee, have studied various previous reports bearing upon the problem, visited the existing bay bridge, and made our own studies as far as the short time available to us has permitted. We have also been supplied with much useful information by the State of California Department of Public Works, by the City Planning Commission and the Department of Public Works of the City of San Francisco, and others.

As the result, we submit attached hereto an abbreviated report containing our essential conclusions and our recommendation.

Respectfully submitted.

T. T. MCCROSKY.
O. H. AMMANN.
OLE SINGSTAD.

PLANNING AND TRAFFIC CONSIDERATIONS

The geographical pattern of the southern bay area has concentrated intensive urban development within a few miles of the waterfronts, below the crests of the surrounding hills and mountains. The coastal area tributary to the bay bridge extends roughly 18 miles on the San Francisco side and 24 miles on the Alameda side. Future industrial growth is expected to be principally to the south, on both sides of the bay. It is axiomatic that coastal areas of such great linear extent should be divided into two or more parts on each side of the water, and the separate parts then connected by separate crossings. This axiom was clearly recognized by the Joint Army-Navy Board. To violate it by building the second bay crossing immediately adjacent to the first would abet further undesirable concentration and congestion, and would fail to provide for the needs of logical southward expansion. Congestion in San Francisco has already reached the point where decay may be imminent; and on the Oakland side, the parallel bridge would shortly produce the same detrimental conditions.

Coverdale and Colpitts calculated, by recognized methods of traffic analysis, that only 18 percent of the total transbay traffic would be more conveniently served by a southern crossing from Army Street to Fifth Street, Alameda, than by the bay bridge. Consequently, if the parallel bridge were built, it is irrefutable that this 18 percent of the traffic would find the twin bridges less convenient; whereas the construction of the southern crossing would, in conjunction with the present bay bridge, serve all traffic reasonably well.

Allowance should be made for many borderline divisions of interzonal traffic, which were assigned by Coverdale and Colpitts almost 100 percent to the bay bridge, due to the rigidity of their application of their basic criteria. Changes in express connections between future freeways and the southern crossing would also alter the percentage division of the traffic between the bay bridge and the southern crossing. For purposes of design, it is prudent to make a much greater allowance for new induced traffic on the southern crossing than the 0.69 percent figure used by Coverdale and Colpitts. Ten percent would be a proper factor.

Combining these allowances, it is considered that the southern crossing may attract the following proportions of total transbay traffic:

	Percent
1956	27–30
1960	31–32
1970	32–33

The Joint Army-Navy Board made very clear that they considered a southern crossing preferable to the twin bridges, from the standpoint of national security. National security is not to be considered the ruling factor in locating the second crossing. However, in view of the Board's conclusion, national security certainly should not be ignored.

Had the southern crossing been designed on the premise that it would be constructed next, and that a parallel bridge might never be constructed, then an entirely different concept of approaches might very logically have evolved.

EXISTING BRIDGES

The roadway capacity of the upper deck of the existing bridge to accommodate passenger cars and other light vehicles without undue congestion and delay has been nearly reached.

The roadway on the lower deck, which accommodates trucks and busses, is now utilized to only one-half its potential capacity, but it would not be advisable under the present arrangement of partly two, partly three, lanes of traffic flowing in both directions to permit passenger automobiles to travel on the lower deck.

The two tracks used by interurban passenger trains are now utilized to less than one-third of their capacity, and the number of passengers carried has been continuously falling off.

The six vehicular lanes of the upper deck are only 9.7 feet wide. This is inadequate for safe high-speed traffic and the lack of a safety mall between lanes of opposite traffic direction tends further to invite accidents. The condition of the three-lane lower deck is even more dangerous, since vehicles going in opposite directions are allowed to use the same central lane.

The existing bridge under the present arrangement is therefore not utilized to its full potential traffic capacity and does not provide adequate safety for high-speed traffic.

PROPOSED PARALLEL BRIDGE

The parallel bridge proposed by the department of public works is to be practically a duplicate of the existing bridge, except that initially the two tracks for rail passenger traffic are to be omitted and either built later, or in their place two additional vehicular lanes are possibly to be provided.

Full utilization of the combined vehicular capacity of the two bridges, amounting to about 60,000,000 vehicles per annum, would be far greater than the traffic which can reasonably be anticipated for 40 or more years to come. It is far beyond any volume that should be concentrated at one location and forced to pass through the densely developed and congested area in the San Francisco business district.

The construction of the parallel bridge with its proposed enormous traffic capacity would make it practically impossible to justify the financing and construction of another crossing to serve the rapidly expanding southern areas for an indefinte time to come.

INCREASING VEHICULAR CAPACITY AND TRAFFIC SAFETY ON EXISTING BRIDGE

An efficient San Francisco and East Bay rapid-transit system is a possibility, but it is not likely to become a reality for many years. If and when such a service can be undertaken tunnels under the bay will serve as effectively and economically as tracks on a bridge.

Removal of the tracks from the existing bridge and the substitution of additional bus service is entirely feasible and would add a very small percentage to the volume of vehicular traffic. It would permit transformation of the lower deck into a modern four-lane highway, with safety mall between roadways of opposite traffic direction, and with ample width of lanes for safe and efficient operation for mixed traffic. The vehicular capacity of the bridge would thus be increased sufficiently to meet the growing traffic comfortably until another crossing

can be completed. The potential revenue from vehicular traffic which would utilize the space now occupied by tracks is far greater than the present revenue from the train service.

The reconstruction of the lower deck can be accomplished without interference with the flow of vehicular traffic over the bridge, and may therefore be undertaken as soon as conversion from train service to busses has been effected.

Our studies indicate that, when the tracks and the heavy load now moving over them are removed, there will be enough carrying capacity in the bridge to permit the construction outside of the bridge cables, towers, anchorages, and trusses of two additional two-lane roadways on the upper deck for automobiles and other light vehicles.

The present six-lane roadway on the upper deck, having narrow lanes and no separating curb, could thus be transformed into two two-lane roadways of ample width and with safety mall between, and the entire upper deck would form a modern eight-lane or dual-dual highway for high-speed travel affording a maximum of safety. Suitable additional approach and toll-collection facilities would have to be provided.

We estimate that this reconstruction, together with the conversion of the lower deck from train to bus service, can be accomplished at close to one-third the estimated cost of the proposed parallel bridge. This estimate covers conversion of the existing rapid transit terminal in San Francisco to a bus terminal, and provision of additional approach ramps and toll-collecting facilities.

Reconstruction of the upper deck could not be accomplished without serious interference with traffic on that deck and would have to await the completion of a second crossing to which part of the traffic would be diverted. Its financing can be deferred until that time, or until need for additional capacity on the existing bridge arises.

SOUTHERN CROSSING

The southern crossing, as proposed by the Division of San Francisco Bay Toll Crossings, follows the general location and plan recommended by the joint Army-Navy Board. It consists of a six-lane causeway and tunnel under San Francisco Bay, a depressed freeway through the city of Alameda from the bay to the Oakland Estuary and a four-lane tunnel under the estuary. The crossing extends from the vicinity of Army Street, San Francisco, to Fifth Street, Alameda, and Clay Street, Oakland, where it connects with the East Shore Freeway. In Alameda it has a traffic interchange at Central Avenue, and on the San Francisco side it is connected to the Bay Shore Freeway by means of a freeway paralleling Army Street and another freeway along Tennessee Street and Six and One-Half Street.

We consider the proposed plan and method of construction practicable and sufficiently developed to form a basis for a reliable estimate of cost.

We are of the opinion that the following modifications of the plan should be made:

The bay crossing should be built as a causeway and tunnel with four lanes, two for traffic in each direction. A recently completed traffic estimate shows that a four-lane crossing at this location would adequately serve the traffic for many years to come. This change in plan would result in a very substantial saving in cost. The freeway in Alameda, from the bay to the estuary, should be on the surface with the principal intersecting streets carried above the freeway on elevated structures. This would effect a material saving in cost. The proposed four-lane tunnel under the Oakland Estuary should be built substantially as proposed by the Division of San Francisco Bay Toll Crossings. The Oakland approach should be connected to the East Shore Freeway in such a manner as to provide traffic movements to and from the freeway in both directions. In Alameda a traffic interchange at Central Avenue, as proposed by the Division, should be built and in addition, means of ingress and egress to the estuary tunnel at the Alameda end should be provided for local Oakland-Alameda traffic.

We believe that consideration should be given to changing the location of the route through Alameda from Fifth Street to Main Street, to avoid passing through the residential area in that city, and also to provide for better means of handling traffic in Oakland.

On the San Francisco side a connecting freeway along Tennessee Street to the Embarcadero should be provided, and also a freeway paralleling Army Street connecting with the Bay Shore Freeway, permitting traffic movements to and from the north, as well as to and from the south.

BAY CROSSING CAPACITIES AND FUTURE ESTIMATED TRAFFIC

The following tabulation gives our judgment as to the "comfortable" capacity of the recommended bay crossings at each stage of progressive construction and expansion. In 1948, the bay bridge carried a total of 26,210,000 vehicles, with considerable crowding in heavy peak hours. Much of the present congestion will be relieved when the four additional toll lanes, now under construction, are in operation.

Our tabulation also indicates the year in which estimated total transbay traffic may be expected to approximate the comfortable capacity of the then existing transbay facilities. Long-term future traffic estimates are evidently subject to many unknown factors. Those that we here present are an extension of Coverdale and Colpitts predictions beyond their figure for 1970, with suitable allowances for nonrevenue vehicles, induced traffic assumed for design purposes, and additional bus traffic replacing key system trains.

Capacities of recommended bay crossings and future estimated traffic volumes

Bay crossing	Comfortable capacity		Combined capacity		Estimated transbay traffic [1]	
	Peak hour, 1 way	Annual	Peak hour, 1 way	Annual	Year	Annual volume
Present bay bridge:						
Upper deck	3,600	21,600,000				
Lower deck	900	5,400,000	4,500	27,000,000	1950	27,538,000
Total	4,500	27,000,000				
Bay bridge with reconstructed lower deck:						
Upper deck	3,600	21,600,000				
Lower deck	2,000	11,400,000	5,600	33,000,000	1954	30,900,000
Total	5,600	33,000,000				
Southern crossing, 4 lanes	2,350	14,300,000	7,950	[2] 47,300,000	1978	47,300,000
Bay bridge with both decks reconstructed:						
Upper deck	5,200	31,200,000				
Lower deck	2,000	11,400,000	9,550	56,900,000	After 2000	55,000,000
Total	7,200	42,600,000				

[1] Based on projection of Coverdale Colpitts figures, with 3 percent allowance for nonrevenue vehicles and 10 percent allowance for induced traffic on southern crossing. Includes busses to replace rapid transit trains after 1950.
[2] If the southern crossing achieves 33 percent of total transbay traffic, it may reach its "comfortable" capacity by 1970. It would not, however, become congested, in our judgment, before 1980.

TIME AND COST ESTIMATES

The short time available to us has not permitted the elaboration of close cost estimates and time schedules for construction. However, we believe that the following program is feasible and the cost estimates adequate as an indication of the practicability of financing the plan and procedure we recommend:

Bay bridge lower deck reconstruction:	
Track removal, paving, vehicular ramps, reconstruction of rapid transit terminal and ramps, real estate; additional toll lanes in Oakland; and allowances for engineering, contingencies, and legal and insurance costs	$7,000,000
Purchase of key system equipment (trains plus new busses)	12,000,000
Total for bay bridge lower deck and key system	19,000,000
Southern crossing:	
Construction costs:	
Bay crossing proper	63,684,000
Alameda freeway	3,000,000
Clay St. estuary and East Shore Freeway connections	$22,000,000
Southern crossing—Continued	
Construction costs—Continued	
Army St. Freeway	[1] $5,400,000
Tennessee - Embarcadero Freeway	[1] 17,800,000
China Basin High Level Bridge	[1] 2,800,000
Miscellaneous items	[1] 1,216,000
Total, construction costs	115,900,000
Real estate:	
Alameda and Oakland	[1] 4,172,000
Army St.	[1] 2,576,000
Tennessee-Embarcadero	3,960,000
Total, real estate	10,708,000
Contingencies at 10 percent of construction costs	11,590,000
Engineering at 7.5 percent of construction costs	8,700,000
Legal and insurance at 1.3 percent of construction costs	1,510,000
Subtotal	21,800,000
Total for southern crossing (round figure)	148,500,000
Total cost, including bay bridge lower deck reconstruction	167,500,000

[1] Division of San Francisco Bay Toll Crossings' estimate.

Debt retirement	[1] $22,793,675
Capital reserve	4,000,000
Total first phase financing, Mar. 1, 1950 (round figure	1P4,500,000
Bay bridge upper deck reconstruction:	
Cantilevered lanes, dividing malls, and necessary improvements to approach ramps and toll collection facilities; contingencies; engineering; and legal and insurance costs	31,000,000
Real estate	5,000,000
Total, upper deck reconstruction and approaches	36,000,000

[1] Division of San Francisco Bay Toll Crossings' estimate.

NOTE.—Reconstruction of upper deck should be undertaken immediately upon completion of southern crossing, expected in 1955, in order to assure completion before traffic demand exceeds the capacity of the southern crossing plus the reduced capacity of the bay bridge during the construction period. Financing is feasible at any time after 1955.

SUMMARY OF CONCLUSIONS AND RECOMMENDATION

It is our opinion that the afore-described plan for the construction of the southern crossing with a four-lane causeway and tunnels, in conjunction with the reconstruction of the existing bridge to provide on the lower deck four lanes for mixed traffic and on the upper deck eight lanes for passenger cars and light vehicles, offers the best and most economical solution of the problem of providing additional traffic facilities between San Francisco and the East Bay area.

We recommend that detailed design studies and cost estimates be made of the plan for increased vehicular facilities across the Bay as outlined in our above-enumerated conclusions.

Respectfully submitted.

T. T. MCCROSKY.
O. H. AMMANN.

National Science Foundation

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1949

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a letter which I have received from S. S. Cairns, head of the department of mathematics, University of Illinois, at Urbana, Ill., in the interest of the proposal to establish a National Science Foundation:

UNIVERSITY OF ILLINOIS,
DEPARTMENT OF MATHEMATICS,
Urbana, Ill., June 15, 1949.

Representative MELVIN PRICE,
The House of Representatives,
Washington, D. C.

DEAR REPRESENTATIVE PRICE: I am informed that House of Representatives bill 4846 establishing a National Science Foundation is coming before you for action. I wish strongly to urge that you give full support to this bill. I was informed by the chairman of the mathematics policy committee, representing the four principal mathematical organizations in this country, that he had written to a number of Congressmen, recommending that a suitable National Science Foundation be established. He also remarked that certain replies from Congressmen had indicated doubts in their minds as to the extent to which scientists are behind such a measure since it appears that not many of them have written to Members of Congress on the subject. In this connection it is to be noted that the mathematics policy committee takes action only when it has assured itself that it has the general support of the mathematical profession.

I have had personal connections with basic research projects being supported through the Office of Naval Research and I have been greatly impressed by the value of that support to scientific research workers and, through their efforts, to the Nation as a whole. Much of the basic research work now coming under the cognizance of the Office of Naval Research is of a nature more appropriate to the functions of a National Science Foundation.

It is my own opinion and, to the best of my knowledge, the unanimous opinion of those mathematicians who are interested in these matters, that the establishment of a National Science Foundation, with the resulting definite separation of military and basic scientific affairs, is extremely important to the development of a suitable research program on a national scale.

Yours sincerely,

S. S. CAIRNS,
Head of the Department.

Communists Making China a Russian Satellite

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 16, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include another eye-witness report of what the Chinese Communists are and do. What costly blunders could have been prevented in our dealings with the Communist rebellion in China if it had been possible to get our policy makers to realize the one fact this article belatedly drives home, namely that Chinese Communists are Communists and subservient to the Soviet Union. What a frightening responsibility those American writers and officials bear who so skillfully and persistently for years have disseminated the agrarianism myth and persuaded our Government to base our China policy on it, thereby losing the victory in Asia which 108,000 Americans died to win.

The article is by Spencer Moosa who, wittingly, or unwittingly, helped develop the myth during the years he spent in Chungking and Nanking, daily seeing and hearing and reporting to American readers the unfavorable fact and fancy about the Chinese Government gathered by the self-styled "anti G-mo clique" of American reporters and officials which set out years ago to pull down the Government of China. Most of them doubtless sincerely believed nothing could be worse than that government, exhausted after its long fight against Japan. And besides, were not the Communists merely Chinese peasants spontaneously struggling to get their freedom from rapacious landlords? Was not a Chinese always first a Chinese?

Unfortunately it was not possible to get them at that time to believe what some, like Moosa, are now discovering the hard way. The tragic miscalculations regarding the nature of communism are producing bad results for the Chinese; they will prove still worse for our country, unless there is a drastic reversal of our policy of "waiting until the dust settles." Mr. Moosa has belatedly discovered the truth, all honor to him for reporting it frankly. Will our Government also wake up before it is too late to keep any of China free and on our side?

Under leave to extend my remarks, I include the following AP dispatch, as it appeared in the Minneapolis Tribune of June 16, 1949:

(Spencer Moosa, veteran Associated Press correspondent in China, was at Peiping when the Communists occupied it January 22. On February 26 all foreign correspondents were told to cease filing dispatches. Now en route from Peiping to Canton, Moosa is free for the first time in nearly 4 months to write of what he saw and heard in Peiping under the new regime.)

(By Spencer Moosa)

PUSAN, KOREA.—Communist China shines as an apparently willing satellite of Russia.

There is no sign of coercion or compulsion in the relationship. There is every sign the Chinese Communists are in fact eager to follow the dictates of Moscow.

As one just coming from Communist Peiping, I have been asked: "Are Chinese Communists simple agrarian reformers who by an unfortunate mischance chose the wrong label?"

The answer is a positive "No."

EXPLODED MYTH

The idea that they are only agrarian reformers is a myth which has been exploded in the minds of nearly everyone in north China. That goes for Chinese as well as foreigners.

Chinese Communists are exactly what they say they are—Communists.

Their doctrines are those of Karl Marx, as adapted by his disciples, Lenin and Stalin—and by Mao Tze-tung, leader of China's Communists.

Through the rule of Mao and his party, China is becoming an extension of the Soviet power bloc.

There is as yet no open evidence that the Kremlin is giving direct, active aid to the Chinese Communists.

The affinity between the Kremlin and Peiping, the capital of Communist China, however, is indisputable.

FOLLOW THE LINE

Chinese Communist leaders are such well-trained Marxists that by following Soviet propaganda they know what tack to take.

For example, when Russia proposed the four-power talks to discuss the Berlin question, the Chinese Communists called a temporary halt to their attacks on "American imperialism."

One of the first things the Chinese Communists did when they felt firmly on their feet in Peiping was to proclaim that they would fight on Russia's side in event of war.

There is no evidence Russia asked for this declaration. In fact, Peiping gossip had it that the Russians were somewhat put out

bec..use the Chinese Communists took the step without Moscow's direction.

Numbers of Russians serve with the Chinese Communists. Chinese Communist employment of Russian technical and political advisers is taken for granted in Peiping.

USE RUSS FLAG

Many Chinese in north China are bewildered and dismayed by the use of the Russian hammer and sickle flag in Chinese Communist meetings and parades.

It is common at big rallies to see pictures of six men, two Chinese and four foreigners.

The Chinese are Mao and Gen. Chu Teh, commander in chief of Chinese Communist armies. The foreigners are Marx, his collaborator Friedrich Engels, Lenin, and Stalin.

This puzzles many Chinese, but not most foreigners. They take it as more confirmation of the fact they have learned in Peiping that Chinese Communists are not fooling when they say they are Communists.

The Painful Realities of Planned Abundance

EXTENSION OF REMARKS
OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 16, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article on the flip-flop the administration is carrying out regarding its grandiose promises to our farmers. As so frequently happens Government programs turn out to be unworkable because they fail to take into account facts which do not agree with their theories. The article was prepared by the Economic Trend Line Studies, an authoritative research organization on economic conditions:

THE PAINFUL REALITIES OF PLANNED ABUNDANCE

We, the free people of the United States of America, in the year 1949 A. D. possess one of the greatest powers ever wielded by mankind. This is the power to produce food in an abundance far beyond our own needs in a world where the vast majority of the population accepts conditions bordering on starvation as a simple everyday reality.

Our plenitude is so great in fact that we are able to give away in a single year more food than the entire Nation consumed a hundred years ago.

Abundance has been a far off worshipful goal to humanity through all the civilized ages. In the ancient world the power of abundance was regarded as an attribute of Deity. The ancient Greeks had their cornucopia, a mythical horn of plenty, from which a goddess could pour forth abundance. The ancient Egyptians had their goddess Isis whose tear was supposed to have caused the River Nile to overflow, and water and fertilize the land. Christianity had its multiplication of the loaves and fishes.

In the early history of this country, the abundance with which our country was blessed was the product of a vast area of fertile virgin soil rather than of unusual effort. Even as late as World War I, farm production under the stimulus of wartime prices was increased only an estimated 10 percent or less in a period of 4 years.

The introduction of scientific methods into agriculture came with the establishment of the United States Department of Agriculture in 1865. From then until the end of World War I, there was a slow but certain improvement in agriculture's productive efficiency. The changes, however, which brought about a veritable revolution in farm production did not gather force and momentum until after the collapse of farm prices in 1921. Failure of farm prices to recover their prewar relationship with industrial prices put agriculture under a severe handicap. The ratio of prices received by farmers, to prices paid, remained below parity from 1921 to 1941.

As a result of this price disparity, improved efficiency and lower production costs were a necessity for the farmer if he were to survive. Under the whiplash of such adversity, which was not wholly eliminated until the Nation entered World War II, farm production made its most impressive gains. These gains were the result of a number of factors, of which better farm management and improved soil practices were first; farm mechanization, second; and improvement in livestock breeds and seed strains, third.

The great depression of the thirties bankrupted the weakest farmers as well as many of the strong. The group that survived were enterprisers of the most competent, efficient and self-reliant character.

Nevertheless, when World War II broke out, no one could be certain that agriculture would or could deliver the tremendously increased food production demanded by war necessities. The farmers were offered every possible inducement to produce, including subsidies and price supports, which were to continue after the war ended.

The wartime performance of American agriculture surpassed everybody's expectations, and, long before the war ended, it became clearly evident that the Nation possessed an agricultural productive power of the first magnitude.

Washington politicians were not slow to grasp the social and political implications of this new-found national power, nor to seek ways of exploiting it to advantage. Why not extend this war-achieved abundance into the peacetime years by Federal planning? The administration was convinced apparently that by proper management a price-support program would succeed in maintaining farm prices at predetermined levels and that, with the incentive of supported prices, farmers would keep on producing at peak levels. The objective, planned abundance, has a seductive appeal that a social-minded Government bureaucracy would find hard to resist.

Apparently the belief is or was widespread in Washington that consumers, if they possessed sufficient sustained purchasing power, would absorb the increased farm production. At least, Agriculture Secretary Charles F. Brannan, then Assistant Secretary, was quoted by the Associated Press in a dispatch dated July 23, 1947, as telling a Senate hearing that Americans would like to buy about one-third more food than in the prewar years 1935–39, and that it is possible to meet these needs. "We have never used, nor are we using, systems of soil and forest management that will sustain permanent high-level productivity." Mr. Brannan was further quoted as saying, "If we do choose to build and conserve our resources—and we must in order to survive—then we have no alternative but to accept abundance and live with it."

In a speech before the National Grange Convention in Portland, Maine, November 14, 1948, Secretary Brannan spoke even more positively. He was quoted by an AP dispatch as declaring that the Truman administration's future farm programs will emphasize "abundant" production. As a consequence, both farmers and the Government will have to learn to "live successfully with abundance."

The one-third more food Mr. Brannan mentioned may have had reference to farm production, which, compared with prewar levels, had increased by that amount. An estimated one-third increase in consumer demand for food would assume that the American people could absorb almost the entire wartime increase in farm production.

At any rate it was precisely at this point that Washington committed the colossal error that was to swamp their carefully laid plans for abundance in an avalanche of farm products.

Washington seems to have overlooked or ignored a simple but very fundamental fact. That fact is that per capita food consumption in the United States is an unusually stable factor. In terms of food energy (calories), per capita consumption of food averaged an estimated 3,300 calories per day in the year 1948, compared with a high of 3,380 in 1946 and 1947, and with an average of 3,250 calories in the 5-year period 1935–39. In the 5-year period 1909–14, when a great deal more physical work was performed, consumption in calories was about 3,500 per day. The average quantity consumed has varied less than 5 percent from one year to another during the 36-year period for which figures have been compiled by the Bureau of Agricultural Economics of the Department of Agriculture. Such increases as there have been, moreover, have occurred during periods of increased expenditure of energy, the two World War periods, for example, and at the end of these wars the quantity consumed has gone back to the original proportions. This means, of course, that no matter how much food production is increased, it will not result in an increased food consumption. With per capita consumption a stable factor, overall consumption will increase only as the population increases.

This stability in per capita food consumption, however, has particular reference to the per capita consumption of food in terms of calories of food energy. The total per capita consumption in terms of pounds of weight can and does vary considerably. During the past four decades there has been a persistent decline, for example, in the consumption of potatoes and cereals and a rise in the consumption of fruits and vegetables.

Apparently the variation in the average pounds consumed per capita is what fooled the architects of our national farm policy. Measured in pounds rather than calories, the peak in food consumption per person was reached in 1946 and represented an increase of 12 percent over the average for the period 1935–39. The United States Department of Agriculture, however, places the increase in consumption at 18 percent instead of 12 percent by weighing it with retail prices for the 1935–39 period. This would have the effect of putting consumption on a comparative dollar of buying power basis. There is nothing wrong of course with this method of computation, but there is grave doubt of the validity of the conclusions drawn from it.

Typical of conclusions drawn from this premise is the following taken from Technical Bulletin 963, United States Department of Agriculture, published in October 1948, which assumes that sufficiently increased consumption is possible to absorb our swollen farm production.

"A relatively high level of food consumption, as compared with that of prewar years, will be necessary to make full use of agricultural production capacity in the period ahead. For example, if per capita food production continues at the same rate as in recent years and if foreign trade returns to prewar levels, enough food would be available for per capita consumption to average 27 percent higher in the years ahead than it did in 1935–39. Exports of food products may remain high for the next several years. But if they decline to prewar levels by 1955 and if production equals the recent wartime volume, enough food would be available for per capita consumption of the expected population to average 15 percent higher than it did immediately before the war.

"Total demand for food products has been large enough in recent years to provide market outlets at relatively high prices for all

that could be produced. This general situation can be expected to continue if domestic demand remains high. A reduction in foreign demand to prewar levels, of course, would mean some reduction in total demand for food products."

The joker in this 12 percent, or 18 percent purported increase in per capita consumption is this. The increase occurred in the food products containing the highest percentage of water, such as milk which is 88 percent water, and fruits and vegetables, which are at least two-thirds water. During the same period consumption of concentrated and high caloric foods, like butter, sugar, and fats and oils, on the other hand, actually decreased. As supplies of the concentrated foods have become freely available since the war, the per capita consumption of the watery foods has declined, and the total poundage of food consumed per capita has shown corresponding reductions. Thus, the apparent increase in per capita consumption of food actually consisted mostly of an increased proportion of water in the foods consumed rather than an increase in nutrients.

The failure of consumption to absorb the present high level of food production has put the Washington agricultural administrators on the horns of a very difficult dilemma. Farmers are left with vast unsalable surpluses of farm crops, much of which the Government is committed by law to buy, or will acquire on default of loans against commodity supplies on the farms. These surpluses are making it impossible for the Government to hold prices of principal farm products at the so-called parity levels. At the same time, due apparently to the Government farm price support activities, prices at the consumer level have failed to reflect the substantial decline in food prices at the producer level.

Finally, acknowledging the untenable nature of his position, the Secretary of Agriculture did a complete about face at a recent Senate hearing. Throwing overboard the policy of agriculture abundance which he had promulgated at the National Grange convention quoted above, Secretary Brannan plumped for marketing quotas on the principal feed crops, designed to prevent unsalable farm surpluses from reaching commercial channels. Such quotas are provided for in the farm-price-support law extended by Congress last year to June 30, 1950.

The farmers, however, had already been told by Secretary Brannan in the heat of an election campaign that they were not going to be the goats in the next depression as they had been in the last, inferring that the Government intended, without any hedging whatever, to make its price-support program effective in preventing an undue decline in farm income. If instead, marketing quotas or production quotas are going to be imposed on farm production, it will acknowledge the failure of price-support operations as now constituted. In short, it will be an abandonment of "planned abundance."

Farmers have notoriously long memories and they are not going to like marketing quotas or production controls, nor are they going to be any better pleased with the severe decline which is now taking place in farm prices and farm income, and which, in spite of promises, intentions and efforts, the Government is unable to prevent.

Out through the countryside these failures can be as devastating to political popularity as a killing frost in September. Meanwhile the Washington administration is not able to offset this political damage in farming areas by building up political capital through benefits of farm price declines passed on to food consumers. Bound to the chariot wheel of statutory price support to the middle of 1950 and to whatever further supports are imposed by Congress for ensuing years, the administration has got itself into an impossible situation. Powerless to prevent the decline of farm prices and of farm income, the Government is prevented by the price support law from marketing the big surpluses that would mean low food costs to consumers. Thus consumers were not allowed to buy the surplus potatoes purchased by the Government last fall in price support operations. These potatoes were either destroyed or turned into stock feed. Similarly the surplus egg production at the present time is not permitted to enter consumer channels. These eggs are dried and stored and exported, if possible. Thus, although the price support program is failing in its purpose, it still continues to penalize consumers.

Meanwhile consumers are being told over their radios that food prices at the farm levels have suffered severe declines but when they go shopping they fail to find the lower prices reflected by the price tags in the grocery stores. The latest available figures show the index of prices received by farmers to be down about 7½ percent and the index of retail food prices to be down about 2 percent. This is creating a discontent that may ultimately cause serious political disaffection before the administration is able to extricate itself from the politically painful situation in which it is so tightly caught.

Thus it appears that a Socialist-minded government grasping what appeared in planned food abundance to be a political tool of great power, has found that it can easily become an instrument of political self-destruction. It would seem as if a workable man-made plan for the management and control of farm production and prices, superior to the methods provided by nature and a free market, still remains as remote a goal as ever. Planned abundance so hopefully envisioned by the Washington administration has by a curious perversion of purposes, become planned scarcity instead.

ECONOMIC TREND LINE STUDIES.

Letter From Harvey W. Brown, President of the International Association of Machinists

---

EXTENSION OF REMARKS
OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1949

Mr. BIEMILLER. Mr. Speaker, under leave to extend my remarks, I include in the RECORD a letter from Harvey W. Brown, president of the International Association of Machinists. This letter seems to me to give a clear and simple explanation, from a man who knows what he is talking about, of the reasons why labor is opposed to the Taft-Hartley Act. As one who is a believer in collective bargaining, I would like this statement to be read by all who do not fully understand the union point of view.

The letter follows:

AN OPEN LETTER TO THE EIGHTY-FIRST CONGRESS

GENTLEMEN: This will be my last communication to you as president of the International Association of Machinists. Within a fortnight I am retiring as president of this union which I have served as a member and officer for the past 44 years. At this time, when it must be clear to everyone that I have nothing to gain for myself, I want to sum up my convictions on the importance of your deliberations on the Taft-Hartley Act.

I have done a lot of traveling all over the United States and a little of it overseas. I have taken part in hundreds of negotiations with employers for whom our members work. I know that free collective bargaining is the best system of adjusting disputes between employer and employees that has yet been devised in our imperfect world.

Most of you will agree with me, I assume, that an individual workman has no power at all to bargain for himself when it comes to dealing with a modern business corporation. The workmen are heard by management only when they talk through a free, democratic trade union.

Most of you will agree with me, I assume, that collective bargaining has helped to maintain some balance between wages, prices, and profits in our country. Union contracts have put a floor under the purchasing power of the plain people in this country who are industry's and the farmers' biggest customers.

When collective-bargaining rights have been won by employees in any shop, there are bound to be differences of opinion with the owners of the shop.

In my experience these disputes can and will be settled if the forces are equally balanced between the parties, and if there is no outside interference. The problem you face as legislators is to maintain the equality of the parties at the bargaining table without permitting interference by the Government.

For all practical purposes, collective bargaining didn't begin on a Nation-wide basis until Congress adopted the Wagner Labor Relations Act of 1935. Except in a few industries, there was no bargaining because the employer held all the cards. He could fire or demote active union members and he could refuse to meet with the union if his employees did run the considerable risk of joining a union.

The Wagner Labor Relations Act established the equality of the parties in collective bargaining by protecting the right of employees to join unions and by insisting that the employer bargain with the unions after they joined. Beyond establishing the right of employees to a seat at the bargaining table, the Wagner Act did not interfere with free collective bargaining.

The repeated charge that the Wagner Act was one-sided is horsefeathers. If the Wagner Act was really one-sided, we could reasonably expect that business profits would have suffered at the expense of wages. But this is not the case. The Department of Commerce reports that corporations took the same proportion of profits in relation to wages in 1946—the year before Taft-Hartley—that they took in 1929. Despite all the propaganda, business corporations suffered no losses under the Wagner Act. That is proof of the pudding.

The Taft-Hartley Act, on the other hand, has disrupted the balance between employer and union. It has rekindled, in the minds of many employers, the idea that they do not have to reach an agreement at the bargaining table. The Taft-Hartley Act has rearmed employers with weapons which many of them believe are sufficient to drive the unions away from the bargaining table.

As surely as God made little apples, I know that if the Taft-Hartley Act remains on the books, corporation after corporation will try to break the unions in their plants as business conditions continue to tighten up. I cannot believe you want that to happen. If it does happen, any one of you who votes to continue the one-sided employer weapons of the Taft-Hartley Act will share in the responsibility not just to working people but to the entire country whose prosperity depends on the stabilizing force of collective bargaining.

Respectfully,

H. W. BROWN,
President, International Association of Machinists.

Address by Secretary of Defense Johnson Before the National War College

EXTENSION OF REMARKS
OF
HON. ELMER THOMAS
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES

Tuesday, June 21 (legislative day of Thursday, June 2), 1949

Mr. THOMAS of Oklahoma. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered today by the Secretary of Defense, the Honorable Louis Johnson. This is an outstanding address, and gives some very valuable information.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

When the United States declared—first in the Truman doctrine, then in the Marshall plan, thereafter in the Atlantic Pact—that it would not, and indeed could not, abide the conquest of western Europe, this Government for the first time joined its economic, political, and military power in a barricade against aggression by treachery or by force.

Thus, in company with free nations, we have labored diligently to immunize them against the economic paralysis that invites political conquest. And by identifying the security interests of the United States with the integrity of free peoples, we have forewarned any aggressor that he cannot trespass upon western Europe without also trampling upon our toes.

With the produce of our farms and the substance of our cities, we have resisted the Communist virus that feeds on economic despair, the conspiracy that prowls in political chaos. We have challenged the strategy of intimidation.

In linking our security interests to those of the Atlantic community, we have lessened the likelihood of resort to armed defense against aggression. For where an aggressor is forewarned that his lawlessness must reckon with the judgment of the American people, he will not lightly challenge the combined resources of our free world.

On the other hand, this diminished possibility of armed aggression does not nullify—or even reduce—the need for powerful military forces in the United States. Rather it multiplies the long-term importance of ready combat forces in the Army, the Navy, the Air Force. And it magnifies the need for superior personnel, modern equipment, and continuing weapon research.

For only if American armed strength stands constantly on the political horizon, can we hope to derive maximum value from our armed forces as a long-term deterrent to war. And only so long as constancy in American military policy reassures free peoples that our moral persuasions in behalf of peace are backed by military muscle, can we expect to hold the free world's front against armed intimidation.

This long-term requirement for American armed strength is not an admission that war is inevitable. Nor is it a denial of United Nations as a forum for negotiation. Instead, long-range military readiness is dictated by Soviet Russia's intransigent opposition to peaceful relationships with the free world.

We have no recourse but to provide for our self-preservation just so long as the attitudes of Soviet Russia are animated by concepts which assert that sovereign and independent governments cannot live peaceably as neighbors; that peoples who do not concede the supremacy of the collectivist state are enemies of human progress; that collaboration cannot serve the interests of both the Communist and non-Communist worlds.

While our free world lies within the shadow of a power addicted to these incorrigible myths—a power hostile to its world environment, conspiratorial in its international conduct, despotic in its internal affairs—we have no choice but to maintain for an indeterminate part of our lifetimes military strength as a deterrent to armed aggression.

As a result the military has become a major factor in the fiscal life of our Nation. It must continue in each successive Federal budget to compete for tax revenues with measures dedicated to the health, progress, and social welfare of the American people. Planes, ships, and tanks cannot be purchased on pay-as-you-go plan without substantial impact on our economy. This is part of the price we pay for self-preservation—part of the cost we must bear for the freedom we prize.

Because of the weighty tax burden we represent to the American people, we in the armed forces must exert ourselves to provide honest value for the dollars we spend. The alternative to efficient and unified management of our armed forces is sacrifice by the American people of a share of their standard of living for waste, duplication, and competition among the services themselves.

This, I submit, they cannot afford in the years that lie ahead.

Prior to enactment of the National Security Act of 1947, each of the armed services was responsible for but a functional share of the Nation's defense. That there was inadequate correlation and some duplication was to be expected.

Today, responsibility for the Nation's armed security has been joined with authority in the National Military Establishment.

And it is here, under the roof of this establishment, that the military chiefs of all three services—as members of the Joint Chiefs of Staff—have been invested with indivisible responsibility for the Nation's security—a responsibility greatly in excess of that devolving upon them as ranking officers of their respective forces.

Thus, in determining the forces that can be supported with funds available to the National Military Establishment, the Joint Chiefs incur responsibility not only for the combat competence of their separate services, but more important—individually and jointly—they become accountable for the sum total armed defense of the United States. For it is upon the considered military judgment of the Joint Chiefs of Staff that the Secretary of Defense must rely for guidance.

It can no longer be claimed that each service is entitled to exclusive judgment and autonomous control of the funds allocated for its role. Since the Joint Chiefs are mutually responsible for the Nation's whole defense, it is their duty to consider the major decisions of any service.

To those who contend that each service must be the sole arbiter of its own need, I would reply that this Nation can no longer tolerate the autonomous conduct of any single service. The unaudited conduct of its affairs by any single service is an open invitation to spendthrift defense. And the waste of our resources in spendthrift defense is an invitation to disaster.

The problem of resolving conflicts within the armed forces is not a simple task of knocking heads together. Its complexities extend into the intricate and technical operations of highly specialized endeavors. With the exception of a few unregenerate warriors of the old-school tie, the separate services have searched diligently to resolve their differences. These differences exist not so much in the acrimonious criticism of one service by another as they do in honest disagreement among earnest men formidably equipped with expert opinion. These men have been done a sad disservice by critics who ascribe to them service loyalties in excess of their duty to country.

Despite the severely contested service disagreements that have handicapped the work of our establishment, there exists today a readiness and defense potential superior to that of any previous period in our Nation's peacetime history. Joint planners of the three services have fashioned strategic plans for the Nation's defense far advanced beyond those of any previous peacetime year. I can truthfully report to you, Mr. President, and to the American people that their defenses have never been in as competent and promising a condition. Let these accomplishments be a monument to my predecessor—Jim Forrestal.

It has become our task to speed this unification of the armed forces into a Military Establishment that will not impair their separate capabilities—but one that will enlarge their constant opportunities for development. By freeing them the burden of dispersal and duplication in effort, the National Military Establishment can help the several services better to concentrate on their primary roles, missions, and functions.

These tasks were defined first at Key West and thereafter at Newport where the Joint Chiefs of Staff met to delineate their service responsibilities in the united defense of the Nation.

Those agreements exist today as a charter for the guidance of each service in its long-range planning. It is a charter sufficiently stable in its definition of roles, missions, and functions to curb uncertainty in our armed forces. At the same time it is a charter so flexible that it can be modified to acknowledge significant changes in world conditions or revolutionary developments in science and research.

As Secretary of Defense, I subscribe to that military charter of service roles and missions. I gladly defer to the professional military knowledge of our Joint Chiefs of Staff, and I shall not knowingly repudiate their judgment unless convinced their views are in conflict with other considerations beyond their province. For to exercise civilian control of our military institutions is not to abrogate military command but to guide it conscientiously in accord with the economic and political policies of this Nation.

There exists in our present strategic concept of national defense an essential and honorable role for each of the armed forces. For security is a cooperative venture to be gained with cooperative effort by the Army, the Navy, and Air Force. It is not a competitive enterprise, where one service can profit at the expense of another. It admits of neither preeminence nor first emphasis. To provide effectively for security, the National Military Establishment must adjudge impartially the representations of our armed forces in weighing the priorities of their needs.

The cancellation of construction plans for a naval supercarrier has been twisted into a charge of persecution against the Navy. Some partisans of that service have exaggerated this action and have represented it as part of a conspiracy either to sink the Navy's air arm or to reduce the Navy to a second-class role.

In their campaign of terror against further unification of the armed forces they have

roused false issues without the substance of truth.

With the extension of American commitments overseas—both in Europe and in the Pacific—a strong Navy is absolutely vital to the security of the United States. Because the naval air arm is a critical weapon in modern sea warfare, we could no more deny the fleet its carrier aircraft than we could deny ships their radar.

That we may put an end to this charge of conspiracy, let me assure you that I am convinced of our continuing need for carrier aircraft.

At the same time I reaffirm the birthright of the United States Marine Corps and its air arm. The Marine Corps' role in the future is guaranteed not by sympathy for its historical tradition but by the proven necessity for equipping fleets with assault forces for the seizure or defense of naval bases essential to the conduct of naval campaigns.

It will be the duty of the Navy by prompt and sustained combat operations at sea to control vital sea areas, to deny ocean highways to an enemy, to guarantee the uninterrupted flow of vital strategic and war materials to ourselves and our allies, to transport overseas Army and Air Forces.

Air warfare has passed through a period of adolescence to find maturity in a new concept of strategic air bombardment. Thus, the threat of instant retaliation through an air offensive has become one of the greatest deterrents to war today.

Strategic air bombing has been chartered by the Joint Chiefs of Staff as the primary mission of the Air Force.

At the same time, the Air Force is held responsible for air defense of the United States. And it is enjoined to provide tactical air support for the Army and for the Navy when required in sea actions.

Tactical air support has become especially crucial to land operations of the Army. For today no army can operate effectively in the field until tactical air operations are coupled with the maneuver of infantry and tanks on the ground.

Even in the combined employment of air, naval, and ground arms, modern war presents a problem of priority and sequence in mounting an offensive against the aggressor's forces and the sources of his strength. In the event of war, the United States has no choice but to join the conflict with an attack of increasing violence, growing intensity, and widening global dimensions.

Since Hiroshima, to a great extent, the fortunes of air power have been linked to the fortunes of the atom bomb. For while the atom bomb may eventually admit of alternative delivery through pilotless rockets or submarines, the strategic bomber today derives its enormous security value from its prospective ability to deliver the bomb on distant land-mass targets.

The long-term American advantage in atomic warfare lies not in exclusive possession of the atom bomb but in the quantity of its bomb production and in the speed and accuracy with which we might deliver these bombs on enemy objectives.

For within a few short years we may witness the end of this era of atomic secrecy—an era whose end will be signaled by the explosion of some other nation's bomb. From that day on, our advantage in strategic bombing will rest not in monopoly possession of the atom bomb but in our superior stockpile, our production capacity, and in the effectiveness and quantity of aircraft required to deliver those bombs.

While the atom bomb has greatly multiplied the destructive force of air power, its effect upon war strategy and the length of war has not yet been completely explored. Certainly the atom bomb is not the absolute weapon. But neither is it just another piece of ordnance which has modified only slightly the strategy of war. The great significance of the atom bomb lies in the destructive and denial power that may be carried in a single aircraft.

Though air power has given promise of a speedier end to conflict, it has not supplanted the soldier who must finally defeat the enemy land forces. For ultimately war between nations is reduced to one man defending his land while another attempts to invade it.

Unlike the Air Force with its bombers on the ready line, unlike the Navy with its ships at sea, the Army must devote a greater share of its strength to nourish a later war potential rather than a large-scale force for instant combat. Nevertheless, it is essential to the security of this Nation, vital to the conduct of war that the Army have a mobile striking force, combat trained and available for urgent dispatch anywhere in the world.

Because the United States could not—without grave distress to the civilized world—abandon western Europe to enemy occupation with the later promise of liberation, our long-term strategy—in the event of war—must rest in the containment and thereafter in the defeat of an aggressor's land-army strength. To live in preparation for so onerous a wartime task, the Army must plan for the rapid mobilization of its mechanized manpower. And it must compensate for our numerical disadvantage both by the destructiveness of its firepower and the mobility of its maneuver.

The postwar military strength of Eurasia has been centered in a land-mass land-oriented power. To prevent this power from spilling over the borders of free nations, we have made it our policy to help those free peoples maintain their integrity and independence. By pledging our resources to their aid, we have identified our security with the security of a free and stable world. We have declared that freedom when threatened anywhere is freedom threatened everywhere. We shall no longer wait behind the seas for the fires of aggression to engulf us. For it is the intent of the American people that we prevent war by construcing such formidable barriers to the likelihood of success in war that no aggressor will chance the adventure.

Thus the primary test of our American military institution lies in its ability to exist indefinitely in peacetime as a forcible deterrent to war without militarizing the Nation or bankrupting it in the ordeal. This we have sought to do by enlisting the resources of science. For in the increased destructiveness of new weapons lies our most promising prospect of achieving adequate defense without dislocation of our economy and waste of personnel in the nonproductive pursuits of war.

You gentlemen who graduate this day from the National War College have studied our security problems not from the abridged viewpoint of the service whose uniform you wear but from the wider range of our national interests. For this institution has fused into a unified concept of national security the most advanced thought of the Army, the Navy, the Air Force and the civilian agencies of our Federal Government.

More than weapons national defense is essentially a business of people. In the last analysis the security of this Nation rests upon the wisdom, the judgment, the integrity, and the professional ability of people like you. If you will lift up your eyes to contemplate the monumental tasks which you as officers of the National Military Establishment share in this Nation's defense, and that of our allies, I am confident the American people can vest their good faith in you.

Chain-Store Lobby and Other Monopolies, Trusts, and Cartels Seek To Repeal Antitrust Laws, Destroy Home Merchants, and Legalize Price Fixing for Big Business—S. 1008 Favorably Reported Without Committee Hearings—Rules Committee Requested To Hold Up

---

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1949

Mr. PATMAN. Mr. Speaker, the following letter is self-explanatory:

JUNE 21, 1949.

Hon. ADOLPH J. SABATH,
Chairman, Committee on Rules,
House of Representatives,
Washington, D. C.

DEAR MR. CHAIRMAN: The Committee on the Judiciary this morning reported favorably to the House of Representatives S. 1008, a bill that was introduced by Senator MYERS, of Pennsylvania (a companion bill by Representative WALTER, of Pennsylvania), as entirely changed by a substitute offered by Senator O'MAHONEY, of Wyoming.

This substitute was presented on the Senate floor, and without any hearings of any kind having been held on the substitute in the Senate, the substitute was adopted.

This O'Mahoney substitute substantially repeals the antitrust laws of the United States and will be in the interest of monopolies and trusts. It will favor big business and cartels and legalize price fixing against the public interest.

This letter is to ask you and your committee not to grant a rule to expedite this bill before the House of Representatives for the following reasons:

1. As chairman of the Committee on Small Business of the House, I am asking our committee to have hearings on this bill at once and to bring out important information that Members of Congress should have before voting on this important proposal that is not now available to them, and especially point out its devastating effects on small business.

2. The chain-store lobby is pushing for the passage of this bill, knowing it will assist chain stores to destroy local independent merchants.

3. The passage of this bill will absolutely nullify and repeal three important decisions of the United States Supreme Court in the Cement, Rigid Conduit, and Salt cases. These decisions are in the interest of the people generally and Congress should not take any action that would in any way interfere with these decisions going into effect.

4. The rules of evidence will be changed if this bill becomes a law so that identical bids would no longer be unlawful; therefore, industries that have heretofore fixed their own prices can, by unconversational understandings, resort to such practices in a perfectly legal manner.

5. The Supreme Court in 1945 entered a decision outlawing basing points, but it was not until 1948 when the toes of big steel and big cement were stepped on that such strong objections, highly financed, supported by people of great influence, were urged to basing points.

6. The passage of this bill is against the public interest and the bill should not be presented to the House before adequate hearings are available. Our committee will conduct these hearings promptly and keep the Committee on Rules fully advised of progress made.

There were no hearings in the Senate and practically no hearings in the House—certainly inadequate hearings—and the House should not be called to vote on such a major proposal involving the economic affairs of our country without full and complete hearings.

Sincerely yours,

WRIGHT PATMAN.

Why Laurens Won

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1949

Mr. BRYSON. Mr. Speaker, yesterday I called attention of the House to an award which had been won by Laurens, S. C., in the national pedestrian-protection contest. I now desire to further extend my remarks on the subject.

Laurens, S. C., was awarded first place among cities under 10,000 population in the 1948 national pedestrian-protection contest because of its outstanding program of pedestrian protection and its perfect record of no pedestrians killed or injured in traffic during 1948. The award was won in competition with 360 cities of 5,000 to 10,000 population.

Among the 896 cities of all sizes reporting in the contest, Laurens received more contest points than any except Peru, Ind., winner of grand award among cities under 50,000 in population.

Laurens' pedestrian protection program was balanced and top ranking in practically every phase. Its accident records system was one of the best reported and received 93 percent of possible contest points. Laurens was the only city receiving full contest credit for pedestrian legislation and enforcement. This reflects great credit on Chief William T. Ivey and the Laurens Police Department. Laurens is one of the few small cities having pedestrian control regulations and enforcing them. While 91 of Laurens citizens were arrested for violating pedestrian laws, 107 drivers were arrested for violating pedestrian right-of-way. As can be seen, while using enforcement to teach pedestrians that they are a part of traffic and as such have definite responsibilities, Laurens police are eternally alert to protect the walker from irresponsible drivers.

The engineering program carried out to improve traffic conditions for the pedestrian also received full contest credit. During the year Laurens added new miles of sidewalk, new street lighting, marked crosswalks at additional intersections and provided new loading zones for transit riders.

For its community organization for pedestrian protection, Laurens ranked first among cities in its size class and received 83 percent of possible score. This is an important phase of traffic safety in which most cities do not do nearly enough. An aroused public, vigorously supporting a traffic safety program is almost essential to the success of the effort. That the people of Laurens are behind their city's program and that it has become a community effort is indicated by the outstanding results obtained.

Only 6 of the 360 cities in its size class received as much credit as Laurens for school safety activities. Laurens has school safety patrols in all of its elementary, junior high, and high schools. It conducts a program designed to get pupils to use the safest route when going to or from school. The schools have bicycle clubs, student safety councils and do an intensive job of teaching pedestrian safety in the classroom.

Driver education with behind-the-wheel instruction is taught in high school. An important part of this course relates to driver and pedestrian responsibilities.

Laurens ranked fifth among cities in its size class in public education activities carried out. These included showings of traffic safety films, extensive use of radio and press, talks before civic groups, and the use of educational materials such as posters, cards, leaflets, and so forth.

SOMETHING ABOUT THE NATIONAL PEDESTRIAN PROTECTION CONTEST

The national pedestrian protection contest, begun in 1939, is sponsored by the American Automobile Association and affiliated automobile clubs, to furnish State and city officials with an effective tool for arousing public interest in preventing needless pedestrian traffic deaths. That officials are using this tool is shown by the fact that nearly half of the eligible cities in the country—over 5,000 in population—submitted rather extensive reports on their pedestrian protection activities carried out during 1948.

Cities compete in classes based on size and States in groups based on similarity and severity of problem. At the end of the year a national board of judges composed of leaders in the fields of highway transportation and traffic safety examine the reports filed by the participating States and cities and select the winners. The judges for the 1948 contest are shown on the attached list.

When a city or State enters the contest the chief executive designates a person to serve as his contest representative. The contest representative for South Carolina is Lt. George E. Hurteau of the highway patrol. Lieutenant Hurteau was cited by the national board of judges for outstanding leadership in the field of pedestrian protection for his work in encouraging city programs in South Carolina during 1948.

Increased attention to pedestrian traffic during the past 10 years has produced striking results. In 1947 pedestrian deaths totaled 15,300 for the United States as a whole. In 1948 this number was down to 9,900—a saving of 5,400 lives. During that same period nonpedestrian traffic deaths were reduced only 2,043—from 24,143 in 1937 to 22,100 in 1948.

The committee of judges at the tenth annual national pedestrian protection contest, held at the Mayflower Hotel, Washington, D. C., Thursday, April 28, 1949, follows:

Hon. Thomas H. MacDonald, commissioner, Public Roads Administration, Washington, D. C.

Rudolph F. King, president, region I, American Association of Motor Vehicle Administrators, Boston, Mass.

Pyke Johnson, president, Automotive Safety Foundation, Washington, D. C.

Robert A. Mitchell, president, Institute of Traffic Engineers, Philadelphia, Pa.

Hal H. Hale, executive secretary, American Association of State Highway Officials, Washington, D. C.

Judge Joseph Wyatt, vice chairman of traffic and transportation conference, National Safety Council, Baltimore, Md.

Walter F. Anderson, second vice president, International Association of Chiefs of Police, Raleigh, N. C.

W. Robie Dunman, assistant director, President's Highway Safety Conference, Washington, D. C.

Is There a Surplus of Hogs?

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1949

Mr. MURRAY of Wisconsin. Mr. Speaker, the following official letter and table from the United States Department of Agriculture is rather revealing:

UNITED STATES
DEPARTMENT OF AGRICULTURE,
PRODUCTION AND MARKETING ADMINISTRATION,
Washington, D. C., June 14, 1949.

Hon. REID F. MURRAY,
House of Representatives.

DEAR MR. MURRAY: This is in reply to your request by telephone on June 10 to Mr. H. E. Reed, director of the livestock branch, for information regarding pig goals and production.

In accordance with your request, we are enclosing a table showing the pig goals and production for each spring and fall pig crop 1945 to date.

With regard to pork production this year, for which you requested an estimate, it is estimated that the production of pork, excluding lard, will be about 10.7 billion pounds in 1949. This compares with the production of 10,246 million pounds in 1948, and includes farm slaughter and noninspected wholesale

and retail production, as well as slaughter under Federal inspection.

Sincerely yours,

RALPH S. TRIGG,
Administrator.

Pig goals and production, 1945–49

Year and season	Goal	Production	Production as percent of goal
1945:			
Spring	57,563,000	52,189,000	91
Fall	37,000,000	34,593,000	93
1946:			
Spring	51,651,000	52,392,000	101
Fall	31,551,000	30,548,000	97
1947:			
Spring	58,000,000	52,802,000	91
Fall	35,000,000	31,345,000	90
1948:			
Spring	50,000,000	51,286,000	103
Fall	34,400,000	33,995,000	99
1949:			
Spring	60,000,000	(1)	----------
Fall	(2)	(3)	----------

[1] To be reported June 22, 1949. Reports of Dec. 21, 1948, showed farmers' intentions were to have 14 percent more sows farrow in spring of 1949 than a year earlier.

[2] None established.

[3] No report available. Farmers' intentions regarding sows to farrow fall pigs to be reported June 22, 1949.

Source: PMA, Livestock Branch, U. S. Department of Agriculture.

If it is now necessary to use public funds to support hog prices, who asked for the surplus? Who, but the Department of Agriculture when they asked the hog farmers of our country for 60 million pigs, and then in just a few weeks time asked for millions of dollars for a subsidy. Why was the pig goal stepped up from 50 million in 1948 to 60 million in 1949? Was this expected surplus "planned that way"? Why do the planners plan so poorly?

Economic Status of the United States

REMARKS

OF

HON. EDGAR A. JONAS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1949

Mr. JONAS. Mr. Speaker, the importance of giving more than passive consideration to the economic status of the United States presently can no longer be ignored. There are too many factors which point conclusively toward the road to depression and this picture is abundantly supported by conditions that prevail in our country relative to employment as well as to those conditions that deal with industry, manufacturing, and transportation. Big Government is now up for examination and trial and the following editorial ably and succinctly sets forth the reasons why. It was published in the Chicago Daily News under date of Saturday, June 18:

THE EDITOR'S NOTEBOOK—SPENDTHRIFT GOVERNMENT DRIVES US TOWARD RUIN

Each month, the National City Bank of New York publishes a thoughtful letter on economic conditions and Government finance. In the current issue, it foresees a probable deficit of $5,000,000,000 between tax revenues and Government expenses, even though the Government's prospective income is eight times larger than in 1939.

"This," says the National City Bank sedately, "is an alarming trend."

This, say we, is a disastrous trend.

Unless it can be curbed, and quickly, Russia's fond dream that economic collapse will overtake the United States may not be as fantastic as it seemed a short few years ago.

RECKLESS WASTE A CRUSHING BURDEN

The curse of the Nation today is big Government, a force far more sinister in its impact upon our daily lives than either of those twin whipping boys, big labor and big business.

Until the work of the Hoover Commission was completed, few people paid much attention to the dangers of Government extravagance. Today, there is a growing awareness that if big Government is permitted to run hog wild, as it has for so many years, the crushing burden of the individual taxpayer will be more than he is able to shoulder.

According to the Hoover reports, the executive branch of Government employs 2,092,180 people who are distributed into 9 departments, 104 bureaus, 12 section, 108 services, 51 branches, 460 offices, 631 divisions, 19 administrations, 6 agencies, 20 commissions, 19 corporations, 5 groups, 10 headquarters, 20 units, 3 authorities, and 263 miscellaneous and functionally designed parts.

A few examples of the disorganized manner in which these bureauacies function may be interesting:

1. Two different Government agencies, the Army engineers and the Bureau of Reclamation, each drew up plans for the building of a reclamation project at Hell's Canyon, Idaho. Each set of plans cost the taxpayers a quarter of a million dollars. When completed, cost estimates differed in the amount of $75,000,000.

2. Not so many months ago, Congress appropriated money for a project in the Middle West on the assumption that it would cost $44,000,000. The actual cost turned out to be $131,800,000.

The well-named Hungry Horse project in Montana grew from an estimated $6,300,000 to a final figure of $93,500,000, more than 15 times the original estimate.

3. Construction costs of Government hospitals run as high as $51,000 a bed as compared with $16,000 to $20,000 per bed for voluntary or private hospitals.

4. In a private insurance company each employee handles an average work load of 1,762 policies. In the Veterans' Administration, each employee handles only an average of 450 policies.

5. The difficulties of getting rid of incompetent or superfluous help in a Government bureau are appalling. It requires an average of 7 months to fire an incompetent worker. Some have held their jobs as long as 17 months by resorting to the appeal method. In one of the bureaus, it was found that 24 subordinates receive as much salary as the head of the department.

6. The Bureau of Ships in the Navy Department is financed by 27 appropriations, many of which have no apparent connection with it.

7. The Veterans' Administration offered no explanation of a request for an appropriation of more than $1,000,000,000 other than the title "Salaries and expenses."

8. The Government pays 100,000 employees more than $270,000,000 a year to store and issue supplies. Fortune magazine says that most agencies have enough of certain supplies on hand to last them 1 to 50 years.

9. The Army requested $1,298,000,000 for the National Guard in 1950, as compared with $197,000,000 in 1949. Of this amount, $529,000,000 was set aside for the purchase of 1,537 M–46 tanks at $337,500 a tank. An investigation disclosed that most of the money was to be used in retooling industry to produce tanks—even though the Ordnance Department obtained permission in 1946 to retain the Detroit Tank Arsenal built during the war at a cost of $48,000,000 and was also given a large allotment of tools.

10. Government records in 1948 filled 18,000,000 square feet of floor space—the equivalent of six Pentagon buildings. The rental value of this space is estimated at $20,000,000 a year; the value of the filing equipment in it at $154,000,000.

The Hoover report charges that the Government's housekeeping job is performed "without central direction, under no orderly system, and with enormous waste."

WELFARE MEASURES BEYOND OUR MEANS

Shocking as these examples of Government waste may seem to you, they represent only a few of the evils which are undermining our national solvency.

The chief threat lies in appropriating more money for welfare measures and reform than can possibly be paid for out of current Government income.

A continuation of this fantastic unrealism can only mean higher taxes, or deficit financing. In the end, it means insolvency.

Who is to blame? Where does the responsibility lie for such a sorry state of affairs?

In my judgment, it rests upon the President, the Congress, and the people themselves. Here is why:

1. The President, despite his own unfortunate personal experiences in bankruptcy, seems to believe the resources of the country are great enough to finance not only his welfare measures but the rehabilitation of the rest of the world as well.

It has long been evident to any informed citizen that Truman's campaign pledges and recommendations to Congress could be financed only in a period of boomtime prosperity. Now that the bite is on, the President and his economic advisers seem confused as to which course of action should be taken.

Publicly, he has not receded from his demand for $4,000,000,000 in additional taxes, even though new levies would constitute an additional load on business in a period when it is steadily declining.

The President has consistently scoffed at advocates of economy as typified in his remark that "there are too many Byrds in Congress." Truman's reference to his fellow Democrat, the senior Senator from Virginia, was intended as a warning to other members of his party not to monkey with his spending program.

As President of the United States, Truman has set the political pattern for his followers in Congress and is therefore responsible for the fact that our country is living beyond its means.

2. Congress, both Republicans and Democrats, cannot avoid sharing a good measure of the blame. Members of both parties have voted for needless appropriations in order to serve their personal interests at election time.

Even Senator WHERRY, of Nebraska, the great economizer, voted against Senator PAUL DOUGLAS' proposal to cut the "pork barrel" bill 40 percent.

Every Congressman knows the only way to reduce the budget is to eliminate useless functions of Government. Thus far, Congress has been anything but courageous in facing the problem. Last Thursday's vote giving the President broad powers to reorganize the executive branch of the Government shows, however, that Congress is finally catching up with the public's demand for retrenchment. It is an encouraging development.

3. Finally, the people themselves cannot dodge the responsibility for the extravagance of their Government.

Until the recent economic pinch set in, they were indifferent to the manner in which their taxes were spent; soft-headed over Truman and security.

Even businessmen believed that Federal aid in the form of grants to communities and States was a sort of largesse that came from the Great White Father in Washington without costing them hard earned tax money.

As good citizens, they lobbied tirelessly for more Government funds.

No one seems to have given much thought to the fact that when more and more Government services are demanded by the people, someone has to pay for it.

They are learning now.

Venango County, Pa.

REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1949

Mr. GAVIN. Mr. Speaker, talk about balancing the budget—some of these renowned unbalancers of the budget might take a day off and go up into Venango County in my district—the Nineteenth of Pennsylvania—and take a leaf from the book of the county commissioners, Huling, Brecht, and Brower. Their recent audit for the county for 1948 shows a balance of $700,000.

I would say that this is a splendid report for a small county of approximately 63,000 people and proves there are parts of the United States where the people do regularly balance the budget.

This outstanding achievement might well be emulated by the Federal Government if the Nation is to remain solvent. It is about time we cut out all unnecessary spending, balance the budget, live within our income, and take off the backs of the American people this terrific tax burden that is now crushing the economy of the Nation.

It is a fallacy to think that Uncle Sam is a rich uncle and his pockets inexhaustible, because we all must eventually pay the taxes to raise the money to meet these spending obligations.

So, let us not delude ourselves into thinking that by the proposed programs that shortly will come before us that Utopia can be reached without paying the bills. I would say if we turned back to the States and local units of our government most of those matters which the Federal Government has undertaken we would get value received for our money at a great savings to the American people. If these programs, now being proposed, were turned back to the home folks to decide they would be laughed out of court and would never see the light of day.

Mr. RICH. Mr. Speaker, will the gentleman yield?

Mr. GAVIN. I yield to the gentleman from Pennsylvania.

Mr. RICH. Why not have the Congress hire those men, bring them down here to Washington, and show us how to do it. We do not seem to be able to do that down here.

Mr. GAVIN. I thank the gentleman for his contribution.

[From the News-Herald, Franklin and Oil City, Pa., June 17, 1949]

COUNTY FUNDS SHOW BALANCE ABOVE $700,000—FINANCIAL CONDITION REMAINS STRONG, AUDIT FOR 1948 DISCLOSES

Venango County finances controlled by the county commissioners continued in excellent condition through 1948, the annual report of the board of county auditors, filed late yesterday, revealed.

Balances in the various county funds totaled $710,488.33 on January 3, 1949, the report of the auditors, A. Tory Peterson, S. M. Beighlea, and Mrs. Mary A. Splain, showed. These balances are approximately $32,000 less than the balance at the beginning of 1948.

The excellent financial structure is being maintained despite the fact that no real estate taxes are being levied by the county. Chief revenue comes from the 4-mill personal property tax (stocks and bonds, levied by the State for county purposes. This tax in 1948 brought in $231,053.10. Other revenue included $20,796.08 from the register and recorder's office, $13,725.59 from the prothonotary's office, and $3,038.81 from the sheriff's office.

EXPENSES TOTAL $262,480

Total governmental expenses in 1948 were $262,480.06, and included $108,153.46 for administration, $66,685.85 for the judicial department, $48,185.95 for corrections (maintenance in correctional institutions). There was a balance of $617,560.96 in the general county fund at the beginning of this year.

Under the heading of administration, the auditors' report shows expenditures in the commissioners' office of $18,134.09, including salaries; county solicitor's salary and expenses $2,402.44; court house maintenance $10,945.67; registration, $4,646.95; elections, $13,982.57; tax assessment costs $23,262.88; treasurer's office, $18,638.05; tax collectors' pay, etc., $9,672.27, and the county auditors' salaries and publishing of report, $5,128.54.

It cost the county $24,770.09 to maintain the register and recorder's office; $13,032.45 for the sheriff's office; $604.60 for the coroner's office; $11,538.07 for the prothonotary's office; $3,874 for the district attorney's office; $2,500 for the law library; $4,301.61 for civil court; $3,857.49 for criminal court; $1,137.89 for justices and aldermen and $621.20 for constables.

The cost of maintaining Venango County prisoners in penal institutions was $34,953.90 and maintenance of the county jail cost $9,351.76, including groceries, meat, and provision of $3,544.03. The warden and matron of the county jail were paid $2,642.73 and there was an item of $1,100 for other employees.

Under roads and bridges there was only one item of expense, $128.32 for repairs to a truck and insurance. Miscellaneous items included $10,000 to the Franklin airport and a similar amount to the Emlenton airport.

BONDED DEBT REDUCED

The bonded debt of the county was reduced by $50,000, leaving a balance to be paid of $169,272.69. The balance in the sinking fund at the beginning of 1949 was $56,818.47. Money is transferred from the liquid fuels tax account to the sinking fund for the payment of road and bridge bonds and interest. The liquid fuels account showed a balance of $24,251.01 on January 3, 1949. Receipts in this account in 1948 were $86,775.31 and this together with a balance of $11,087.52 at the beginning of 1948 brought the total in the account to $97,862.83. Paid out of the account was $53,850 to the sinking fund, property damage, $24,251.01, bridge lights, $24,251.01, and other smaller items.

The institutional district report, including the maintenance of the county home, showed receipts of $76,397.17, including a balance from the previous year of $73,442.57. Total expenditures were $58,448.12. At the end of the year there were 73 residents in the home, 47 men and 26 women.

Low-Cost Housing and Slum Clearance

REMARKS
OF
HON. STEPHEN M. YOUNG
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1949

Mr. YOUNG. Mr. Speaker, the Republican Eightieth Congress left homeless veterans still homeless and slum dwellers in our cities hopeless.

This Congress, before the present session is permitted to end, must, above everything else, provide for adequate low-cost housing and slum clearance.

The administration low-cost housing bill has for its purpose the glorification of democracy by extending its benefits, not to a favored class, but to all the people of our country.

One great purpose of the public housing bill is to eliminate slums in our cities. Passage of public-housing legislation will end a shameful waste of people and money. Slums in Washington, Cleveland, and elsewhere represent private enterprise at its worst, operating under a subsidy paid by the taxpayers. Nearly one-fifth of the people in our great cities have been living crowded in slums, yet slum areas require on an average half of the time of police and law enforcement officers, half of the available medical and institutional care, one-third of the time of fire departments and nearly all welfare and charity benefits. Slums, therefore, are not only eyesores but they are wasteful of people and of money.

American people pay willingly for education, health, and other necessary services, for which their less fortunate are unable to pay.

They do this because the welfare of the communities of our Nation require it. So it is with housing for low-income families and the clearance of slums—it is a public responsibility.

Thousands and thousands of our fellow citizens are in a pitiful situation, walking the streets looking for a room or for some shelter. Thousands and thousands of veterans of World War II have reason to feel that they have been let down by the Government, for whom they made sacrifices.

Soldiers knew they were being taken for a long ride when they embarked from Newport News, New York, or San Francisco but that was nothing compared to the long ride they have been given since that time in connection with housing matters.

Some of my comrades of World War II have expressed wonder to me as to what the folks at home were doing while they were away fighting to maintain the American way of life.

During World War II, I had the honor to serve overseas for 27 months. I believe that overseas service gives perspective to those who served in the armed forces. Those soldiers who returned and have been pushed around in housing matters rightfully feel their sacrifices must be made to count. There was not any future in the combat zone but those who came through and returned should be determined there must be a good future for everyone—a home, a job, security, and permanent peace.

Modernize House Chamber

REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1949

Mr. MILLER of Nebraska. Mr. Speaker, preparations for remodeling the House and Senate Chambers have moved me to bring to the attention of the House the urgent need for making the improvements necessary to provide for carrying on the work of this body in the years to come. We will never, in the foreseeable future, have the opportunity we have today. The people are demanding efficiency in government and a better understanding of the way their Government works. Much criticism is being leveled at the Congress and it is essential that we take every opportunity to impress upon them our sincere purpose not only to do our work efficiently but in a manner that will give them that understanding.

My experience as a member of the Nebraska Unicameral Legislature, where voting was done on an automatic recording machine, has caused me to be concerned over the wasteful practice of calling the roll, name for name, as is now done. I realize the practice is the result of a time-honored custom and is sometimes used as a delaying tactic. However, the time has come to seriously consider this practice in relation not only to the present but to the problems of the future. We can no longer indulge in the luxury of time-consuming practices and customs that were fitted to the days before World War I when the Congress met for a few months a year and considered the relatively few domestic problems and the negligible problems presented by our relations with foreign countries. Our predecessors of those years could afford to waste time for it cost the people little. I need not remind you that all this has changed. The Federal Government has expanded its activities over the whole field of economic and social life at home and has assumed leadership in the field of world affairs. So vast has the field of Government expanded that we are compelled to save every minute and every penny possible.

Let us consider this practice of calling the roll to assemble a quorum or record a vote. Each time the roll is called it consumes at least 45 minutes. Given 15 minutes for a Member to come to the Chamber and record his presence or his vote, there would be a saving of 30 minutes on each call. What this means can be readily seen when we realize that there were 489 roll calls in the Seventy-ninth Congress, 285 in the Eightieth, and 107 to date in the Eighty-first. Figuring a 5-hour day, it would have meant a saving of 49 days in the Seventy-ninth, 29 in the Eightieth, and 11 days to date in the Eighty-first Congress. It has been estimated that it costs on an average of $5,000 per day to print the RECORD and $415 per day for the calendar. Even though we do not save 1 penny—and we must not ignore the saving—the business of the House would be carried on with more dispatch and efficiency. Voting by machine would necessitate the assignment of a seat to each Member but that would tend to cause the Members to remain in their own seats and improve the decorum of the House.

While remodeling is being accomplished the House should consider the need of televising and broadcasting its proceedings that is sure to come in the not too distant future. As matters now stand only through the medium of the press and radio commentators are its proceedings made available to the public. With the increasing practice of commentators to slant the news for the purpose of emphasizing a story there is need for the people to hear and see for themselves what their Representatives say and do. May I urge the Members to give careful consideration to these suggestions for improving the work of the Congress.

The Story of a Washington "5 Percenter"

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1949

Mr. JACKSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Jack Steele, from the New York Herald Tribune of June 21, 1949:

THE STORY OF A WASHINGTON "5 PERCENTER"
(By Jack Steele)

WASHINGTON, June 20.—This is the story of a "5 percenter" and a small-business man who signed up as his client on the strength of his assurance that he could secure lucrative government contracts through his influence in Washington.

The "5 percenter's" name is James V. Hunt. He was a war-time lieutenant colonel in the office of the Army Quartermaster General and later an official of the War Assets Administration. For the last 3 years he has been a management counselor in Washington.

The small-business man is Paul Grindle. He is president and treasurer of the C. W. Laing Woodworking Corp., of Framingham, Mass., a furniture factory.

Mr. Grindle came to Washington late in April in search of a government contract for his factory.

He had been referred to Colonel Hunt by a Boston friend of the colonel.

Mr. Grindle was astonished and shocked by Colonel Hunt's recital of his influence with close and dear friends in high Government posts—and by his boasts of the profitable deals he had made for his clients through the "influence" he said he wielded.

BIG NAMES IMPRESS MANUFACTURER

Mr. Grindle was impressed—as any businessman would have been—by some of the names Colonel Hunt tossed off as those of men he knew.

Among them were:

1. Maj. Gen. Harry L. Vaughan, military aide to President Truman.
2. Secretary of Defense Louis A. Johnson.
3. Maj. Gen. Herman Feldman, Army Quartermaster General.
4. Jess Larson, former War Assets Administrator, who was recently named Federal Works Administrator.
5. Maj. Gen. Alden H. Waitt, Chief of the Army Chemical Warfare Service.
6. John R. Steelman, the top-ranking assistant to President Truman.
7. Lt. Col. Roy T. Evans, Jr., executive officer of the supply division of the office of Quartermaster General.

(It should be emphasized here that Washington is a city in which part of the stock in trade of some lobbyists and "5 percenters" is the casual mention of big people they claim to know and the avenues of influence they claim to have. Quite often the big people are no more than nodding acquaintances of the lobbyists and "5 percenters" who bandy their names about. This account does not purport to reveal what the men he named think about Colonel Hunt; it merely discloses how he used their names to Mr. Grindle.)

Colonel Hunt—in his efforts to impress Mr. Grindle—did not stop with the simple mention of the big names he knew.

He described in considerable detail his alleged business and social relations with some of them.

Further, in discussing a number of deals he claimed to have swung for clients, he alleged that some of his big names had directly helped him with them.

CLAIMS OF INFLUENCE

Among such deals mentioned by Colonel Hunt were these:

1. An implied promise Colonel Hunt claimed was made by General Vaughan to help him get part of a contract for remodeling the White House for a client.
2. A claimed assurance by Secretary Johnson to a group of banker clients of Colonel Hunt that the Secretary had not promised to another outfit a contract in which the banker clients were interested.
3. A claim that Colonel Hunt could save one client a $60,000 fine for late delivery on a contract by intervening with General Feldman.
4. A claim that Colonel Hunt was arranging a deal with WAA to buy $200,000,000 worth of surplus airplane parts as junk and resell them as new parts.
5. A claim by associates that Colonel Hunt arranged with WAA the deal to lease the $171,000,000 Dodge plant in Chicago to Preston T. Tucker. They said Tucker never paid off on a promise to give Colonel Hunt 5 percent of his company's stock.
6. A claim that Colonel Hunt represented Kenneth Strickland, owner of the Strickland Furniture Co., High Point, N. C. An RFC loan to this company is now being investigated by a congressional committee.
7. A claim that Colonel Hunt received a $102,500 fee, which he said was his largest, for 6 weeks' work arranging a deal with WAA through which a client hotel chain bought back a hotel for less than half the amount for which the chain had previously sold it to the Government.

SECRETARY JOHNSON'S WORDS RECALLED

Mr. Grindle, after talking briefly with Colonel Hunt in late April, conferred at length with him on May 9, 12, and 20. At the May 12 meeting Mr. Grindle's attorney, Richard Hunt, of Boston (no relation to Colonel Hunt) was present.

They conferred in Colonel Hunt's sumptuous suite of offices in Washington's Barr Building and, with Colonel Hunt as host, at luncheon at the Army and Navy Club.

One wall of Colonel Hunt's private office was lined with autographed photographs of Washington notables, including many Members of Congress as well as military and civilian officials.

Mr. Grindle found Colonel Hunt's words to be in sharp contrast with some uttered by Secretary of Defense Johnson in an address to the United States Chamber of Commerce on May 5, which was a few days after Mr. Grindle first met Colonel Hunt.

Secretary Johnson inveighed against the "five percenters," threatened to "drive them out of the National Military Establishment," and assured small-business men they did not have to deal through such operators to get contracts.

Colonel Hunt, on the other hand, assured Mr. Grindle that it was difficult, if not impossible, to get Government contracts without having such a representative as himself.

On May 9 the "five percenter" and the little-business man signed a written contract.

Mr. Grindle's firm as the first party to the contract, agreed to pay Colonel Hunt's firm $1,000 down, $500 a month for 1 year, out-of-pocket expenses, and 5 percent of the gross amount of any Government contract he received.

Mr. Grindle gave Colonel Hunt a $1,000 check for the down payment on May 12. Colonel Hunt indorsed it in his presence.

Colonel Hunt's firm, as the second party, agreed to aid and assist Mr. Grindle in obtaining contracts from Federal agencies and departments and civilian sources and to promote the prestige and reputation of Mr. Grindle's firm with such agencies and sources.

Colonel Hunt did not guarantee in writing to get Government contracts—or anything else—for Mr. Grindle.

On the contrary, the contract provided that his powers of representation would be limited to negotiation and solicitation.

BUSINESSMAN'S DILEMMA

But Colonel Hunt's verbal assurances were rosy ones.

Businessmen who come to Washington, the Colonel told Mr. Grindle, often find they cannot get Government contracts through regular channels. Some then go to their Congressmen for help, Colonel Hunt continued.

"Ninety percent of my clients are referred to me by Congressmen," Colonel Hunt told Mr. Grindle.

Colonel Hunt suggested that Mr. Grindle throw a cocktail party in Washington for prestige reasons. Colonel Hunt said he would see that seven Senators attended such a party.

Mr. Grindle listened to Colonel Hunt's every word.

Then, believing it his duty as a good citizen to inform other businessmen of the practices he encountered, he made available to the New York Herald Tribune detailed accounts of his conversations with Colonel Hunt—accounts dictated immediately after the conversations occurred.

SOURCES OF INFLUENCE

Mr. Grindle said that Colonel Hunt repeatedly said—even boasted—that many officials were his bosom friends and strongly implied that they were the sources of his influence in Washington.

Here is what Colonel Hunt told Mr. Grindle about some of the names:

General Vaughan: He identified General Vaughan as "my closest and dearest friend." He used these words to Mr. Grindle: "General Vaughan is Harry Truman's closest friend and I am one of Vaughan's closest friends."

Colonel Hunt said he saw General Vaughan at the White House all the time. One of Colonel Hunt's assistants, Richard A. Martin, told Mr. Grindle that Colonel Hunt was known by security guards at the White House and that they let him go right by.

Colonel Hunt told Mr. Grindle that he represented Dorothy Draper, the interior decorator. Colonel Hunt said he was trying to get Dorothy Draper part of a contract for redecorating the White House, which is to be completely remodeled.

Colonel Hunt added that he thought this was possible. Colonel Hunt related to Mr. Grindle that General Vaughan had told him that he (Colonel Hunt) should be able to get the White House redecorating contract for Dorothy Draper.

Among the photographs on the walls of Colonel Hunt's office were several of General Vaughan which he pointed out to Mr Grindle. They were autographed and flatteringly inscribed by the General. One of General Vaughan and Colonel Hunt and his wife was taken at the White House. Colonel Hunt told Mr. Grindle it was taken at a White House party in his honor.

Colonel Hunt, during his conference with Mr. Grindle and Richard Hunt on May 12, mentioned General Vaughan's name as much as 50 times, they reported. He said he had been to the White House to see General Vaughan the day before and related many incidents indicating that they were close friends.

Colonel Hunt told them of one incident which occurred when he was in General Vaughan's office last December. The telephone rang, he said, and General Vaughan got red in the face and swore at great length into the phone.

Colonel Hunt said he later asked: "Harry, who were you talking to?" He quoted General Vaughan as replying: "It was that S. O. B. Drew Pearson."

Secretary Johnson: Colonel Hunt told Mr. Grindle on May 9 that he was very close to Secretary Johnson.

(This was only 4 days after Secretary Johnson had denounced "five percenters" who boasted that they could sell influence to businessmen and has promised to drive them out of the National Military Establishment.)

Colonel Hunt said he was one of four present in General Vaughan's office in the White House last November 4 when Mr. Johnson was called in and notified by one of the group of four that he would be appointed Secretary of Defense by President Truman. Colonel Hunt did not say or imply that President Truman was present.

(This was only 2 days after President Truman's election and 4 months before Johnson's appointment was announced.)

Colonel Hunt had an explanation for Mr. Grindle on May 9 for Secretary Johnson's May 5 blast at "five percenters."

Colonel Hunt declared he had inspired the blast. He explained that some banker clients of his had become alarmed over reports that Secretary Johnson had promised a contract in which they were interested to a certain company. He said he had taken the banker clients to see the Secretary.

"We saw Johnson," Colonel Hunt told Mr. Grindle and Richard Hunt on May 12. "Johnson was hopping mad. He told the bankers that the company had no such promise and added: 'Stick with Jim, and things will be all right.'"

Colonel Hunt said that he received a "large fee" from his banker clients for getting this information.

Colonel Hunt told Mr. Grindle that Secretary Johnson made his attack on "5 percents" out of anger over the reports that had been circulated about that specific contract.

Mr. Grindle said he drew the inference that Colonel Hunt wanted to emphasize that Secretary Johnson was angry at somebody else—not at Colonel Hunt.

(This reporter has learned that an entirely different episode touched off Secretary Johnson's attack. The episode involved an engineering consultant who went to Mexico City and boasted to Mexican purchasing officials that he had an "in" with Secretary Johnson and could help in getting them railway rails.)

General Feldman: Colonel Hunt described General Feldman as "a dear friend" whom he said he saw personally "all the time." Colonel Hunt also told Mr. Grindle: "I don't want to brag, but I am the most influential man in Washington with the Quartermaster Corps."

Colonel Hunt, in one explanation of how he could be helpful to his clients, gave Mr. Grindle his version of how the Quartermaster Corps awards contracts. It follows:

"It isn't always the low contract that gets the bid. They don't have to take the low contract. They can consider ability to fulfill the contract. I can be very helpful in satisfying them of your ability to fulfill. You won't have to fill out any papers. The Quartermaster Corps will take my word for you."

Colonel Hunt also told Mr. Grindle he had intervened with General Feldman to save a client a $60,000 fine for late delivery on a contract. Mr. Grindle's account of what Colonel Hunt told him follows:

"Colonel Hunt said he had been to the Quartermaster General's office to discuss this $60,000 fine and while there had seen Quartermaster General Feldman. He said Feldman suggested that Hunt take the whole thing up with General Crist, head of the Review Board in New York. Hunt said that Crist owed him his job. Hunt said he knew Crist would take care of him and would recommend that a 60-day extension be granted on this contract which would invalidate the fine. He said he knew that Feldman's office would take care of him."

(This reporter telephoned Army Public Relations in Washington and requested "General Crist's" full name and title. A public relations officer called back and reported that the quartermaster general's office said it had no officer by that name and was "very anxious" to know what information the New York Herald Tribune wanted. Within a half hour a telephone call was received at the New York office of the Herald Tribune. It was from E. R. Dibrell, who identified himself as deputy to Brig. Gen. Letcher O. Grice, of the New York office of the quartermaster corps. He explained that the Herald Tribune's Washington bureau had been inquiring about General Grice, but had gotten his name "wrong." He added that the general wanted to know what it was all about.)

Jess Larson: Colonel Hunt told Mr. Grindle that he was "instrumental" in getting Mr. Larson appointed War Assets Administrator.

Colonel Hunt gave Mr. Grindle and Richard Hunt on May 12 a detailed account of some of his claimed successful "deals" in behalf of clients with the WAA while it was headed by Mr. Larson. He wound up with this comment: "I am the reason for getting Jess Larson appointed."

General Waitt: Colonel Hunt told Mr. Grindle on May 12 that General Waitt was one of his "closest friends" and that the

General had been a guest at his house the night before.

On May 20, Colonel Hunt's representative informed Mr. Grindle that Colonel Hunt was "just completing" a deal that would give a client a negotiated research contract from General Waitt. He identified the client as a research laboratory located in Connecticut.

He also claimed to have obtained contracts from the Chemical Warfare Service for some chemical companies and to have received a 15-percent commission on this deal.

John R. Steelman: Colonel Hunt described Mr. Steelman as a friend, but did not say or imply that Mr. Steelman had helped him get any contracts.

Colonel Hunt told Mr. Grindle that Mr. Steelman had given him a tip that Mr. Larson was being considered by the President for War Assets Administrator. He said he had asked Mr. Steelman to hold up action on Mr. Larson's appointment for several hours until he could warn Mr. Larson that the job would "ruin his health." (Colonel Hunt did not explain to Mr. Grindle how this squared with his claim of being responsible for Mr. Larson's appointment.)

Colonel Evans: Mr. Grindle has received no Government contracts in the 6 weeks since he signed up with Colonel Hunt. He did get an invitation through the mail from the Chicago Quartermaster Depot to bid on a list of furniture items needed by the Army.

Mr. Grindle had made no personal application for such a list. He received it only 4 days after Colonel Hunt promised to get it for him. Colonel Hunt told him later that Colonel Evans had telephoned Chicago to have the list sent immediately.

Colonel Evans' name was mentioned frequently by three friends of Colonel Hunt who first put Mr. Grindle in touch with Colonel Hunt.

GRINDLE GETS AN INSPECTION

One of these friends is Arthur J. Conlon, a Boston investment counselor, whose firm is now trying to collect a $1,000 finder's fee from Mr. Grindle for steering him to Colonel Hunt. The other two are associates of Mr. Conlon known to Mr. Grindle only as "Michelson" and "Small."

These three men went to Framingham and inspected Mr. Grindle's factory in April after he had telephoned Michelson on a tip from another Massachusetts businessman that Michelson could help him get a Government contract.

Two days later Mr. Grindle received a call from Mr. Conlon in Washington. Mr. Conlon introduced Mr. Grindle on the telephone to Colonel Hunt. Colonel Hunt told Mr. Grindle on the telephone he thought he could get Mr. Grindle part of a $3,000,000 Government furniture contract and urged him to come to Washington.

Mr. Conlon, who served briefly during the war as a management representative on the Economic Stabilization Board, then faded out of the picture. Michelson and Small, however, visited Mr. Grindle again at Framingham on June 9 and demanded that he pay the $1,000 finder's fee to A. J. Conlon Associates, Mr. Conlon's investment counseling firm.

WIFE TAKES NOTES

Mr. Grindle talked with Michelson and Small with his wife taking notes on their conversation in an adjoining room. He refused to pay the fee, demanding instead that they give him further assurance that Colonel Hunt could actually get him contracts from the Quartermaster Corps.

"Of course he can get the contracts," the man named Small said. "That's his business—that's the only way he has of making a living and he makes a very good living."

(Colonel Hunt used much the same language at their conference on May 9, according to Mr. Grindle, and reported that he had just been out to inspect the new house he was having built in Washington for $60,000 cash.)

"My people would like to know just who Colonel Hunt talks to in the Quartermaster Corps," Mr. Grindle insisted.

"Hunt talks to both Evans and Feldman, but it's Evans who does the work," the man named Small replied, according to Mrs. Grindle's transcript of their conversation.

Small and Michelson also told Mr. Grindle in detail of Colonel Hunt's alleged role in getting Preston Tucker a lease for the Dodge plant from WAA. They said Tucker promised to give Colonel Hunt 5 percent of the Tucker corporation's stock in return, but that the colonel was never able to collect one stock certificate.

"But Tucker is going to get his," the man named Small told Mr. Grindle. "Hunt would do anything to get even with him."

Small and Michelson left Framingham without collecting the $1,000 finder's fee they claimed for the Conlon firm, but not without a parting word of warning by Michelson to Mr. Grindle.

"I tell you, Grindle, never cross up the syndicate," he said. "If you do, you'll end up with nothing but your throat cut."

Socialized Housing

EXTENSION OF REMARKS

OF

HON. HERBERT A. MEYER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1949

Mr. MEYER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include copy of a radio broadcast recently made by me over five stations in my district on the subject of socialized housing. The broadcast follows:

Recently I talked with you on the subject of socialized medicine. Today I am going to discuss another socialized scheme—the administration's housing bill. This housing bill will come before the House next Tuesday for debate, with a final vote expected the latter part of the week, and I believe all of us should know what this measure really means.

This socialized housing bill provides that there will be built in the next 7 years 1,050,000 low-rental family units of public housing, paid for by Federal funds, at a total cost to the Federal taxpayers of $16,000,000,000.

This socialized housing idea arose from the housing shortages that developed during the war when workers and materials were channeled into war work and no new housing was built.

It totally ignores the fact that in 1947 and 1948 private builders constructed 1,785,000 new homes, the greatest number of housing units in 2 years in the history of the country. This construction, incidentally, was encouraged by and built under the Republican Eightieth Congress.

In addition to authorizing grants and loans of $1,500,000,000 for what is termed "slum clearance" in the big cities. This bill also authorizes loans up to $312,500,000 to repair and improve farm homes and buildings where such loans cannot be obtained from local banks.

The total cost for this experiment in socialized housing will amount to $19,312,500,000. It will mean an average additional $518 in taxes on every family in the United States.

Just how will this housing plan be financed and how is it going to be paid for?

Well, this administration's socialized housing bill provides that the Federal Government shall make a maximum contribution at the rate of $400,000,000 for 40 years. This money is not used directly from the United States Treasury. Local or State public-housing authorities will issue bonds and sell them to the general public. Then the Federal money will be pledged as security for the repayment of the money obtained by the sale of bonds and the interest on those bonds. There will be $3,500,000,000 in interest which will also come out of the pocket of the taxpayer.

It is well to keep in mind that Government does not make money. Every time the Government issues a check for anything, the money to cover that check must come out of your, the taxpayer's pocket.

Although the total amounts will be reduced some, since the proposed legislation provides that State and municipal authorities must establish a housing authority covering a part of the bill and this local housing authority, through taxes or bonds, raise one-third of the money, still this public housing will be owned perpetually by the Government and the local housing authorities. None of these houses or apartments will be sold to private owners. They will be rented at a probable $30 per month for four or five rooms. This rental, in most cases, will be far less than the rental value of the properties.

And so we have a new subsidy, this time to tenants. If past experience means anything, it will cost the Government, which means you, the taxpayer, more to erect this public, socialized housing than if the same work was done by private business.

Now let's look a bit into past Federal housing efforts for a comparison as to what has been or can be done.

The Senate recently made a study and investigation of Federal housing constructed by the Government during the past few years. The chairman of that committee, Senator MCCARTHY, of Wisconsin, reported: "We made a very thorough investigation of the Federal Housing Administration and found many things wrong with that agency." Senator MCCARTHY pointed out that the situation got so bad that the General Accounting Office, in attempting to make an audit, reported it was absolutely impossible to intelligently audit the books. The committee called in Price & Waterhouse, nationally known public accountants, who agreed that no possible audit could be made. This investigation revealed gross inefficiency and the waste of millions of dollars.

And so, in my opinion, one of the greatest mistakes this Congress can make is to put the Government into the housing and rental business. It is the same step France took after the First World War when she socialized housing to such an extent that the investment of private funds in building construction practically stopped, with the result today that French cities are largely slums.

This socialized housing bill is also politically tinged. Let me quote the testimony of John W. Edelman, representing the CIO, before the legislative committee at the hearings on this bill. This is what Mr. Edelman said—and I quote: "Once this program is well under way, it will develop sufficient political momentum * * * in the future to increase and extend this authorization to whatever extent may be necessary."

The vote-pulling power in public housing projects was borne out recently in California. Though the State over all voted heavily against public housing, those people who lived in public housing projects voted 2 to 1 for this kind of subsidy.

Now what about the slum-clearance angle? Will these projects help in any way in southeastern Kansas?

The answer is, "No; they will not." The one and one-half billion dollars provided for slum clearance will be used mostly for the purchase of land in the heart of big cities such as Chicago, New York, etc. The people living in these areas will be moved out for a year or so while the old buildings are being torn down and new ones erected. And that won't solve a housing problem, since other quarters will have to be found for them while they are waiting for the new buildings to go up.

As for cost, a twelve- to eighteen-thousand-dollar residence or apartment will be rented to people earning very little, perhaps up to $3,500 a year. These rental units, which should bring in $60 to $90 a month in return on the investment, would be rented for from $30 to $50 a month.

The people of southeastern Kansas and the Nation would be compelled to pay the difference between the rental of these so-called low-income groups and the real cost of carrying this investment. This cost would come out of every taxpayer, no matter where he himself lives.

Before and during the war thousands of such buildings were constructed and rented by the Federal Government. In practically every Federal housing district, the record shows that families earning from $3,000 up to $5,000 and $6,000, even $10,000 and $30,000 a year were allowed to move into these buildings. And they are still occupying them 4 years after the war is over.

As for those slum areas, the taxpayers of southeastern Kansas and the rest of the country who have been thrifty enough to own their own homes will be taxed to clear city slums throughout the Nation. They will have to clear the slums, for instance, brought about by the waste and high taxes of former Mayor Frank Hague, the erstwhile powerful political Democrat boss of Jersey City, N. J. Time magazine had this to say with reference to Hague: "Left to the new mayor was a city with one of the highest tax rates in the Nation, rigged assessments, discouraged businesses, factories deserted by fleeting industry, a city turned into a patchwork of slums by political graft."

If this legislation is passed the lowly taxpayers of southeastern Kansas will also have to contribute to the rebuilding of slums in New Jersey.

I believe that not over 10 percent of all the residences in our district cost the owners $15,000, or could be sold much above that. Many workingmen are living in good, comfortable cottages that they struggled and saved to build that cost them from $3,000 to $7,000. Many a farmer has raised a fine family and is living in a farm home which when built, cost less than $3,000 or $4,000.

Yet these people and these farmers must pay additional taxes for the shiftless people in other areas, if this socialized housing bill is adopted.

And when and if the Government begins spending these billions of dollars for material and labor, it will be tough on the little fellows who want to build a home or a business building, to compete with the Government which will be bidding up the price of construction. And the waste on these projects, judging from past experience, will amount to millions of dollars, a part of which will be taken away from every family in our district.

Frankly, I don't believe this housing program if it goes through, will greatly increase the number of houses that will be built. Instead, if this socialized-housing bill does go through, housing will cost more money and, in my judgment, we will get less units of housing.

You just can't get housing by legislation. Houses are built by carpenters, painters, bricklayers, and other workmen. Practically every workman in the building trades industry who wants to work, can work every day at the present time in the building of new houses or the repairing of old ones. When the Federal Government goes into the housing business, it will slow down private investment capital which would otherwise go into housing. That has been proven in the past. I repeat, in 1947 and 1948, even with the shortage of material we had then, private builders built 1,785,000 homes, the greatest number of housing units ever built in the history of our country.

If the Government will stay out of this housing business, I predict within a short space of time the housing needs of the people will be met. And, as the cost of materials drop, at prices the people can afford to pay.

This bill would provide homes or apartments for about 4,000,000 people. They would be securing their rent at approximately 50 percent less than normal rentals. In addition, the contracts which must be let, the commissions paid, the jobs created, will work to the benefit of political leaders; both national and local. If you get housing well into politics, it will be a gold mine * * * for the politicians. And there will be additional hordes of political bureaucrats hired out of the taxpayers money to administer this program. Public housing has already made itself felt in the political field. Where it exists today it is used politically.

While the Rules Committee waited for cost data from the Bureau of the Budget, one member, Representative EUGENE COX, Democrat, of Georgia, charged that the bill would establish political ownership and control over human shelter. "As written," he said, "it is the most dangerous threat to home ownership and private enterprise that has arisen since I have been in Congress."

I feel the people in my district should not be compelled to pay the rentals of citizens in Chicago, New York, or Jersey City, for instance, and continue to pay it for the next 40 years. Take a look at France and at England where the socialistic government is taxing the people more and more. We don't want that nor do we need it here.

United States Engineer Office, Philadelphia

EXTENSION OF REMARKS

OF

HON. WILLIAM J. GREEN, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1949

Mr. GREEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Journal-Every Evening, Wilmington, Del., of May 14, 1949:

ORCHIDS TO THE ENGINEERS

Reopening of Summit Bridge this morning is cause not only for rejoicing on the part of Middletown, Mount Pleasant, and other points north and south of the canal—but also for congratulating the United States Engineer office in Philadelphia. Col. Fred F. Frech and his military and civilian bridge experts have done something to be proud of. And we are proud of them for performing a major operation on the bridge and restoring it to health nearly 2 months ahead of schedule.

After the winter rains had caused the north bank to slip, dislocating the structure, the lift span had to be kept raised for ships to go through. Meanwhile work started in removing 20,000 cubic yards of earth pressing against the north abutment, which in turn was shoving the north tower toward the center of the canal.

They "tied back" the tower to a concrete "dead man." They put in a "well-point" system to drain off the water from around the abutment. Then they drove 16 heavy steel piles, 80 feet long, to "underpin" it. A lot of other engineering tricks they tried—which worked. They pulled back the tower, and took the strain (we're glad to say) off the dead man. Finally a new timber trestle was built for a vehicular approach.

All this the engineers accomplished in the accustomed single-minded manner of their profession. They made no rash promises, but just went right ahead and did the job. They deserve our thanks.

And No Farm Program Yet

EXTENSION OF REMARKS

OF

HON. CLYDE M. REED

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, June 21 (legislative day of Thursday, June 2), 1949

Mr. REED. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Chanute, (Kans.) Tribune, And No Farm Program Yet. The Tribune, one of the representative newspapers of Kansas, makes a significant statement regarding the long-range farm problem now facing the country.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AND NO FARM PROGRAM YET

A few days ago, after nearly 2 years of turning the subject over in its mind, Congress gave the Commodity Credit Corporation authority to provide more storage space for wheat. The action came so belatedly that any additional wheat that can be housed as a result of it by harvest time could be put in a combiner's right eye.

The consequences of the Government's dilatoriness will be some loss from the forced piling of grain in the open and a sacrifice of 30 cents a bushel or so below the plan price for those producers who are unable to find approved storage facilities for themselves.

Conspicuous and aggravating as the delay in building more wheat storage has been, however, it is only a small part of the major crime of omission of which the Government is guilty. Although it has had 10 years to appreciate the need, to study, and to act, it is no nearer establishing a long-range farm program than it was when the last war began.

Through the war and for two seasons thereafter there was a market for all the farm pfoducts this country could produce, and the Government merely compromised with the problem by paying for the exports the consuming nations were unable to finance for themselves. Since then the Government has depended on stop-gap and expedients without yet having to come to grips with the basic questions.

Unfortunately, guilt is not to be placed on any one party. The Republicans have no more evolved a satisfactory long-range farm program than have the controlling Democrats in either the administration or in Congress.

So American agriculture today finds itself on the verge of being in as dangerous a surplus situation as it was in the early thirties, with the Government knowing little more about what to do about it today than it did then.

The Marshall Plan at Work in Italy

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1949

Mr. RODINO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith the second of a series of articles on the Marshall plan at work in Italy, by W. G. Hetherington, staff correspondent of the Newark Evening News, dated June 13, 1949, from Rome, Italy:

ECA PROPS INDUSTRY AND AGRICULTURE

(By William G. Hetherington)

ROME.—For three convulsive years after World War II Italy's wretched living conditions gave life and rebellious vigor to its Communist Party. Yet today, with no appreciable improvement in those conditions, the Communist menace has passed—at least for the foreseeable future.

Such is the political phenomenon that has been worked by the Marshall plan, as guided by the Economic Cooperation Administration. But no amount of American aid could have succeeded were it not for the eternal optimism of the Italian people.

ECA, now 1 year old, has applied $550,000,000 to the Italian economy, not in hit-or-miss relief, but in a well-ordered program of economic rehabilitation. Under its aggressive chief, James D. Zellerbach, ECA has struck at the root of Italy's economic troubles, whereas in previous years the United States Army, UNRRA, and United States winter relief spent $2,000,000,000 with little more aim than to keep the people alive.

PEOPLE STILL HOPEFUL

In one year ECA has invigorated industry, put a crutch under agriculture, and measurably stiffened the democratic coalition government of Premier De Gasperi.

But these upper-level benefits of ECA have not yet reached down to the masses. That they eventually will, the ever-hopeful Italian people now appear to be confident. Hence, the popular optimism after years of disillusionment and the new confidence in a democratic regime backed by American aid.

To sustain this newly granted support of the people there still remains a monumental job for De Gasperi and ECA. Wages and prices have yet to be adjusted. Housing conditions are as abominable as ever for the workingman. Those are the continuing complaints of the man in the street.

EMIGRATION BOGS DOWN

On a national level, some 1,850,000 are still unemployed, which would compare with perhaps 10,000,000 jobless in America. With these new jobs to be provided, the birth rate continues to soar between 4,000 and 5,000 a month, adding that many more Italians to the Nation's already overburdened economy.

To ease the population problem, the Government has an ambitious emigration program. This caught on shortly after the war, and thousands of Italian workmen and their families moved to labor-hungry countries of Western Europe, notably France, and to South America. But the program bogged down for several reasons, among them a slackening need for labor among the receiving nations.

Another piece of unfinished business is land reform, which still is a matter of debate in Parliament. Giuseppe Saragat, right-wing Socialist member of De Gasperi's coalition, wants to move quickly. Under his plan of land redistribution, some 9,000 large and almost feudal estates would be affected. The Government would buy up to 50 percent of these great acreages, divide them, and resell on easy terms to Italy's landless peasants.

DE GASPERI OPPOSES HASTE

De Gasperi, who is a more practical politician, advises, with reason, against too much haste. He argues for improved farming methods first, on the theory that the peasant will be no better off as a landowner if production remains at its present low levels.

Today's most pressing problem involves wages and prices, as it did when this correspondent covered the Communist campaign to overthrow the Government last year. As already pointed out, substandard living conditions show no appreciable improvement.

The Italian workingman, if skilled, may earn perhaps 40,000 lire (about $70) a month, working a 5-day, 40-hour week on a spread-the-work plan to keep down unemployment. That amounts to $3-plus a working day. If unskilled, he may receive as little as 800 lire (about $1.40) a day.

RED GAINS BLIND WORKERS

If these figures for working men are low, consider the plight of many so-called white-collar workers. School teachers, university professors and many categories of civil servants and general clerical help are still paid at the prewar rate of the lire. This means that, in the present inflation, their wages run in many cases to as low as $10 a month.

The complaint this correspondent heard so often last year is still repeated: "A university professor earns less than a garbage collector."

Parenthetically, that is because the garbageman, like other laboring men, belongs to a trade union, usually Communist-led, which has forced up his wages by strikes and, in many cases, violence. The Communist record of improving wages often has blinded the workingman to the more sinister motives of the party.

RELY ON GOD AND UNITED STATES

As against excessively low wages, prices remain exorbitantly high. Rationing has been removed, except for bread and the ubiquitous "pasta," the staple which shows up in all forms of spaghetti, macaroni, fettucine, and other Italian dishes. But increased availability has not lessened the cost of the necessities of life.

The average workingman's family subsists on dried beans, cheese, "pasta," and a few fresh vegetables. It is fortunate to have meat once a week. The head of a family may work four days or more for the price of his wife's new shoes. His habitation, more often than not, will be a cramped, cold-water flat in the city, or an incredibly dirty hovel in the country.

Where once these conditions had fattened communism and threatened the very life of democracy, they are—in the main—now suffered in patience and in hope. Such is the temperament of the Italian people and their faith, as the hall porter put it, that "God and America will help us all."

Politics From the Inside

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1949

Mr. MACK of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I herewith include the following article from the Independent Newspapers by Hon. James A. Farley, entitled "Politics From the Inside":

POLITICS FROM THE INSIDE

(By James A. Farley)

Politics is at once the most hazardous and the most noble worldly career open to man.

Politicians stand more abuse, year in and year out, than perhaps any other class of citizens. And yet the success of our form of government, in a large measure, is entrusted to their care. Public opinion in our country must find an outlet. We have grown too large for the town meeting with its individual participation. Orderly and effective expression now comes through political parties. The organizing of political parties and employing them to express the will of the people is the work of a politician. The political leaders must harmonize conflicting points of view. When politicians fail the country fails.

Politics may be as pure or impure as the people themselves determine. If there is no public conscience, why should there be complaint that none speaks in the politician's breast? Often have I heard eminent and successful businessmen announce they are in business, not in politics. It has always seemed to me that this is a confession of neglected duty, rather than the boast of superiority which is intended. If the wrong kind of politician gets control and uses his office for his own advantage or that of his organization, it is frequently the fault of those who conceive themselves to be too busy to be interested in their own Government, except when the Government adopts a policy which they deem harmful to their own personal interests or withdraws a privilege they have employed.

Unhappily, the politician is no better and no worse than his fellow men. Politics has its share of conscientious, high-minded, incorruptible men. And it has its share of scoundrels. I have known men of both types and I must say there was more good in the worst of the political scoundrels than there was in prototypes I have known in other walks of life.

Politicians, as a class, like people. They delight in serving people. Of course, they hope to gain advancement by this. But I can testify there is a genuine satisfaction in being of service to your fellow men. To this day, I am warmed when someone clasps my hand to give thanks for a favor rendered long ago.

In rendering service, the politician has nothing to offer, in the final analysis, but his own word. If he tells the truth and keeps his word he gains the devotion of his friends and the respect of his enemies. Honest men can and do have honest differences. More often than not there is something to be said on both sides of a public question. Most legislation is the result of compromise in committees, on the floor of the House, the floor of the Senate and in conference of House and Senate conferees. Compromise does not mean the surrender of principles or ideals but is the leveling influence of tolerance and understanding.

Politics is no place for the coward or the grumbler. The man who will not fight fearlessly for what he believes is doomed to anonymity. Discontent is more common. Discontent's invasion of the pride is a common disease of humanity, but in the politician it sears the soul and dries public progress. There is no shame in losing a fight, as there is in running away from a contest of principle.

Politics is no place for the sluggard. Probably no man works longer or harder than the successful politician. Duties of office are exacting enough, but he must make himself accessible to all people at all times.

Let me note here parenthetically that public service makes heavy inroads on family life.

The man who likes people finds that the hours he can give to his family become fewer and fewer, but are the more precious. Time after time I have been struck by the fact where there is a man successful in public life there is a patient, charming and noble woman at his side. I do not know why politicians, as a class, have such fine wives. It must be because there are so many wise, understanding, and beautiful women, although I like to think, in my own case, that politicians are excellent pickers.

As a lifelong Democrat, I am a firm believer in the two-party system and believe it would be a tragedy if the Democratic or Republican Party were to pass from the scene. I am sure that if all Democrats would be stricken at one fell swoop, the Republicans would carry on the Government with conscientious regard for the principles of Jefferson, just as the Democrats would, I am certain, give consideration to the principles of Lincoln, if all the Republicans were suddenly stricken.

Americans look out upon a world torn by strife and discord. We have not contented ourself with compassion, but have given freely of our resources to help other nations to liberty and plenty. America is leading the other nations through dangers and vicissitude toward liberty and abundance.

Salaries of Federal Judges

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1949

Mr. RODINO. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include a resolution adopted by the New Jersey State Bar Association at its annual meeting in Atlantic City, N. J., on May 21, 1949, advocating an increase in the salaries of all of the judges of our Federal courts and to provide for two additional for the State of New Jersey:

Whereas the New Jersey State Bar Association believes that the compensation provided for the Justices of the United States Supreme Court, and for the judges of the United States circuit court of appeals, and for the judges of the United States district courts is inadequate and far below compensation provided for judges and justices of the courts of the several States; and

Whereas such inadequacy of compensation makes it impossible for such judges and justices to maintain the economic standing and dignity of such essential and important positions in our system of jurisprudence: It is

Resolved, That the New Jersey State Bar Association recommends and urges that the salaries of the Federal judges be increased so that the annual salaries of the respective judges will be as follows:

For Chief Justice of the United States	$40,000
Justices of the United States Supreme Court	35,000
Senior judge of circuit court of appeals	27,500
Judges of circuit court of appeals	25,000
Chief judge of the United States district court where there are 5 or more United States district court judges in the district	22,500
Judges of the United States district court	20,000
Full-time referees in bankruptcy	15,000

And it is further

Resolved, That copies of this resolution be sent to the chairman and members of the Senate Judiciary Committee and to Members of Congress; and

Whereas there has been a substantial increase in civil actions, bankruptcy matters, and other litigated cases in the United States District Court for the District of New Jersey; and

Whereas the number of United States district court judges provided for the district of New Jersey cannot adequately attend to the increased work of said court; and

Whereas the processes of the administration of justice are unduly delayed because it is physically impossible for the judges to give such attention to pending actions as the dignity of the court, the needs and welfare of the public, and the ends of justice require: It is

Resolved, That the New Jersey State Bar Association does hereby recommend and urge the Congress to provide for two additional United States District Court Judges for the District of New Jersey; and it is further

Resolved, That copies of this resolution be sent to the chairman and members of the Judiciary Committee and to Members of Congress and to the President of the United States.

This is to certify that the above resolution was unanimously adopted by the New Jersey State Bar Association at its annual meeting in Atlantic City, N. J., on May 21, 1949.

EMMA E. DILLON, *Secretary*.

The Bureaucrats Love It

EXTENSION OF REMARKS
OF
HON. HARRIS ELLSWORTH
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1949

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Grants Pass Daily Courier, an excellent newspaper published at Grants Pass, Oreg., in my congressional district:

MAJORITY IS AGAINST A CVA

Despite the ballyhoo following the 1948 Presidential election to the effect that the left-wingers had captured the Government lock, stock, and barrel by electing the President and capturing both Houses of Congress, things don't seem to be turning out that way.

However, the result of the election unquestionably pepped up the radicals in Government to the point where they are making a real fight for their pet measures.

The activities of C. Girard Davidson, Assistant Secretary of the Interior, should be noted in that respect.

Davidson, apparently, has no other immediate duties than campaigning throughout the Northwest to break down the widespread opposition to a Columbia Valley Authority.

Davidson is appearing on every program he can reach and is calling both public meetings and private conferences with businessmen to push the CVA. He is meeting plenty of opposition.

Developments at the Oregon Bankers' Association convention in Portland early this month is a case in point. Robert Ormand Case, Portland author, then was the fly in the ointment.

As Davidson made various claims as statements of fact in connection with the proposed CVA, Case countered with the query, "Does it say so in the bill?"

The subject matter being discussed was the question of the extent that the CVA Board could control industries and how far it could go in setting up its own.

Davidson has rounded up some converts by the argument that there is confusion and overlapping of activities among Federal agencies participating in Columbia Valley development, an undisputed fact.

Davidson would obviate such a situation by empowering a Board of three men appointed in Washington to control the economic future of the Northwest.

To emphasize the inherent danger in such a program, Case reminded Davidson that, under the brief requirements of the proposed legislation, the future of the Northwest States might well be found in the hands of a Board consisting of ex-Gov. Mon Wallgren, of Washington (for whom President Truman is seeking an important post), Glen Taylor, Idaho Senator, and Davidson himself.

Certainly it is no great stretch of the imagination to envision Wallgren and Davidson as the majority Board members.

We refer to these individuals merely to emphasize what kind of a deal the Northwest might receive under a CVA.

On the other hand, if the States involved were permitted to handle Columbia development through an interstate commission, there is little likelihood that Presidential political favorites would land in the seats of the mighty. Political support or campaign financing would not be the determining qualifications for appointment.

Davidson is using the typical demagogic approach in his barnstorming for CVA. Its opponents, he says, are private utility corporations, the power lobbies * * * operating behind front organizations such as the development associations, reclamation associations, and water-users' protective councils recently organized in the Northwest * * * the railroads and the chambers of commerce.

We are familiar with some of the local organizations of the type listed by Davidson and we know he is peddling plain political buncombe when he makes such a charge.

Recently, we heard the Josephine County member of the lower house of the Oregon Legislature touch upon the subject of CVA.

"It (and other VA's) is an attempt to divide the United States into a group of regions instead of into 48 States now existing," said Representative RAY COULTER.

Tennessee Valley Authority, the administration's model, is being referred to repeatedly by pro-CVA sources.

Such an argument reminds us of the old truism that a benevolent dictatorship is a more efficient form of government than our democracy, with its waste, duplication of authority, and varying policies.

What the people of the Northwest fear is whether CVA will be a benevolent dictatorship.

The history of politics under both past Republican and Democratic administrations does not engender the hope that a CVA would be such.

Should events prove otherwise, it would then be too late for the people of the Northwest to protect themselves from the all-powerful CVA administration.

Davidson knows full well that the preponderance of public sentiment in the Northwest is against CVA. Otherwise, he would not be making an all-out effort personally to swing over that sentiment to his pet project.

If the people who are running this Government believe that this should be a Socialist Nation, they should campaign frankly on that basis, not by piecemeal introduction of social legislation while soft peddling its real import.

Public Housing

REMARKS
OF
HON. FREDERICK C. SMITH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1949

Mr. SMITH of Ohio. Mr. Speaker, President Truman's communication to the Speaker of the House, June 17, importuning passage of the housing bill is a masterpiece of rabble rousing and fabrication.

It is an affront to the intelligence of Members of Congress who oppose it and an insidious attempt to demean their integrity.

President Truman says he is extremely anxious that when the Members of the House vote on this important legislation they should be aware that "the real-estate lobby," which he says does not really represent the real-estate business and the home-building industry, but consists of "a little group of ruthless men," has put on an extraordinary propaganda campaign of deliberate misrepresentation, distortion, misstatements, and falsification.

By innuendo, Mr. Truman seeks to create the impression that those who vote against this bill are either so lacking in intelligence or so devoid of probity, or both, as to become willing tools of the "little group of ruthless men."

Having been continuously somewhere in the forefront of the opposition to this communistic housing scheme since 1938, and since 1941 a member of the House committee which has jurisdiction of this legislation, I think I know something of the score.

It is true that the real-estate and home-building industries and property owners have appeared before our committee in opposition to so-called low-rent housing and other provisions of the bill, but there is no warrant whatsoever for Mr. Truman to say that they do not speak for those groups in general. Nor have they been guilty of the things with which the President charges them. The fact is that every charge which the President makes against the representatives of the real-estate and home-building industries can perforce be made against the proponents of this housing scheme. Furthermore, the amount of lobbying those interests have carried on is insignificant indeed, compared with that promulgated in support of this communistic housing scheme by the great army of Federal, State, and municipal bureaucrats and politicians at taxpayer's expense.

President Truman himself, as his letter to the Speaker shows, unrestrainedly resorts to the deception and misrepresentation with which he charges "a little group of ruthless men." He says the total cost to the Government of the low-rent housing program is estimated at nine to ten billion dollars plus administrative expenses over a period of 29 to 33 years. But the bill provides for annual appropriations of $400,000,000 over a period of 40 years totaling $16,000,000,000. This amount was necessary in order to market the bonds to finance the program. It is against the $400,000,000 annual appropriations over the 40-year period that the bonds will be sold, and not against the nine or ten billion dollars which President Truman would have you believe. Just common honesty would demand that the cost of this housing would be the amount provided in the bill.

President Truman resorts to the same trickery as the men who originated this political housing scheme when he says, "The local public-housing authorities will sell their bonds on the private investment market." This statement is intended to convey the idea that the project is privately financed, the bonds being sold by the local housing authorities against assets of the local housing authorities and hence differing from bonds sold to the public by the Treasury. Now the fact is the local housing authorities have no assets of their own whatever. These local housing authorities are merely dummies of the Public Housing Authority, which is itself but an agency of the Treasury in the financing of this program.

It is to the Treasury that the purchasers of the bonds look for the interest and repayment of their capital—not to the local authorities. That is provided in the law under the annual $400,000,000 appropriation provision. The procedure ultimately resolves itself into a purely Treasury transaction. The Treasury would also sell its bonds on the private investment market. There is no other capital but that of private capital to finance the cost of any publicly owned structure.

But why continue further? The President's letter, in all likelihood, was written by one of the leading proponents of this communistic housing scheme, Mr. Leon Keyserling, vice chairman of the President's Council of Economic Advisers and one of the original authors of the 1937 low-rent housing act and the amendments contained in H. R. 4009.

Address by Hon. Herbert R. O'Conor, of Maryland, as Chairman of the United States Delegation to the ILO Conference at Geneva

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Tuesday, June 21 (legislative day of Thursday, June 2), 1949

Mr. THOMAS of Utah. Mr. President, the distinguished Senator from Maryland [Mr. O'CONOR] delivered an address in the United Nations General Assembly Hall at Geneva yesterday, Monday, June 20, in his capacity as chairman of the United States delegation to the ILO conference. It was translated simultaneously in three languages—French, Spanish, and English. Fifty-two nations were represented, including three countries from behind the iron curtain—Poland, Czechoslovakia, and Bulgaria.

In his official response to the report of the Director General of the ILO, the Senator from Maryland stressed the benefits of point 4 of President Truman's Inaugural Day program as a bulwark to international peace, pointing out the great benefits to labor's welfare, employment, and standards of living.

He deplored the obstructionist efforts of the Communist countries in the field of labor and in practically every other endeavor and declared that the policy of the United States is to do all it can to aid the revival of production in trade, with the single restriction that we cannot allow any of our exports to impair national security.

I ask unanimous consent that the address delivered by the Senator from Maryland be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

INTRODUCTION

It is a gratifying experience for one who, like myself, sits as a member of his nation's legislature to have the honor of representing that nation for the first time in this great parliament of many peoples. To one who comes from a country where economic, industrial, and social problems are solved by the method of discussion, compromise, and democratic decision, it is impressive to see these methods applied on a world-wide basis by the International Labor Organization.

It is the essence of democracy to approach these problems not merely with an appreciation of the material and social advances which we have already made, but also with the vision of how much more we can do to lift man's standard of living, and to enable him to live in freedom and in peace. For, as a great American teacher has said, it is only by seeing the world as it might be, that we can truly see the world as it is.

DIRECTOR GENERAL'S REPORT

Toward that clearer view of the world as it is and as it might be, the report of the Director General makes a real contribution. We appreciate the range and breadth of his analysis of the world in which this conference meets and in which the office functions, and his specific proposals for the work program of the ILO.

In commenting on his report, may I, first of all, touch upon some specific questions, and then discuss a few of the urgent problems we face today.

RATIFICATION OF CONVENTIONS

Recommendations and conventions are among the major tools used by the ILO in the attainment of its ends. The Director General has raised questions relating to the number of conventions ratified since 1945. We in the United States are conscious of the need for ratification and are working on the matter. Our work has not yet come to the point where it can be shown in the record, but progress is being made.

I believe that the conference will have a sympathetic appreciation of the problems of Federal states in this connection. A large proportion of the ILO conventions deal with matters which in our country are in whole or in part subject to the jurisdiction of our 48 constituent States. The amendment of the ILO constitution has provided us with a procedure for dealing with such conventions, but even in cases where our law and practice fully meet an ILO convention, we still are without power to take formal action to ratify. We can simply report the fact to the Director General. The pattern of State

labor legislation is uneven; a large proportion of the States meet ILO standards, some of them are below in certain respects and many of them exceed the ILO standards, in one or more aspects of their labor legislation.

Each year, our Secretary of Labor calls a conference of officials responsible for enforcing labor legislation in the States and Territories. The last two sessions of this conference have given serious study to the obligations of the States and Territories under the revised ILO constitution. The matter was also discussed at a recent meeting of the Association of Government Labor Officials, which includes Federal, State, and Territorial officials not only from the United States and Puerto Rico, but also from Canada. The association recently requested the Federal governments to give assistance to the States and Territories in meeting the requirements of the ILO constitution.

REVISION OF CONVENTIONS

The governing body had decided that the Committee of Social Security Experts should meet early in 1950 to consider, among other things, the revision of the ILO Social Security Conventions and Recommendations. This committee will be able to analyze these standards in relation both to unsolved problems and to developments in the social-security legislation of member states since the conventions and recommendations were passed, and to advise the governing body as to desirable revisions.

The precedent set by this governing body action might well be followed in regard to other groups of conventions. It may be advisable for the governing body to appoint a staff committee to analyze conventions and recommendations already passed in other fields. This staff committee could then recommend which ones might profitably be referred to expert committees, for study and advice on bringing them up to date in the light of present-day law and practice, and present-day problems.

TECHNICAL CONSULTATION

There is a great need, as the Director General's report suggests, for technical consultation with states members on the practical aspects and implementation of conventions and recommendations. Obviously some of the most important problems still remain to be solved after an ILO convention has been ratified. This realization does not take anything away from the importance we attach to the conventions which the conference has adopted and those which it will adopt. You know from experience that the passing of a law, or even the signing of a collective agreement, is often not the end, but the beginning, of the job of putting agreed decisions into practice.

POINT 4

No more far-reaching proposal could be envisioned than that made by the President of the United States as point 4 of his inaugural address of last January. Under this proposal, the benefits of scientific advances in the United States and its exceptional industrial know-how would be made available in generous measure for the development and betterment of underdeveloped areas of the world. So vast are its implications that it may well become a major factor in United States foreign policy.

Laborers in industry and in the fields and the vineyards would be the principal beneficiaries of such an endeavor, inaugurated under Government auspices and fulfilled by private enterprise coordinating with governmental agencies. In this long-range program, immediate benefits would be afforded primarily to under-developed areas. Corollary benefits would be afforded to all countries on a global basis.

We commend this proposal enthusiastically, realizing that its cost will not be inconsiderable, but convinced that the allocations, large as they may be, will prove to be insignificant when compared with the results to be achieved.

Specifically we visualize the improvement of labor's standards of living through assistance to health, sanitation, and food production. We foresee addition to labor's welfare through improvement in social security and civil liberties standards. We perceive stimulus to greater employment of labor by creation of new enterprises, expansion, and increased productivity in agriculture, industry, and commerce. Under a world-wide program, the improvement of many areas offers the strongest bulwark to universal peace and stability. It will contribute to the solution of the challenging problem of displaced persons and refugees. It will vitalize democratic government.

On economic grounds alone, and regardless of the humanitarian aspects of such a vast undertaking, the relatively small investment required initially and the later participation of normal enterprise on a reasonable risk and profit-motive basis would seem to be well justified.

Such a program would lessen the danger of economic distress and the hardship to labor—and we must never forget that labor's welfare is essential to lasting progress.

The United States strives to further the interests of all people in this common endeavor. To the end that it may be a joint enterprise the United States invites all interested nations to pool their specialized knowledge for the success of this venture. The experience and enterprise of the various cooperating nations can insure the success of the undertaking outlined by the President of the United States. Through the combined efforts of labor, private capital, agriculture, industry, governments, and international agencies this program can effectively stimulate activity in all nations.

No international agency is better prepared than the ILO, in terms of experience and field of activity, to assist in developing the skills and techniques vital to increased productivity and general economic developments.

The ILO long has been in the forefront of international cooperative efforts to promote social justice and to raise living standards. Before World War II the emphasis was largely on agreement, in the form of international standards, as to what should be done to accomplish these aims. Now the ILO added a second major emphasis designed to implement this "what" by assisting countries to find out how to do it—and as requested to help them to do it. The importance of this step cannot be overemphasized. It is this kind of an approach, to provide practical know-how, geared to the varying needs of different countries, that constitutes the care of the President's point 4 suggestion.

The ILO, in other words, already is engaged in a program of technical assistance. Its competence in many fields essential to a growing economy (statistical and social-welfare programs, improved labor standards and conditions of work) is well recognized, and it is already carrying on effective work to assist in locating manpower where it will do the most good. The manpower programs will, no doubt, have to be expanded and intensified in response to many requests, both those of single states and of groups of nations working together for economic reconstruction and development. As the Conference studies and acts on the recommendations of the governing body in the broad fields of technical assistance we hope that the manpower program will be given the high priority it deserves.

COORDINATION WITH UN AGENCIES

We are gratified to note from the Director General's report that the ILO has made substantial progress in developing close cooperation with the United Nations and the various specialized agencies, thus avoiding overlapping and waste, and making for more effective work programs. The Government and the people of the United States attach great importance to this cooperation within the framework of the United Nations.

We are vitally interested in the ILO. We are also vitally interested in the United Nations system as a whole. And the more the ILO is willing to share with the United Nations and the other specialized agencies their problems and their opportunities, the more successful the ILO will be. The more we strive for joint or closely integrated action on the front of peace and social progress, and the less we think in terms of prestige or privileges of this or that organization, the better we shall discharge our responsibilities to the peoples of the world and to generations yet unborn.

I am not suggesting that the ILO or any other specialized agency should give up its autonomy. Nothing is further from my mind. But there is a world of difference between genuine autonomy, and the kind of organizational isolationism which at times creeps into the discussions of almost any established institution.

For many reasons, we welcome every opportunity to concert with other specialized agencies operating as parts of the stellar system of economic and social agencies revolving around the United Nations and its Economic and Social Council. My Government will continue to press for the closest possible coordination and integration of activities.

WORLD TRADE

Among the basic problems of the postwar world to which the United States is devoting earnest study, and which the Director General mentions in his report, is the level of world trade. It is low even as compared with prewar—when the volume of trade was far from satisfactory. We feel that an increased volume of world trade, serving peaceful purposes, is basic to the long-range advancement of the people's standards of living.

A few of the speakers before this Conference have injected a political note into the discussion by repeating allegations about the trade policies of the United States Government. We ourselves do not propose to turn the ILO from its important work by using it as a political sounding board. The same charges about alleged discrimination in United States trade policies have been made over and over again. They have been answered fully in other bodies where these issues are at least relevant—that is, before the General Assembly of the United Nations, the Economic and Social Council, the General Conference on Tariffs and Trade at Annecy, and the recent meeting of the Economic Commission for Europe. The record there is clear for all to read, and it shows the policy of the United States to do all it can to aid the revival of production and trade, with the single restrictions that we cannot allow any of our exports to impair our national security or impair the peace.

To promote increased trade and international stability of employment, the International Trade Organization, a specialized agency of the United Nations, is now in the process of creation.

The United States has played a positive role in the development of the ILO and also in the multilateral conferences which seek general agreement on tariffs and trade to promote an increase in the exchange of goods which will be of mutual advantage to all the countries which take part.

Beginning in Geneva in 1947, following a number of years of piecemeal bilateral trade barrier reductions, many specific barriers were reduced and tariffs affecting a very substantial proportion of world trade were lowered on a multilateral basis, for the first time in history. Now, just across the border, in Annecy, representatives of 34 nations are

meeting, under the terms of the 1947 Geneva General Agreement on Tariffs and Trade, to negotiate further tariff barrier reductions and to broaden the bases of trade among nations.

The workers of all countries have a special interest in the reduction of tariff barriers and in having the principles of the International Trade Organization put into practice. For as those principles are effectuated, they will expand markets and help to raise the standards of living of peoples everywhere. In the mandate to work for fuller and more productive employment, at fair labor standards, the International Trade Organization will, of course, cooperate closely with the International Labor Organization.

THE UNITED STATES AND HIGH LEVELS OF EMPLOYMENT

As the report says, while there are shortages of skilled workers around the world, there is also considerable unemployment and underemployment. We in the United States have taken active steps to maintain a high level of employment, under conditions of freedom and dignity for the individual worker.

We have set forth our policy on this subject in the Employment Act of 1946. Both our Congress and our President—with the aid of the Council of Economic Advisers—are closely watching general economic developments, at home and abroad, so that when storm signals appear, we can initiate the measures necessary to keep employment at high levels.

There has been some increase of unemployment in the United States during the past year, although its volume is not large for a country the size of ours, in which workers move freely from job to job and from place to place. Much of this unemployment is a natural consequence of the postwar readjustment of production, and the leveling of prices, as postwar shortages are gradually met in one commodity after another. It is far less than the amount of unemployment predicted by some students of the United States economy. Frankly, we are concerned about any unemployment beyond that which is normal as workers go from one job to another. But I am convinced that never again in the United States, whatever political party may be in power, will there be a repetition of the tragic unemployment of the early 1930's. To this end, we have developed our system of unemployment insurance which now has reserves of more than $7,000,000,000. We have also our program of support for farmers' incomes and our proposals for dealing with the international ramifications of economic instability. We are determined to act wherever necessary against unemployment and insecurity.

WORKER AND EMPLOYER PARTICIPATION IN RECOVERY PROGRAM

During the last 2 years, we have been particularly interested in the means which have been taken to associate both working men and women and employers with the efforts at economic reconstruction.

In formulating and carrying out the European recovery program, the trade-unions and employers of our country have contributed a large share from the very start. Men from both groups are now active in the ECA, the Economic Cooperation Administration.

A man who has several times acted as United States Employers' Delegate to this conference is now head of the ECA mission in one of the major capitals of Europe. Two of the men from the labor movement of our country who went to Europe last year as labor advisers to ECA missions have since been appointed heads of missions themselves.

Employers and unions in our country are cooperating with those of many European countries in joint programs—under the auspices of ECA—to increase the productivity of European industry and make possible higher standards of living.

Consultation of this sort had its beginnings when the ILO was founded 50 years ago. Unquestionably, the experience of these 50 years has contributed to the significant cooperative efforts in which employers and trade-union organizations have worked with the recovery program.

CONCLUSION

In the calm and beauty of this pleasant city of Geneva, no one should forget the magnitude of our tasks. No one should forget, as we strive to raise labor standards and productivity, that the world is passing through one of the most crucial periods in history. We must never lose sight of the ultimate objective—the achievement of a durable peace based on mutual confidence among peoples who are devoted to social justice and the freedom of the individual. There cannot be any dispute as to this objective—though there may be some honest difference as to the means of achieving it.

In the kind of cooperation among workers, employers, and governments that is the genius of the ILO, and in the common devotion to social justice, we take strength and courage for the future.

Farm-Labor Coalition

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 21 (legislative day of Thursday, June 2), 1949

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Minneapolis Sunday Tribune of June 19, 1949, entitled "Farm-Labor Coalition?"

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FARM-LABOR COALITION?

Democrats at their Des Moines conference last week made a spectacular bid to achieve what long has been considered politically impossible—a working coalition of farmers and city workers.

In the past politicians have been discouraged by what appeared to be hopelessly antagonistic self-interests. The city worker's concern for high wages and low food prices always seemed to be at odds with the farmer's desire for high commodity prices and low prices for manufactured goods.

Attempts at political union of farmers and laborers failed because sooner or later one group tended to overshadow the other. That is why Minnesota's Farmer-Labor Party began to disintegrate long before taking root as a national organization.

Yet enlightened farm leaders and enlightened union leaders know that their two groups are interdependent. The prosperity of one cannot long endure at the expense of the other. Whether they can find common ground for political action under the banner of the Brannan farm income support plan, however, remains to be seen.

Secretary Brannan's proposal, which President Truman now thinks ought to be adopted by the Eighty-first Congress, promises to stabilize farm income at near wartime peaks. At the same time it promises city workers lower food prices by paying farmers the difference between free market prices and the new support prices. Federal income taxpayers would have to provide the additional billions necessary to cover the subsidy payments.

At first glance this gift horse looks like the answer to a politician's prayer. Yet both farmers and city consumers would do well to look in its mouth before accepting it in return for allegiance to the Democratic Party.

The farmer, who must plan his work a year or two before his produce goes to market, needs protection against unexpected price drops. But he surely should be suspicious of a Government-guaranteed income.

Guarantees mean controls and surrender of freedom to take risks in the hope of extra rewards. The guarantees Brannan has in mind would be expensive. Just how many billions even Brannan declines to estimate. And if farmers' incomes are to be underwritten by the Government, why not those of labor, professional people, and business?

Consumers, who would indirectly pay the subsidy through higher taxes, also need to take a second look. Average prices paid to farmers for their crops are 15 percent below a year ago (prices of some specific commodities are down even more) while retail food prices have declined only slightly. Why? Because marketing and processing costs take 47 cents of every dollar consumers spend for food. The Department of Agriculture estimates that only one-fifth of the drop in the price of the consumer's market basket since last summer represents lower marketing and processing costs. Are these charges also to be shifted to taxpayers in order to keep retail prices down?

If that is what sponsors of the Brannan plan have in mind, we can expect a drive for price and wage controls throughout the food and transportation industries. After that it is but a short step to a completely regimented economy.

Surely neither farmers nor working people want this for America.

Endorsement of Housing Bill by Scranton Times

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 21 (legislative day of Thursday, June 2), 1949

Mr. MYERS. Mr. President, I ask unanimous consent to have inserted in the Appendix of the CONGRESSIONAL RECORD an editorial from one of Pennsylvania's most influential and important newspapers, the Scranton Times, of June 18, 1949, entitled "Backs Housing Bill," which declares that the President has the backing of the public in calling for prompt passage by Congress of the long-range housing bill which recently was passed by the Senate.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BACKS HOUSING BILL

President Truman went to bat for Federal housing again yesterday and in doing so registered telling blows against what was described by the Chief Executive in a letter to Speaker SAM RAYBURN as the real-estate

lobby, rated by many congressional observers as one of the most powerful lobbying groups in Washington. The President's remarks opened an intensive campaign to insure passage of the proposed multibillion dollar national housing bill slated for consideration in the lower branch next week.

This program of the administration is designed to help people in the lower-income brackets. It calls for an outlay of $10,000,000,000 spread over 30 years. It also deals with slum clearance. Realty interests have been trying to sprag the program on the ground it is not needed and because they say it would be too expensive. These arguments are labeled 100 percent misleading by Mr. Truman who points out the real-estate lobby pictures the total expense as being double the estimated outlay of $10,000,000,000.

The public, we believe, is behind Mr. Truman in this drive to provide many thousands of families with decent living quarters at rentals they can afford to pay. In some cities the housing shortage may not be as critical as it was a few years ago but on the whole reports indicate the home scarcity for these groups continues. The condition is specially true in the larger centers of population and in smaller cities where there has been a definite lag in building construction.

There are two housing proposals before Congress. The Senate bill would provide 810,000 public housing units in the next 6 years. The House plan calls for the erection of 1,050,000 low rent units in 7 years. Strong sentiment is growing in the House in favor of the Senate measure. This probably means whatever conclusions are reached by the lawmakers will be in the form of a compromise. It is timely to note that Mr. Truman told Speaker RAYBURN more than 470 town, city, and State boards have applied for public-housing projects since the war ended. This would seem to uphold the contention that the home shortage is still acute.

One clause in the housing bill provides for a $1,500,000,000 revolving fund for loans to local housing agencies for temporary support of projects and to be repaid with interest. There is another provision for annual contributions to local authorities in amounts required to make up differences between rents which low-income tenants can afford to pay and the costs of operating and maintaining the buildings and retiring interest debts. These features, coupled with the $15,000,000 fund Pennsylvania has authorized for housing should insure real headway in the fight for greater and better housing in this State. It might even lead to the completion of the housing development launched in the south Scranton section several years ago.

Gratitude of a Veteran for Opportunity To Complete College Education

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Tuesday, June 21 (legislative day of Thursday, June 2), 1949

Mr. MYERS. Mr. President, among the thousands of letters and postcards and telegrams and even cables flowing into our offices in the Senate every day, there occasionally comes a letter so heartwarming and so sincere and genuine that it instantly catches our eye and impresses us greatly. I have here such a letter.

It comes from Joseph A. Meyers of 825 South Manor Street, York, Pa. Mr. Meyers served in the Navy for 3½ years. After the war he matriculated at Syracuse University under the GI bill and on June 6 of this year he received his diploma.

Millions of our veterans have benefited from the educational provisions of the GI bill. I know many of them feel the same way that Mr. Meyers has written me he feels. He has asked me to express his gratitude and extend his thanks to all the Members of Congress who joined in making possible the college education which he has just completed. So that every Member of Congress will have the opportunity to read this delightful letter which expresses dramatically the gratitude of one veteran for a higher education, which further expresses his complete confidence in the flexibility and the strength of our system of government based on the freedom of the individual, I ask unanimous consent that this letter be printed in the Appendix of the CONGRESSIONAL RECORD where I hope all Members of Congress will read it.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

YORK, PA., *June 20, 1949.*

Senator FRANCIS J. MYERS,
Washington, D. C.

DEAR SIR: On June 6, 1949, I fulfilled an ambition I had held since my early high school days—to graduate from college. Like the many thousands of men who entered the service earlier in the war, I had no idea that I would realize the ambition to enter college. Through the generous aid of the United States Government I was given the opportunity to learn more of the American ideals and democratic ways of life which I had so wholeheartedly fought for in the Navy for 3½ years.

When I had finished high school my funds were not nearly enough to continue on in higher education. But you and others in your capacity, as representatives of the people, enabled me to receive my diploma at Syracuse University on June 6, 1949.

I cannot adequately express my appreciation and gratitude by a few written words but I know you will understand when I say I sincerely thank you and the American Congress most humbly.

I know that the GI bill of rights has promoted greater unity and understanding among our diverse peoples and that the money invested by the Government will be repaid tenfold through a more educated and a better-adjusted veteran.

I believe I speak for most of the veterans when I say that we will not be daunted by talk of hard times in the future; nor discouraged over the slowness of peace movements. The tradition of the freedom of the individual has carried us through many hard times in our history and each time has made our Government stronger and more united than ever before. I am not afraid of Russia because I know it can never destroy this faith in the freedom of the individual. It is as strong as the Pyramids.

I hope you will express my gratitude and extend my thanks to your fellow Senators and Congressmen for the aid you have given me toward improving my education.

Very truly yours,

JOSEPH A. MEYERS.

Farmer-Labor Unity

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, June 21 (legislative day of Thursday, June 2), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the RECORD an address entitled "Farmer-Labor Unity," delivered by Joseph D. Keenan, director of Labor's League for Political Education, at Des Moines, Iowa, on June 13, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FARMER-LABOR UNITY

It may seem strange for me as a representative of organized labor to be present at a farm meeting.

To get this straight let me say that I am not a farmer and do not know anything whatever about the details of agriculture. I am not a candidate for office and so I cannot provide you with a picture of myself leaning on a cow.

However, organized labor is very much interested in one of the greatest problems that face the Eighty-first Congress—the proposed reduction of the farmers' income and the proposed reduction of the farmers' standard of living.

Now, who has proposed that the farmers' income be reduced?

1. Senator TAFT, of Ohio, in his speech in the Nebraska presidential primary in the summer of 1948 was the first publicly to advocate that the Government price supports for agriculture should be reduced, thus lowering the farmers' income.

2. Former Governor Stassen, of Minnesota, was the second to propose that the farmers' income be reduced by lowering the Government price supports for agriculture.

3. The Eightieth Congress at 4 o'clock in the morning on the last day of its session enacted a law which provides that the farmers' Government price support should be reduced and that the farmers' over-all income should be reduced—but the Eightieth Congress put on an amendment to avoid embarrassment in the 1948 presidential campaign which provided that the reduced income for farmers should commence January 1, 1950. This act of the Eightieth Congress puts the Eighty-first Congress directly on the spot. If the present Congress does not act, then, automatically, beginning January 1 next, the Government price supports for farmers will be lowered.

4. President Allen Kline, of the Farm Bureau Federation, has publicly endorsed the program laid down by TAFT; then by Stassen; and then by the Eightieth Congress.

Consequently, a fundamental issue has been raised which affects everyone in the United States—shall the farmers' income be reduced by Government action and shall the farmers' standard of living be lowered?

To this question, of course, labor says—no. It is opposed to any and all proposals to reduce the over-all farm income and it is opposed to any and all proposals to lower the standard of living on the farm.

Organized workers look upon the Government price supports for farmers as Government action to maintain the farmers' "wage scale." Many times it has been pointed out that Government farm supports give the farmers a "minimum wage."

Organized workers as taxpayers know that the farmer has been given Government funds for price supports of various kinds and for soil-conservation payments out of the Federal Treasury since 1933. Organized workers have never complained about paying their share of the taxes necessary to provide these farm aids which have increased the standard of living in rural areas. In addition, organized workers as consumers have paid the higher prices maintained by the working out of the Government farm program during the past 16 years.

Organized workers know that the Government farm program has been a success and that the farmer has improved his position greatly in the 16 years that the farm program has been carried on. Nineteen hundred and twenty-nine was the most prosperous year before Roosevelt. In 1929, there were 827,000 tractors on the American farms. At the beginning of 1948 there were 3,250,000 tractors in use. In 1929, there were 37,000 combines in use. At the beginning of 1948 there were 540,000 combines. In the same period corn pickers have increased from 9,000 to 300,000. In short, with Government aid the farmer is unbelievably better off than he was under the so-called "free economy" that prevailed before 1933—he is better off in machinery, in soil, in cash, and in net worth.

Organized labor is opposed to the Taft-Stassen-Kline proposal to reduce the farmers' standard of living because this proposal is part of a general drive for a smaller and shrinking American economy. The great financial interests behind the proposals made by these three persons are working in Congress for smaller social-security payments—for a smaller health program—for a smaller housing program—and to shrink down or kill all of the programs that provide for the development of the West—such as reclamation, irrigation, public power, etc. And, of course, these same forces are working to destroy free trade unions so that wages can be lowered and the standard of living in the cities reduced.

Organized labor does not believe that there is any advantage in a lower standard of living for our country, in a shrinking economy, or in a lower national income. Organized labor believes in an expanding economy. Organized labor believes that we should aim at increasing the national income from its present $214,000,000,000 a year to $300,000,000,000 a year. Incidentally, more businessmen than you think, agree with labor's desire for an expending economy. We hope that the farmers will take the same position. We hope that the farmers will help organized labor and the forward-looking sections of business in defeating all those who advocate a smaller or shrinking economy with the lower standard of living that goes with it.

We know that many sections of business will be hurt if the advocates of a little economy or a shrinking economy continue in office or are returned to office with power to carry out their reducing program for the United States. For example, when the bipartisan reactionaries in the Senate and the House strike hard at the farm program and try to reduce the farmers' standard of living they are striking at the farm machinery manufacturers. They are striking at the automobile manufacturers and the truck manufacturers and the businessmen who make home furnishings and at those who manufacture the so-called soft goods.. They are striking especially at the manufacturers of durable goods so important to the farmer. In fact, these reactionaries are striking at the whole Sears, Roebuck catalog.

Organized workers know that at the present time the farmer is a thirty-billion-dollar customer of American business and organized workers know that the farmer can be even a bigger and better customer in the future if the Eighty-first Congress does its duty. Organized workers are against Congress injuring all of these businesses by reducing the farmers' income. Organized labor has a right to be disturbed at such reactionary proposals because all of these businesses provide millions of jobs in the cities.

If these advocates of a smaller economy and a shrinking economy have their way a lower farm income will be followed by a smaller demand for the products of business and labor. This, in turn, will be followed by a smaller demand by the workers in the cities for farm commodities and so on down until we are back in the days of Harding, Coolidge, and Hoover when agriculture was flat on its back. The proposal before the Eighty-first Congress to reduce the farmers' income is simply the road back to 1920 and 1921. Labor remembers those years and we are sure that farmers, too, remember those years.

In the years of the farm depression, 1921 forward, the farmers had no Government price supports. There was no soil conservation program. There was no rural electrification program—(let us remember that the rural electrification program established in 1935 has increased the number of electrified farms from 700,000 to 4,500,000—an increase from 10 percent to almost 75 percent of the total farms). And, of course, in those years, the farmers were absolutely free from Government regulations and Government red tape and Government controls. In those same years, organized labor had no old-age pensions. It did not have any other form of social security. It did not have a 40-hour week. There was no minimum wage (either for labor or agriculture) labor had no right to organize or to bargain collectively.

So let us not follow the advice of the Eightieth Congress and march to the rear under the slogan, "Back to 1920."

Now, what is the alternative to the proposal to reduce the farmers' income? It is the Brannan plan. As I said, I am not a farmer. I do not know how to milk a cow or to cultivate corn and I am no judge of the detailed methods of operation proposed in the Brannan plan. However, the over-all purpose of the Brannan plan to maintain the present standard of living on the farm is just as important for labor as labor's program to maintain the workers' standard of living in the cities. And, of course, the Brannan plan has one advantage not present in the farm programs of the past 16 years. It provides that the consumer shall have the benefit of lower prices for meat, milk, fresh vegetables, eggs, butter, and other perishable farm products that represent 75 percent of the farmers' income and which also represent by far a major part of the consumers' cost of living items. Certainly, in every respect, this plan is much to be preferred to the program of the Eightieth Congress which aimed at reducing the farmers' income and which inevitably would guarantee all the undesirable results that occurred in 1921 and the following years.

Organized labor would like to know if there is any other plan available to preserve and expand the American standard of living. Much of the talk favoring the Brannan plan comes about because reactionaries have offered no constructive plan to take its place. They merely continue to plug for a shrinking American economy. They say, "cut and cut." "Lay off workers and lay off more workers." "Cancel this project and cancel that project." I am sure that the American people will reject at the polls all candidates who advocate this "little economy" of cut and slash, reduce and postpone—delay and reduce.

When the farm program was first set up 16 years ago it had the support of forward-looking and progressive Congressmen and Senators, both from the city and from the farm. Many a Congressman who has had a perfect record of voting in the interest of the farmers did not have even a blade of grass in his city district. Many a forward-looking Congressman who had a 100 percent labor voting record came from a district without a single factory and only a few scattered organized building trades workers who voted in the district.

This combination of farmer and worker representatives is the combination that put on the books the Government support program for farmers and the labor laws that have made possible a higher standard of living in the cities, which, in turn, has maintained and supported the better standard of living in the rural areas.

It seems to me that it is our job to reconstruct this all-American coalition that did so much for us in the past. It should be easy for us to create worker and farmer unity in the halls of Congress and on the floor of the United States Senate because we have both been attacked.

In 1947, a bi-partisan reactionary coalition in the House and Senate led off with the Taft-Hartley Act to lay the groundwork for reducing the standard of living in the city. In the summer of 1948, Senator TAFT laid the groundwork for the Eightieth Congress attack on the farmers' standard of living. We have both been attacked by the same great financial interests—we have been attacked by the very same individuals who speak for these big interests and who disregard the welfare of the people they represent. In the unity of the attack against us we should find the unity which will make us strong enough to defeat this attack—to prevent a little economy for our country—and all the evils that go with it.

While our opponents have a first mortgage on the slogan, back to 1920, we might well consider the advantages of going back to 1922. It was in 1922 that a farm revolt occurred which sent to Congress many United States Senators and many Congressmen who voted for labor and who tried to pass a farm-aid program. Whenever they did pass a measure that helped the condition of agriculture it was vetoed. In the 1922 election labor was not able to do its full part. The same forces that crushed agriculture also crushed organized labor. Our membership was smashed down from 8,000,000 to 2,500,000 by the use of injunctions and other anti-labor measures employed by the antilabor and antifarmer administration of that era. So while the slogan of back to 1922 refers to a progressive and liberal revolt at the polls against reaction, it was a revolt that was handicapped by the lack of realistic and energetic political activity on the part of labor. In 1950, however, the situation will be different. After the Second World War labor was attacked first and was the first to react politically. Labor is now in a position to hold its own in urban areas. Those of you who are engaged in agriculture were not attacked first after this war. You were attacked second so that now all that is necessary is for you to do what you did in 1922. And this time you may be sure that labor will be an equal partner in the enterprise. It will not lag behind in 1950 as it did in 1922.

As a matter of fact, the political league of the AFL in its campaign of last year tried everywhere to work with farm organizations, rural electrification organizations, and farm cooperatives. We did not have sufficient time to accomplish the best results because we did not start out until almost June 1, 1948, and the election took place November 2. However, we learned that the best results in the public interest were obtained in those States where we had a working arrangement with the farmer interests. So, in 1950, you may be sure that we will go further and expand

our 1948 beginnings of cooperation between the farmer and the worker in the political field.

It is only this combination that can guarantee continued and growing prosperity in the United States—and check the reactionary campaign for a little economy.

Jack Bell

EXTENSION OF REMARKS
OF
HON. CLAUDE PEPPER
OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 21 (legislative day of Thursday, June 2), 1949

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Miami Herald of June 3, by Luther Voltz, paying tribute to a distinguished newspaper columnist, Jack Bell.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MEN BEHIND THE COLUMNS—JACK BELL

(By Luther Voltz)

Jack Bell believes in pixies.

He has ever since he sat in childhood wonderment as his grandfather, with Gaelic sincerity, spun tales of good fairies and leprechauns of Irish folklore.

Perhaps that explains best why Jack loves little people. Maybe that's why he'd rather fight their battles and write of their tribulations and triumphs than interview the world's giants.

He can discuss world affairs with leaders of nations. But he'd prefer chewing the fat with some backwoods judge or constable with tobacco juice in his whiskers.

Jack Bell likes people—especially the little people he usually pictures in his own folksy style as the Herald's Town Crier and for the Chicago Daily News Foreign Service.

This man Bell is something of a study in contrasts.

He was born on a farm outside St. Joe, Ill., down near Urbana. He picked corn, watered the stock, did all the chores a farm boy must and learned to love the good earth.

But though he now owns a farm of his own, he hasn't lived on one since he was 21.

He's essentially a family man. His proudest and happiest hours are with Nora (familiar to all his readers for her daily trials with maids) and their daughters, precocious Sharon and tiny Rita.

But let the opportunity for travel or an overseas assignment come along and he's off without even the drop of a hat. He'll talk about how tough it is to have to go, but a tractor couldn't keep him from flying to far places.

HIS SHIRTS ARE LOUD

His tastes in books and wine are those of a man who loves the finer things in life. But he picks out—and actually wears—shirts that a respectable person wouldn't be found dead in.

He has that happy faculty of being able to laugh at his own misfortunes, but not at those of others. He's a sucker for a hard-luck story.

He'll listen to some character's tale of woe and write a note to Louie's across the street to give the down-and-outer a meal.

When he goes to pick up the tab, Bell usually finds the character has ordered the best steak in the place, topped it off with two orders of strawberry shortcake and a handful of cigars.

But he doesn't sour and he never loses his patience with little people.

That's why he gets a daily stream of characters to the desk that is always piled high with wooden legs, toys, clothing, a trombone for some aspiring musician, crutches, old books—well, name it. It's usually on Jack's desk.

His callers are just as varied. There's the moon woman, who waited for hours to tell him about the world's end that day at noon. Legless men on skate platforms zip through a startled city room to see Bell. The chances are they'll have to wait while some tearful mother with a baby in arms and dirt-streaked children hanging onto her skirts tells her story.

He gives them all a sympathetic hearing.

But let some real-estate man call up and kick about something Jack has said about inflated property values and watch the mood change. Then the Irish temper really shows.

His is the soul of understanding with the "have-nots."

But the "haves" who complain of their State get nothing but the back of his hand.

HATES WAR; SEEKS FRONT LINE

His hatred for war and those who make wars is undying. But let shooting start anywhere on the globe and he'll pull every string until he gets into the front lines.

Perhaps he knows that's where he's at his best, retelling the frustrations, the heroism, and the suffering of little people who must kill and be killed when big people make war.

As a sports editor Jack often as not would devote his column to national politics, the gambling situation in Miami, the literature of James Stevens, or a night-club act. Now he's just as likely to do his daily stint in sports.

There's no predicting what the man may write. That's because he's a natural left-hander. Or, he was.

Jack was a pretty fair baseball pitcher when he got out of high school. He was good enough to play in a fast winter league out on the Pacific coast.

That was before World War I. He got into that show as a machine gunner. The left arm what whipped 'em past batters on American baseball diamonds was shattered by a German shell on a Belgian battlefield.

Back home he didn't create much of a stir at first on the campus at the University of Illinois. He was just a farmer's son. He didn't dance. He was shy. He didn't talk about his war experiences.

And then there was the day Gen. John J. Pershing came to town.

"Black Jack" himself, commander in chief of the AEF, pinned a Distinguished Service Cross on the young veteran with the empty left sleeve.

The accompanying citation which Pershing read, told how Sgt. John Arthur Bell, with "extraordinary heroism" and in defiance of orders, had saved an entire company of men from destruction.

COMES TO MIAMI

Jack came to the Herald and Miami in the boom days of 1925.

There was a kid hanging around the sports desk back then, pecking out accounts of junior high school sports. Jack took a liking to him, gave constructive criticism on stories and advice on being a newspaperman and a man.

One night Jack was hammering out a yarn as only he can. The kid hung over his shoulder watching every word take form under the tapping keys.

Jack came to the end of a page, whipped it out of his typewriter. Eager to help, the kid picked up two clean sheets of copy paper, rustled them together as newspapermen do, rolled them into the typewriter and stepped back for a smiling "Thank you."

What he got was something vastly different.

Jack deliberately unrolled the paper from the typewriter. He put the sheets back down neatly on the pile on his desk. He picked them up again, balanced them against the typewriter platen and with a quick movement of his right hand spun them into writing position before they could fall.

He didn't look up, didn't speak until the story was finished. Then he said quietly:

"Son, don't ever do anything for a one-arm man unless he asks you. You see, he might not want help."

It was a perfect insight on this man Bell, I know. I was the kid.

What's Jack Bell like? Well, he loves little people.

Stand him still or spin him like a whirling dervish, you can see only one side. That's the human side.

Possible Economic Slump

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 21 (legislative day of Thursday, June 2), 1949

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in the Washington Evening Star last night, June 20, written by David Lawrence. It is entitled "President Seen Faced With Economic Slump He Pledged To Avoid." It is an excellent article.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PRESIDENT SEEN FACED WITH ECONOMIC SLUMP HE PLEDGED TO AVOID—WRITER HOLDS RECESSION WAS INEVITABLE, TRUMAN SHOULD HAVE ADMITTED IT

(By David Lawrence)

Just a few short months ago President Truman was going up and down the country telling the American people that unless he were elected the Nation would experience a depression.

Many persons took seriously his warning and voted for him—comprising enough votes perhaps to swing a close election. Mr. Truman's campaign was based on an assurance of continued prosperity—high-level employment, high wages, and high rewards to every group. His whole strategy was based on a materialistic, selfish appeal—to farmers and to workers.

Today the Nation is in the midst of a slump that could become a serious depression if leadership fails and confidence in the President himself continues to diminish.

For the trouble with Mr. Truman is that he has not yet learned that the best politician is a man who forsakes the evil ways of politics.

A recession was inevitable no matter who was elected last November. Mr. Truman would have been a bigger man today had he stated that simple truth to the people and outlined instead an economic program that was balanced and fair. The words "Fair Deal" are remarkably descriptive of what the Nation ought to have. But until Mr. Truman emancipates himself from the hold which pressure groups and meretricious advisers have upon him, he cannot make the words "Fair Deal" mean anything.

MUST TELL PEOPLE TRUTH

At heart Mr. Truman is a good man. Again and again it is said about him that he means

well. There is no dislike for him personally. He could be a popular President with all classes. But he has not yet started to do those things which could make him a great President.

To be a great President does not mean to give away the people's money. The first requirement is to tell the people the truth—all of it, no matter how painful it is. Nothing is to be gained by being a partisan—by denouncing groups or individuals who did not agree with him last summer and do not agree with him now. Everything is to be gained by summoning the most disinterested men of all parties and developing a national policy that is right for the United States today—and which may indeed seem to be contrary to what the politicians or pressure groups want.

The kind of advice Mr. Truman needs was given publicly over the week end by James F. Byrnes in a speech at Washington and Lee University's 200th anniversary celebration.

Here is a Democrat who served in the House and the Senate for many years and won the respect of both parties. Here is a man who served as Associate Justice of the Supreme Court by appointment of President Roosevelt. And here is a man who left that high post to take a difficult and nerve-racking job as director of economic mobilization during the war. President Truman later appointed him Secretary of State. Certainly here is a disinterested man who does not aspire further to political honors.

And what did Mr. Byrnes say. He declared a national policy in a few words:

WARNED OF WELFARE STATE

Our first line of defense is a sound, solvent American economy. But to achieve such strength, he suggested that the only wise course is to reduce expenditures and live within our income.

Mr. Byrnes warned that certain Federal programs before Congress today would create a welfare state in which the American people would be economic slaves. Unless there was economy, he expresed fear that the United States may be going down the road to statism.

The former Secretary of State, therefore, made a concrete proposal, namely, that Congress authorize the President to make the reduction necessary to bring the expenditures within our income. He pointed out that because several appropriation bills have passed both Houses, a blanket reduction by Presidential authority was logical and the only way out.

He is right about it. But Mr. Truman will have to become a new kind of President to accomplish it if Congress should give him the power. Many men can win elections, but can they win the respect of all the people—the confidence that means a real place in American history? The next 60 days will bring the test and perhaps fix the level of prestige or ignominy that historians will record for Harry S. Truman.

Agricultural and Industrial Progress in the South

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1949

Mr. EVINS. Mr. Speaker, under leave to extend my remarks, I wish to have included in the RECORD an article which appeared in the July issue of Reader's Digest entitled "The Rebirth of the South," by Louis Bromfield, which was a reprint of the article originally published in the Country Gentleman.

I should like to say that this is a splendid article which Mr. Bromfield has written. It is authentic and reflects careful research and a scientific knowledge of agriculture. What Mr. Bromfield has to say regarding the progress which is being made in the South in an agricultural way is true and appreciated, and I have nothing but praise for his article. However, I do wish to say that in writing so authoritatively of the progress of the South, Mr. Bromfield has made several omissions in his explanation of that progress. I should like to take note of these omissions. First of all, he has neglected to mention that the key to the progress in the South is the character of the southern people, the willingness to work to overcome handicaps; he has omitted the mention of the industrial growth of the South and of the industries which, through faith of southern people in their native land, has made possible and by which the determination of southern people to overcome economic handicaps has been most evident. He has neglected to mention the great boon to agriculture and industry alike of the Tennessee Valley Authority and the countless benefits which have been derived therefrom, and which were made possible through the belief of the southern people that harnessed resources of nature are the surest path to universal progress and prosperity. Yes; the South continues to make progress industrially and agriculturally and I should like to suggest that Mr. Bromfield and others write more fully and expansively on this subject for the information of all the Nation.

The article is as follows:

THE REBIRTH OF THE SOUTH

(By Louis Bromfield)

Only 10 years ago President Roosevelt spoke of the South as the Nation's No. 1 economic problem. Today no other part of the Nation is growing and developing so rapidly. Hard-working, intelligent new pioneers have taken wornout land from the tyranny of King Cotton and turned it into rich, diversified production. Meanwhile, as farm mechanization has progressed, hundreds of thousands of low-wage seasonal farm workers have found year-round employment in rapidly expanding southern industries.

I have a deep affection for the South and periodically make tours along its back roads. Each time I revisit the same territory I am astonished by the progress in prosperity, living conditions and happiness. The Old South of the rotting, pillared plantation house, a wretched, single-crop cotton agriculture, the share cropper living in a mud-plastered cabin, is rapidly becoming obsolete. Within only 7 years, for example, I have seen agricultural slums virtually disappear from North Carolina, where agricultural income has increased from two hundred million to nearly eight hundred million dollars per year.

Almost every year I visit my friends, the Simpson brothers, in Alabama. About 15 years ago they inherited 600 acres of cotton land with a $40,000 mortgage. Today these brothers raise more cotton on 50 acres than the whole farm produced when they took it over. The rest of the land is given over to sweetpotatoes, pecans, grass and legumes, beef cattle and hogs, with occasional seed crops. The 600 acres have grown to 3,000 acres, and the brothers have built themselves two handsome brick houses.

Then there's Tom Necker over in east Texas. He hasn't a lot of land, and until 10 years ago he had it all in cotton. On a Government loan he bought cows and planted grass and legumes. The gross return on his land the last year he raised cotton was less than a thousand dollars. Last year his gross on the same acreage was more than $10,000.

The rebirth of the Old South has come about through the brains and energy of hundreds of individuals like the Simpsons and Tom Necker. It has come about through Government financing and the devoted work of county agents and soil-conservation engineers, through the contributions of experiment-station and agricultural-college researchers in finding new crops.

Most of the soils in the South, however depleted or eroded, are fundamentally good soils which react richly to knowledge and good treatment. The potentially rich red soils are deep and easy to work and the marl or limestone base of the black soils makes possible the growth of miracle-working legumes. The legumes feed the whole range of succulent grasses, which in turn make for profitable beef- and dairy-cattle production. In some areas where even lime failed to make alfalfa grow, science discovered what was missing—the trace element boron. When as little as 10 pounds of borax per acre was applied to the soil, alfalfa and other legumes flourished.

The chain of limestone, legumes, grasses, and livestock has increased immensely the organic content of soils which in the past under single-crop cotton had been reduced to nearly zero. Rotation of crops, with emphasis on legumes, has brought back to so-called worn-out soils bacteria, fungi, molds, earthworms and other living factors which make dormant fertility quickly available.

Of the crops that have played a part in the southern renaissance some had been growing under the very noses of farmers and experiment stations. Only a few years ago, for example, a county agent noticed that a long-familiar grass on a steep Kentucky hillside was deep green in midwinter. Now widely propagated as Kentucky fescue 31, it provides succulent pasture for livestock through the winter months on thousands of acres.

The Cayley or Singletary pea grows wild along roadsides in the Deep South. It took a farmer named Cayley—who had come down from Ohio to Alabama—to observe that this plant continued growing throughout the winter, an observation made also by Professor Singletary of Louisiana State Agricultural College at about the same time. It is now worth millions to the South, for after the crop has been used as pasture during the winter it is plowed in as organic material, along with quantities of nitrogen it has fixed out of the air.

Other valuable plants have come from remote parts of the world and found southern soils and climate singularly adapted to their growth. Alfalfa, credited with an Asiatic origin, has become one of the great wealth-producing crops of the South not only because of its high protein and feeding values but because it checks erosion and produces nitrogen deep in the soil.

Kudzu, from Japan, a deep-rooted leguminous vine, has a prodigious summer growth, sometimes as much as 40 to 50 feet. It was first brought to this country by clipper ship and was long used as an ornamental plant called "porch vine." Someone discovered that it is a fabulous erosion-checking cover for gullies too deep to be bulldozed over. Not only that—it furnishes high-protein pasture and forage. Throughout the South it has reclaimed land once regarded as hopelessly lost.

Crimson clover, one of the best of winter clover crops and nitrogen-producing legumes, comes from Europe and Asia. A sport, or variation, of this plant occurred a few years

ago in Alabama. In a pecan orchard seeded to crimson clover, a patch about 10 feet square reseeded itself—not immediately as was its habit but a year later, the seed remaining dormant in the ground during the intervening time. Gradually it took over the whole orchard. This seeding habit makes it possible to grow a crop of corn or cotton during the period the seed is dormant and, when that crop is harvested, to find the field covered with a thick carpet of young crimson-clover plants to keep the earth protected during the winter.

Ladino clover, a rival of alfalfa as "the green gold of agriculture," was brought to this country about 25 years ago from northern Italy. Under proper rainfall conditions it is the greatest known producer of high-protein pasture for cattle, hogs, turkeys, and chickens. It, too, covers the ground and builds rather than destroys soils. It has helped produce the enormous recent growths of the poultry industry in the South.

Another cover crop of Asiatic origin is the blue lupin, a legume which can be sown after the corn or cotton harvest to protect the earth against winter rains. It blossoms in February and is ready to plow under with all the nitrogen and organic material it produces in time to seed another crop of corn or cotton the following season. Sometimes it is used for grazing before being turned into the soil.

Strawberries, asparagus, truck crops, peanuts, and other products are adding millions to the agricultural income of a vast area where once only cotton grew. The growth and sale of tomato plants, seeded early in the South and shipped to northern growers for replanting, has become an industry. Tung oil, our entire supply of which formerly came from China, is being produced for use in paints and varnishes by an increasing number of southern orchards.

It has at last been realized that the southern livestock grower and dairyman has great advantages over farmers in the North and Middle West. Through most of the South investment in barns and equipment to house livestock and store forage during the long winter is unnecessary since it is usually possible to keep cattle on pasture the year round.

Until recently most of the milk consumed in the South came from the North and Middle West. It was too expensive for many families. But today one sees everywhere, in fields which only a little while ago were bare and gullied, fine herds of beef and dairy cattle up to their knees in grass and legumes.

One of the soundest developments is the gradual disappearance of the absentee landlord. Land has been passing into the hands of men working as owners rather than under the tenant-farmer, sharecropper arrangement which contributed so much to poverty and low living standards. No other factor has destroyed more good land in the Nation than the short-term, year-by-year arrangement between absentee landlord and tenant farmer. That system encourages both to steal as much as they can out of the soil. In 1936 only 44 percent of the farms in the South were farmed by owners; today more than 60 percent are so farmed.

Statistics on agricultural income in the Southern States show an increase from about two and a quarter billion dollars in 1940 to more than eight billions in 1947. Even allowing for inflated prices and for the general rise in farm income, the figures are remarkable. While the farm income in the whole of the United States (including the South) increased over the same period 300 percent, the income of the Southern States increased nearly 400 percent.

The record of southern agriculture is ample proof that most basically good soils are not worn out and can rapidly be restored at low cost. And that with economic rebirth come other things—better diet, better education, and a better South and America.

Blueprint for Disaster

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1949

Mrs. ROGERS of Massachusetts. Mr. Speaker, in a recent issue of Collier's weekly magazine there appeared a very significant article by Mr. Walter Winchell entitled "Blueprint for Disaster." It is well done, impartial, fair, and to the point. It brings to the attention of the American people the great importance of having a smooth operating military team composed of our respective services. And just as important, it brings to our attention here in this Congress the necessity of our maintaining our constitutional prerogative of civilian control over the military services. This constitutional power of civilian control rests completely here in this Congress and it is our solemn duty to see to it that we do not permit this control to accidentally or inadvertently pass to others.

In this Collier's article, Mr. Winchell very correctly points out the importance of tradition in our military services. He brings to our attention the overwhelming victories of the United States Marine Corps and the United States Navy in those days when we were pushing the Jap back to his homeland. Make no mistake about it for there is no question but that any legislation which might curtail the tradition and spirit behind the respective uniforms of our military services will operate as a dagger in the heart of the fighting spirit of the men who must carry the burden of protecting our freedom.

There are more ways than one to strike a death blow at one or more of our great military organizations. One is by legislation and that concerns us. We should be very careful that the Congress never enacts any laws which in the end might boomerang and prove disastrous. Another way is by Executive order or decree. Through this method of Executive order it is possible to transfer the military functions or missions from one service to another and thereby ruin morale and spirit to carry into the future the glorious traditions of the past. Through this method a great military service can be left to wither on the vine. If the Congress is to maintain civilian control over our military forces it is essential that it exercise the right of review of all Executive orders relating to the creation, assignment, and operation of military missions. There is no point and no value in maintaining complete control at the front door of our military house and forgetting all about the back door.

In this brief message to you this morning I suggest that all of you read Mr. Winchell's article which I am including here as a part of my remarks. I am doing this because I feel that it is essential to the welfare of this country for every Member of Congress to read this article. In conclusion my plea is this—as Members of this great parliamentary body let us not dissipate our powers through inaction but let us enforce our powers and show the people of America, whom we represent, that their Congress is still in control of their Government.

The article is as follows:

BLUEPRINT FOR DISASTER

(By Walter Winchell)

Mr. and Mrs. United States: When a nation is about to depart from the proven way of its ancestors there should be, at least, a pause at the crossroads. Before a nation plunges off at a tangent from the straight and narrow path it has traveled with honor and dignity for 170 years, the theory of the new way should, at least, be tested by challenge.

America is at a constitutional crossroads today.

While this Nation hopefully gropes for new objectives, it actually is abandoning the sacred procedures which were the topmost concern of the men who created it. The fundamental concept of the American definition of law and order is that the end never justifies the means. In our seeking toward the end—that we shall be a perfectly defended country by twentieth-century standards—we are now in danger of sacrificing the means by which we live in these United States as freemen.

That is why I believe the American people should now cry, "Halt!" on two military bills before the Congress—the Tydings bill (S. 1843) and the Vinson bill (H. R. 3845)—because these documents, in effect, may wreck the very Constitution they are supposed to protect. It is not because I condemn the new objectives of military unification, but because I, like the rest of my fellow citizens, have not been informed of them; it is not because I have reached conclusions, but because I have not even been informed of the methods by which conclusions were reached. I am in doubt.

When an American is in doubt as to whether his rights under the Constitution are being impaired his conscience leaves him no choice. He must defend the Constitution on the steps of his own Capitol as certainly as he must defend his country in the stratosphere or in the pounding surf if need be.

I, therefore, write this as a citizen to you, my fellow citizens, urging that we demand an explanation of the legislation which proposes transfer and centralization of great new power—military and financial—in the Department of Defense. I do not say that the transfer is iniquitous. But I most certainly do say that the procedures by which it is being accomplished are contrary to the traditions of this Republic; that they are unaccompanied by a really clear public understanding, and that, unchallenged, they are a threat to the liberties of the American people.

We are told that modern warfare requires a unified command in the military, but we are given no assurance that our fundamental democratic system of checks and balances will continue to control it. Thomas Jefferson, James Madison and Alexander Hamilton would no more have created such a military-political machine such as that being formed than they would have loosed into a holiday parade a crazed stallion, without rider, bridle, saddle, whip or checkrein.

President Theodore Roosevelt once received a committee dedicated to protecting migratory bird life. It was shortly after the war with Spain. The committee complained that American soldiers in Cuba were wantonly shooting sitting birds who had come to rest on the tropical waters there on their seasonal flights south. The Rough Rider, with his customary effectiveness, grabbed a telephone, asked for the Secretary of War and tersely ordered: "Mr. Secretary, tell Wood to stop that damned bird slaughter down in Cuba."

ABUSE OF PREROGATIVE CHALLENGED

The committee withdrew, overwhelmed by the decision and the dispatch of its execution. A distinguished visitor, who had witnessed the entire episode, remarked to the commander in chief: "I think I have some knowledge of your prerogatives, Mr. President, and you may believe me your whole procedure was unconstitutional."

"I know that," said Teddy, "but one of the most dee-lightful things about this office is that nine tenths of a President's illegal acts aren't ever questioned."

The trouble with the beloved Teddy's statement, unfortunately, is that this is true. And just as unfortunately a whole Nation's civil rights can be killed—just as easily—as a bird's life can be spared.

This Republic was founded on the theory of checks and balances. The Constitution did not restrict the sovereign powers of the Government. On the contrary these powers, delegated to our central government, were so formidable that they had to be proved out, finally, at Gettysburg. But even as the founding fathers entrusted great powers to the Federal Government, the touchstone, indeed the watchword, of American liberty was that no one man, and no single department, should ever wield them all. The powers inherent in Government are so great that the founding fathers feared that if any one man were to be vested with them all, he would automatically become a dictator, whether he wanted to be or not.

There is no doubt about which branch of our Government is meant to have final power, the Congress, the President or the Supreme Court. It is the Congress. Congress is the expression of the will of the people, and so closely was this differentiation made, that no appropriation can be obtained unless the bill for it originates in the House of Representatives. Not even the Senate may initiate financial measures; the House, the body nearest the people, was designated to control forever the purse strings of our country.

Accordingly, the invasion of the powers of Congress is a body blow to the rights of the people. The Hitlers, the Mussolinis, the Stalins cannot exist in a nation which has a congress or a free parliament. Yet the legislative branch of the Government of these United States stands challenged—and successfully challenged—by a special gag order issued by the Department of Defense even before Congress has had a chance to act finally on the Tydings and Vinson bills. This presents a tremendous constitutional crisis, completely without precedent in the history of our country. Had such doctrine charged across our borders under the battle flag of a foreign enemy, it would have been recognized. We would have fought it, if necessary, from behind the fishermen's shacks on the Maine coast to the irrigation ditches of California.

But because the threat bears a Washington date line, we accept it. What is worse and almost criminal, the Congress accepts it—without a murmur.

DEFENSE DEPARTMENT BUCKS CONGRESS

Under the Defense Department mandate, officers and men of the United States armed forces are forbidden to give information to Congress, unless their statement is approved first by the Department of Defense. This is far more than an invasion of the military man's rights as a citizen; it is an outright defiance of Congress as a body. Had George Washington himself ever issued such an order the Continental Congress would have driven him out of Independence Hall.

Congress has the constitutionally guaranteed right to know anything about the Republic, because unless Congress has the facts it cannot pass intelligent laws. Yet the Department of Defense has indicated that it will present to Congress only those facts that it wishes Congress to hear. This is control of Congress—by censorship. Yes, believe it or not, Mr. and Mrs. United States, your Congress is censored—and it is accepting this censorship from a department which Congress is supposed to control.

My fellow Americans, write, wire, ask, beg—and demand—of your Congressman that your fundamental right of information (removed from his pocket while he slept) be returned at once.

The strongest actions are necessary to counteract the censorship of Congress by the Department of Defense. The fact is that unless this censorship order is countermanded by the Department there is sufficient evidence right now for Congress to impeach the officials who are ordering that information be withheld from it. Further, under his oath to the Constitution, any member of the National Military Establishment who refuses to furnish Congress with information bearing on the defense of the Republic should be subject to impeachment by trial in the United States Senate, not by military court martial.

The final power must be civilian. All of history is shouting its warning. The cannon of Louis XIV bore this inscription:

"The final argument of the King."

The Department of Defense appears to be urging the same "argument" when it censors the Congress.

In 1948 the Department of Defense was not capricious in its unconstitutional defiance of Congress. It was deliberately concealing one of the greatest scandals in American history. There is evidence to support the belief that right now the Department is withholding from the American people information on a collective dereliction of duty unmatched in the annals of any nation which ever survived. The truth is that the high command in Washington has failed the American people. Rivalries among the fighting services are being fought to a bloody draw at the expense of the security of the country. Of this, every foreign capital, including Moscow, is well and fully aware.

The reason for censorship of Congress—and of you—is not obscure. You and the country have been sacrificed. Your Congressman, and he alone, can prove I am right by officially demanding an investigation. I dare the Secretary of Defense to countermand the order of November 8, 1948, and to permit the admirals, the air chiefs, the Army Ground Force generals, or the Commandant of the United States Marine Corps to take the stand under oath and to voice their convictions on the state of this Nation's defense to those who are ultimately their constitutional commanders—the American people.

I believe at first the now bitterly competitive big brass was actuated by honest convictions. But somewhere, somehow, the squabble became so savage, so personal, and so unreasoning that it is now the chief danger to the safety of the Republic.

The fight is far from finished. The contestants have merely concluded another vicious round. With baleful eye and somber intent each service is measuring the other in preparation for the next frightful heat.

Maj. Gen. "Wild Bill" Donovan has declared that the most perfect subversive action that can be effected against an enemy nation is to achieve disunity among the various branches of its armed forces. The general stated that the acme of intelligence goals would be to stir up disunity in any enemy's high command.

Why should the Department of Defense be permitted to deprive the American people of these facts? Why should this Department be allowed to put felt around the doors behind which this brawl is taking place—to soundproof them so well that not even Congress can hear the sounds of the titanic struggle? Some Senators I know, who are familiar with this undercover battle, are darkly muttering the word "treason."

SILENCE IMPOSED ON ARMED FORCES

For this reason—the conspiracy of silence—I am opposed to pending legislation for further unification of the armed forces, though I am not opposed to unification. Facts for any honest debate on these bills have been withheld by the Department of Defense, by blanket orders against discussion or argument on the subject of unification among personnel of the armed forces, and by the implied threat that swift demotion, transfer, or even court martial will follow for any man or woman in the services who dares speak his mind.

The principle involved is far more important than the military bills themselves. I do not know enough about these bills to approve them. But I am ashamed to report that, as a matter of fact, neither does the Congress of the United States.

The moral overtones of the method by which these unification bills were manufactured amount to even more of an attack on self-respecting people than upon their Constitution. There is only one thing worse than government by bureaucrat—and that is government by "expert." The creed of the "expert" is that no amateur should be allowed to touch delicate machinery. This is sound, up to a point. It may take an expert to assemble a motorcar, but any amateur can tell you instantly whether or not it works when he applies his foot to the self-starter. An "expert" in a cubbyhole is no substitute for a responsible public official under oath on an open witness stand before Congress.

Whether or not Congress likes its job, it in the end is responsible to the people—and it is not within the power of Congress to abdicate, allocate, or delegate that responsibility.

The Congress of the United States owes to the American people an immediate explanation as to just how, where, when, and why the Secretary of Defense acquired his power to defy constitutional subpenas generally, when many American citizens have been thrown in jail at various times in the past century for ignoring them individually.

On the record, the Department of Defense is not only in contempt of Congress, it is in outrageous violation of the Bill of Rights.

Gen. Lucius D. Clay once sardonically observed that a United States citizen leaves his Constitution behind him when he goes abroad. At the time, your correspondent corrected: the American citizen leaves his Constitution behind only when he is lowered into his grave. But the Department of Defense now goes far beyond that. In effect, it holds that when an American boy is drafted he becomes a second-class citizen in his own land. Should his superiors blunder away his life, should they mistreat him as a man, should they squander away his vitality and youth through some misguided whim of theirs, these facts could not be brought out before Congress—except by permission of the Secretary of Defense.

HUMILIATING THE LAWMAKERS

The day Congress accepted this usurpation of its sacred constitutional duty, Congressmen should have tied a small piece of crepe to their brief cases—in memory of great Representatives and Senators who would have been carried down the Capitol steps to their hearses rather than countenance it—instead of crawling back to their offices under such public humiliation to themselves and to the American people.

Can anyone imagine Daniel Webster being refused the plan of campaign by Gen. Winfield Scott? Would Calhoun have taken without a whimper an order limiting his brilliant interrogations? Had Senator Walsh

been ignored by the Interior Department, the Teapot Dome scandal would never have been exposed.

Over the Senate door there should be placed this inscription: "Through these portals since November 8, 1948, passed the most stultified Senators in American history." The Senate has been defied before—but never successfully—and never without a fight. Now, for the first time in our land, a Senator must confide to you—if he is telling the truth—that, militarily, he doesn't know what is going on, because the Department of Defense won't tell him.

The vast powers about to be made the law give jurisdiction over more than mere numbers of men. The essence of the Bill of Rights, and of the American way, is the respect of personality. If the right of personality belongs to the individual American, how much more does the esprit de corps earned on the field of battle belong to its great fighting services? When the frigate, U. S. S. *Constitution*, was to be scrapped ignominiously 120 years ago, the American public rose en masse. The *Constitution* is still afloat—and fully restored. Her tattered ensign has not been torn down, "and many an eye has danced to see that banner in the sky"—the frigate's officers and crew—would rejoice to see how the American people have preserved the ship, the flag, and the country they loved.

Weapons have changed since they sanded her gun platforms before she engaged the enemy—sanded them to prevent slipping on her bloody decks in battle. But there is no new twentieth century model of a human heart. *Old Ironsides* won her reputation for the valor of her crew far more than for her oaken bulwarks. The battleship *Missouri*, the carriers *Coral Sea* and the *F. D. R.*, plowing through the billows, are sparked by the morale of their officers and crews far more than by the steam in their turbines.

That applies to every branch of the American forces. The Fighting Sixty-ninth, the U. S. S. *Salt Lake City*, the magnificent Second Division, Patton's Third Armored, the Eighty-second Airborne—these are names which rang out like their own musketry fire in the hearts of men who followed their colors into battle. Congressional Medals of Honor have been awarded to men who waved these colors in the face of the enemy.

The tattered battle flags of the Republic cannot become rags overnight by a mere act of Congress. They have lived far too long—and they have been carried by too many brave men—to be put to death with the scratch of a pen in a departmental order.

TRADITIONS THAT ARE SACRED

A fighting ship or battalion is not an administrative classification, but a tradition which lives in the souls of sailors and soldiers—and it will be a tragic day for this Republic when the men who wear the uniforms feel otherwise. The personality of a service is entitled to as much consideration as the personality of an individual. For one reason, the Republic owes its very life to the existence of an esprit de corps—and the existence of the Republic depends upon its continuance. To see 175 years of pride in fighting service traditions kicked around the legislative halls as if our fighting men were a self-seeking mass of supplicant office seekers, is about the most ungrateful act that a democracy can perpetrate.

For instance, Iwo Jima was—even by tough Marine standards—a very rough show indeed. On D-day minus 1, the day before the landing, it was estimated by the command that Iwo would cost 15,000 leatherneck casualties. The hearts of Marine generals faltered for love of their men. But neither the men nor the generals faltered when they looked at the globe and the anchor. That famed insigne had been faithful for 174 years.

A GRIM TOLL OF CASUALTIES

Fifteen thousand dead and wounded American men on a strange beach are enough to make even the Marines swallow hard—swallow everything but their pride in their corps. You know the rest. The Fourth and Fifth United States Marine Divisions went in, and then the Third. The enfilading fire from Mount Suribachi to the left and Motoyama to the right mowed them down.

Semper Fidelis means "Always faithful" in Latin, to a Marine it means the honor of the corps—and on February 19, 1945, it meant "Faithful unto death." Col. Harry Liversedge, 28th Regiment, Fifth Division, USMC, was handed his orders at dawn. They read very simply: "Capture Mount Suribachi." You have seen the picture—at the end. The 28th carried the volcano, but it carried home, also, its dead.

Marine Gen. Holland M. Smith wrote that he was standing down on the beach with Secretary of Navy Forrestal when "the tiny speck of red, white, and blue broke and fluttered on the gaunt crest of the volcano. Turning to me, Secretary Forrestal said gravely: 'Holland, the raising of that flag on Suribachi means a Marine Corps for the next 500 years.'"

Obviously Forrestal, who later was to become the first Secretary of Defense, neglected to take into consideration the forgetfulness of the politicians and the bureaucrats. Within the next 500 days the Marine Corps was fighting for its life—not on Mount Suribachi, Iwo Jima—but on Capitol Hill, Washington, D. C. The wounds the corps has received in the corridors of the Capitol are far more grievous than those the enemy delivered from the foxholes. The Japs killed only their bodies. It remained for American bureaucracy to stab the spirit of the Marine Corps in the heart—from the back—with the poison dagger of brutal ingratitude.

The Department of Defense in an off-the-record statement during the last week in April indicated that the marines would no longer have an air arm. This is the twentieth-century equivalent of saying that, henceforth, beachhead marines would fight without rifles. Twenty-four hours later the report was denied. It was discovered that the American people had a longer memory than Washington desk men. Much to their own surprise the marines found that being first in battle had left them first in the affections of the American people.

Even more to their surprise, they found that this was one battle which they wouldn't have to fight—for the good and simple reason that the American people were going to fight it for them.

TOO MUCH POWER FOR ONE MAN

The politician who introduces any bill to abolish the United States marines will have dropped into the hopper his own political death warrant. Yet the Secretary of Defense can emasculate the Marine Corps with a sheet of paper, an administrative order, any time he pleases. No single man should have this power. If the Republic's battle flags must be folded, let it be done in the open by the will of the people, and where, at least, our colors can be paid the final and full honors of war.

Secretary of Defense Johnson is not only in charge of the Nation's safety—he has the power of life and death over its traditions. If the Marine Corps is to pass into history, this Nation and the world will be less a great fighting spirit and a magnificent personality. One thing is certain: Bureaucracy is not going to kill the Marine Corps by a scratch of the pen, at least not publicly. If "taps" are ever blown over the blood-stained flag of the corps it will be because the bureaucrats have thwarted the will of the American people—in the dark.

Your correspondent believes in a 70-group air force. In carrying that fight to the people this reporter mentioned the fine integrity of Air Force Gen. Carl A. "Tooey" Spaatz, who resigned rather than take the responsibility for the safety of our cities without adequate air weapons to defend them. Congress passed the 70-group bill, and since then the administration has given a gigantic example of executive sabotage—the kind we must protect ourselves from in the Department of Defense. The executive branch refuses to enforce the measure, though the President's own committee reported it was the minimum necessary, not for war, but for defense.

Following that fight there occurred one of the most desolating experiences which this reporter has ever faced as a citizen. The 70-group air force bill was hailed as an Air Force victory over the United States Navy. This reporter crusaded for the 70 groups as a necessary weapon against all possible enemies of our country—not as triumph of one service over another. That the outcome of any issue can be construed as a victory of one American service over another belies every tradition of the past cooperation of those forces. It is sickening to think of the implications.

There are no degrees of supreme devotion to duty. Two men typically prove it: Army Air Force Gen. Jimmy Doolittle, who took off for Tokyo from the deck of a Navy carrier with the odds at 10 to 1 against his return, and Rear Adm. Daniel J. Callaghan, an old-school sea dog who believed that the gun turret was more important than the aircraft carrier. The weight of authority branded him wrong in that, but Dan Callaghan was the rightest man in the world at the Battle of Guadalcanal. Had he not been there, there would be 18,000 more white crosses in Solomon Islands cemeteries.

The White House lights burned late the night of November 12, 1942. They knew in the war room that a much more powerful Japanese task force than Admiral Dan had was in Indispensable Strait to wipe out the First Marine Division, thinly spread out on Guadalcanal, Tulagi, Gavutu and Tanambogo. They knew also that Admiral Callaghan, U. S. S. *San Francisco*, was on his way up the "slot" to grapple with the giant. They told F. D. R. that his old aide had accepted battle—with nothing more formidable than a puny cruiser-led task force, and a theory. Callaghan did the incredible. He drove right through the two battle lines of the enemy fleet.

VICTORY FLAG AT HALF MAST

The next morning they told the President that Dan had won. The man with the wrong theory had held the "slot." The cruiser *San Francisco* came through with colors flying, but at half mast, for Admiral Dan Callaghan, Congressional Medal of Honor, posthumous, was dead on his bridge. Loyalty and devotion to this country is no monopoly of any one branch of our armed forces. The acid test of true loyalty to this Nation on the part of the various services is to concede that there is equal devotion to the flag in each of the other fighting arms.

The admirals have issued a warning on sea transportation. They declare they cannot accept that responsibility unless they directly command a covering air arm of their own. Yet, merely because the war plane carries wheels instead of pontoons, it must come under Air Force command as of this writing.

Thus, for practical purposes, this achieves the damaging result of splitting the command—not unifying it. For a fleet to have insufficient carrier planes in the twentieth century is the equivalent of an army with insufficient cavalry in the nineteenth century. It is just as ridiculous as to suppose

that Grant could have landed the Army of the Potomac while Sheridan's cavalry was under the command of Admiral Porter. For the historians, an examination will reveal that Gen. George Washington lost the Battle of Brooklyn Heights because, though he commanded the right and center of his battle line, the left was under the direct and conflicting orders of a Continental committee.

What the Tydings and Vinson bills are supposed to do and what they would do are two different things. These bills have already, in peace, divided the morale of our armed forces. If in war they would divide the theaters of command, then they are indeed the blueprint for disaster.

The admirals have issued their warning, a warning just as portentous as the Air Force's. The time to fix the responsibility is now. If the sea around and the sky above our task forces and convoys are not the Navy's theater of command, what is? No officer in his right mind can take the full responsibility without absolute command. A sinking transport in the raging North Atlantic, with thousands of GI's in the water, is a terrifying picture—enough to give pause to a Congress which legislates, but does not fight, a war. Congress is certainly entitled to hear every viewpoint of the admirals. But it cannot get them unless they are first approved by the Secretary of Defense.

The Tydings and Vinson bills do not purport to solve any tactical problems. They do attempt to establish the chain of command. That's excellent—if they achieve their objective. Mr. Justice Oliver Wendell Holmes once observed that a page of experience was worth 10 volumes of logic. The whole experience of government is that the man who votes for the law is quite secondary, ultimately, to the man who enforces it.

Vast sums will be voted for the Defense Department—but will there be a legislative check on its expenditures? Indeed, the Secretary of Defense can forbid an officer to tell Congress how an appropriation is being expended. (Just how important this check-up on the executive branch is, in practice, can be estimated from the fact that President Truman established his prestige as presidential timber from the manner in which Senator Truman conducted his senatorial investigation committee—a check-up on the war effort itself.)

DANGER IN LACK OF CRITICISM

Thus the checkrein of the appropriating power dies with the killing of the right to obtain information. The constitutional safeguards of the right of freedom of speech—so valuable in civilian life—are now excised from the military phases of our national existence. The Secretary of Defense is insulated from the criticism of his subordinates; his superiors are isolated from the facts on the manner in which he is conducting his office. These are powers which the head of any large corporation would shun as the very formula for general catastrophe. The wisdom of the Bill of Rights is more than the right of the citizen to be heard. It is also to guarantee the official the benefit of criticism.

Thus, my great objection to these bills—which purport to establish the armed forces chain of command—is that they are breaking the first great constitutional order of responsibility; that the Executive shall be responsible to the Congress and the Congress shall be responsible to the people.

The Congress has already allowed that power to slip from its grasp even before the bills have become law.

I repeat: It is beyond the constitutional authority of the Secretary of Defense to effect—and beyond the constitutional power of Congressmen to permit—the wresting away of Congress' investigatory, its appropriative and its legislative functions. The question and the crisis have now come before the final judges—the American people.

Intrinsically these unification bills may be good—or they may be bad—but the extra-legal usurpation of authority by the Defense Department under the color of law is absolutely unconstitutional. Candidates for political office are sometimes picked in smoke-filled rooms; but the Constitution lives by the light of day. There was no back door to Independence Hall, Philadelphia, in 1776; there is no place for trap doors in the ramparts of national defense today. Before any department is given sweeping powers to act it must first satisfy the fundamental constitutional rights of the American people—the right to know, to approve, and to reject.

The Germans and Italians voted away their liberties—and the jagged wrecks of their public buildings are now monuments to that sorry day in their respective histories. It is because there is such a great danger to our own country that I wrote this article. The proceeds from it will go to the Damon Runyon Memorial Fund for cancer. But its results, I hope, will be your letters to your Congressmen and Senators. The vast powers about to be delegated in these two unification bills, unless they have constitutional safeguards, will represent not the will of the American people—but, instead, the last will and testament of the American Republic.

Elections Made to Order—Democracy in the Captive Counties

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1949

Mr. MANSFIELD. Mr. Speaker, under unanimous consent, I am inserting an article on the recent Irish elections which I think will be of interest to the Members of the House. The article was carried in the May 1949 issue of the magazine Columbia:

ELECTIONS MADE TO ORDER—DEMOCRACY IN THE CAPTIVE COUNTIES

(By David O'Neill)

On February 10, 1949, a general election was held in the partitioned area of Ireland, that is, the six northeastern counties. The total number of votes cast in the election was 376,973 out of a registered electorate of 843,412. Of the votes cast the Tory party and all government supporters got 238,697 and the opposition parties who stood for a united Ireland polled 138,356. The difference—100,341 votes—elected a government. Before the election took place, over 38 percent of the seats (20 out of 52) had been filled without a contest. In some of the contested areas the constituency boundaries had been so carefully arranged by the Tory party (who of course were able to act as a government) that even where the opposition cast a majority of the votes the government won the majority of the seats. Although the total opposition poll was much more than half the Tory poll, the Tory party won three times as many seats as the opposition. The opposition has never won an election in the 28 years since the area was cut off from the rest of Ireland. Even when, of the votes cast for the contested seats, the official government party was in a minority—as happened in two of the five last general elections—the Tory party still held three-fourths of all the seats.

To understand these and other anomalies it is necessary to understand why general elections are held in such an area at all.

It is not a natural geographical unit—its boundaries pass up the middle of streets, through houses, across individual farms and bisect bridges. There is no division in ideals, outlooks, or attitude between the people immediately south of the border and immediately north of it. Those living along the line are of the same race, practice the same religions, are engaged in the same economic pursuits, use the same language, and marry into one another's families. Groups on each side of the line share the varying political beliefs of the citizens as a whole.

Why then have they been separated into two states? Certainly not by their own will.

NEITHER PARTY WANTED PARTITION

Today there are two principal parties in the separated area—the Tory Party and the Nationalist Party, who between them speak for 90 percent of the people. We shall come later to understand how these parties were brought into existence. At the moment we are concerned solely with the fact that they are there. Both of them have put on record in repeated public declarations that they never wished Ireland to be partitioned into separate states. "We never asked for Partition and we never wanted it," said Lord Glentoran, then chief whip of the Tory Party speaking on October 10, 1946, at Belfast. The Nationalists have always made the ending of partition their chief aim and have never accepted their separation from their fellow countrymen. So that partition was imposed upon the Irish nation against the will of any of its political groups, for in the free part of Ireland every political group has said with Lord Glentoran, "We never asked for Partition and we never wanted it."

The Partition of Ireland was in fact carried out by Britain for her own purposes. The British Government, in 1920, was predominantly a Tory Government. It had by then despaired of success in its efforts to deny freedom to the insurgent people of Ireland. It decided, however, to prevent part of the island from becoming free. As has been the method in other parts of the world, a local minority was incited against the national majority. This local minority was then used as an excuse for the claim that the territory occupied by the minority must be separated from the national territory. In this way the British Tory policy could be achieved of denying to Ireland the right of self-determination which had just been won for all peoples by World War I.

Irish consent for this policy of mutilation was not forthcoming but that did not dismay the British Tories. They had at that time majorities in the British House of Commons and the British House of Lords and they passed a statute called (sardonically) the Better Government of Ireland bill. By this bill 6 of Ireland's 32 counties were separated from the rest of Ireland and kept under British rule, with a grant of local autonomy.

Six Counties—but why six? That must be the most difficult thing to understand for all who have not realized the purposes behind Britain's action in dismembering Ireland. When they do understand it they will know at once why the general election of February 10 had the result it had.

If Ireland were to be divided at all why not one of its ancient territorial divisions? Ireland is made up of four provinces. The northern province is Ulster, an area of nine counties. It has boundaries many centuries old. It has been historically and geographically as distinctive a part of the Irish Nation

as Connacht has been. But it was not the nine counties of Ulster that Britain chose to separate from the rest of Ireland.

Again, the real antagonism to Ireland's national majority created by British propaganda and influence is centered not in nine counties or six counties but in two. These two are counties of Down and Antrim. In the other four of the six counties, taken as a unit, that is Armagh, Derry, Tyrone, and Fermanagh there is a majority against separation, a fact confirmed on February 10 when in the contested areas in these four counties the antipartition candidates polled more votes than all the Tory candidates put together. And in the two most southerly counties of the six—Tyrone and Fermanagh—the majority for inclusion in the rest of Ireland is so strong that if the wishes of the people were really consulted union must follow immediately.

Britain, when her Tory Government came to dismember Ireland, had two rational alternatives:

(a) The two counties of Down and Antrim where a national minority holds a strong local majority position; or

(b) The nine counties of Ulster which form an old and distinctive territory within the Nation.

Britain chose neither. Instead, an area of six counties was chosen having no distinctive features of any kind, either natural boundaries or any particular geographical setting, nor any racial, religious, economic or political differentiation from the people of the territories adjoining it. What on earth was the basis of so curious a choice?

ANSWER TO THE MYSTERY

The recent General Election and every general election since the separation took place gives us the answer to the mystery.

Britain intended the separated area to remain under her rule and in her occupation not for a short period (as her statesmen pretended to Ireland's national leaders) but always. A territory of two counties would have been absurdly small either to justify the creation of a separate State or economically to exist as one. On the other hand a territory of nine counties would be very dangerous from the British point of view since 2 years before, when Ulster as a province was given a chance to express itself on the issue of national unity, it returned a majority for "one Ireland and that free."

Faced with this difficulty, that too small an area could not survive and too large a one would refuse to exist separately, Britain decided to manufacture a state on the basis of arithmetic. Britain thought she could count on 800,000 people to whom she had sold the proposition of remaining in the Empire. Therefore, a territory containing a lesser number of people holding the opposite view could be placed in conjunction with it with the certainty that that opposite view could never express itself effectively if the safety factor were great enough. It was decided that the safety factor should be 2 to 1; so an area in which 400,000 Nationalists resided could, it was thought, be cut away with some chance of perpetuity.

The query will immediately arise in the non-Irish reader's mind, how anybody could (a) determine, so accurately as to make it the basis of a long-term policy, the politics of a people in a given area; and (b) rest reasonably assured that the politics of 1920 would be the politics of 1949. The answer is a significant one in these times. The originators of Partition decided to make religion the issue. Upon a difference of creeds (all scruples in the use of propaganda being barred) a deeper division could be created than on any other question and it would, with the support of a sectarian press, be easier to keep alive. Nor need the people of two creeds be incited. It would be sufficient to incite one, to fill it with fear and horror of the other, to inflame sectarian passions at every crisis and to stand back when mobs took the street. It was brutal, it was cynical, but it was successful.

PROPAGANDA DIRECTED AT THE MOB

It is true that the more educated Protestants were not by this means converted either into fanatics or into opponents of the unity of Ireland. Indeed, all the Protestant Churches, as well as the Catholic, jealously preserve their unified national organizations and have never in that sense recognized Partition. But the British propaganda was not directed at the discriminating but at the mob. Their prejudices were played upon shamelessly. The Pope of Rome was at the gates ready, in the person of "Papists," to snuff out the civil and religious liberties of all who would not sprinkle themselves with holy water.

In the case of the North-East, pogroms followed propaganda and partition followed the pogroms and Britain had her bridgehead, though the rest of Ireland by the courage of her young people and the sacrifices of their elders, won its freedom. That bridgehead has been kept under British control ever since through the Tory Party in the six counties. Whenever it has seemed that despite all Britain's care there may yet be a possibility of reuniting Ireland by consent, the same old sectarian catch-cries are sent the rounds, the same inflammatory propaganda. In the election just over, the picture was painted that had been painted to create the excuse for Partition—hordes of Papists waiting on the border to smother the rights and liberties of the Protestants. As a result of this scare the unofficial Tory movement and the Labor movement, both of which were helping to bring more normality into six-county politics, were wiped out on February 10 and reaction entrenched. The mathematical precision with which the area of the State had been decided, coupled with the misrepresentations designed to startle the mob, insured the result of this general election as it has been insured at every General Election since 1921.

In studying the results of these northern polls we must bring to them a new meaning in words. This was not an election in which the voters were given the chance to change a government or to decide upon the issue of national unity. The composition of the electorate was devised nearly 30 years ago to give but one result, always the same result. In a House of 52 members, the strength of the Tory Party has been in the last seven General Elections—1921, 40; 1925, 33; 1929, 37; 1933, 36; 1938, 39; 1945, 33; 1949, 37.

All over the world governments changed—old regimes fell, and new ones took their places as new ideas filled men's minds. In the Six Counties there was no change. Not only the same ideas, and these the narrowest, but actually the same groups, and these most reactionary, hold sway as held it in 1921. When it has become clear that every election in the last generation has had one result, and that prearranged, we can understand some of the other anomalies better.

When Britain partitioned Ireland she provided as a safeguard for the minorities in the two parts the electoral system known as proportional representation, or P. R. This system, which is difficult for majorities, does give minorities full representation. Despite its shortcomings, it has ever since been retained in the free part of Ireland where the minority is given so privileged a position. But after the Six-County election in 1925, when the Tories lost seven seats, it was abolished—the minority had done too well.

Since the abolition of P. R. the Six-County elections have become more unreal than ever. In the five general elections from 1929 to 1949 the average total of contested seats has been 23 out of the 48 filled popularly, or almost 50 percent. (The other four are university seats filled by P. R., and there, significantly, the official Tory Party got on this occasion only two out of four.) If one could regard as a test of public opinion an election in which 200 Members of Congress, or 45 Senators, were returned without a vote being cast, then public opinion in the six counties has been tested. In the free part of Ireland the average number of unopposed seats in the last five general elections is less than 1 percent. In the same period the unopposed returns in Britain were 2.9 percent. In the northeast the percentage has ranged from 63 percent in 1933 to 38.6 percent in 1949, with an average of 44. This means that nearly half the electorate are never consulted. Twenty is the lowest uncontested since 1929.

It follows that there are areas which have never had a poll in 24 years, such as Mid-Down, Mid-Derry, and South Antrim. Others have had but one contest in the same period—the Carrick division of Antrim, Central Armagh, North Down, South Derry, Mid and West Tyrone, and two of the three Fermanagh seats. In this last election there was only one election in the whole of Antrim, which contains a sixth of the entire population of the six counties. Imagine an area peopled by 25,000,000 Americans in which only one seat was contested in an election year.

Why is this? The answer again is illuminating. Not only was this part of Ireland cut off to produce an electoral majority saecula saeculorum; but inside that cut off area the majority (being in power) has been able to arrange the boundaries of constituencies so that their own party's votes count to the last man, but the value of the opposition's votes are halved. The Nationalist minority, to say nothing of Labor, forms at least 33 percent of the Six-County population. It should then get something like 17 of the 52 seats. It has 9, barely half its due. This is achieved by the well-known process of gerrymandering.

Take Fermanagh with 33,942 electors, where the Nationalists number 18,600 and the Tories 15,300. The county was divided into three constituencies, one so arranged that the Nationalists were given a thumping and wasted majority, leaving the other two areas with small but effective Tory majorities. So, although the Nationalists polled 15,891 votes in this election, they got one seat while the Tories polled 13,985 and got two. County Tyrone also has a Nationalist majority and, if the constituencies were fairly drawn, they would get three of the four seats. Instead, clever boundary work wiped out the Nationalist plurality and both minority and majority get two seats, so that in the whole Nationalist area of Tyrone and Fermanagh, where there are 20,000 more Nationalists than Tories, the Tories get 4 of the 7 seats.

How the minority is cheated of its due is shown in another way. The seats in the Parliament are fixed at 52. In order to control as wide an area as possible, the Tory Party thinks it useful to arrange for one seat for every 19,000 votes in Down and Antrim where they are strong, but in Tyrone and Fermanagh where they are weak one seat for every 13,500 votes. This enables them to get a seat with a smaller vote where they are in a minority.

When this method does not work, as in Derry City where the Nationalists have a strong majority, another simple device is used. The Derry City constituency is enlarged so that it takes in half a countryside—the Tory half of course—and the election of a Tory for a normally Nationalist constituency has thus been brought about in every election since 1929.

In Belfast city, the Nationalists are at least a fourth of the population (nearer a third, in fact). At the least they should have four of the 16 seats. They have never been able to secure more than two and more

recently have only got those two by going forward as Independent Labor and Socialist-Republican.

By these methods the Tories have coralled the Nationalists into electoral enclosures where their majorities are wasted, leaving the Tories to pick up seats with tiny majorities close by. The inevitable result is that the elections lose their meaning as a test of public opinion and candidates of all parties know it is useless to fight this or that seat. The phenomenal percentage of unopposed returns logically follows.

One would think that with the dice so well loaded in their favor the Tories would be content. But, for the elections of February 10, they still had a card up their sleeves, indeed two. The main one, a regular trump, was an out-of-date register. Had they waited 2 months, the register compiled for 1949 would have been ready. They timed the election so that a register 3 years old had to be used—that simply meant that all young people who came of age since January 1946 were disfranchised, all who changed their addresses likewise lost their vote, and many who had been away during the war years also were rendered voteless.

Young people take a less prejudiced view of Partition than their elders; by disqualifying them from voting the Tories played for their own safety. Two comments on this action, neither of them Irish, are revealing:

"When Sir Basil Brooke," said the Manchester Guardian, "rushes a general election in Northern Ireland on the partition issue and prefers a stale register 3 years old to the new one that will be available on April 1 he is indulging in a pure party maneuver. There is no serious partition issue that calls for an election in February rather than in April."

Mr. Arthur Johnston, who is the chief organizer of the British Labor Party in the six counties, said on January 21:

"It is my considered opinion that the effective strength of this register will be 60 percent and no more. A new register would have come into force on April 1 and it is undemocratic for the sake of 6 weeks to disfranchise so many thousands of six-county citizens."

That 40 percent of the electorate could have made a considerable difference. The three seats won from Labor were all won by majorities of much less than 40 percent.

The final arrow in the Tory quiver was the old one of violence and it was directed mainly against Labor and very little against the Nationalists. The reason for this will be obvious if we remember that the Tories feel they have nationalism in an electoral straitjacket from which it cannot work itself out. But Labor is an unknown quantity and might loosen the Tory grip.

So when Mr. Costello Taoiseach, of free Ireland, called an all-party conference in Dublin during the election and that conference decided to collect funds for the support of anti-Partition candidates of whatever group, the Tory leaders and their very obedient newspapers loosed the whirlwind. This, they said, was a papist effort to exterminate the northmen's rights and destroy all they held dear. Excited mobs took the streets (armed with a new and unpleasant weapon in the form of an orange studded with razor blades) and beset the Labor Party meetings. Labor candidates became, in their eyes, tools of the Pope and they were wiped out, even in areas where Labor had held the seat for 20 years.

That is perhaps the most serious result of the election from the point of view of the future. In 1945, all groups of Labor (both those for and against partition) polled nearly 108,000 votes as against 178,652 for the Tories. It was a serious threat to those chosen by Britain to hold the area for the Empire. It is gone. On this occasion the well-exploited bogey of a papal army massed on the border, every man with a liberty-extinguisher in his mailed fist, combined with an out-of-date register and gerrymandered electoral boundaries have scattered Labor who, with less than 30,000, lost all their contested seats.

So another election has taken place in the six counties of partitioned Ireland and it has put into the mouths of those who favor Ireland's dismemberment the apparently telling argument that "the people have just been consulted and are more than ever determined," and so on and so on.

The reality is very different. The area has been designed to give always a fixed result. On this and on previous occasions that fixed result was made doubly sure by delicately arranging the constituency boundaries to make one Tory vote worth two opposing votes. An out-of-date register and mob violence were hardly necessary but they were brought in for good measure.

From the beginning it was never a test of public opinion on the issue of partition and it can only mislead those who, in prewar days, were impressed by the continental "elections."

As a tailpiece, nothing is more significant than that the one Communist candidate, who in 1945 got 5,000 votes against his Tory opponent's 9,000, on this occasion got 623 votes and the same Tory opponent got 14,000; thus absorbing all the comrades.

And there, as we say in Ireland, I leave ye.

New World Union Movement

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1949

Mr. MULTER. Mr. Speaker, I commend to the attention of my colleagues the following editorial which appeared in the Brooklyn Eagle of June 17, 1949:

NEW WORLD UNION MOVEMENT

In Switzerland, at the end of this month, a momentous meeting will be held. Delegates from labor unions in practically every anti-Communist country in the world will assemble there. The purpose is to form a new world organization of trade-unions.

The significant feature of this meeting from the American viewpoint will be in the fact that both AFL and CIO will send representatives.

CIO in May withdrew from the abortive attempt called the World Federation of Trade Unions to establish a similar organization. The WFTU was doomed to failure from the beginning. It was overloaded with representatives from Communist countries and the inevitable happened in a hurry. Joe Stalin's international stooges immediately went to work to turn the organization into a gigantic world-wide pro-Communist propaganda machine. The CIO and the British trade unions went along with the building up of the group until a few months ago. The AFL turned thumbs down on it without taking a second look.

Most of the cooperation, however, which was given to the project was offered before the Marshall plan became the established policy of the United States. The acceptance of the Marshall plan spelled the downfall of the Soviets' hopes to control the labor thought of the world through the WFTU. It symbolized and crystallized the sentiments of trade unionists throughout the world. There was no ducking the issue. You had to be for it or against it. Stalin, of course, was against it. The anti-Communists everywhere naturally rallied in defense of it.

In addition to the Marshall plan, the bid for power by Henry Wallace gave the CIO here at home a grand opportunity to put the issue into concrete form. The sudden, open break with the Commies within CIO has since been seen as an established fact.

United now with AFL and the powerful anti-Communist unions throughout the world, the new international organization about to be formed can become one of the greatest grass-roots influences the world has ever witnessed.

Compulsory Health Insurance

EXTENSION OF REMARKS

OF

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1949

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein a resolution passed by the New Hampshire Medical Society at its one hundred and fifty-eighth annual convention, June 15, 1949:

RESOLUTION AGAINST COMPULSORY HEALTH INSURANCE BY THE NEW HAMPSHIRE MEDICAL SOCIETY

Wheras, under a system of free enterprise and personal initiative, the American medical profession has attained for the people of these United States the highest standards of scientific performance, treatment, and research to be found in the world; and

Whereas there exists in many forms voluntary health insurance whereby payments for health care may be effected on a purely voluntary budgetary basis; and

Whereas, under voluntary health care programs the people of this country are left free to select their physicians, hospitals, and to carry such voluntary health insurance as they may wish; and

Whereas, under compulsory health insurance, both employees, employers, the self-employed as well as those in other categories would be faced with a compulsory tax on annual income, earning power, or wages to support a governmental controlled medical program; and

Whereas the experience of all nations where government has assumed control of medical services has shown that there has been a gradual erosion of free enterprise and a progressive deterioration of medical standards and medical care to the detriment of the health of the people: Now, therefore, be it

Resolved, That the New Hampshire Medical Society does hereby go on record against any form of compulsory health insurance or any system of politically controlled medicine, firm in its belief that the American tradition of free enterprise may best be carried out by the people and for the people through voluntary means.

That a copy of this resolution be forwarded to the President of the United States; to Senators STYLES BRIDGES and CHARLES W. TOBEY; to Congressmen CHESTER E. MERROW and NORRIS COTTON, representing the State of New Hampshire in the national Congress; and that they be urged and respectfully requested to use every effort at their command to prevent the enactment of compulsory health insurance legislation.

JOHN P. BOWLER, M. D.,
President.
CARLETON R. METCALF, M. D.,
Secretary.

Dated this 15th day of June 1949.

Housing Bill

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1949

Mr. MULTER. Mr. Speaker, the following two editorials are very timely. The first, entitled "Time To Mend the Roof," appeared in the New York Herald Tribune of June 17. The other appeared in the Brooklyn Eagle of June 20. I should think that some of the opponents of the housing measure should be heartily ashamed of themselves in labeling the bill socialistic and communistic. Almost the entire American press has urged early enactment of the measure.

[From the New York Herald Tribune of June 17, 1949]

TIME TO MEND THE ROOF

The arguments for a public-housing program that have been sufficient for the last 5 years hold with still greater force as the House, at long last and for the first time, prepares to face this legislative proposal. The opposition in the House to any housing program now finds it expedient to express its hostility in terms of the cost of the program. That cost has been atrociously misrepresented. But even assuming that capital grants for slum clearance and annual subsidies to secure low rents would come to around one-third of a billion dollars annually, the benefits to hard-pressed cities and ill-housed families would be cheaply bought, and the maximum rate of contributions would not exceed 1 percent of the present Federal budget. Poorly bargained economies are not a cloak of respectability in this case. Such arguments lack sincerity when found in the mouths of legislators who last year opposed the same program on the ground of its alleged inflationary effect. They too closely resemble the old saw about the right time to mend a leaky roof. We are more impressed when individuals so widely separated in ideology as Senator TAFT and Walter Reuther realistically plead for the bill as a necessary economic weapon in fighting back a slump in house building.

Any short-term arguments will fail to fit a long-range program like that proposed in the housing bill the House is about to consider. We have too long delayed attacking the twin problems of slums and the housing shortage. The sooner we get on with them the better. The legislative issue in the House is not the details of this program, but a declaration of national policy within which more precise determinations of program can later be made. That decision cannot be shirked. We hope it will be favorable.

[From the Brooklyn Eagle of June 20, 1949]

SOUND HOUSING MEASURE WOULD AID UNITED STATES ECONOMY

As the housing show-down nears, President Truman, through his unrestrained denunciation of the "ruthless men" who have "s'ocked" him with their "propaganda" against the pending legislation, has succeeded in dramatizing the issue in a manner to capture the attention of the people.

The President has undoubtedly vitalized support of the bill, which will come up in the House on Wednesday. He has accomplished this purpose through severe treatment of the real-estate interests and other opponents who have stifled action on this problem since the war's close. The President has stung these interests into angry replies but they have not succeeded in giving any semblance of decency or legitimacy to their unscrupulous fight to deny to millions of Americans, including veterans and their families, the homes to which they are entitled in the wealthiest land on earth.

Spokesmen for the National Association of Real Estate Boards, one of the most determined and effective forces in Congress against low-cost housing and slum-clearance, are particularly incensed by the President's statement. It is doubtful, however, if thoughtful public opinion will be impressed by their attacks upon political dabblers in housing and self-appointed wise men in Washington.

And Representative MARTIN of Massachusetts, Republican floor leader, insists that the opposition to housing is not influenced by the real-estate lobby but rather by the cost of the housing program. Heavy Government expenditures, he warned, threaten to send the Nation into a tail spin.

If Mr. MARTIN were inclined to go into the economics of the issue fairly, however, he would have to concede that the maximum annual outlay under the bill is a very small fraction of the Federal budget and that even this expense will not begin to accrue for a year or two. There is no possibility that the cost of the housing program would cause a depression. This money would properly be considered as a timely investment to increase the national wealth. It would strengthen, rather than weaken, the Nation's economic structure.

Last year the familiar coalition of Republicans and southern Democrats prevented the housing bill from coming to a vote in the House. Now the bill is at last in the open, where it must either be passed or defeated. It will be a matter of enlightenment for the American people to know just where each Member stands on this issue.

Palestine Peace Talks—Israel Not To Blame for Lausanne Stalemate

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1949

Mr. CELLER. Mr. Speaker, it is most unfortunate that the current impression that the United States has changed its line in relation to Israel is gaining wide circulation. It is devoutly to be hoped that we do not once again travel the circuitous route we did last year following the adoption by the United Nations of the partition resolution. It can easily be recalled what damage we did then to both our own national prestige and that of the United Nations.

Are we again obscuring the facts and refusing to face the realities? It has been asserted that the United States has taken unilateral action in reprimanding the Israelis for blocking the peace talks at Lausanne. If that is so, I believe it is time for those high in authority in our Department of State to investigate what is going on in the unpublicized desk corners within the Department. We have seen before what mischief arose out of improperly digested and improperly interpreted reports which came to the policy makers from lesser officials. To cite but a few, we had reports on the Russian menace in Israel, the strength and unity of the Arab countries, the revolutions that would follow in the wake of recognition of Israel and the menance to our oil supply. All of these reports proved to be completely without foundation.

True, the peace talks at Lausanne are stalemated. But the vital question before us is: Where does the responsibility lie for the stalemate? Is it all Israel's fault? Assuredly, not when Israel has made the only concrete proposals to date.

First. The offer to take 230,000 Arab refugees in the Gaza strip if that bit of land were ceded to Israel.

Second. The proposal to unite Arab families by permitting those Arabs who fled to return to Israel to join their families.

Third. A change in procedure in the peace talks to permit subcommittees to get down to basic issues, and

Fourth. A proposal that the Arab delegates get wider powers from their governments to discuss other questions beyond that of the refugees.

The Arabs have refused to discuss any of these proposals. They admit openly that the only question they will discuss is that of the Arab refugees and no other.

Naturally, then, the stalemate exists. In the procedure at Lausanne, Arabs and Jews do not sit down face to face to negotiate. The United Nations Palestine Conciliation Commission is the go-between, talking first to one side and then to the next, but there is no meeting between the two principals which could permit for a more thorough examination of proposals and counter proposals.

The strategy of the Arabs appears to force a complete concession from the Israelis to admit to Israel the major portion of the Arab refugees. Not only has this sentimental value to win world-wide public opinion, but, far more concretely than that, once having gained the readmittance of these refugees, the Arabs will have succeeded in obtaining a powerful fifth column within Israeli territory in the event of the resumption of hostilities. The admission of the Arab refugees would likewise so burden the economy of Israel that it would be immeasurably weakened should the Arabs decide to open fire again. The possibility of another Arab attack is by no means to be overlooked.

Israel has reasonably consented to participate in plans for resettlement of the Arabs, though not within Israeli territory. She has likewise reasonably contended that the issue of Arab refugees is part of the whole picture and cannot be resolved without discussion of such major issues as boundaries and economic pacts. Until such issues are settled, what guaranties of further peace talks can be made should the Israelis concede to the resettlement of these Arabs in Israeli territory? It must not be lost sight of that the Arabs fled, not by pressure of the Israelis, but as a result of Arab aggression.

If the threads of the peace discussions are to be picked up again, it is not quite clear why the onus is being placed on the Israelis by the United States, as reported. I sincerely trust this is not so. This will need careful watching to determine that the United States is acting in the interest of peace and not in the interest of the Arabs only.

The Late Dr. Hugh Smith Cumming

EXTENSION OF REMARKS
OF
HON. SCHUYLER OTIS BLAND
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1949

Mr. BLAND. Mr. Speaker, one of the most distinguished careers in the service of the United States, of help to his fellow man and in the history of public health, came to an end December 20, 1948, with the death of Dr. Hugh Smith Cumming at his home in Washington, D. C.

Dr. Cumming, Surgeon General of the United States Public Health Service from 1920 to 1936, and for many years a world figure in his profession, had suffered a thrombosis on November 19, 1947, from which he only partially recovered.

It was during Dr. Cumming's administration of the Public Health Service and the important Pan-American Sanitary Bureau, of which he had been director for 27 years, that public health came to be recognized in the United States as a major responsibility of Government in international as well as domestic affairs. Dr. Cumming, in his more than a half-century of service, became one of the dominant figures in this development.

Dr. Cumming was born in Hampton, Va., August 17, 1869, and acquired his early education in the Symmes-Eaton Academy, oldest public school in America, and in private schools before studying for a year at City College of Baltimore. Upon returning from Baltimore he continued his studies in languages and sciences under private tutoring. For a year he taught school in Harford County, Md.

In 1891 he entered the medical department of the University of Virginia, from which he was graduated in 1893 with the degree of doctor of medicine. He was a member of Chi Phi Fraternity, Eli Banana Society, and the Raven Society. He was president of the Jefferson Literary Society and was one of the founders of the Pi Mu medical fraternity. He was elected most popular man in the university and historian of his class.

Following his graduation, Dr. Cumming went to Richmond as house doctor in Dr. Hunter McGuire's old St. Luke Hospital, at the same time assisting Dr. McGuire in surgery in the Medical College of Virginia.

On February 10, 1894, young Dr. Cumming wrote a letter from St. Luke's to Surgeon General Walter Wyman asking concerning examinations for entrance into the United States Marine Hospital Service.

He was 1 of 4 who were successful among 27 applicants and on May 28, 1894, he was advised that the President of the United States had signed his commission as Assistant Surgeon.

Twenty-six years later, during which time the United States Marine Hospital Service had become, on July 1, 1902, the United States Public Health and Marine Hospital Service, and on August 14, 1912, the United States Public Health Service, Dr. Cumming received a communication from Washington that gave historic significance to the letter he had written to Surgeon General Wyman in 1894.

The message awaited him in Rome upon his return from a tour of inspection of ports in the Mediterranean area. It was a cable announcing his appointment as Surgeon General of the Public Health Service. On March 10, 1920, he took the oath for the first of his four successive terms in that high office.

From the time he first entered the Service, Dr. Cumming served under nine Presidents, under five of them as Surgeon General.

During his 26 years of service, culminating in his appointment as Surgeon General, Dr. Cumming proved his abilities not only in the realm of science but in administration and diplomacy.

At his first Service station, the United States Marine Hospital, Staten Island, N. Y., Dr. Cumming became acquainted with the clinical activities of New York hospitals and studied tropical diseases on ships arriving from all parts of the world.

During the next several years, he served successively at Norfolk, Ellis Island, and Montauk Point, N. Y.; in Mississippi and Louisiana, at Philadelphia and Cape Fear. These assignments included medical inspection of aliens, quarantine inspection of returning troops, and participation in service work during a yellow-fever epidemic.

In June 1899, Dr. Cumming was placed in charge of the South Atlantic Quarantine at Blackbeard Island, off the coast of Georgia. Here he treated yellow-fever cases, and saw his first case of bubonic plague.

Following his recovery from an operation for appendicitis, Dr. Cumming was ordered, on December 2, 1901, to San Francisco, Calif., as chief quarantine officer and during this tour of duty, Dr. Cumming's abilities as an administrator and diplomat first came into important play.

Bubonic plague was known to be rampant in the area, but a disagreement had arisen among Federal, State, and local authorities as to the seriousness of the outbreak and jurisdictional handling of the problem. Dr. Cumming was of assistance in harmonizing the differences and aided in instituting constructive action.

So successful was his administration as chief quarantine officer of San Francisco that at the end of his 4-year detail commercial and health interests joined in requesting his reassignment.

Following his San Francisco detail, Dr. Cumming served for 4 years in Japan, where he was sent in March 1906 to the office of the United States Consulate General in Yokohama to guard against exportation of plague and cholera to the United States. In Japan he had an opportunity to follow the research work of Kitisato and other great Japanese scientists and to further his knowledge of both the administrative and scientific handling of tropical diseases.

From Japan he was ordered back to the United States and placed in charge of the Cape Charles Quarantine Station at Fort Monroe, Va., to coordinate the quarantine situation in Hampton Roads.

In the autumn of 1912, Dr. Cumming requested leave of absence to pursue his studies of tropical disease in London, but was prevented from leaving by reports that pollution of tidal waters in the Chesapeake Bay was threatening wholesale destruction of the great oyster beds in that area. He was assigned to this work, and his service gained him recognition not only in this country but abroad. His assignment later was extended to cover the entire Atlantic coast.

With the advent of World War I, Dr. Cumming was detailed to the Office of the Surgeon General of the Navy, where he remained until the fall of 1918, when he was ordered by the President to report on sanitary conditions at camps in France and elsewhere, and at the ports of embarkation of returning United States troops.

As travel restrictions were relaxed following the war, intensifying the danger of infection from abroad, Dr. Cumming was given a general assignment by the President to conduct sanitation studies at European ports.

This and similar assignments in this country and overseas made Dr. Cumming an outstanding authority on quarantine matters that stood him in good stead in his work of completing the United States quarantine system during his tenure as Surgeon General, and gave him an unusual comprehension of the importance of international cooperation in the field of health.

During this period he took part in the conference at Cannes which resulted in the organization of the League of Red Cross Societies, and he held frequent conferences with leading health authorities of other countries on the subject of an international health organization.

In 1920, when he first took office as Surgeon General of the Public Health Service, Dr. Cumming was elected Director of the Pan American Sanitary Bureau, created by treaty in 1902 as the world's first international health organization. He held this office, concurrently with his other duties, until his retirement and election as Director Emeritus on February 1, 1947. He attended every Pan American sanitary conference from 1920 until his retirement in his capacity as Director of the Pan American Sanitary Bureau or as a representative of the United States Government. He saw the Bureau grow, in large part through his efforts, from little more than a reporting service to a full-fledged health organization, with professional, technical, and administrative representatives throughout Latin America.

In addition to his work with the Pan American Sanitary Bureau, Dr. Cumming found outlet for his interest in international health problems in the Office International d'Hygiène Publique and in the health section of the League of Nations. He had played important

parts in both bodies for nearly a quarter of a century prior to their dissolution in 1946 to make way for the new World Health Organization of the United Nations. In his capacity as Director of the Pan American Sanitary Bureau he attended both the Paris and New York conferences which led to the establishment of the new organization. For his work in international health, Dr. Cumming was decorated by many foreign countries and held honorary membership in a number of the world's leading medical bodies.

It was because of his broad concept of health as an international, as well as a national, responsibility that many of the programs of Dr. Cumming's administration as Surgeon General of the United States Public Health Service were conceived, developed, and carried through.

It was during Dr. Cumming's administration that the national quarantine system was completed with Federal acquisition of the last State-owned quarantine station at the port of New York. Other achievements of the period included:

Reorganization of the Hospital Division of the service and expansion of facilities, following World War I, to meet the needs of ex-service men and women; establishment of a national leprosarium; control of several outbreaks of bubonic plague in United States port areas; inauguration of the plan of assigning medical officers to American consulates abroad for examination of prospective emigrants to the United States; development and expansion of important research and field investigation activities of the Service, and the inauguration of studies of silicosis and other dust diseases which greatly extended knowledge in this field.

Dr. Cumming was also the key figure in a number of programs carried out with congressional authorization during this period, including:

Construction of a new building for the Public Health Service headquarters in Washington, now occupied by the Atomic Energy Commission; construction of 11 new marine hospitals in the United States; construction of 2 hospitals for treatment of narcotic addicts; establishment of the Division of Mental Hygiene in the Public Health Service; construction of new quarantine stations at principal ports of the United States; enlargement of the Corps of Commissioned Officers of the Public Health Service to include dental, engineering, and pharmacy personnel as well as medical officers.

Dr. Cumming inaugurated a study of malignant growths by medical officers of the service at Harvard University and at the hygienic laboratory, forerunner of the National Institute of Health, which has developed into a major function of the service.

An alumnus of the first class of the old hygienic laboratory, which had carried on its work in the attic of the old Service Headquarters, Dr. Cumming, as Surgeon General, made it his business to obtain appropriations for an expansion of this activity.

His efforts in this direction were culminated shortly before his retirement through a gift of land at Bethesda, Md., and the passage of appropriations with which were constructed the present National Institute of Health.

Following the discovery of vaccines for Rocky Mountain spotted fever, by an officer of the Public Health Service, Dr. Cumming arranged for the service to take over a small laboratory at Hamilton, Mont., and obtained appropriations for its enlargement. It was in this laboratory that these vaccines, as well as the present yellow fever vaccine, were manufactured.

Industrial medicine and sanitation was another field in which considerable progress was made during Dr. Cumming's administration. When many leading public-health authorities in the country were campaigning against the use of tetra-ethyl lead in gasoline, Dr. Cumming appointed a board to prescribe the conditions under which tetra-ethyl might safely be manufactured and used. As a result, use of the fuel was greatly facilitated—a fact of incalculable significance not only in the industrial and social progress of the country but in its position as a military power as well.

It was during Dr. Cumming's administration also that standards for safe production, processing, and handling of milk were introduced throughout the country. Important strides also were made in the field of steam sanitation.

Dr. Cumming's foreign citations were additional to the many honors accorded him in the United States by educational, professional, and public organizations and institutions. He was an honorary fellow of the American College of Surgeons, the American College of Physicians, and the American College of Dentists; a life member of the American Public Health Association, the American College of Physicians, the Association of Military Surgeons of the United States, the American Hospital Association, and the United States Mexican Border Public Health Association.

He was a past president of the Association of Military Surgeons of the United States, the Southern Medical Association, the American Public Health Association, and the Gorgas Memorial Institute of Tropical and Preventive Medicine.

He served from 1929 as a member of the Board of Visitors of Saint Elizabeth's Hospital, Washington, D. C., a Presidential appointment, and also was an active member of the board of directors of Garfield Memorial Hospital, Washington, D. C. He held honorary degrees from the Medical College of Virginia, the University of Pennsylvania and Yale University. In 1936 he was awarded the Hartley Gold Medal by the National Academy of Science for Application of Scientific Knowledge to Public Service. Other citations included the Gorgas Medal and Prize of the Association of Military Surgeons of the United States for distinguished service in the field of national and international public health and the William Freeman Snow Award For Distinguished Service to Humanity.

Dr. Cumming was married on October 28, 1896, at Carters Grove, Va., on the James River, to Lucy Booth, daughter of Dr. Edwin Gilliam Booth. In addition to his wife, he leaves a son, Hugh Smith Cumming, Jr., counselor to the American Embassy at Stockholm, and a daughter, Clara Diana, wife of Manville Kendrick of Sheridan, Wyo. Two grandsons also survive, John B. Kendrick II and Hugh Smith Cumming Kendrick.

Dr. Cumming was buried at Hampton, Va., in the churchyard of St. John's, oldest English parish in America, December 24, 1948.

From the very earliest informal discussion of a proposed World Health Organization until the ratification by Congress of the constitution of the World Health Organization, Dr. Cumming fought actively for the maintenance of the autonomy of the Pan American Bureau and its continuance as the regional agency for all public-health matters on this hemisphere. He fought practically a one-man battle and realized and understood far better than many others that the public-health problems on this hemisphere were entirely different from those in other parts of the world. It was very fortunate that he realized the danger of having certain foreign organizations undertake to solve public-health problems on this hemisphere when conditions peculiar to our own countries were unfamiliar to them. Dr. Cumming felt that there should be regional agencies for various sections of the world and that the Pan American Sanitary Bureau should act as the regional agency on this side of the Atlantic.

At the World Health Conference in New York, Dr. Cumming, aided by his Latin-American colleagues, fought against the so-called integration of the Pan American Sanitary Bureau and its complete subjugation under the new organization. Dr. Cumming's fight was made to preserve the integrity and autonomy of the tried-and-true Pan American Sanitary Bureau as the regional agency for the American Republics and other countries on this hemisphere.

Dr. Cumming was not fighting against the creation of a World Health Organization but he was fighting for the preservation of the Pan American Sanitary Bureau as a regional agency for this hemisphere and for other regional agencies in other parts of the world. Time and world conditions have demonstrated beyond possible question that the course he pursued was the best for this Nation and for the world.

A few days before his death Dr. Cumming had the supreme satisfaction to learn that his fight had not been in vain and that the Pan American Sanitary Bureau had been made the regional agency of the World Health Organization for this hemisphere. He knew then that it might be truly said of him and his work, "Well done, thou true and faithful servant."

I feel that I would be remiss if I did not add that during the entire 27 years that Dr. Cumming served as director of the Pan American Sanitary Bureau he received no remuneration of any kind and that during the period from his retirement as Surgeon General in 1936 to his election as director emeritus of the Bureau in 1947 he gave his entire time and

strength to the administration of the Bureau continuing with no remuneration whatsoever.

I can truly say that in my public life, I have never met a man with more patience, humility, and surpassing ability than Hugh Cumming. I feel myself wholly incapable of describing fully his merits and services to the Nation. I invite a minute study of his labors and life, for by these deeds we may best know him.

On February 24, 1935, I spoke on the life and service of Dr. Cumming, Surgeon General of the United States Public Health Service, and I refer to those remarks for further comments on the splendid career of this great man. As was said in an editorial which appeared in the Daily Press, Newport News, Va., on December 23, 1948:

Dr. Cumming, during a lifetime spent in the United States Public Health Service, served his fellow men as abundantly as any other American of his time.

Speaking of his service to humanity the editorial also further said:

No greater service could have been rendered humanity, and Hampton may feel the warmest pride that he was a son of Hampton.

An editorial in the Times-Herald, Newport News, Va., December 22, 1948, closes with these words:

The peninsula may be proud that this eminent man of medicine is native to her soil and that his life and work brought so large a benefit to his generation.

The Evening Star, of Washington, in an editorial on December 23, 1948, truly said of Dr. Cumming:

His death at 79 removes a health crusader to whom the world, as beneficiary, owes a debt of gratitude.

The Richmond Times-Dispatch of Richmond, Va., in an editorial on December 23, 1948, said of Dr. Cumming:

That he should have been retained by five successive Presidents until his voluntary retirement in 1936 is a testimonial to the universal esteem in which he was held. Dr. Cumming was one of the truly notable Virginians of his generation.

In the Journal of the American Medical Association, January 1, 1949, vol. 39, No. 1, there is an announcement of Dr. Cumming's death which closes with these words which should be preserved as they truly portray this great man:

Dr. Hugh Cumming was, throughout his life, a firm supporter of the ideals of American medicine. He was forthright in his views and dependable in his actions. His friendships were innumerable and his loss is mourned by many great leaders of medicine who held him dear.

He was my very dear friend and during a fairly long life, I can truthfully say that I never met anyone whom I held in higher esteem or more devoted affection. Peace to his ashes. His memory deserves to be remembered and cherished by all who knew him. He was a great man. Virginia should remember him always as one of her greatest sons.

Coast Guard Honors Auxiliary With "Day"

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1949

Mr. MULTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the Brooklyn Eagle of June 19, 1949:

COAST GUARD HONORS AUXILIARY WITH "DAY"

Two events in Brooklyn yesterday high lighted the activities of the Coast Guard Auxiliary, volunteer organization of boatmen whose services to the Coast Guard in war and peace will be observed throughout the Nation on June 23, the tenth anniversary of the signing by the late President Roosevelt of the act which created the present auxiliary.

Borough President John Cashmore issued a proclamation establishing June 23 as Coast Guard Auxiliary Day, and urging all citizens "to observe the anniversary in an appropriate manner."

At the same time, announcement was made by Capt. John A. Sutter, of the Rockaway Inlet Division, that local auxiliarists would again put in 24 hours around the clock with the Coast Guard, beginning next Saturday.

Brooklyn and Queens members of the division will serve on Saturdays and Sundays during the summer at the Coast Guard's Rockaway Point Lifeboat Station, assigned to boat work to supplement the station's skeleton crew of regulars.

CONTINUE COOPERATION

With Brooklyn one of the critical areas of port security work during the war, members of the local auxiliary, sworn into the Coast Guard as temporary members of the Reserve on unpaid intermittent duty, stood watch on piers and ships and did boat patrol work.

Honorably disenrolled after the war's end, the temporary reservists reverted to their civilian status as auxiliarists and began a new phase of cooperation with the Coast Guard—promotion of safety at sea and in small-boat handling.

The local auxiliary organized free courses in seamanship and boat handling, which were given during the last two winters at Brooklyn College to more than 200 adult students, most of them owners of pleasure craft.

The auxiliary's principal summer work, carried on from its Jamaica Bay base at Beach One Hundred and Seventeenth Street, Rockaway Park, has been its courtesy inspection program of small boats.

The inspection program, carried out at the request of the Coast Guard, enables owners of motorboats to obtain free inspections of their craft on application to the auxiliary. Boats found to meet minimum legal requirements for safety receive red-and-white stickers to display.

AVOIDS INSPECTION

Display of the sticker exempts a boat from being boarded for routine inspection by the crews of Coast Guard cutters, which will cruise local waters this summer in search of safety violations. Captain Sutter pointed out that failure to pass the auxiliary's courtesy inspection did not entail any penalty. Owners of such boats are informed how they may correct the crafts' deficiencies if they care to do so.

If they continue to operate without meeting minimum legal requirements they run the same chances of being picked up by a regular Coast Guard boarding crew as do boat owners who did not avail themselves of the auxiliary's inspection service.

Requests for courtesy inspections may be made in writing to the auxiliary at the Coast Guard's Rockaway Point Lifeboat Station or to Captain Sutter, at 2501 Knapp Street, Sheepshead Bay. Captain Sutter, one of Brooklyn's veteran small-boat men, has operated a ship repair yard at Sheepshead Bay for more than 40 years.

The Rockaway inlet division is made up of two flotillas, both headed by Brooklyn men. The commander of flotilla 1000 is Eugene Hoffman, and the commander of flotilla 1100 is Reginald Berry.

The Wrong Audience

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1949

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Amsterdam (N. Y.) Recorder of May 24, 1949:

THE WRONG AUDIENCE

Former Postmaster General James A. Farley, in an address made some time ago before the New York State Bankers Association, uttered these words of wisdom: "Our people must not expect unending miracles of generosity from Government."

Genial Jim's outline of the situation in which this America of ours finds itself was an able one. "The two fears about America we must, with all our will and intelligence, defeat and dissipate. The first of these fears is that this time, as in the years after the First World War, we shall lose ourselves in our own concerns and forget our responsibility for world leadership. * * * The other fear is that history might repeat itself and that by its own mistakes and excuses we shall fall into another depression. That is what every follower of Marx everywhere hopes and believes. Such a disaster here would set the forces of Communism on the march everywhere. We must frustrate that hope of our enemies."

Now that is excellent doctrine. In general, it expresses our own opinion and advice as to the course which this country should pursue. But we could wish that Mr. Farley had explored a bit further his hint to the American people that they must not expect unending generosity from Government. Just who is responsible for the hold which anticipation of protection from all the ills of mankind, from the cradle to the grave, has upon our people? Is it not the candidates of the major political parties, who have been promising all things to all men for so many years, who are chiefly at fault? Mr. Farley was addressing the wrong people when he talked to the bankers about this. He should have been advising the Democratic and Republican Parties in both State and Nation. They could really do something along this line. But Mr. Farley's speech has been printed in the appendix to the CONGRESSIONAL RECORD. Maybe Mr. Truman will read it.

The American Dream

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1949

Mrs. BOLTON of Ohio. Mr. Speaker, I had the pleasant privilege to deliver the commencement address at the very splendid Meharry Medical, Dental and Nursing College for Negroes in Nashville, Tenn.

Under unanimous consent to extend my remarks, I include herein my address:

THE AMERICAN DREAM

Mr. President, members of the faculty and staffs, all of you who have the privilege of studying at this splendid college, trustees, alumni, and guests, I deeply appreciate the honor you have done me in selecting your commencement speaker. Miss Gault and I have known each other lo these many years. I have felt the stimulation of her rare spirit more often than she is aware. I am not surprised to find this school of nursing of such high standard—nothing she touches could be otherwise.

Let me take this opportunity to thank you, Miss Gault, and those associated with you in the Meharry School of Nursing for the joy of coming to Meharry.

You see, ever since I can remember medicine and nursing have been a part of my life, and for the past 20 years dentistry too has come into the intimate sphere of my interests. This will perhaps surprise you. So let me explain for a moment. It is really orthodontics—work my oldest son has been interested in with B. Holly Broadbent, D. D. S., professor in the Western Reserve University School of Dentistry—research, and fascinating findings that are revolutionizing the science of orthodontics.

So you see it was an irresistible temptation you offered me when I realized I should have all three professions completely at my mercy.

I have so very much I should like to say about the need for nurses equipped to meet tomorrow's requirements, to say nothing of today's. I could make many suggestions to you dentists about the importance of teaching every person you meet up with the need for understanding of what teeth require by way of foods, of cleanliness, of watching, and oh a lot of other things.

As to you doctors: If I had you alone with a whole day before us I should be but part way through the much I long to pour out upon you. And as to this business of Government medicine, mercy what we could do to that together.

But none of this will happen, for that belongs in your professional lives and I am not here to speak of those.

To you, Dr. Dawson, and all your faculty and trustees and guests I want to say how good it is to be among you, to have had a little moment to see and feel Meharry, the symmetry of your buildings, the beauty of your grass, your trees, your shrubs. But best of all I have broken bread with you.

It is always a bit of a sacrament to me, the first breaking of bread. One moment we were strangers, the next we could never be so again.

So I say to all of you: I am so glad to be here.

But what I shall say, the remarks I shall make are to the graduating students most of all, to each of you quite apart from your companions, to each of you as an individual in those innermost recesses of mind and heart where you live but into which you cannot see. What I have to say is to each of you as an American with the peculiar responsibility that rests upon each one of you because of that fact, for I have come from the halls of Congress to talk with you of the American dream.

"There was a dream, that men could one day speak the thoughts of their own choosing.

"There was a hope, that men could one day stroll through streets at evening, unafraid.

"There was a prayer, that each could speak to his own God—in his own church.

"That dream, that hope, that prayer became—America.

"Great strength, youthful heart, vast enterprise, hard work, make it so.

"Now that same America is the dream, the hope, the prayer of the world.

"Our freedom—its dream. Our strength—its hope. Our swift race against time—its prayer.

"We must not fail the world now.

"We must not fail to share our freedom with it.

"Keep singing, keep working, and fight for America." (From The Flag Speaks.)

All down the ages after the spark was kindled in the human breast men have dreamed dreams of freedom. Then a man saw a vision—and in spite of confusion, bitterness, hardship, and bloodshed, brought it into being, protected its first steps, and made it a nation. This man was George Washington. Towering above his companions in physical, mental, and spiritual stature, he drank deep of the cup of loneliness that freedom might be given form.

And again a tall figure raised himself up by the sheer force of his inner need to serve that same freedom under law—and the Union was saved. Lonely beyond most men's knowledge of loneliness, Lincoln lived out his destiny and forged a great link in the chain of human freedoms.

Leadership is a lonely business, friends—made up of courage and wisdom and a great carelessness of self, and yours has been a training for leadership.

Think for a moment of what dramatic importance it has been for you that two men met under the stress of war and came together in the consequent peace, dreaming the same dream.

Each separate one of you chose to take advantage of the opportunities available to you because those two men dreamed that dream and a third man caught their vision and five others joined in. You have spent wonderful years here at Meharry—years of serious work bound together with the joys of fellowship in a community of common purpose.

Until now you have been members of groups—family, church, community, school, college, perhaps the armed services, and recently Meharry. You have been subject to the training, the disciplining, and the equipping which the human race provides for its young. You have been learning from each other, stimulated by each other, dependent upon each other and upon those under whom you have studied.

Now you step out of the world of preparation into the world of action, taking with you only those things you have made your own, a part and parcel of yourselves.

It is true, of course, that with each new dawn we face a new day, a new world—but at such a moment as this, when the school years are done and one stands on the threshold of life looking out, there comes a poignant need for courage and for faith—faith in one's self, confidence in the future.

You have chosen a life of service—you will not belong to yourselves any more, you will belong to suffering humanity, and everywhere in the world there is need of you. That is a thrilling and a challenging thought, a humbling one, especially when the need is so very great right here in America—just beyond these halls. You have taken an oath to serve mankind. In so doing you have asked the God within you to stand close beside you, to give you judgment, wisdom, courage. He will not fail you if you call upon Him.

A wonderful opportunity lies before you, carrying with it not only the responsibility of your professions, but in addition the responsibility of leadership as privileged Americans. What you do professionally will give relief and help to many—but friends, what you live, what you do as human beings, as citizens of this our beloved country—that matters most.

The very fact that you have come through school and college and have taken this fine professional training sets you apart, and your influence will be more far reaching than you know. Decisions of every sort await you out there, just across this golden threshold. Judgments, defeats, victories, misfortune, and good fortune, they are all there awaiting you. Whether you marry, whether you find close companionship in work or play, one thing is certain, the moment has come when you must live with yourself, accepting the consequences of your actions, taking full responsibility for them. Leadership is a lonely road, friends, an exacting one. Let me repeat the words written by John Buchan (Lord Tweedsmuir) in one of his books, "Leadership is wisdom and judgment and a great carelessness of self." That is perhaps the key: "Carelessness of self"—unselfishness—a constant giving, a continuation of learning by doing, a never ceasing outpouring of your own need to appease suffering, to teach ways of life that mean health and joyous happiness. And again I say to you that what you live will be as truly productive and often more so as what you do.

The responsibility you have assumed in your choice of a calling reaches out into every area of your living—for you are Americans and America needs you. "There was a dream, a hope, a prayer," and a new nation was born. That nation is still less than 200 years old, the dream is not yet reality. There is so much still to do—and you and I have the burden and the glorious chance of the doing.

As Americans we cannot escape the responsibility not only to protect such freedoms as we have secured, but also to extend these ever nearer to the dream that brought us into being, that means opportunity for all. Is that not so?

Let us look about us for a moment at this great country that is ours to build, ours to mold, ours to love.

What a strange picture we see. A seething cauldron into which have been poured people of all races from all climes. By whom? Surely by the great force which, for a moment, I shall call evolution, to rub against each other and so generate new sparks of life, new and different phases of living. To what end? Who knows save the Eternal One within whose life we live and move and have our being. It isn't necessary that we know why. It is supremely necessary that we know what we as Americans believe and what faces us in the strangely confused and struggling world into which you must now go forth.

As Americans we believe profoundly that the individual is important—not just important of himself, but because he is a part of the very being of the Living God, created in His image, indestructible. As such he shares with every other individual the responsibility to keep America strong, to keep her free. The fundamental principles of our living is the certainty that because God is, because His laws created and continue the universe, because He is we are. Out there in the world of armed truce and continuing wars we are pitted against an adversary whose fundamental principle is that the individual is of no importance at all except as he serves the state, that there is no force, no power higher than the state, and that all

must bow before it and do its will. And what constitutes the state? Fourteen men who have taken control with a ruthlessness never before imagined.

This struggle that is going on is not one between nations. Friends—this is a struggle between darkness and light, between the man who says "there is no God—all power belongs to the state" and the man who knows that he of himself is part of the Eternal Creative Energy, the all-pervading Power that is life, ever changing and indestructible.

Nor is the struggle all way out yonder. It is right here in our own beloved country. Everywhere there are those who are infusing into our people many subtle doubts. They suggest that because we have not perfected our dream in 150 years there is no value in it. They seek to undermine our confidence in it and in ourselves. To meet this impact you will need an inner security that no one can give you other than yourself. You will need a few fundamental bits of basic knowledge, of deep and abiding faith to keep you strong when you are assaulted by the cohorts of this other ideology as you most surely will be.

Should you find yourself at some future moment questioning values, stop for a moment and look about you quite calmly, quite objectively. Has it not been a miracle? Less than 200 years from wilderness to world power!

Oh! there is still much to be done, but the onward march will never stop until the dream has become reality. It will not stop because you and many like you know from personal experience that opportunities bring with them responsibilities of leadership that you must fulfill.

You know as some as yet do not that there was a dream of freedom and opportunity for all, not just for a selected few. You who are so vitally a part of the miracles of our development know that America is dedicated to freedom under law—consecrated to the protection of the individual from domination by other individuals, by groups, even by Government itself. You, with countless others partake now more, now less, of its opportunities for development and growth. You are equipped for leadership and so must assume responsibility for the protection and the continuance of these freedoms.

You are a part and parcel of a people—a Nation—who, from the very beginning, declared their trust to be in God. Our great men have turned to Him when, in their hours of despair, hope left them and they had nothing but their certain faith that if they reached out, no matter how dense the darkness, and put their hand in His, that would be "better than a light, safer than a known way."

All of us are faced with heavy responsibility to God Himself in these days when the forces of those who deny His very existence grow in strength. If we are to prevail—and we must—we must know our strengths and our weaknesses, we must learn to recognize the temptations that might make a strong appeal, the pitfalls that are on every hand. Only when we know these are we safe on the road—only when we can recognize them in any guise can we stand against them.

I am not offering you ease, friends. I am offering you a hard path—a lonely road—a road that winds across vast arid plains, across broad fertile valleys, over rocky mountain ranges—a road that turns and twists and climbs—and climbs. And perhaps I am not just offering it to you. Rather, am I saying:

When a man or a women chooses to take hold of opportunity and be instructed and practiced in some special field, responsibility for leadership results. Oh, I do not mean you must all become Presidents—but I do mean that what you make of your lives not only in your professions but as citizens of this our country is of far-reaching importance. They are honored professions that you have chosen. But let me say what I believe with all my capacity for belief, that serving well America's dream is of all ways of life the most worth while, the most soul-satisfying, and the most significant.

Yes; I offer you a lonely path, friends, for you will often be misunderstood, misjudged. But I assure you that once your foot is really on the road you will find others going the same way, weary, perhaps, but with a light in their eyes seldom seen on sea or land. I can assure you that if you will step across this threshold that confronts you today with the dream of this young, virile, eager country ever before you, consecrating yourselves to the hard task of making that dream come true, you will be given a strength no man can take from you. You will go forward with the song of freedom in your heart.

And may the Infinite have you deeply aware that you are in His keeping now and beyond time.

The Real-Estate Lobby

EXTENSION OF REMARKS

OF

HON. FRANK M. KARSTEN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1949

Mr. KARSTEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Louis Post-Dispatch of June 18, 1949:

A SCATHING MESSAGE

Seldom has a President used more scathing terms than those employed by Mr. Truman to denounce the real-estate lobby. He says a "little group of ruthless men" is trying to mislead Congress and the Nation on housing legislation and he adds in a letter to Speaker Rayburn:

"I do not recall ever having witnessed a more deliberate campaign of misrepresentation and distortion against legislation of such crucial importance to public welfare."

But the President did not confine himself to general condemnation. He took up the lobby charges point by point to show that they are false. Actual expenditures under the House bill will be about ten billions, spread over 30 years, rather than the twenty-billion estimate of the lobby. Unit costs of low-rent public housing will average $8,465, instead of more than $15,000. Such housing will be restricted to people of low income, and not be made available to persons with good incomes. So runs the President's bill of particulars.

In reviewing the fight of the real estate lobby against public housing legislation, it is sometimes necessary to rub one's eyes in wonder at some of the things it has said and done. Here is a private interest which, through previous housing legislation, has been greatly benefited by governmental action and governmental funds.

Yet, like a dog in the manger, it does not want similar action taken in behalf of the poorest part of the population. The effect of the lobby's activity is to perpetuate the crime and disease-breeding slums in both urban and rural areas. These slums are profitable to their owners, who are willing to batten on human misery.

Private enterprisers cannot and will not replace the slums, because they cannot do it with profit. That is well understood and private enterprise cannot be blamed for refusing to engage in losing ventures. But private enterprise, which willingly takes subsidies for higher types of housing, cannot reasonably object to the grant of subsidies for slum clearance.

Never before in the Nation's history have the American people suffered so much for want of places to live. The housing shortage is causing domestic unhappiness, divorces, and even murder as people are crowded together in intolerable intimacy. It is not a sentimental exaggeration to say that the plight of many is reminiscent of the line from Matthew: "The foxes have holes, and the birds of the air have nests; but the Son of man hath not where to lay his head."

The real estate lobby has the nerve to place itself direct', in the path of the national welfare, and even to attack men like Senator TAFT for failure to do its bidding. It is an incredible state of affairs, and it fully justifies the President's strong language.

Red Attacks on Religion Fail To Purge Man of His Faith

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1949

Mr. MULTER. Mr. Speaker, I commend to the attention of my colleagues the following editorial which appeared in the Brooklyn Eagle of June 13, 1949:

RED ATTACKS ON RELIGION FAIL TO PURGE MAN OF HIS FAITH

The points of similarity between fascism, which survives now only to an extremely limited degree, and communism, a much more imminent menace to peace and freedom, become more apparent as time goes on and the Soviet ideology encounters increasing resistance.

Basically, of course, there is little difference between the two schools of political thought although theoretically they are the antithesis of each other. Both are destructive of human dignity and freedom and, to exalt the state, bring about the degradation of the individual.

One of the means to this end is the elimination of religious belief and practice on the very sound and practical assumption that it is difficult to cast the lives of great numbers of people in a common and degraded mold when there is the sustaining force of spiritual faith to be overcome.

Hitler recognized this obstacle early in his regime and proceeded against it with characteristic ruthlessness. Recognizing the clergy as among his most formidable opponents, he sought through ingenious and even fiendish means to discredit them in the eyes of his people preliminary to their imprisonment and the closing of their churches.

In Poland, in Hungary, Bulgaria, Yugoslavia, Czechoslovakia, and Rumania today the techniques of Hitler are being followed faithfully. Russia has by now succeeded in denying to its people the spiritual sustenance of religion and the satellites are proceeding swiftly toward the same end.

The arrest of Dr. Antonin Mandl, secretary of the Catholic Action Organization of Czechoslovakia, and the wholesale imprisonment of priests represents a speeding of the tempo of religious persecution. It is also a tribute to importance of the church as a barrier to authoritarian rule.

In connection with the current crusades of Europe's dictators, the history of the last 2,000 years provides a great deal of comfort. From Nero to Hitler they have failed to pluck faith from the hearts of men.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. HENDERSON LANHAM
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1949

Mr. LANHAM. Mr. Speaker, with leave to extend my own remarks in the Appendix of the RECORD, I am including, with my entire approval, an editorial that appeared in the Atlanta Journal under the date of June 15, 1949, entitled "Eisenhower Disapproves of Federal Aid to Education."

I am sure that General Eisenhower is wrong in his views and that he is not really familiar with the proposed bill.

The editorial follows:

EISENHOWER DISAPPROVES OF FEDERAL AID TO EDUCATION

When General Eisenhower was being urged to run for the Presidency of the United States about this time last year, his proponents did not know whether he was a Republican or a Democrat, a liberal or a conservative. They knew he was, and is, a fine man, and that he would probably be a winner. Now that the General is making statements as president of Columbia University, enjoying a freedom that his military responsibilities denied him, it is possible to tell more about the nature of his political credo.

Asked by a Republican Congressman for his views on Federal aid to education, General Eisenhower replied that he favors help for poorer sections but is against a general over-all program for assistance to all States, "Unless we are careful," said he, "even the great and necessary educational processes in our country will become yet another vehicle by which the believers in paternalism, if not outright socialism, will gain still additional power for the Federal Government." General Eisenhower drew a distinction between specific Federal grants to schools for specific purposes, such as scientific research, and a broad program which would involve "a blanket usurpation of local responsibility and obligation."

"The completely spurious argument is frequently advanced," General Eisenhower wrote the Congressman, "that because the Federal Government skims off so much of the available tax revenue it must, as a consequence, bear more of the local expenditure. This is putting the cart before the horse. If local communities do their job then there will be no need for additional centralized revenues for Nation-wide subsidies of an essentially local character; and we will avoid the extreme pitfalls of extreme centralization."

It strikes us that General Eisenhower would profit by reading the Federal aid to education bill. The legislation clearly provides that control of schools will be left to States, a point upon which southern Congressmen have insisted from the start. It also is drawn in such a manner as to encourage, rather than to discourage, an increase of effort at the local level. The question is not whether the Government will take over the schools, but whether it will use its financial resources to bring educational facilities in poor areas—like the South—more nearly into line with those of the richer sections.

General Eisenhower's views are sound enough once his premises are granted, but we doubt that they are the same views he would hold if he were superintendent of schools in Gilmer County, Ga., rather than the president of one of the Nation's most heavily endowed universities in one of the richest States.

Ignorance breeds poverty. Both are the concern of every American, no matter where they exist. It is impossible to isolate them, or to say they are solely the concern of the State, the town, or the county. When educational standards are raised, the entire Nation benefits. We believe that Federal aid to education, when it is passed, will be among the most progressive and beneficial steps ever taken by Congress.

Schoolbook Probe

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1949

Mr. HOLIFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Marquis Childs, from the Washington Post:

WASHINGTON CALLING
(By Marquis Childs)
SCHOOLBOOK PROBE

Prodded recently for inactivity, the House Un-American Activities Committee seems to have decided to start on a new trail. That is as good an explanation as any for the remarkable step just taken by the committee.

A letter has gone out signed by the chairman, Representative JOHN S. WOOD, of Georgia, to nearly every college and university in the country and to every public-school system. It requests lists of textbooks now being used, along with the authors of the texts.

This first came to light when the heads of several institutions telephoned to Washington to try to find out what was behind the demand. The letters went to large privately endowed institutions, such as Harvard, Wellesley, and Vassar, as well as to State tax-supported schools.

The smaller institutions and the high-school and grade-school systems were asked for lists of all the texts used. To the larger institutions the request was somewhat narrowed down, as the letter indicates:

"The Committee on Un-American Activities is desirous of obtaining lists of textbooks and supplementary reading—with names of authors—in use in our educational institutions throughout the country in the fields of American literature, geography, economics, government, philosophy, history, political science, and any other of the social-science group. Since we have immediate need for this material, the committee will very much appreciate your cooperation in making this material available to us at the earliest possible date."

What led up to this request is revealing of the fear and suspicion that today border on hysteria. It is the climax of what seems to me to be a concerted drive to put curbs on the right of free inquiry.

For some years the Un-American Activities Committee has been under pressure to investigate American education to determine whether subversive doctrines are being taught in the Nation's schools. For the most part, the pressure has come from those who tend to regard as subversive anything that deviates slightly from the propaganda of the National Association of Manufacturers.

In some instances they are superheated patriots of advanced years who looked on the whole Roosevelt New Deal as part of a Communist plot. Others are cynical opportunists deliberately whipping up fears about education in order to serve their own political ends, which in some cases are just as subversive as communism.

Under the Republicans for the 2 years of the Eightieth Congress, the committee resisted this pressure. Smarter members, such as Representative RICHARD M. NIXON, of California, realized that such a line of inquiry might stir a hornet's nest of resentment. And, furthermore, they were aware that a large and carefully trained staff would be necessary for such an investigation if it was to be anything more than a sort of junior edition of the Hitler book burning in the heyday of the Nazis.

If all the schools respond to the un-American request, the volume of material coming in to the committee is likely to be large. That the present staff could analyze it intelligently is very doubtful. In about 30 States a board approves the textbooks for all public schools, but in the other States the choice is made by counties or local school boards.

What immediately precipitated the committee's letter was a petition from the National Council of the Sons of the American Revolution. The demand for an investigation of the Nation's textbooks was approved by the Sons at their last national convention. The Sons, even more nervous in their reaction to anything faintly subversive than the Daughters of the American Revolution, have about 20,000 members.

Chairman WOOD plays down the letter. He says it is merely a staff request, and the committee will decide what to do about the Nation's textbooks when they see what the staff turns up in this preliminary inquiry.

In my opinion, it is an ominous move. Even if the committee decides not to determine what is American and what is un-American in the schoolbooks, it will further increase the fear and doubt that have a baleful effect on the morale of the American people.

If I were a Member of Congress, I would hesitate a long time before I voted for Federal aid for education. Even though I believe such assistance necessary, I would be fearful of the long arm of the Federal Government thrust out to police all teaching. The strange thing is that those who oppose aid to education are also those who want Uncle Sam to become snooper and policeman on the thought-control beat.

The Problem of the Palestine Arab Refugees

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article entitled "The Problem of the Palestine Arab Refugees":

THE PROBLEM OF THE PALESTINE ARAB REFUGEES

(Memorandum submitted by Eliahu Ben-Horin, author of The Middle East: Crossroads of History)

1. The question of the future of the Arab refugees from Israel continues to be a source of uneasiness in international relations. Until settled, it may be expected to intensify the friction between Israel and the Arab states, to provoke tension between the great powers and the countries of the Middle East, and to confront the world with the existence

of a group of frustrated and unhappy human beings who might easily become prey to demoralizing influences. For these reasons, a rapid and satisfactory settlement of that problem appears eminently desirable.

2. Further urgency is lent to the question by the fact that the maintenance of a large mass of Arab refugees in their present position of uncertainty, is very costly, while it does not bring a solution any nearer. A sum of $16,000,000 has already been appropriated for the relief of these refugees by the United States Government. A similar sum has been or is being appropriated by several foreign governments. This money is due to be expended by next August, at which time the question of further relief expenditures will undoubtedly arise. Considerable amounts have also been provided for Arab refugee relief by private relief agencies and voluntary contributors. These funds, too, are wellnigh exhausted and more will be required. The demands on the United States Government and on private funds, largely from the United States, will continue and may have to be met again and again.

3. Growing recognition is given in all quarters to the need to proceed speedily with the resettlement of the large mass of the Arab refugees. It is generally understood that only a small part of these refugees will be able to return to Israel, and that even such a limited return will hardly be possible except as part of a general resettlement scheme for these refugees and in connection with an over-all improvement in Arab-Israeli relations. There is growing agreement that most of the Arab refugees in question should be enabled to settle on the land or to find a place in urban occupations in the various Arab countries whose recent war against Israel has had so much to do with the emergence of this particular refugee problem. It is understood that officials of the American and the British Governments, as well as United Nations circles, tend towards this viewpoint in growing measure, and that informal discussions are afoot with various Arab governments to explore the willingness of the latter to cooperate in such a resettlement scheme.

4. A serious danger that has to be faced in this connection is the danger of a diffusion of effort. There seems to be some feeling that the mass of the Arab refugees might be distributed among the different territories of the Middle East, notably Transjordan, the Arab part of Palestine, Iraq, Syria, and Lebanon. (Egypt has officially declared that it is in no position to absorb any of the Palestine Arab refugees.) It is understood more particularly that the government of Transjordan is willing to accept for resettlement within the territories under its control most of those refugees, presumably in consideration of the large monetary expenditures which would be made by outside sources, especially by the Government of the United States, to facilitate such a settlement. It is open to serious question whether such a large-scale operation could be successfully accomplished in the relatively arid territories under Transjordan control. It is quite conceivable that, once the money has been expended, it would appear that the future of the refugees has not been assured after all. Similarly, opportunities for the resettlement of the refugees in Lebanon and Syria are open to serious doubt.

The governments of those countries, disinclined as they are at present to accept any considerable number of the refugees for permanent residence, may be coaxed into doing so by the promise of American largesse. But once foreign funds have flowed directly or indirectly into the treasuries of those countries, it may well be that the Arab refugees would once more find themselves facing an unsettled future and therefore remain a burden on the world. Because of this, every effort should be made to decide beforehand on the most feasible large-scale scheme for Arab refugee resettlement and, once the answer is found, to concentrate on its execution. Thus there would be avoided a great deal of waste motion, waste of funds, human misery, and international friction.

5. From an over-all viewpoint, it seems that Iraq is the country which can most easily provide for large-scale resettlement of all of the Arab refugees from Palestine with greatest benefit to the country itself. For several decades attention has been focused on Iraq's need for additional population and on the tremendous opportunities existing in that country for agricultural development. The British Government, at the time when Britain still held the mandate over Iraq, was interested in large-scale agricultural development there. Iraqi statesmen themselves raised the question from time to time. International authorities in the field of economics, nutrition, and soil development have repeatedly drawn attention to this situation in Iraq. In the United States, Mr. Herbert Hoover, among others, suggested in 1945, long before there were any Arab refugees from Palestine, that everybody's interest might be served by encouraging the large-scale resettlement of Palestinian Arabs in Iraq. The former President put it as follows:

"In ancient times the irrigation of the Tigris and Euphrates Valleys supported probably 10,000,000 people in the kingdoms of Babylon and Nineveh. The deterioration and destruction of their irrigation works by the Mongol invasion centuries ago, and their neglect for ages, are responsible for the shrinkage of the population to about 3,500,000 people in modern Iraq. * * *

"My own suggestion is that Iraq might be financed to complete this great land development on the consideration that it be made the scene of resettlement of the Arabs from Palestine. * * *

"There is room for many more Arabs in such a development in Iraq than the total of Arabs in Palestine. The soil is more fertile. They would be among their own race, which is Arab-speaking and Mohammedan. The Arab population of Palestine would be the gainer from better lands in exchange for their present holdings. Iraq would be the gainer, for it badly needs agricultural population. * * * It would be a solution by engineering instead of by conflict."

The fact that several hundred thousand Arabs who formerly lived in Palestine now find themselves uprooted only lends further strength to Mr. Hoover's suggestion. We must remember, too, that even those Arabs who may be able to return to Israel will have to undergo a process of rehabilitation and adapt themselves to totally new conditions. As Dr. Clarence E. Pickett, executive secretary of the American Friends Service Committee, who recently returned from supervision of the Friends' Arab refugee relief program in southern Palestine, puts it in a letter to me: "The third problem, and a very important one, would be an additional program for those who return to Israel as well as those who go elsewhere, for the Arab will have to pursue modern farming methods wherever he may be and this will involve real training."

6. A further consideration militating in favor of the choice of Iraq as the place where most of the Arab refugees should be encouraged to resettle is connected with the international situation. As the most northeastern of the Arab lands, lying close to the borders of the Soviet Union, Iraq, from the long-range viewpoint, occupies a particularly important strategic position. But Iraq is very weak internally and will remain so until and unless the Arabic element of its population is considerably strengthened. At present the many national minorities and particularly the very sizable Kurdish minority form too large a section of Iraq's population. The claims of the Kurds to an independent Kurdistan (which would be carved out of the territories of Iraq, Iran, and Turkey) are on record. All this makes Iraq particularly vulnerable to attempts from whatever quarter to foment trouble and threaten the political stability of the area. The addition of a considerable number of new residents, Arab in race, Moslem in religion, and agricultural by occupation, would greatly strengthen Iraq internally and thus also heighten its chances of resisting the forces of disorder.

7. Assuming that the above considerations represent a correct analysis of the situation, nothing can be gained by further delay. It would seem best to have action undertaken at once to prepare the ground for large-scale development projects in Iraq. It is understood, of course, that the consent of the government of Iraq to admit the refugees in question must be obtained. There is no reason to doubt Iraq's concurrence with the scheme if necessary measures are taken on the diplomatic, financial, and technical levels. As for the execution of the project, consideration might be given to entrusting it to a suitable agency of the United Nations, working in cooperation with the government of Iraq and with such other governments or official institutions as would assume certain responsibilities in this connection. In order to lift the question at once to the necessary level of a major humanitarian and statesmanlike project which would command the respect of world opinion at large and of public opinion in the United States more particularly, it might be advisable to request the only living former President of the United States, the Honorable Herbert Hoover, to undertake a study of this project, together with a suitable committee.

World Federation

EXTENSION OF REMARKS
OF

HON. HENDERSON LANHAM

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1949

Mr. LANHAM. Mr. Speaker, with the extension of my own remarks in the RECORD, I am happy to include an editorial which appeared in the Atlanta Journal under date of June 9 entitled "A Resolution Looking to a World Federation."

I am glad to see that this great southern newspaper approves of the efforts being made by the Members of Congress looking toward the strengthening of the United Nations so that it may become a true and effective instrument for the peace of the world.

The editorial follows:

A RESOLUTION LOOKING TO A WORLD FEDERATION

Ninety-one Members of the House of Representatives, including a majority of the Foreign Affairs Committee, have joined in sponsoring a resolution to put the Congress on record as favoring the development of the United Nations into a world federation, empowered "to preserve peace and prevent aggression through the enactment and enforcement of world law."

The sponsors, numbering 64 Democrats, and 27 Republicans, affirm their faith in the principles and purposes of the United Nations. They would do nothing to impair it,

but instead would strengthen it so as to make it an effective instrument for a just and lasting peace. Moreover, they recognize that "before any concrete measures can be taken to this end much must be done to stabilize Russian-American relations, as well as to improve world economic conditions." They declare, however, that the orderly conversion of the UN into a world federation, with powers duly defined and limited but also duly adequate should be "a fundamental objective" of American foreign policy.

There is nothing strange or new in the thought of this resolution. It simply applies to current conditions a theme that runs far back into history, a concept that was sung a century ago in Tennyson's famous lines:

"Till the war drum throbbed no longer and the battle flags were furled,
In the Parliament of Man, the Federation of the World."

Practical statesmanship is now at work on an old ideal of philosophers and poets. There are divers opinions as to how a world federation could be formed and as to what its chances of success would be in a foreseeable future. There were divers and hostile opinions as to how the loose alliance of 13 independent and jealous States from which our Republic sprang could form an effective national Government. In the critical 1780's only a few leaders believed the goal to be attainable. The Constitution which finally replaced the weak articles of confederation was opposed by many as a death warrant to the integrity of the States and a surrender of the people's liberties. Yet, the union thus formed has survived the storms of more than 160 years and stands today the world's strongest power.

St. Louis Real Estate Board

EXTENSION OF REMARKS
OF
HON. FRANK M. KARSTEN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1949

Mr. KARSTEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Louis Post-Dispatch of June 19, 1949:

LOCAL ECHO OF HOUSING DISTORTIONS

The St. Louis Real Estate Board has lost no time in making itself a party to the deliberate campaign of misrepresentation and distortion which President Truman denounced last week in his statement on public housing.

It repeats, in a mailed broadside, misstatements of fact which the President as shown up: That family unit costs may be $15,000, when the actual average is $8,465, and that the 30-year cost of the House bill would be $16,000,000,000, when the actual figure is $10,000,000,000.

These falsifications of fact are followed by the St. Louis Real Estate Board with such statements as that public housing is communistic because its occupants will have to vote the way their landlords want them to. If landlords can control the votes of their tenants, the private landlords, who have the overwhelming mass of tenants, certainly made a poor showing of it at the last presidential election.

Another equally nonsensical argument advanced against public housing by the St. Louis realtors is that two bank bandits occupied public housing here. If these are the only criminals the realtors can think of who occupied public housing, all the rest, amounting many times that number, occupied privately owned housing. Is that any argument against private ownership of housing?

The present moment is a golden opportunity for real-estate men to lead in making real estate useful to everybody. A sad commentary on the quality of the realtors' response to this opportunity is the real estate board's broadside, Political Public Housing.

Mrs. Hawkes Views Our Legislative Program

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1949

Mr. PATTERSON. Mr. Speaker, under leave to extend my remarks, I wish to include a letter received from Mrs. William V. Hawkes, Middlebury, Conn., which is a pungent commentary on our national welfare. Mrs. Hawkes evinces the interest of a forthright citizen in our future undertakings as a legislative body responsible to the people.

We should look askance at many proposals which limit individual initiative and foster a national feeling of "let's get ours while the getting is good."

MIDDLEBURY, CONN.

The Honorable JAMES T. PATTERSON,
House of Representatives,
Washington, D. C.

DEAR SIR: Because of various organizations in which I am interested, and because of the nature of my husband's business—the Waterbury and Naugatuck manager for the Metropolitan Life Insurance Co.—we meet and talk with many hundreds of Naugatuck Valley people each year. To the best of our abilities we seek to publicize the democratic form of government which has made us so grateful to have been born in America. We also call as much attention as possible to our public representatives who oppose—or do not—those dangers inherent in various efforts to nationalize such American institutions as industry, medicine, etc.

A man of your intelligence and knowledge can have small doubt that if various bills now pending in our Congress are passed, economic suicide for our country will be the inevitable, ultimate result. I think it unnecessary to itemize these bills to you. But I do say that we and our widespread friends are watching with the greatest alertness your stand regarding all legislation designed to curb personal, individual initiative and ambition, and to cast our people into the mass frame of mind of "Oh, the Government will take care of us" without the realization that drastically mounting taxes for all can be the only answer; that an increasing power for a relatively small group of intensely ambitious persons (who would enlarge their power with no thought whatever for the country's economic health, taxation of our children and grandchildren and millions of yet unborn Americans) will precede that ultimate answer.

I saw my husband during the war work himself to the point of illness helping to sell hundreds of millions of dollars worth of war bonds, thus to aid the boys and girls overseas and to perpetuate democratic freedom. Not only was this time and energy freely given; but it was considered a privilege to do anything and everything we could for our country. Is this work and the tremendous sacrifice made by millions of our young people to be scrapped for an ambitious few who talk like economic morons but who, it is not difficult to understand, feel they will have had their power and passed on before paying for all their fine promises begins to take its toll?

Let me tell you a little story. Recently, I said to a school teacher that I favored better pay for teachers. She gave me an odd look and replied: "Well, so do I, but I'm more worried about something else—about what is happening to school children today because they hear so much at home about how the Government is going to take care of everything—health, jobs, old age—everything. They are beginning to see no reason whatever to learn to do or be anything. They don't even care whether they pass. They know that sooner or later we will have to pass them to make room for other pupils. Yes, I could use more salary—a lot more—but the honest fact is that I am much more concerned with what a good many of our legislators are teaching young America about how to sell democracy short. I'm worried because I don't think I'm going to enjoy living in the America of the future if it is going the way it seems to be headed. I don't think I'm going to like it nearly as much as I like being ambitiously poor yet free as any millionaire."

Very truly yours,
Mrs. WILLIAM V. HAWKES.

Why Democracy Works

EXTENSION OF REMARKS
OF
HON. CARL ALBERT
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1949

Mr. ALBERT. Mr. Speaker, this year the Benevolent and Protective Order of Elks sponsored a national essay contest among high school students on Why Democracy Works. The importance of stimulating interest among the youth of our country in the fundamentals of democratic government in this age of uncertainty is apparent even to the most casual observer.

Hundreds of thousands of high-school students competed in this contest. I was pleased indeed to learn recently that William Johnson, one of the outstanding young men of my own home town, McAlester, Okla., won the $1,000 first prize in the national contest. His essay contains such a clear and lucid analysis of the basic precepts of our Government and such a graphic picture of its significance to our people in their everyday lives that I think it should be brought to the attention of the Congress. Under leave to extend my remarks, I am accordingly inserting it in the CONGRESSIONAL RECORD. The essay reads as follows:

WHY DEMOCRACY WORKS

(By William Johnson, McAlester, Okla.)

We, in the United States, are truly "heirs of all the ages," building upon a foundation of the vast experiences of others. From the years of the Anglo-Saxons to our present time, we have been building a democracy—a place where, guaranteed by our Constitution, all men are considered equal. Here men are given the right to worship when and where they may wish, an opportunity to enjoy their own leisure and to carry out their own desires

insofar as these do not interfere with or endanger the rights, the privileges, and the lives of other people.

But why is this possible? Why can we in the United States live in comparative peace and security while so many in the world suffer? One very good reason for this difference is that the people are themselves the best guardians of their liberty. If the people are the power in their country, no petty demagogue or selfish tyrant can long take away their cherished rights. This is exactly what a democracy is. For democracy is that way of self-government by which the many choose the few who are to carry out their mandates instead of the few determining the will of the many. Democracy is, in the words of that great American leader, Abraham Lincoln, "government of the people, by the people, and for the people." Democracy determines that the will of the many shall prevail, not the will of the few.

Democracy encourages unhampered initiative in the individual, rather than placing him at the mercy of those who would regiment him to their own way of restricted working and living. As a civilized, intelligent individual, respected for his individuality, he has the right to protest against wrongs which may be done against him and other men and is encouraged to seek correction of these wrongs in an orderly and worthy manner in courts set up for his protection.

This principle of living, based on the Golden Rule, is that which dictators dread and tyrants fear. Its deepest concern is to protect human rights instead of exploiting the people who should possess these rights.

Democracy encourages and fosters the public school, whereby every child has the same opportunity to learn how to make a living, and also how to live a life which is useful and abundant, both for himself and his fellowmen.

Every person is given the right to speak whatever his mind and his heart may dictate; the right to say whatever he desires about his Government and the defects in his society, provided, of course, he does not speak words of treason, or those which counsel the tearing down instead of the building up of free institutions, or the jeopardizing of the inherent rights of free men and women.

Where all men are considered equal, the human spirit is exalted rather than crushed. Here men are granted an abundance of life instead of the pitiful existence which is the lot of millions who live under the dread shadow of dictators and secret police or even those in whose country freedom has been only partially achieved.

Democracy is an ideal, a way of life that is embedded in the heart of every American citizen, conversely every American citizen is democracy.

Throughout the years, since the establishment of our Government, we, as a Nation and as individuals have made mistakes. Hence, we realize that democracy is not a perfect government, but we also realize that under our Constitution we can correct our mistakes and that we grow in stature by our experiences. Perhaps our American democracy will never reach perfection, because our ideals advance with our progress, but we can make it serve more and more people better as the years go on. Our goal is to put laughter in the eyes of little children, hope in the hearts of youth, and contentment on the faces of the aged, instead of leaving all these with the despair and the hopelessness which is the universal and grim bequest to all who live in lands where democracy is unknown.

The ultimate worth and value of a government is determined by its end results. The results of democracy are so evident that they prove beyond any shadow of doubt it is the finest form of government ever conceived by man.

Civil Rights and Antilynching Bills—H. R. 4682, To Provide Means of Further Securing and Protecting the Civil Rights of Persons Within the Jurisdiction of the United States—H. R. 4683, To Provide Protection of Persons From Lynching, and for Other Purposes

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1949

Mr. CELLER. Mr. Speaker, with your kind permission, I would like to analyze the sections, H. R. 4682, a bill to provide means of further securing and protecting the civil rights of persons within the jurisdiction of the United States and H. R. 4683, a bill to provide protection of persons from lynching, and for other purposes. I believe it is high time we dissipated the heat surrounding this subject matter and replaced it with some light. I know of no legislation before this Congress—and I say this with due deliberation—which has engendered more irrelevant emotionalism. The need for this proposed legislation emphatically exists, as will be shown, and the measures laid before you meet that need without violation to our Constitution and the principles of our democracy.

H. R. 4682 is divided into two titles. Title I contains provisions to strengthen the Federal Government machinery for the protection of civil rights and has three parts:

First. Establishment of a Commission on Civil Rights in the executive branch of the Government.

Second. Reorganization of the civil-rights activities of the Department of Justice.

Third. Creation of a Joint Congressional Committee on civil rights.

Title II contains provisions to strengthen protection of the individual's rights to liberty, security, citizenship, and its privileges. It likewise has three parts:

First. Amendments and supplements to existing civil-rights statutes.

Second. Protection of right to political participation.

Third. Prohibition against discrimination or segregation in interstate transportation.

Section 2 is a declaration of findings, purposes, and policy, stressing the basic doctrine of the integrity and dignity of the individual, the danger to national security and the general welfare arising out of the curtailment and denial of civil rights. It sets forth the national policy which is to protect the right of the individual to be free from discrimination based upon race, color, religion, or national origin as guaranteed by our Constitution and the United Nations Charter to which we are committed and to the United Nations Universal Declaration of Human Rights, thus relating the significance of secured civil rights to our role in international affairs.

Title I, part 1, section 101 creates in the executive branch of the Government a Commission on Civil Rights. The Commission is to be composed of five members to be appointed by the President by and with the advice and consent of the Senate. Each member of the Commission is to receive $50 a day while engaged in the work of the Commission together with necessary traveling and subsistence expenses.

Section 102 provides for the duties and functions of the Commission which are, among other things, to gather all information relative to social and legal developments throughout the Nation concerning civil rights consistent with the Constitution and laws of the United States, to evaluate the policies, practices, and enforcement program of the Federal, State, and local governments as well as the activities of private individuals and groups. The Commission is to make an annual report to the President, incorporating therein its findings and recommendations. In addition to the annual report, it may report and recommend at any time it deems appropriate or at the request of the President. It will be noted that no hearing or subpena powers are conferred.

Section 103 provides for the use of advisory committees, consultation with public and private agencies and Federal agency cooperation. A paid staff is authorized as well as the use of voluntary services.

Section 111 of part 2 which deals with the reorganization of civil rights activities of the Department of Justice provides for the appointment of an additional Assistant Attorney General to be in charge, under the direction of the Attorney General, of a Civil Rights Division of the Department of Justice.

Section 112 calls for the increasing of the personnel of the Federal Bureau of Investigation to investigate civil rights cases, and for the Bureau to include special training of its agents for such investigations.

We now come to part 3, page 8, which establishes a Joint Congressional Committee on Civil Rights. Section 121 provides for such a committee to be composed of fourteen members, seven Senators to be appointed by the President of the Senate, and seven Members of the House of Representatives to be appointed by the Speaker, with due regard for party representation.

Section 122 concerns itself with the function of the joint committee which is to make a continuing study of matters relating to civil rights under the Constitution and laws of the United States, to study means of enforcing civil rights and to consult with the several committees of the Congress dealing with such legislation. Its functions are thus confined to investigations and studies without legislative powers.

Section 123 concerns itself with vacancies and selection of presiding officers.

Section 124 makes provisions for hearings, power of subpena and expenditures.

Section 125 provides that funds appropriated to the Joint Committee shall be disbursed by the Secretary of the Senate on vouchers signed by the Chairman and Vice Chairman.

Section 126 authorizes the use of advisory committees and consultation with public and private agencies.

We come now to changes in existing law. This is undertaken in title II, part 1.

Section 201 amends title 18 of the United States Code, a criminal-conspiracy statute, which has been invoked to protect federally secured rights against encroachment by both private individuals and public officers. The word "citizen" therein is deleted and the phrase "inhabitant of any State, Territory, or District" is substituted. It has been held that the word "citizen" deprives an alien from the benefits of the section. "Inhabitants," on the other hand, would include citizens as well as aliens as it does in section 242 of title 18 of the United States Code which is aimed at State officers who deprive inhabitants of the rights, privileges, or immunities secured or protected by the Constitution or laws of the United States. Without the addition of subsection (b), section 241 would still remain only a conspiracy provision. The proposed new subsection (b) extends responsibility to persons acting individually. In addition thereto, penalties are set in subsection (b) at $1,000 or imprisonment for not more than 1 year or a fine of $10,000 or 20 years' imprisonment, or both, if death or maiming results.

Subsection (c) is likewise new. It provides the necessary authorization, an authorization not heretofore clearly set forth, for the bringing of proceedings for damages. Therein jurisdictional provision is given Federal district courts and the State and Territorial courts to hold civil proceedings as was done under the Emergency Control Act of 1942 and under the Federal Employers' Liability Act. The money-value requirement of $3,000 or more for Federal district court jurisdiction as has been often applied to individuals has been removed by the language "without regard to the sum or value of the matter in controversy."

Section 202 amends title 18, United States Code, section 242, only in regard to penalty. The violation of this section still remains a misdemeanor since there are less difficulties presented in prosecution by information rather than by indictment. However, in cases resulting in death or maiming, a fine of not more than $10,000 or imprisonment for 20 years, or both, are imposed.

Section 203 on page 12 adds a new subsection to section 242 of title 18 of the United States Code. Therein, the rights, privileges, and immunities referred to in title 18, United States Code, section 242, are set forth not as a matter of limitation or exclusion but rather as a matter of clarification. The intent is to provide an enumeration of some of the rights, privileges, and immunities secured and protected by the Constitution and laws of the United States, of which inhabitants shall not be deprived. In the recent case of *Screws* v. *United States* (325 U. S. 91 (1945)) it was held that the Government, in order to obtain a conviction under section 242, is required to prove, and the judge must adequately instruct the jury, that the defendant has "willfully" deprived his victim of a constitutional right which specific right the defendant had in mind at the time. Proof of a general purpose alone may not be enough. The enumerated rights do not create any new right. These have all been upheld by the courts:

First. The right to be immune from executions of fines without due process of law.

Second. The right to be immune from punishment for crime except after fair trial and due sentence.

Third. The right to be immune from physical violence applied to exact testimony or to compel confession of crime or alleged offenses.

Fourth. The right to be free of illegal restraint of the person.

Fifth. The right to protection of person and property without discrimination by reason of race, color, religion, or national origin.

Sixth. The right to vote as protected by Federal law. I draw the attention of this committee to the line of court decisions which have upheld these rights as enumerated: *Culp v. United States* (131 F. (2d) 93), *Screws* v. *United States* (325 U. S. 91), *Crews* v. *United States* (160 F. (2d) 746), *Moore* v. *Dempsey* (261 U. S. 86), *Mooney* v. *Holohan* (294 U. S. 103), *Chambers* v. *Florida* (309 U. S. 227), *United States* v. *Sutherland* (37 F. Supp. 344), *Catletts* v. *United States* (132 F. (2d) 902), *United States* v. *Trierweiler* (52 F. Supp. 4), *Yick Wo* v. *Hopkins* (118 U. S. 35), *United States* v. *Classic* (313 U. S. 299), *United States v. Saylor* (322 U. S. 385), *Smith* v. *Allwright* (321 U. S. 649).

The old civil-rights laws protect, presumably, any and all rights established by the Constitution or Federal statute. But the Constitution nowhere lists personal rights which may be protected, nor does any Federal statute enumerate them. Thus the civil-rights section denied, or abridged, or interfered with by State officers and individuals. The enforcement of civil rights also ran into the legal defense that criminal laws must adequately define the crime or conduct forbidden. To do away with the defense of vagueness of statute we set forth, and enumerate, and define as best we may, and with fair degree of clarity just what these rights are. Thus the defendant has sufficient warning that his conduct is forbidden.

Following this section concerning enumeration and defining of rights is section 204 which amends section 1583 of title 18 of the United States Code. This statute provides for the punishment of the kidnaping or enticing of persons for purposes of subjecting them to slavery or involuntary servitude. The amendment makes clear that the holding in involuntary servitude is punishable. The insertion of "other means of transportation" is simply to bring the statute up to date, supplementing the word "vessel."

We come now to part 2 of title 2 which concerns itself with the protection of right to political participation. Thus section 211 of the bill is an amendment of section 1 of the present Hatch Act. Presently, under this section, intimidation and coercion for the purpose of interfering with the right of another to vote as he chooses at elections for national office is punishable. The purpose of this amendment is to make the provisions applicable to primary and special elections as well as to general elections for Federal office. The existing language is "any election." The amendment would make it "any general, special, or primary election."

Section 212 amends section 2004 of the Revised Statutes. Section 2004 declares it to be the right of citizens to vote at any election by the people in any State, Territory, county, municipality, or other territorial subdivision without distinction as to race, color, or previous condition of servitude. In order to avoid any question as to the kind of punishment or remedy which is available in protection of the right to participate politically, the amendment inserts a specific reference to the two basic criminal and civil remedy provisions directed at State officers, namely, Eighteenth United States Code, page 242, and Eighth United States Code, page 43. Likewise the phrase is added "and other applicable provisions of law" to preclude any implication that by specifying two statutory sections there is an exclusion of other sections of the criminal and civil statutes. The words "religion or national origin" have been substituted for the words "previous condition of servitude." Again I call the attention of the committee to a line of court decisions which hold that the guaranty against distinctions in voting based on race or color is expressly authorized by the fourteenth and fifteenth amendments to the Constitution, and that the equal protection clause of the fourteenth amendment upholds the doctrine that distinctions in voting based on religion or nation origin are arbitrary and unreasonable classifications: *United States* v. *Reese* (92 U. S. 214), *Smith* v. *Allwright* (321 U. S. 649), *Chapman* v. *King* (154 F. (2d) 460), *Nixon* v. *Herndon* (273, U. S. 536), *Nixon* v. *Condon* (286 U. S. 73), *Cantwell* v. *Connecticut* (310 U. S. 296), *Hirabayashi* v. *United States* (320 U. S. 81), *Truax* v. *Raich* (239 U. S. 33).

Section 213 of this bill supplements the section just discussed and the one before it by creating civil remedies for their violations, and to authorize the bringing of suits by the Attorney General in the district courts for preventive, declaratory, or other relief.

The last part of this bill, part 3, deals with prohibitions against segregation in interstate transportation. The Supreme Court has stated time and again that constitutional rights are personal and not racial. Thus in the case of *Morgan* v. *Virginia* (328 U. S. 373), the Court held a State statute which required segregation of the races in motorbuses unconstitutional in the case of an interstate passenger as a burden on interstate commerce, but that case dealt only with State law and not with the action of the interstate carriers themselves who may and do continue to segregate. Hence, the necessity for section 221 of this bill which states that "all persons traveling within the jurisdiction of the United States shall be entitled to the

full and equal enjoyment of the accommodations, advantages, and privileges of any public conveyance operated by a common carrier engaged in interstate or foreign commerce, and all the facilities furnished or connected therewith, subject only to conditions and limitations applicable alike to all persons, without discrimination or segregation based on race, color, religion, or national origin."

Section 221 (b) makes punishable by fine—there is no imprisonment penalty—and subject to civil suit, the conduct of anyone who denies or attempts to deny equal treatment to all travelers. Civil suits may be brought in the State courts as well as in the Federal district courts.

And finally, section 222 makes it unlawful for the common carrier engaged in interstate or foreign commerce to segregate or otherwise discriminate against passengers. Violations are subject to fine and civil suit in State as well as Federal courts.

So much for the bill itself. I have gone into this detailed analysis because it was my purpose to show that nowhere has this proposed legislation overstepped constitutional limitations. To deny that reason exists for the necessity of such legislation is to deny all the evidence of our senses. As has been aptly put, we have a moral reason, an economic reason, and an international reason for enacting this legislation now. I believe the President's Committee on Civil Rights was completely justified when it stated, "The pervasive gap between our aims and what we actually do is creating a kind of moral dry rot which eats away at the emotional and rational bases of democratic beliefs." Where disenfranchisement, political coercion, and intimidation exist based on race, color, religion, or national origin there exist alongside of it the belief of might over right, disrespect for the law, and a corruption of all human values. You cannot keep the dismaying effects of such kind of thinking confined to the locale of its origin; it seeps through to pervade the whole national scene. You cannot ask local enforcement when those responsible for the enforcement refuse to accept these responsibilities. Hence, the necessity for strengthening the arm of the National Government.

Much has been made of the behavior patterns of the Negroes. How many of us would have different patterns if we were denied equality of opportunities, oppressed by fears of physical violence, denied a voice in the affairs of the Nation, segregated and discriminated against, and knowing that ever the law offers no protection?

Only recently, the United States and Britain started treaty action against Bulgaria, Hungary, and Rumania, accusing them of denying civil rights to their inhabitants. You may well believe me that this irony is not lost upon our foreign friends and foes alike when they can point to our national indifference to the denial of civil rights to our own inhabitants. Our international cloak of virtue slips a bit from our shoulders, do you not think?

There is no attempt in the proposed bills to legislate prejudice out of existence. But what we can do is to legislate the manifestations of this prejudice out of existence. We are not attempting herein to outlaw prejudice; we are attempting to outlaw lawlessness. There is not a provision in H. R. 4682 which can be called unreasonable or arbitrary. It creates no new rights; it only secures existing ones. It closes gaps and cuts into the heart of the relevant statutes to reveal fully the congressional intent. For example, in the establishment within the FBI of a special unit of investigators trained in civil rights work and in the reorganization of the Civil Rights Section of the Department of Justice, no radical departure is made. The FBI is already charged with the responsibility of enforcing Federal law which include the already existing civil rights statutes. A Civil Rights Section of the Department of Justice already exists. If these functions are to exist, why should they not be performed in the most effective way? The outlines exist and if we found the outlines a pertinent part of our national machine, why do we not give them substance?

And so it is with the existing statutes, sections 241 and 242 of title 18 of the United States Code, and with the amendment to section 594 of title 18 and section 2004 of the Revised Statutes. If reason at all exists for their being on our books, then sufficient reason exists for giving them meaning and strength.

And, finally, remember we are concerned with human beings, and that nobody, no group, no faction, no sect, has the moral right to play God and arrogate unto himself or themselves the meting out of the reward, privileges, or immunities based on color, race, creed, or national origin.

You have before you, as well, gentlemen, the consideration of H. R. 4683, a bill to provide protection of persons from lynching, and for other purposes. This proposed antilynching act defines that a lynching may be committed by an assemblage of two or more persons. It is directed against two general types of lynch mob violence; namely, that committed or attempted because of the race, color, religion, or national origin of the intended victim, or that attempted or committed by way of correction or punishment of the victim who is either in the custody of a peace officer or suspected of or charged with or convicted of a criminal offense.

The bill provides for the punishment of any member of a lynch mob, as well as a person who instigates, incites, organizes, aids, or abets in the commission of a lynching. The penalties provided are graded according to the seriousness of the offense and range from a fine of $1,000 to $10,000 or imprisonment from 1 year to 20 years, or both.

It also provides for the punishment of peace officers who neglect, refuse, or willfully fail to make diligent efforts to prevent a lynching or to protect a person from a lynching mob. It also provides punishment for the peace officer who willfully fails to make diligent efforts to apprehend and to retain in custody the members of a lynching mob. The coverage of this particular section extends both to State and municipal peace officers, as well as Federal peace officers where the United States exercises exclusive jurisdiction. Another section amends the present kidnaping law so as to make punishable the transportation, in interstate or foreign commerce, of persons abducted or held because of race, color, religion, or national origin, or for the purposes of punishment, correction, or intimidation. In 1937 and again in 1940 an antilynching bill passed the House and was reported in the Senate. In the Eightieth Congress, H. R. 5673 was reported by this committee to the House, and S. 2860 was reported in the Senate.

No year since 1882 has been free of lynching. Nineteen hundred and forty-nine was no different. The flagrant incident at Irwinton, Ga., where a Negro was taken out of jail and shot to death, is only too familiar in detail. Yes; it has been said that lynchings have decreased, but it is still possible for a mob to abduct and murder a person in some sections of the country with almost certain assurance of escaping punishment for the crime. The decade from 1936 to 1946 saw at least 43 lynchings. No person received the death penalty, and the majority of the guilty persons were not even punished. The reasons for this are quite obvious. The State or local governments refuse to punish lynchers. Participation by State officials, actively or passively, is not uncommon. Local government and citizens refuse to cooperate. There were over 200 attempted lynchings in the past decade, which is a clear indication of how far this idea of lawlessness has spread. There is no moral will in these communities to view these lynchings as violations of the law. It is a terrorist device and, as such, clearly against the Constitution of the United States. Article IV, section 4, of the Constitution, states:

> The United States shall guarantee to every State in this Union a republican form of government.

A lynching is government by mob and not government by law; it invalidates the courts, the very cornerstone of government, and nullifies the law. Those who hold a Federal antilynching law is unconstitutional are using the veil of the Constitution to protect and uphold unconstitutionality. This bill is within the ambit of the fourteenth amendment which reads:

> No State shall make or enforce any law which shall abridge the privileges or immunities of the citizens of the United States nor shall any State deprive any person of life, liberty, or property without due process of law, nor deny to any person within its jurisdiction the equal protection of the laws.

In his message to Congress on February 2, 1948, the President stated the case most clearly:

> The Federal Government has a clear duty to see that constitutional guaranties of individual liberties and of equal protection under the laws are not denied or abridged anywhere in our Union. That duty is shared by all three branches of the Government, but it can be fulfilled only if the Congress enacts modern, comprehensive, civil-rights laws,

adequate to the needs of the day, and demonstrating our continuing faith in the free way of life.

H. R. 4682 and H. R. 4683 are administration bills, but by no means partisan. I ask your most favorable consideration of these measures, gentlemen, and to exercise justly your responsibility to enact such legislation as will really and truly make this country as free and as fearless as are the words of the preamble to our Constitution.

Address Delivered by Dr. Bunche at First Annual Convocation Exercises, Brandeis University, Waltham, Mass.

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein the convocation address delivered by Dr. Ralph J. Bunche, senior director, united trusteeship council, at Brandeis University, Waltham, Mass., on Sunday morning, June 19, 1949:

THE ROAD TO PEACE: THE UNITED NATIONS WAY

There is no road in the world today more important than the road to peace. It is, to date, insufficiently traveled, and indeed, not at all clearly charted. The United Nations is attempting both to chart it and to guide the nations and peoples of the world along it. For peace is the business of the United Nations. At times it is a pretty grim business.

The United Nations was conceived in the throes of war. When the United Nations Conference on International Organization convened at San Francisco in the spring of 1945 for the purpose of drafting the United Nations Charter neither Germany nor Japan had yet capitulated. The war in both east and west was in its final, decisive phase.

It was inevitable, therefore, that peace should be the overriding concern of the delegates to that historic Conference. They sought to devise an international organization to succeed the League of Nations which would have the achievement of a peaceful world as its most fundamental objective, and which would possess the means to give maximum assurance against war or the threat of war. They spoke of peace-loving peoples. They made the desire to maintain peace the basic qualification for membership in the Organization.

They strove to avoid the weaknesses of the League of Nations. They were sick unto death of war. They did not seek peace at any price, but they were eager to go very far to insure it.

Thus the United Nations was designed to prevent wars and to stop them if unhappily they should break out. Elaborate machinery for this purpose was created. To this end the United Nations was endowed with certain enforcement powers and was to have an international security force.

It was recognized also that to insure a peaceful world solid foundations for peace must be laid. Therefore, great stress was put on human rights and fundamental freedoms, on the equality of peoples irrespective of race or creed, on economic collaboration and advancement, on the rights of colonial peoples to aspire to and move toward freedom and the control of their own destinies. The intent was to eliminate the irritants, the foci of unrest and rivalry, the inexorable pressures, which in the past had twice set the world on fire.

For many reasons, not the least of which is the unfortunate conflict between East and West, the enforcement machinery of the United Nations has never become operative; the international security force has not yet materialized. Does this mean that the effectiveness of the United Nations as an instrument for the cultivation and preservation of a peaceful world has been destroyed?

I believe that the answer is emphatically no. The United Nations today has no military force with which to impose its decisions. It does not presume to be a world government. It has obvious imperfections and weaknesses. It suffers from that dread virus, veto. It often appears that the great powers have it at their mercy. Yet the voice of the United Nations has become an instrument of tremendous and increasing influence in our world. That voice is the one great hope for all of us that the world will not be consumed by atomic warfare.

There is a popular tendency to take a somewhat cynical attitude toward the United Nations. This is because, in the turbulent postwar period, the United Nations has been seized with so many delicate, complex, and explosive problems and has not produced definitive solutions for most of them. But if United Nations action has not often produced definitive results and tidy decisions, it has nevertheless always dulled the dangerous edges of the problems and has at least eliminated them as frightening threats to the peace of the world. This has been the case in an impressive array of situations, including such disputes as those in Iran, Indonesia, Korea, Kashmir, Palestine and even Berlin, where United Nations intervention has been an important catalytic agent. Each of these situations has been heavily charged; each posed a potential and frightening threat to the peace of the world. In each the tension has been greatly eased as a consequence of United Nations intervention, and the threat to the peace has been either eliminated or greatly lessened.

Because the United Nations is functioning in this way, I am optimistic about the prospects for peace in the future. War, in our day and age, is a product of the state of mind of peoples. If the generality of peoples are peace-loving and are determined to live in peace—and I firmly believe that throughout the world they are—the prospects of war are remote. But it is not necessary for people to be warlike, to be wishing for war, to demand it, in order that war will come to their doorsteps. It is fatefully ironic that essentially peaceful peoples may have war thrust upon them only because they have fallen into a fatalistic state of mind which persuades them that for one or another reason, war is inevitable.

There is too much of that kind of dangerously loose thinking in the contemporary world. There are too many people who are prepared to draw the fatal conclusion that war is inevitable, or virtually so, because of the apparent inability of the United Nations thus far to repair the breach between East and West. That is reckless and irresponsible reasoning in an atomic age. In the final analysis, the United Nations can be an instrument for peace no stronger and no more effective than the peoples of the world make it, by their confidence and support.

Many, perhaps most, of the problems which beset the contemporary world are due in large measure to a lack of understanding among peoples, and to the suspicions and recriminations which are the inevitable by-product of misunderstanding. Despite the great technical advances in transportation and communication, which in fact, make the world physically "one world," there is as yet no deep sense of world brotherhood among peoples. That which is strange and foreign is still looked at askance by most of us. Barriers of language, religion, modes, and ideology, continue to be formidable, and these barriers become even more formidable by political curtains and the instruments of propaganda.

The United Nations ideal whereby peoples would "practice tolerance and live together in peace with one another as good neighbors" is still far from realization. But no ideal has ever been more worthy.

The vital role of the United Nations in the settlement of disputes is to bring representatives of peoples together in order that they may apply reason to their problems, that they may argue out their differences in the full glare of international public opinion—to give them every possible assistance in finding means of peaceful settlement.

That the role of the United Nations in this regard may be decisive is perhaps no better illustrated than in the experience of the United Nations with the Palestine problem.

The encouraging results thus far achieved in Palestine are the product of a prolonged and intensive United Nations effort to restore and secure peace. But they have not been achieved without great cost. Ten members of the United Nations staff in Palestine, including Count Bernadotte himself, have sacrificed their lives in this peace expedition and twice that many have been wounded.

Because there is a readiness on the part of Arabs and Jews to heed the insistence of the United Nations that peace shall reign in Palestine; because a great number of men and women have been willing to risk their lives in serving the United Nations ideal; because Arabs and Jews have been sensible enough to sit down together and negotiate their differences; because of these factors big steps toward permanent peace have been taken in Palestine. The truce checked the fighting. The armistice agreements have taken the warring parties much further along the road to peace. They define armistice demarcation lines. They provide for substantial reduction and withdrawal of armed forces on both sides, with a view toward eliminating any possibility of offensive military action by either side. Each agreement incorporates an article which, in substance, is a nonaggression pact. In each instance, mixed armistice commissions are established whereby, through joint and cooperative effort, assisted by United Nations observers, the parties themselves supervise the application of the armistice terms. The agreements were signed at the governmental level and firmly bind the governments. Any violations of their terms would be an act of bad faith by the responsible government.

But undoubtedly the greatest significance of the agreements is to be found in the fact that they are voluntary agreements, that the representatives of the Arab and Israeli Governments have now, for the first time, sat down together as equal parties in earnest consultation, and have learned that it is possible for them to resolve vital differences by statesmanship and a mutual spirit of conciliation. This is the United Nations way. This is a vital lesson not only for Arabs and Israelis but for a troubled world at large.

It would be a serious mistake, however, to exaggerate the significance of the Palestine armistice agreements. Serious problems of a nonmilitary character await solution. These include the repatriation and resettlement of the Arab refugees, those tragic and innocent victims of the conflict of whom there are now estimated at some 900,000; the status of Jerusalem and the holy places; and the definition of permanent frontiers. The United Nations Palestine Conciliation Commission, now meeting at Lausanne with Arab and Jewish delegations, is engaged in assist-

ing the parties to find amicable and just solutions for all of their outstanding differences. The settlement of these differences poses a strong challenge for both Arab and Jewish statesmanship. Their settlement will require important concessions from both sides.

The burden of finding agreement rests upon the parties themselves, but it has been abundantly demonstrated that the United Nations is the indispensable catalytic agent in the process. I am quite convinced that the Palestine experience has amply demonstrated that the United Nations has a vital role to play in world disputes as mediator and conciliator, quite apart from any enforcement action, and that it can play this role effectively. It has shown that by persistence and by firm resolve to maintain the peace the United Nations can assist the opposing parties, bitterly antagonistic though they may be, along the road to peaceful settlement of their differences, however serious, and thus avert a dangerous threat to the peace.

The processes of conciliation and mediation are slow and tedious, but they can pay handsome dividends. In the long run it may well be that they will provide the most firm procedural foundations for a peaceful world. It is very doubtful, in my view, that a peace founded upon force alone could long endure. In the final analysis, lasting peace must be founded upon consent freely given and agreement voluntarily achieved.

In Palestine, as in many other troubled areas of the world, the United Nations has been pursuing vigorously its vital role of insuring a world at peace, a secure world in which men will walk together as brothers. When men think and act as brothers, the world is big enough for all of us. It is only when, in their perversity, they govern their conduct by the law of the jungle that the world becomes too small.

The problems of the world are problems of the relations among its people. They are human problems, and therefore they should be and are susceptible to man's reason and conscience and elemental decency. I believe that the world has a rich supply of men and women of good will and vision, of peace-loving individuals, and that these men and women, working through the channels offered by the United Nations, can light the way to universal peace and justice in our time.

The United Nations' experience in Palestine is demonstrating cogently that although the United Nations is not a world government, that although lacking in enforcement machinery, its voice can be an instrument of tremendous influence and great good. This is a voice which must be forcefully and increasingly heard and heeded in all the troubled areas of the world. It is, perhaps more difficult to wage peace than war. There is certainly no magic means of achieving peace once war has begun. Nor is there any easy way to give expression to the will of the overwhelming majority of the people throughout the world that peace shall reign. It is only by tireless, persevering, and courageous action of the United Nations that peace can be secured, whether in Palestine or elsewhere in the present-day world.

But it is not only on behalf of a world at peace that the voice of the United Nations is raised. That voice is also being increasingly heard and felt for a just world, a good world, a world fit to live in for all the people. A just world, in the eyes of the United Nations, and, I submit, in the eyes of all honest and fair-minded people, is a world in which racial and religious bigotries are universally outlawed, a world in which all peoples, irrespective of race or creed, are accepted as equals in a fraternal bond of human kinship; a world in which the right of a people to self-determination is unchallenged; a world in which discrimination, segregation, underprivilege imperalism and colonialism will have become the unsavory relics of a dark age happily past. To insure peace in the world it is not enough to stop wars once they are started or are threatened. It is indispensable that secure foundations for peace be laid. The foundations for peace will be insecure and uneasy so long as hundreds of millions of non-self-governing peoples throughout the world are denied the elemental right to control their own destinies, to govern themselves, and a reasonable hope for the realization of their aspirations. The Charter of the United Nations has recognized this and holds forth the promise of a new day and a new way of life for the colonial peoples. That promise remains a long way from fulfillment.

The Charter also reinforces and gives new inspiration to the heroic struggles of racial and religious minorities as, for example, the Negroes and Jews of America, to free themselves of unjust disabilities which they suffer only because of race or creed.

There is much to be done in our world. But in a democracy what needs to be done can be done if the people are alert and determined. I have great faith in democracy because I have great faith in the basic goodness, in the conscience and instincts of mankind. I am convinced that the common people everywhere long for a world in which peace and justice shall reign. That kind of world is the world which the United Nations seeks to achieve. It is lighting the way that man may live in peace, happiness, and security. It is still a dim and flickering light, but it grows stronger and surer each day. Can there be any who doubt that better this light than the oppressive darkness of a modern dark age?

Better it is to make sacrifices and to strive mightily now for a world of peace and justice than later to fight an unwelcome war for mere survival only because we lacked both realism and vision.

CAB Decision

EXTENSION OF REMARKS
OF

HON. J. PERCY PRIEST

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1949

Mr. PRIEST. Mr. Speaker, I wish to bring to the attention of the House a proposal which may result in increasing enormously the public expenditure for the carriage of United States mail by air and to complicate further the present financial distress of our air lines.

Recently the Civil Aeronautics Board, by a close 3-to-2 vote, tentatively, but not finally, decided to issue certificates of public convenience and necessity to four all-freight air lines, thus adding multiple specialized competition to an industry presently regulated, yet positively ill financially. Chairman Joseph O'Connell and Vice Chairman Oswald Ryan and member Russell Adams constituted the majority, and Members Josh Lee and Harold Jones dissented vigorously.

The opinion indicates that the majority believes that these exclusively freight air lines can succeed without support of mail pay. Specifically, they say:

The potential market appears to be sufficient to warrant economic operations by the carriers we are certificating. Facts of record lend credence to the assertion of the applicants that air freight can be developed without subsidy from the Government in the form of mail payments. * * * It must not be forgotten that between practically all of the major cities of the country there is available today an adequate air-mail system by the existing certificated carriers. * * * The carriers herein certificated have strongly urged that they can conduct the service without benefit of Government aid and have, in fact, exhibited a determination to do so.

On the other hand the dissenters Jones and Lee point out their fear that the million-dollar losses already incurred by these all-freight carriers operating under an exemption, will continue and that if certificated, these carriers will look to the Federal Government and mail pay to make up their losses.

It is surprising how strongly the public record of these freight air lines supports the suspicion of Members Lee and Jones. And this is my very point.

On the one hand, the majority is convinced these applicants can live and prosper without Government aid. On the other hand the applicants themselves have a long record before committees of Congress, the President's Air Policy Commission, and in fact, before the Senate Interstate and Foreign Commerce Committee now investigating the financial condition of the air lines—of urging that they be allowed to carry parcel post, which, of course, is mail, which, of course, must be paid for by the Federal Government, and which, of course, will be the Government aid for which the Civil Aeronautics Board majority would disclaim any need.

If further experimentation in the field of all-freight transportation is desirable, as it may be, it can readily be accomplished by permitting these all-freight carriers to continue their service under the exemption rules under which they have operated these past 2 years, and are presently operating. This would provide them the opportunity of developing their business without opening the door to an increasing drain on Federal funds through mounting air-mail subsidies that certification may imply, and in fact, ultimately require.

I include here some excerpts from official records indicating repeated expressions of the all-freight carriers for parcel post:

1. In late 1947, at the hearings before the Civil Aeronautics Board on the Air Freight case (Docket No. 810 et al.), Mr. Moorman, of Slick Airways, testified in behalf of the freight carriers' proposed carriage of air parcel post and air mail:

"Question. Then the answer to my question is 'Yes, that you are very much interested in carrying air parcel post'?

"Answer. If it is on the right basis and at what we believe to be a reasonable rate.

* * * * *

"Question. It has already been brought out that you did amend your certificate of incorporation to include authority to carry United States mail?

"Answer. I believe that is in there." (Transcript, p. 331.)

2. On September 22, 1947, before the President's Air Policy Commission, Earl F. Slick and H. Struve Hensel, general counsel for the Independent Airfreight Association, made the following statements to support the carriage of mail by the nonscheduled lines:

"Mr. HENSEL. That is what leads us frankly to say that if you were to approach this problem [certificated carriers subsidized freight

operation], (1) you have got to stop the use of air-mail subsidy to finance freight competitive wars; and also (2) if you were to approach it on the fully competitive basis, we are perfectly willing to carry the air mail at a rate that we thing is compensatory, which over our routes we think is 18 cents a ton-mile. So that there is quite a difference. (Transcript, p. 413.)

* * * * *

"Mr. HENSEL. I think certainly if we can carry mail for 18 cents a ton-mile, as we have offered to do, backed up by a bond, I should think that they [American Airlines] would be able to do it [carry mail at 18 cents a ton-mile] if their operation is any good. * * *

"Mr. BAKER. You would offer to give a mail service on as many flights, that is, you could offer the frequency and regularity of flights of the present common carriers, and do it at this much less cost?

"Mr. HENSEL. We think so, over our routes. It would take some time to establish these other routes. (Transcript, pp. 424–425.)

* * * * *

"The CHAIRMAN. You said somewhere, as I remember it, Mr. Slick, that you would recommend that noncertificated air lines should be permitted to bid competitively on air-mail carriage. Would not that mean a return to the pre-1938 condition when competitive bidding on air-mail contracts was generally regarded as damaging to the industry?

"Mr. SLICK. I agree that it is damaging to the industry and I don't think it should be open to bidding regularly as they did at that time. However, if you were to recommend a policy and one carrier said that it can be done for 18 cents a ton-mile and another said $5.01 a ton-mile, I think maybe it should be reconsidered once, the whole policy of it.

"Mr. HENSEL. In competitive bidding, I don't think it is necessary to have the advertising for bids and then the acceptance that way. We discovered that during the war in many of our procurement contracts where we kept up competition by inquiring of a number of manufacturers what they would produce the article for, and then carrying on the negotiations. But we were interested in developing some competition so that these rates might find a natural level rather than an artificial one. (Transcript, pp. 454–455.)

* * * * *

"Mr. BAKER. Where there is a demand for a product and you can produce it for less than the demander is willing to pay, do you feel that involves a subsidy, not just an ordinary profit?

"Mr. HENSEL. I think when the Government gives it to a man and keeps everybody else out from competing, it is a plain subsidy." (Transcript, p. 458.)

3. Excerpt from prepared statement of Earl F. Slick presented to the President's Air Policy Commission in 1947:

"(3) The presently noncertificated air-freight lines should be permitted competitively to bid on air-mail carriage and all other governmental transportation needs. If that be done, the prophecy is ventured that efficiency will soon be forced on the aviation industry. We have already offered to carry the mail over our routes at 18 cents per ton-mile. And at that we would expect to earn a fair profit.

"(4) Air parcel post on a competitive non-subsidized basis should be established by statute." (Statement, p. 5.)

4. Late in 1947, at the hearings before the Civil Aeronautics Board on the Air Freight case (Docket No. 810 et al), Robert Prescott, president, Flying Tigers, testified in behalf of his all-freight airline carrying parcel post:

"Question. Is your company interested in parcel post?

"Answer. Oh, yes, indeed." (Transcript, p. 745.)

5. On December 10, 1947, in hearings before the Subcommittee of the Committee on Post Office and Civil Service, House of Representatives, Robert Prescott testified in behalf of the Flying Tigers, urging freight carriers be given right to carry parcel post:

"That parcel post can take to the air at low attractive costs and rates has been amply demonstrated by the operating experience of the non-certificated cargo air lines. We now blanket the country and among us service most of the major centers of the United States. We have demonstrated that air freight—and therefore parcel post—can be carried at low rates without subsidy between those points which can be expected to furnish the great bulk of parcel post. At only a modest increase in cost, large volumes of parcel post can be carried to other points. We are prepared to carry parcel post at such low rates. The passenger-mail air lines should be ready to do likewise.

"The obvious secret of low-cost parcel post lies in a steady, large volume. If the Congress should decide to initiate parcel post on a progressive scale, starting first with parcel post between the big cities, it is possible to start immediately at a low rate. For example, if the Flying Tigers were given an opportunity to carry parcel post on long hauls between the cities it is now permitted to serve under its letter of registration issued by the Civil Aeronautics Board, and could anticipate a steady, predictable volume. It is prepared to contract to carry parcel post at approximately 18 cents a ton-mile. And it is prepared to demonstrate that its costs of operation would justify that low figure.

"If a larger program should be initiated, calling for short hauls and many intermediate stops on a flight, a higher base rate would be required. Short hauls and many stops would increase costs. Smaller planes would be required. For example, if the Flying Tigers were to carry parcel post in the short hauls, we would utilize two-motored planes for such work while making the long hauls in the four-motored planes more economical in operation. The composite cut of the two types of operation would justify, we calculate, a rate of approximately 20 cents a ton-mile under present operating conditions.

"We are prepared to sit with the appropriate Government agency and develop a proper set of rates which would return our costs and a fair profit, and still permit low parcel-post rates. The Government could do the same with other air lines, certificated and noncertificated. It could obtain a composite cost upon which to set its parcel-post rates which would attract the great volume of parcel post which is admittedly available and at self-supporting rates.

"Care should be exercised to require the most economical operation. Parcel post, like air freight, does not require multiple flights between points. Parcel post should move at night with air freight for delivery on the following day. Fewer flights with concentrated loads will make for low-cost operation. And the public interest will be served." (Hearings, p. 7.)

* * * * *

"We are very much interested in the inauguration of a parcel-post system, because we would like to bid on those contracts in some manner on a just plain business basis. We would like to carry them for what the carriage costs, cost plus a normal reasonable profit.

"Studies have been made by the lines in our own freight business that we can carry with a profit at the rate of somewhere between 14 and 15 cents a ton-mile on our normal carriage of air freight. My statement to you on the probable cost of air parcel post will be somewhere around 16 cents or 20 cents a ton-mile. I place that higher because I want to be safe. I wouldn't want to tell you that—I wouldn't want to mislead you, and you go aboard on assumption of, say, 12 cents or 14 cents a ton-mile, and when you get a bill passed nobody will carry it for that.

"I can positively assure you that no parcel-post rate should be over 20 cents a ton-mile with this precaution: You won't be able to give air mail service to every hamlet and every village in the country—that is, air parcel-post service—but it is our contention that you don't need to fly airplanes into every one of these little places." (Hearings, pp. 9–10.)

6. On December 10, 1947, in hearings before the House subcommittee of the Committee on Post Office and Civil Service, Earl F. Slick urged that freight carriers be given the right to carry parcel post:

"I have dwelt on the subsidy question at some length, not only because I believe its early elimination is a prerequisite to the development of a sound and fully vigorous air-transportation system, but also because I wish to urge as earnestly as I can that it has no place in the air-parcel-post picture and to call attention to the fact that the subsidy feature is responsible for restrictions surrounding air-mail carriage which need never apply to air parcel post.

"My company is interested in air parcel post. As a freight carrier we feel that much that we have learned about air freight can be put to good use in the development of parcel-post traffic. We are convinced that air parcel post can be organized on a basis which will result in an efficient operation with low cost to the public. Split-second scheduling should not be the goal, rather the economy that results from the flexible schedules now in effect for commercial freight and from nightly departures from principal points is to be desired. Moreover, in the beginning, air deliveries at all way stations and smaller communities should not be attempted. It is an astounding fact that the members of our association working with the surface carriers can guarantee second-day delivery to virtually any town in the United States. No more speed than that is required to generate an immense volume of air-parcel-post traffic.

"Furthermore, if this method is used, the cost of the service will put air parcel post in reach of a great many people who could never afford the service if it is set up on any other basis. This is the service which is required and this is a service which the all-freight carriers are preeminently qualified to render. And yet, if an air parcel post bill is passed, containing only rates and zones as that proposed in the last session (H. R. 955), the Post Office Department and the public would not be able to use for air parcel post the services of the all-freight carriers. While not a lawyer, I understand this arises from the fact that under the present Civil Aeronautics Act only air-mail carriers could qualify. This situation should by all means be cured by appropriate provision in the next air parcel post bill or by amendment of the Civil Aeronautics Act. Some provision must be made authorizing the Post Office Department to make use of the services of the all-freight carriers.

"We have not yet made any detailed analysis or projection of air parcel post rates. However, it is obvious that air parcel post can be put on a sounder basis, from the very beginning, than has been the case with air mail. The rate should be low enough to attract the traffic in volume and yet high enough to pay the air transportation cost and a reasonable return thereon, plus the charges of the Post Office Department. But in the air parcel post there is no reason to start with an air transportation charge of $1.02 a ton-mile, the average air-mail rate, or even 45 cents a ton-mile, the so-called service rate. The proper rate can be determined

only after further study of the costs involved in affording parcel post its proper priority, and only after consultation with the Post Office Department as to its requirements. In any event, however, the air transportation charge should not, even at the outset, exceed 20 cents a ton-mile." (Hearings, p. 38.)

7. On December 10, 1947, George Haney of California-Eastern Air Lines, appeared before the House Subcommittee of the Committee on Post Office and Civil Service urging parcel post for the freight carriers:

"Insofar as parcel post is concerned, another reason that I would like to advance for the fact that we should receive that business if the Post Office Department and the Congress starts and decides to go into air parcel post, we feel that the freight operators should receive the business." (Hearings, p. 42.)

8. On May 17, 1949, Earl F. Slick testified in behalf of Slick Airlines before the Senate Interstate and Foreign Commerce Committee in support of all freight air lines carrying air parcel post:

"The CHAIRMAN. Do you want to carry the mail?

"Mr. SLICK. No sir, we do not. We stated in the Freight case we did not want to carry it, and we thought it would hurt our freight service.

"And last year before the House Post Office and Civil Service Committee, I testified on air parcel post. And we made a proposition then to that committee and to the Post Office Department to carry air parcel post at slightly above our air freight rates which were 18 cents a ton-mile, to allow for any special services that they might want, but just to get the volume of business and to do it on a business basis. I think all mail and air parcel post should be done to give the public a service at a low cost, which they need, and which would increase the volume tremendously.

"That was our only proposition we have made as far as carrying the mail. That was strictly on a nonsubsidized cost basis, a fair cost and fair profit to us, and a fair cost and fair profit to the Post Office Department.

"We asked that subsidies be separated from mail and the public know what the subsidy is and who is getting it and for what.

"The CHAIRMAN. But even so, you did not want to carry the mail, even though it were separated?

"Mr. SLICK. Not the mail. We thought that air parcel post could possibly be in such large volume, if the rates were put low enough, we could carry that in an all-freight airplane. But we think the mail is an expedited service, a special service, to the public and belongs in the passenger service who have schedules to fit that need.

"The CHAIRMAN. I am very much interested in what you say about parcel post because I have asked the Post Office Department to give us some specific testimony with respect to parcel post. We want to explore the possibilities of parcel post fully. And you are the first witness who has mentioned the subject, and I hope that some place in your statement there will be another reference to parcel post.

"Mr. SLICK. Sir, I will be glad to refer to it a little more in detail right now.

"Last year, when we had the hearings before the House Post Office Committee, the air lines and ATA asked that air parcel post be put on the same basis as air mail, which meant 45 cents, or whatever the subsidy was, that was involved in that be given to them.

"We thought it could be done on a low-cost basis, and we could give second-day delivery to any place in the United States, which is comparable to what the passenger air lines could do at 67 or 70 cents, or whatever their mail payments were.

"And we thought we could increase the volume so tremendously and give such a much greater service to the public as a whole in this country, and to the people that want to use air parcel post at these low rates, and we could make money at it by getting a volume at those rates. (Transcript, pp. 1628–1630.)

* * * * *

"Mr. SWEENEY. Mr. Slick, I wonder if you would give us the total potential you believe can be realized at various air freight rates.

"Mr. SLICK. This is a study we reached after considering it later on when we put in our application in the Air Freight case. We considered the development that had occurred already at the rate we had had, and we were trying to estimate how many cargo planes could be put in the air-freight service commercially without a subsidy and national defense needs.

"I presented these figures last year to the Congressional Air Policy Board.

"And these figures are in million ton-miles per year: 1,300 at the rate of 13 cents a ton-mile; 2,100 at the rate of 11 cents a ton-mile; 5,000 at the rate of 9 cents a ton-mile; and 12,000 at the rate of 7 cents a ton-mile.

"A lot of people say that our potentials are visionary, that they are not going to be realized, that you cannot operate planes that cheaply.

"But there are freight planes that are going to be out within the next year, the next 2 years, that will operate in a 9 to 10 cents a ton-mile total cost range.

"With the planes that we have today, which are fairly obsolete airplanes—they are the best available but they were not designed for freight—we can operate profitably under the fair competition for 14 to 15 cents a ton-mile.

"If the volume increases, if they put air parcel post in all these planes, they estimated there would be, I think, 100,000,000 ton-miles at 20 cents air parcel post to the public. That is feasible today. If they put that 100,000,000 ton-miles in the airplanes not as a subsidy but as an increase in volume, increase in utilization, increase in the number of airplanes in service, the cost would probably be, with the present equipment, between 13 and 14 cents a ton-mile." (Transcript, pp. 1655–1656.)

9. On May 27, 1949, Robert Prescott, president of Flying Tigers, testified in favor of air parcel post being carried by all-freight lines (before the Senate Committee on Interstate and Foreign Commerce on Investigation of the Financial Stability and Operational Efficiency of the Airline Industry):

"The Flying Tiger Line has not sought certification for the carriage of mail, although it stands ready to do so without subsidy should the Government so elect." (Transcript, p. 2181, vol. 26.)

"Air parcel post has been instituted within the past year. Parcel post is classified as mail and is a high-priced special air service. We have contended that air parcel post should be treated as freight, with corresponding low rates and high volume to the benefit of the shipper, the taxpayer and the carrier. We may still have our piece to say on this at some future and appropriate forum." (Transcript, p. 2182, vol. 26.)

Wolf, Wolf, Wolf

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1949

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Post of June 19, 1949:

WOLF, WOLF, WOLF

The little shepherd boy in the fable didn't just cry "Wolf." If he had he might not have ended up as a warning for all the peoples of the world for all time not to overdue things. His trouble was that he cried "Wolf, wolf, wolf." He didn't know when to stop. Even when told the first time that he was figuratively playing with fire, after he turned in a false alarm for aid for his flock, he did not desist.

No one now remembers his name. If anyone had passed it along the stepping stones of history, his name would now stand for practical jokers who end up hurt—like the name of Captain Boycott of Ireland became the synonym for curtailment, and the name of Quisling became an alternative for a traitor.

If we knew the little boy's name we would apply it to those who at the moment are not only crying "Wolf," but repeating it, shouting it aloud, whispering it in the corners and acting it out in pantomime which includes a dolorous visage with a turned-down mouth.

Something is happening in America at the moment, economically. The wartime shortages are being met. Production is overcoming demand. The inflation which frightened us half to death is not the ascending spiral that F. D. R. described.

We do not know and we do not think anyone knows whether we are suffering disinflation, deflation, or depression. One could safely say we are settling back to normalcy, if one were sure what normalcy meant in a country whose population and domestic demand grows daily, and at a time when the world demand is not diminishing perceptibly.

A distinguished solon in Washington the other day, chiding the administration to which he is opposed with lack of action to meet the situation, shouted that the depression was already here. All right, where are the breadlines? Has anyone lately stopped you on the street for a dime? Has someone come to the back door asking food? Has any town father suggested that it is time to take the boards down from the windows of the almshouse?

Let's be frank and face it. There is unemployment. But how much of it is due to the so-called depression and how much is due to buyers' resistance, by people and emporiums delaying purchases until if or when prices go down?

How much of it has come about because too many people who should know better are crying "Wolf" and scaring folks into keeping their money in the bank or in the family sock, thus delaying the purchase of articles which would keep the factories and mills at full employment? We are all aware that we cannot talk oneself out of a depression. That was evident in the days when we were told that prosperity was just around the corner. We can talk ourselves into one.

What are the facts? The banks are bulging with savings. More people have bonds, war bonds and peace bonds, than ever in history. More people own their own homes, possess automobiles, have children in high school and college than ever before. And have you noticed how many chimneys now sprout television masts?

In the face of those facts what is happening? Let's illustrate it this way. There are sadistic people in the world who have an oblique way of being funny. They meet you when you are feeling fine and tell you wryly you look pale. They then ask, "What's the matter? Are you sick?"

That kind of abominable kidding has put many a man or woman in the full bloom of health on the sick list. The same thing, carried too far, can send Uncle Sam reaching for the aspirin and calling in special nurses.

The cure? Production is the key. Instead of giving up sewing because we mislaid the needle, if we buy just one needle, we give someone a few minutes more employment. Let's use the money we earn for the purpose for which we earned it, to buy things to make our lives and living a little happier, a little less burdensome.

For Freedom in Education

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1949

Mr. YATES. Mr. Speaker, the House Committee on Un-American Activities has now gone into the field of education. Acting upon a petition of the Sons of the American Revolution, the committee has addressed letters to approximately 100 schools in this country, asking for a list of their textbooks. There is a suspicion that there may be subversive influence in the books which is slanted, as the petition says, to favor socialism and communism, and which is designed to convert this country into a social-welfare type of state. Upon this broad general charge the investigation by the committee was ordered. I assume that if the committee finds any language in the books which it considers un-American, there will be a book burning.

Many Representatives in the Congress are opposed to the manner in which the operations of the Un-American Activities Committee have been conducted. This does not mean that we are at all sympathetic to the communistic philosophy. On the contrary, we abhor communism. We recognize it as deceptive and cruel; that it is reactionary, both in government and in economics; that it is government by a police state and in conflict, directly and entirely, with the freedom and individual liberties which are our sacred birthright under the Constitution and which we must protect at all costs.

Our objection, however, lies in the methods used by the committee and the narrow-minded scope of its viewpoint. In the past it has used every kind of scare and hysteria for partisan political purposes and has recklessly thrown Communist charges against all kinds of people—good as well as bad.

The latest activity of this committee now proposes to police that which should be taught in our schools. It is difficult to see how this differs in principle from the Communist dictate that only education fostering communism shall be provided in its institutions.

I agree with those who condemn this latest activity of the committee, and who point out that our great danger lies from those who, in the guise of attacking communism, attack something quite different. I feel certain that this latest charge is an underhanded and devious sniping at much of the legislation constituting the President's program.

The American way has been to encourage thought and discussion and we have never been afraid to permit a full disclosure of ideas. A policy of repression of ideas never has worked and cannot work. Our way of life requires that we shall have faith in the principles and practices of democracy—faith that when our people are permitted to discuss and analyze all forms of government that they will prefer democracy and will be better citizens if they are convinced rather than compelled to follow certain lines of thinking.

Chancelor Robert M. Hutchins, of the University of Chicago, has stated that the danger to our free institutions is not from the tiny minority who do not believe in them, but from those who would mistakenly repress the free spirit upon which those institutions are built.

He says:

In America we have had such confidence in democracy that we have been willing to support institutions of learning in which the truth might be pursued and when found, might be communicated to our people. We have not been afraid of the truth or afraid to hope that it might emerge from the clash of opinions. The American people must decide whether they will longer tolerate the search for truth. If they will, the universities will endure and give light and leading to the Nation. If they will not, then as a great political scientist has put it, we can blow out the light and fight it out in the dark; for when the voice of reason is silenced, the rattle of machine guns begins.

We must keep the light of freedom burning in our educational institutions.

A. P. Giannini Was Ahead of His Time

EXTENSION OF REMARKS
OF
HON. FRANCK R. HAVENNER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1949

Mr. HAVENNER. Mr. Speaker, under the above caption Mr. M. S. Rukeyser, economic commentator for the International News Service, wrote an extremely interesting sketch of the life of the great American banker, Amadeo Giannini, who passed away recently in California, his native State and the capital of the financial empire which he had created.

Mr. Rukeyser's article, which was published in the San Francisco Examiner and many other newspapers, was as follows:

The meaning of the career of the late Amadeo Peter Giannini runs beyond the fact that he created the Nation's biggest commercial bank.

He was ahead of his time in instinctively grasping the importance of integrating his business activities into the social interests of large numbers of people. His concept of banking for the little fellow was more than a mere slogan.

The Californian anticipated the recent social changes, which have elevated the stature of large numbers of little fellows.

In making his bank, with its myriad of branches, part of the economic warp and woof of the State of California, Mr. Giannini made himself relatively impregnable against onslaughts from business baiters and Federal bureaucrats.

Some years ago when the Comptroller's Office raised eyebrows, Mr. Giannini avoided the psychological blunder of becoming defensive and apologetic.

A similar philosophy animated the recent defense of the Giannini bank holding company in the antitrust proceedings brought by the Board of Governors of the Federal Reserve System.

Behind the Giannini boldness and courage was an astute understanding that the Bank of America structure had become so much a part of the economy of California that it was puerile and immature to talk in terms of unscrambling the egg.

Giannini's strength inhered in a capacity to think in terms of public usefulness, rather than personal cupidity. He made a virtue of not becoming a millionaire long before the Federal tax structure ended that hazard for most of us. Even when his institutions attempted to be generous to him with bonuses, he used such windfalls to make endowments for social purposes.

This very quality made him a different type of banker. It invested him with the qualities of a public benefactor.

And this reputation paid dividends.

In the toughest fight of his career, after initial retirement when he regained control of the empire in 1932 after a bitter fight against Wall Street interests headed by Elisha Walker, Mr. Giannini again assumed the responsibility of management. During the fight for control, when the Giannini interests were making serious and highly emotional charges against the former management, the bank at the nadir of depression was losing deposits at the rate of $1,000,000 a day.

After he returned to the driver's seat, Giannini was confronted with the task of reversing popular psychology, and restoring confidence.

It was a delicate challenge, and a bungler could have done irreparable damage.

Faced with crisis, Giannini showed himself a master of public relations. Recognizing that it would be crude for the former attacker to switch immediately to a new role of conventional booster of the bank, Mr. Giannini bought full-page newspaper ads to dwell on the long-term growth possibilities of California and the West.

At a time of low confidence, he correctly pointed to the vast potential resources in water power, minerals, and agricultural wealth, and stated the thesis, amply sustained by subsequent events, that California and the West were destined for quickened growth and development.

To hoarders and others who were depressed, he said: "Put your funds on deposit in the Bank of America or in any other bank."

The advertising was enormously successful. The touch of genius was in the unselfish note, boosting all the West and all its banks, not merely the one institution which he again dominated.

When I was in San Francisco during the presidential campaign of 1936 to make an address at the convention of the American Bankers Association, I attended a press dinner of which Mr. Giannini was the host. At that time Mr. Giannini had not yet broken with the New Deal. In a joshing mood, I said to him: "I hear you're for Landon." Giannini flare up: "Landon! Why he won't carry a single State in the Union." At the time, the Literary Digest poll was still predicting a Landon victory. Giannini's remark seemed extreme, but the record showed that Landon carried only Maine and Vermont.

In 1932 during the fight to regain control, when I was in California, I wrote in my column that Giannini doubtless regarded

himself as a man of destiny. I revealed that he had retired in 1929 at the peak and that in 1932 he was attempting a comeback at a time when he doubtless felt that bottom had been touched.

Although the column appeared to Giannini to have a critical undertone, there was no protest from Giannini. However, more than a year later at a bankers convention at Chicago, Giannini good humoredly introduced me to his wife and his chief aides as "the man who attacked me last year."

Through his infinite capacity for making friends, he gradually converted me from a critic to an admirer. The climax came when I invited him to write a guest column for me during a vacation season. He regarded this as a tremendous compliment.

Giannini had imagination, courage, and a capacity to understand the accents and emotions of plain folks. He possessed boundless energy, and, like Socrates, he knew how to get at the nub of a subject through asking questions.

The Textbook Hunters

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1949

Mr. CELLER. Mr. Speaker, it is difficult to understand the action of the House Un-American Activities Committee. Its demand for lists of textbooks used in our institutions of learning smacks of censorship and is a blow against academic and cultural freedom. In opposition to the committee's action the New York Herald Tribune editorializes this day as follows:

THE TEXTBOOK HUNTERS

If the House Un-American Activities Committee put its foot in it with its casual summons to the universities to submit their social-science textbooks, it has certainly in nowise improved matters by a hurried letter now dispatched, explaining that the committee "does not desire to interfere in any manner with academic freedom nor does it intend to censor textbooks." What it can possibly do with the books other than to interfere with the universities' academic freedom or to produce comments that would have the effect of a censorship does not appear. The explanatory letter might even be considered worse than the original, for in disclaiming the intent to meddle with the universities' texts it still seems inferentially to claim the power to do so if it wished. When its chairman (who seems chiefly responsible for the affair) guilelessly fell in with a demand of the Sons of the American Revolution for a textbook heresy hunt he was misconstruing the whole function of his committee and getting into complex difficulties of which he still seems only dimly aware.

The anguished outcries from Representative McSWEENEY, one of the committee members, over the implied smear on Mr. McSWEENEY's own alma mater, is the least of the trouble. Even if the committee were careful to hold the universities unsmeared, the effort by this congressional body to set itself up (on the allegation of a patriotic society) as judge and critic of university social-science teaching is so completely beyond any reasonable terms of reference which it properly holds as to indicate that the committee is once more losing its sense of proportion. In the course of its labors it has found more than one legitimate subject for congressional investigation in the thorny fields of subversive activity. But it will only destroy whatever of value it has done if it falls into the megalomaniac idea that any whisper of communism is enough to give it authority and control over any part of the Nation's political and intellectual life.

The President's Legislative Program—The Congress' Executive Program

EXTENSION OF REMARKS
OF
HON. DEWEY SHORT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1949

Mr. SHORT. Mr. Speaker, it is only natural, I suppose, that each Member of Congress thinks he represents the greatest district and the finest people on earth.

Avoiding comparisons, I think everyone who has visited the Ozarks in southwest Missouri will testify to the ruggedness of the hills—and especially to the ruggedness of the character of the people who inhabit them. It is my high honor to represent that pioneer and patriotic citizenry who possess so many sterling qualities of mind, heart, and soul.

Among the outstanding citizens of that region is a retired, able, and successful lawyer, Mr. M. E. Morrow, of West Plains, Mo.

Under leave to extend my remarks, I include a letter written by Mr. Morrow on May 2, 1939, which appeared in the West Plains Journal-Gazette on May 9, 1949. The sound advice in it is most timely, and if followed, would prove most beneficial to our whole country. If not followed, I fear we shall end in disaster:

1. THE PRESIDENT'S LEGISLATIVE PROGRAM;
2. THE CONGRESS' EXECUTIVE PROGRAM

What constitutional authority can be found for a President to have a legislative program, about which we hear so much during the last 16 years? Except to recommend, and a qualified veto power in the President, all legislative power is given to the Congress by the National Constitution; except, further, such portion as is reserved to the States by amendment 10 of the Constitution. After repeatedly recommending in campaign speeches, formal and informal interviews, messages to Congress, and other ways, that the Taft-Hartley labor law be repealed, we heard over the radio only this morning that the President would accept no amendments to the outright repeal of that law.

Again, we ask, where is the constitutional authority for the President to thus usurp the powers of Congress? Suppose Congress should try to usurp executive power from the President, and demand the right to dictate to him whom he nominates for members of his Cabinet; or, whom he nominate for foreign ambassador in these troublesome times; what would the President and his New Deal friends say? I think they should condemn it as being unconstitutional. But would not Congress have as much authority for such action on their part as the President has to try to seize so much legislative power? I think so.

I further think that both the President and Congress, sometimes in these last 16 years, recommend, and enact into law, certain measures that belong within the jurisdiction of the States. Amendment No. 10 is as old as any part of our Constitution, having been adopted at same time; and this amendment reserves to the States and the people certain matters over which no Federal official should assume authority of any kind. States existed before the Nation; and the former were not destroyed by the latter. We hear so much today, to the effect that "the President has a mandate from the people" to make laws. These good people seem to think that the temporary opinion of the people, expressed in a general way, at a political election, can overthrow and repeal a permanent constitutional charter; when that same charter contains the only methods by which it may be amended or repealed.

I fear there has not been as much study of our Constitution in these last years as there should have been. And I fear that the lack of such study has permitted the following of men who have given little or no study to it. Had they given greater study to it, they would doubtless give more than lip service to such great leaders as Jefferson and Jackson. And had we followed different leaders in these recent years, we might not now be so close to those two dangerous precipices—communism, and a big, perilous debt; both of which dangers are growing worse, it seems, daily. And had all New Deal administrations lived faithfully to the financial plank on which its first one was elected; and had no Communist government ever been recognized in Russia; and had America warned Germany in understandable language, when she began to rearm before World War II would we not now be at peace with all the world, and in better financial condition, than we've been for a hundred years? I think so.

Had each and all of the above steps been taken in time, as any well-informed historian could have foreseen in due time, might we not next year be ready for the second celebration, like the one held in Washington, D. C., on January 8, 1835, before a great national gathering? I think so.

Before that great national meeting in 1835, called to celebrate two great deeds of Andrew Jackson, Missouri's old bullion Senator Thomas Hart Benton offered the following toast:

"The national debt is paid. This month of January 1835, in the 58th year of the Republic, Andrew Jackson being President, the national debt is paid. And this apparition, so long unseen on earth, a great nation without a national debt, stands revealed to the astonished vision of a wondering world. Gentlemen, my heart is in this double celebration; and I offer you a sentiment, which coming from my bosom, will find a response in yours: President Jackson; may the evening of his days be as tranquil and happy for himself, as their meridian has been resplendent, beneficent, and glorious for his country."

The Butte, Mont., High School Band Is the Nation's Best

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1949

Mr. MANSFIELD. Mr. Speaker, the Butte High School band is the Nation's best. I make that statement without fear of contradiction because I have seen

this organization and I know whereof I speak.

I am sure that the citizens of Pasadena, Spokane, Seattle, and Portland will confirm this statement because the Butte band has been seen and heard in these cities and, by their outstanding performances, have captured the hearts of the people who saw them.

To say that I am proud of the Butte High School band is to understate the esteem I have for its members. I want the Congress of the United States to know about this group and to express the hope that their next venture will be to the Nation's Capital. The Nation's best deserves to be seen and heard in the Nation's Capital.

Mr. Speaker, I am inserting in the RECORD, three feature articles by Frank Quinn and covering the send-off of the band by Butte and the receptions accorded to it in Spokane and Seattle, Wash.:

[From the Montana Standard of June 6, 1949]

SPECTACULAR SEND-OFF IS GIVEN BUTTE BAND AS IT LEAVES ON TOUR OF PACIFIC NORTHWEST

(By Frank Quinn)

ABOARD THE BUTTE HIGH SCHOOL BAND SPECIAL, June 5.—Butte's traveling ambassadors of good will, 139 boys and girls forming the Butte High School band, as fine a scholastic musical organization as exists anywhere in the Nation, embarked on a new adventure Sunday night.

Laden with well wishes of parents, relatives, friends, teachers, and hundreds of other Butte citizens, who despite the late departure hour, 11 o'clock, Butte time, were assembled at the Northern Pacific depot when the 12-car special train pulled out, the teenage musicians sped westward Sunday night in quest of added laurels.

An estimated 5,000 proud parents, friends, and well wishers gathered in Naranche Memorial stadium Sunday afternoon to encourage the band youngsters in a final dress rehearsal. The crowd packed the north section of the bleachers as the band went through its sparkling routines and parade formations. Several band selections also were played for the entertainment of the audience.

It is 17 months to the day since the band returned home from Pasadena, where it achieved Nation-wide distinction in the Tournament of Roses parade, and a trip on which it also won acclaim in appearances in downtown Los Angeles, Salt Lake City, and Las Vegas, Nev.

This year the goal of the group, under direction of Henry J. Schiesser, bandmaster, and Mrs. Schiesser, who is in charge of majorette and twirling routines, is the Portland Rose Festival. During that festival it will lead the famous Grand Floral parade Friday morning, give a command performance in the Multnomah Civic Stadium that night, lead the Junior Rose Festival parade on Saturday morning, and as a forerunner to those events in which it will take an honor role, will participate with 2,000 other high school musicians in a band jamboree on Thursday night.

The Grand Floral parade will be witnessed by nearly a million spectators from all parts of the Nation. The Multnomah Stadium performance, in which the Butte musicians hold the command spot, will attract an overflow crowd of some 40,000 people. The Jamboree and Junior Rose Festival parade will attract similar crowds.

Many of the band members, majorettes, and twirlers are veterans of the Tournament of Roses trip. But they, like the youngsters who have become a part of the organization in the last year and a half, are thrilled and happy at the opportunity to bring added glory to Butte during this second out-of-State trek for the noted pageantry musical organization.

Parade appearances in Spokane on Monday, and in Seattle on Tuesday, together with concert showings in both cities, will serve as preludes to the grand opportunity in Portland, and at the same time give residents of those Washington cities an opportunity to see and hear this sterling musical organization in action. The band also will visit Victoria, British Columbia, on Wednesday, but a concert in that city is indefinite.

Because of the late departure hour and the fact that the youngsters were scheduled to rise and shine at 6 a. m. mountain standard time, an hour and a half before arrival time in Spokane, there was little activity aboard the train after it left Butte. Some of the twirlers, younger members of the troupe, did get in last-minute practice, aided by older girls in the group, but by the time the special whistled through Deer Lodge it was "lights out" in cars occupied by the students.

The same held true for the most part in pullmans quartering parents of the musicians, or other Butte residents making the trip. Between Deer Lodge and Missoula the only ones stirring were members of the official school party, including George Haney, principal, and party chaperons who reported to him that "all were bedded down although all were not asleep."

Thrilled boys and girls, many sleeping in an upper or a lower for the first time, found sleep hard to achieve, Haney said. Conversation, however, died out by the time a 10-minute stop was marked up in Missoula.

Working late were Eddie Price, general chairman in charge of arrangements for the trip; B. E. Lam, Northern Pacific general city freight and passenger agent, who is in charge of the train; Ray Sims, property man; and Director and Mrs. Schiesser, who discussed details regarding handling of uniforms and costumes in conection with the Spokane stop.

Mrs. W. J. Barnicoat, registered nurse, and president of the Butte High School Band Boosters Club, also was late in retiring as she made a last-minute check before the lights-out signal, to determine that her charges were still in the tiptop condition that weeks and weeks of training for their rigorious enterprise has placed them. Dr. W. E. Crawbuck is available for any emergency, but they are a healthy bunch of youngsters, and it is not anticipated that anything other than minor ailments, such as a blistered toe or possibly a sunburn, will be encountered on the 7-day journey.

In addition to Mayor and Mrs. Thomas R. Morgan, their son, Thomas, Jr., 18, official school party members, "On to Portland" committee members, and chaperones, Mining City residents aboard the special include:

Mrs. George Haney, wife of Principal Haney, and their two children, Marlys and Mickey, Mrs. Hattie Duncan, Mrs. Robert Rhind, Mrs. Tim Thomas, John Mulhern, Harry Falancer, John (Fink) Kelly, Mrs. E. J. Berg, Mrs. Victor Anderson, Dr. and Mrs. W. E. Crawbuck, Mrs. Elsie Barry, J. F. Ham and granddaughter, Joan Hill; Mr. and Mrs. Thomas Carrig. Mrs. Joseph Dodds and daughter, Nevis; Mrs. W. H. Harkins and daughter, Dilene; Mrs. Ann Schauer and granddaughters, Ruth and Mary Lou Barnicoat; Mrs. M. J. Cavanaugh and daughter, Marilyn; Mrs. V. L. Olson, Mrs. Stella Kekich, Mrs. Alvin Herzog and son, John; Mr. and Mrs. William Penaluna, Mr. and Mrs. J. W. Harkins, Mr. and Mrs. J. W. C. Haller, Mr. and Mrs. T. H. Estlick, Mr. and Mrs. Ernie Wiles, and Mrs. William Fraser, of Los Angeles, sister of Mrs. Eddie Price.

[From the Mountain Standard of June 8, 1949]

CONFETTI SHOWERS AND CHEERS OF 60,000 ARE EVIDENCE OF BAND'S SEATTLE CONQUEST

(By Frank Quinn)

WITH THE BUTTE HIGH-SCHOOL BAND, SEATTLE, June 7.—The grandest boys and girls in America—the Butte High School band—Tuesday night paid glowing tribute to the grandest American game—baseball—while 8,500 spectators at Sicks Stadium, home of the Seattle Rainiers, roared approval. Playing a 25-minute field performance and concert, the band went through part of its famous "Parade of the Months" scene on the greensward of the stadium outfield.

Earlier in the day the band gave a triumphal performance before 60,000 Seattleites as confetti wafted down from the office buildings lining the 28-block parade route and cheers thundered.

"They're major leaguers, each and every one," said Jo-Jo White, field manager for the Seattle club. "I need some of those twirlers and their accuracy in my line-up," he added.

The band was given a tremendous ovation before it entered the playing field. Its appearance at the east end of the stadium was the signal for uproarious applause as Seattle baseball fans recalled the superb performance of the boys and girls in the street parade downtown earlier in the day.

Earl Sheeley, business manager of the Seattle club, through courtesy of whom the stadium performance was arranged, said, "Bring them back every year—they're wonderful."

Before the game Field Manager White posed with several of the Butte majorettes. He wore a drum majorette's hat and swung a baton while he showed the girls how to swing a bat.

The performance of the youngsters was broadcast over the public-address system and over Seattle radio station KING.

The band goes to Victoria, B. C., by boat Wednesday.

In the words of Mayor William J. Devin, of Seattle, the mining city pageantry, marching and playing organization, "took Seattle by storm." Lauded by scores along the line of march, the Butte outfit was hailed by one observer as the "finest band to perform in Seattle in more than 37 years"; the mining city youngsters presented a show along a 28-block-long marching route that long will be remembered by Seattle.

En route to Portland and the rose festival aboard a 12-car special Northern Pacific train, the band paraded here during the noon hour and thrilled the thousands who lined both curbs for the entire route or watched the spectacular show from windows of the sky-reaching business blocks. The stirring music of Henry J. Schiesser's teen-agers drew almost never-ending rounds of applause from spectators. But with all due respect to the young musicians, top honors must be awarded to the gaily (although scantily) clad drum majorettes and twirlers. Their intricate routines with sparkling silver batons, cartwheels, horn-pipes, and prancing dance numbers left Seattle's populace gasping.

Capt. R. V. Shaughnessy, in charge of the parade police detail, after receiving reports of his traffic squad of 19 motorcycle officers and some 20 other traffic officers stationed along the route, revised an earlier estimate of the crowd including those in office building windows and said the number of persons who witnessed the procession topped the 60,000 figure.

The parade formed promptly at 11:45 o'clock (Seattle daylight saving time) at the Northern Pacific station with Mayor Thomas R. Morgan and Mrs. Morgan, Mayor Devin, Eddie Price and Mrs. Price, principal and Mrs. George Haney, W. C. Greer, Sherrill A. Brown

and N. E. Dobbins, presidents of Seattle Active Clubs, occupying cars of honor. Immediately preceding the band was a Marine Corps recruiting station and Reserve color guard. At the conclusion of the parade, the band was lauded by Mayor Devin, who said:

"This band is the most wonderful musical aggregation Seattle has seen in a long time. The playing ability, color, and pep of these Butte boys and girls is astounding. I am deeply impressed with their ability to play apparently countless numbers without music scores. Their training and discipline is superb."

The band enjoyed its first continuous ovation as it rounded the turn at Second and Yesler, site of the L. C. Smith Building. Hundreds had thronged that three-way intersection long before the parade formed and, as the band passed beneath the shadows of the skyscraping Smith Tower, the applause was deafening.

The ovation continued along Second Avenue to Pike and for blocks along Pike and Third to the disbanding point. The number witnessing the parade was smaller, but the ovation was as great as that accorded the band in Pasadena New Year's Day, 1948.

Along every foot of the parade, the band continued to play and the majorettes went through a seemingly endless series of acrobatics, leaving the huge audience limp from hand-clapping. Traffic from every side street leading into the parade channel was halted. Especially popular with the spectators was the number Beaut from Butte, which includes a prancing act by the majorettes, who also vocalized this selection. Yea, Butte was heard from all sides as this selection was played and pantomimed.

The first paper shower complimenting the band came as the band staged an impromptu concert at Second and Union, in front of the large Rhodes department store. The ovation following that lone break in the marching routine lasted fully 10 minutes.

A similar reception greeted the band along Third Avenue and was climaxed in front of the city hall, just a short distance from the L. C. Smith Building, near the end of the parade route. During another concert played at that point, paper fluttering from the towering Smith Building and the city hall littered the streets for blocks.

[From the Montana Standard of June 7, 1949]

BUTTE'S BAND IN THREE SPOKANE APPEARANCES

(By Frank Quinn)

WITH BUTTE HIGH SCHOOL BAND, SPOKANE, June 6.—Butte's inimitable traveling emissaries of good will and public relations did it again.

Monday afternoon and evening in street parades and concert appearances, the Butte high school band, majorettes and twirlers literally stole the hearts of residents in this inland empire metropolis.

The Spokane Active Club sponsored appearances of the band here, and arranged for its three programs. Familiar to Butte residents, nonetheless always thrilling, always new performances of the mining city boys and girls drew enthusiastic acclaim from the citizenry of Spokane proper and from Garland, a suburban business district, which Monday night dedicated a new post office, dental building, and bus route.

"Spokane owes Butte a debt of gratitude for having given our city an opportunity to hear and see these wonderful boys and girls perform," Mayor Arthur Meehan, of Spokane, said in a brief address Monday evening. "Their performances here have been superb," Mayor Meehan added, "and it is gestures of this type and the spirit of people like the citizens of Butte that makes the Northwest great. To all my many friends in Butte and in Madison County, I want to say that Butte can't be too proud of this splendid musical organization. It's magnificent."

Mayor Thomas R. Morgan, in replying to the Spokane chief executive, expressed appreciation on behalf of Butte for the generous response given the band in Spokane, and invited Spokane citizenry to pay a return visit to Butte during the summer. Eddie Price, chairman of the band travel committee, expressed his appreciation to the Spokane Active Club for its part in sponsoring the organization's visit to Spokane.

Happy over the gracious reception tendered them upon arrival in Spokane Monday morning, the band members practically went all out in their endeavors to entertain Spokane. To those who knew little about the band, except what they read in advance publicity, it appeared that Schiesser-directed musicians and the lovely majorettes and twirlers in flashing costumes went through their entire bag of tricks more than once along downtown Spokane streets, in front of the new Garland Theater, and during a street concert broadcast to Butte; playing ability of the young musicians, dexterity and nimbleness of the majorettes drew spontaneous applause from assembled throngs.

Capt. L. B. Ferguson, in charge of traffic, estimated that at least 10,000 persons who jammed sidewalks and countless hundreds of others in windows, watched the pride of Butte on review.

Following the parade and dinner, the band traveled to Garland on the outskirts of Spokane, where it highlighted the new post office dedication ceremony. Attended by 5,000 persons. It played a concert performance on the concourse of the Garland theater, and then staged a short street parade. Mayor Arthur R. Meehan, Postmaster William Simpson, and Otto Warn, president of the chamber of commerce, were among the principal speakers. All paid tribute to the band, Warn said:

"We have heard much about the Butte high-school band. It has lived up to our highest expectations. The talent of these boys and girls—their sterling showing in Spokane—reflects great honor upon the mining city."

The Spokane Chronicle gave the band front-page coverage Monday evening and carried two pictures inside. The Spokane Review scheduled a half-page spread on Tuesday morning including pictures taken at the station on arrival in the parade and at the aluminum company plant.

The band was given a surprise at Garland when businessmen of the district presented it with a registered English bulldog, the bulldog, purchased through funds raised by public subscription, was presented Director Schiesser. Eddie Price was also presented a token of esteem by the district.

Immediately following the Garland festivities the band returned to its special train and prepared for departure to Seattle, where it is scheduled for two appearances on Tuesday, one a downtown street parade, the other a performance at Sicks stadium in connection with the Seattle-Los Angeles Coast League baseball game.

Monday morning Spokane citizens extended the Butte high-school band one of the warmest receptions the purple and white clad musicians have received in varied travels in five States.

Led by Mayor Arthur Meehan, a former Montanan; Chamber of Commerce President Otto Warn, and Henry R. Harder, district governor of Active Clubs, several hundred Spokane residents assembled at the Northern Pacific station to greet the band upon its arrival.

Only one incident marred the welcome. The 12-car Northern Pacific special gained an hour in travel time and arrived in Spokane a full 60 minutes ahead of the scheduled reception time of 8:30 (10:30 Butte time). Band members remained aboard the train until the arrival of Mayor Meehan and his party.

The weather was as warm as the reception. The thermometer was pressing the eighties and band members and majorettes sweltered beneath rays of a burning sun.

As Mayor Meehan and the Spokane reception committee approached the train, along with Miss Glenda Bergen, Miss Spokane of 1949, the band played Beaut From Butte, and then swung into a varied selection of numbers honoring members of the reception party. In tribute to the fascinating Miss Spokane, who was attired in Indian costume, the young mining city musicians played Indian Love Call. This was purely incidental as Director H. J. Schiesser had no previous knowledge how Miss Spokane would be garbed. It was another example of the versatility of the band.

Alleged Communism in Labor Unions

EXTENSION OF REMARKS
OF
HON. JOHN C. DAVIES
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 22, 1949

Mr. DAVIES of New York. Mr. Speaker, in these times when most American unions are being accused of embracing communism, it is encouraging to me to be able to reveal to the House an incident which I think is indicative of the attitude of the overwhelming majority of union members in this country. It is the story of a constituent of mine who joined the Communist Party in Rome, N. Y., because he suspected that a union to which he belonged was being infiltrated by Communists, and he wanted to find out for himself. Other union members knew of his plan and helped him.

I am certain that the membership in American unionism consists mostly of true Americans, and I further believe that the union movement will never be controlled by Communists if the membership maintains the vigilance exemplified by the incident related in the following article from the Buffalo Evening News of June 6, 1949:

TWO ACTIVE IN COMMUNIST PARTY TAKE PART IN RICHARDSON STRIKE—ROME, N. Y., UNION MAN, WHO JOINED REDS TO TRACE ACTIVITIES OF UNITED ELECTRICAL LEADERS, GIVES FACTS IN AFFIDAVIT

A veteran, Rome, N. Y., union man who joined the Communist Party to trace the connection between it and certain elements of the United Electrical Workers today told the Buffalo Evening News that two men now prominent in a local strike had been active in the Communist Party in his home city.

The two men recently came to North Tonawanda to participate in the 8 weeks' strike of 70 employees of the Richardson Boat Co. who are represented for collective bargaining by Local 308, United Electrical Workers.

The two are Daniel Fitzgerald and Michael Jiminez, both organizers for the United Electrical Workers and active in union work in Rome. The latter has been a leader in the Blackstone strike in Jamestown.

The author of the statement, who made an affidavit which is in the possession of this

newspaper, is Andrew J. Madonia, a copper plater with the Rome Manufacturing Co. He is a member of the Interstate Metal Workers Division of the MESA (Mechanics Educational Society of America) and a former UE member.

ATTENDED FIVE MEETINGS

Mr. Madonia told the News he had been suspicious of the connection between the Communist Party and certain United Electrical Workers leaders in Rome, and in early 1947 joined the party "for the express purpose of confirming my suspicions." He joined with the knowledge of other union men sympathetic to his plan.

He attended five meetings over a period of 3 months of 1947, he says in his affidavit. Some of the meetings were held in the Fitzgerald home, where were present some of the officials of UE Local 331 and the Communist Party, he adds.

He exhibited a photostat copy of a receipt he says he got for dues in the Communist Party.

"Look closely at the initials on the lower right-hand corner and with some difficulty you will make out the letters 'S. F.'—Sophie Fitzgerald, wife of Daniel Fitzgerald. This is one of three such receipts issued to me for payment of dues to the Communist Party local," he asserts.

SAW JIMINEZ PAY DUES

The affidavit goes on to say that Mr. Madonia saw Michael Jiminez present at Communist meetings as well as Mr. Fitzgerald. He further says:

"I have seen Michael Jiminez pay his dues to Mrs. Sophie Fitzgerald, the party's chairman (1947), and then tear his receipt to bits to prevent it from falling into the wrong hands.

"At the last meeting I attended in Mr. Fitzgerald's home, March 29, 1947, a stranger from Schenectady explained that the Communist Party had launched a drive for funds to assist Soviet Russia because, and I quote him, 'We don't want this country [meaning the United States] to dominate the world.'

"Mr. Fitzgerald contributed $10; Mr. Jiminez gave $15 and others gave in varying amounts. A total of $137 was collected. I did not contribute."

Mr. Madonia swears in his affidavit that in his presence in 1947, a conversation took place between Mr. Jiminez and a union official of local 331 (General Cable Co.) at which time a loan of $20 was negotiated from the General Cable Co. local 331 treasury and turned over to the Communist local to help it get started.

USED IN REVERE CAMPAIGN

Much of what is contained in the affidavit was used in the campaign at the Revere Copper & Brass Co. preceeding the May 7, 1947, union election. The UE was beaten 3 to 1 by the Interstate Metal Workers Division of MESA. Mr. Madonia, who had helped organize the UE local at Revere, publicized his knowledge to defeat it.

He said one of the things that first made him suspicious of Mr. Fitzgerald was when he (Madonia) bought a plot of m ckland to help support his wife and seven children, and Mr. Fitzgerald sneered at him as a capitalist. He originally joined the UE in 1936 and put in as high as 20 hours a day advancing its interests, he said, adding:

"I attended numerous meetings and conferences in various places throughout the State. I was selected to serve on many committees and for a time I was chairman of the workers alliance."

In a news release May 5, UE, local 308, stated it had informed the boat company through Leo E. Rose of the State mediation board that it had offered to substitute in negotiations Mr. Jiminez for Emanuel J. Fried, a district UE organizer. The company has declined to meet either of the two men on the grounds of their leftist affiliations.

Mr. Fitzgerald marched in the pro-Communist picket line of March 1948 but left the Westinghouse plant where he was employed shortly after the crushing defeat of the Communist-liners there last year.

Address of Hon. William F. Knowland to California Savings and Loan League

EXTENSION OF REMARKS

OF

HON. WILLIAM F. KNOWLAND

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 22 (legislative day of Thursday, June 2), 1949

Mr. KNOWLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD my talk before the California Savings and Loan League on June 15.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman and fellow Californians, from your Nation's Capital I extend greetings to the California Savings and Loan League and express my regrets at not being able to be present at your convention in person.

There is no group that could be gathered together that is more interested in preserving free enterprise in this country.

Our economic system is tied with Siamese-twin attachments to our constitutional form of government. If one is destroyed they both perish. There is no need for either catastrophe to happen if we get off the perpetual defensive and take the offensive.

There are too many people who have had our hospitality or advantages joining forces with Moscow and her satellites in spreading their views on "What's wrong with America."

Those who believe in our system should start a crusade to tell "What's right with America." We, of course, will not close our eyes to the liability side of the ledger. But as businessmen with our feet on the ground and common sense gained from experience and observation we know that America's assets in fiscal, industrial, agricultural, educational, moral, and governmental categories, to mention but a few among many, greatly exceed our liabilities.

To permit this solvent going concern of ours to be liquidated by the strong-armed action of international communism or to consent to the voluntary bankruptcy proceedings of state socialism are both unthinkable and unnecessary.

We must not let complacency destroy the spirit that has developed a great world power out of a small colony in less than 175 years. We must not build or depend upon military or economic Maginot lines.

This Nation has never been wedded to the status quo or ruled by the dead hand of the past. Our economic as well as our political system broke away from old world patterns.

Short-sighted European-style capitalism built the gallows for its own execution by allowing and encouraging monopolies, cartels, and great aggregations of capital narrowly held.

The lifeblood of our system to the contrary is competition, productivity, good wages, and widespread ownership of our economic structure. In no other country is there such widespread corporate stock ownership.

In addition, 78,000,000 life-insurance policy holders own policies of over $200,000,000,000. Individuals who still believe that thrift is a virtue also own directly over $56,000,000,000 in Government bonds. They have over $30,000,000,000 in various types of savings institutions and $3,300,000,000 in the Postal Savings System. A substantial part of the $36,000,000,000 of time deposits in commercial banks is theirs. They also have a stake in annuities and pension funds amounting to an estimated $5,000,000,000 and a direct stake in the Social Security System (Federal, State, and local) of $29,000,000,000.

There have never been so many people in the entire history of the world who have had as large a stake, as much to gain or as much to lose as the people of the United States of America.

Nor does history record a people who have been as unselfish in their possession of their power, their resources, and their good will.

In this century, which is not yet half over, they have sacrificed blood and treasure in two World Wars to prevent the destruction of free institutions on the Continent of Europe. Few dispute the fact that all of western Europe and perhaps even Britain would today be behind the Communist iron curtain if it had not been for the firm stand taken by this Republic and a considerable contribution of our resources to prevent the complete economic collapse of those war-torn nations. Both Washington and Moscow understood the facts of life.

Communism thrives on chaos. A rehabilitated Europe was the only chance for survival had by free institutions in that area of the world.

Both our own people and our friends abroad must recognize the fact that a strong America is the priceless ingredient for world peace. An American economic collapse would be the signal to the men in the Kremlin to turn the cold war into a hot one. Failure to recognize this reality would be worse than folly.

A strong America requires, among other things, a solvent Federal Government, a sound national economy, and an adequate national defense. These three factors are closely interwoven.

Our Federal Government's budget, as recommended by the President for the fiscal year 1950, amounts to $42,000,000,000, and if all his additional recommendations were accepted by Congress, it would top $45,000,000,000. I do not believe that our present national economy can in peacetime stand for long any such burden.

It is hard for many people to grasp the meaning of the astronomical figure of $42,000,000,000 included in the President's budget. Since Columbus discovered America 457 years ago the total gold production in the entire world has amounted to approximately $40,000,000,000.

Streamlining the executive branch of our Government is long past due. The report of the Hoover Commission has outlined how the elimination of duplication and overlapping can make substantial savings in expenditures and at the same time increase efficiency. I strongly favor expediting final congressional action to put the bulk of the Commission's recommendations into effect as rapidly as possible. If there is the will, a way can be found to make substantial progress this year.

Ten years ago the Federal debt stood at $40,000,000,000. Today it is over $252,000,000,000, or more than six times as large.

Ten years ago our Federal expenditures were less than $9,000,000,000. Now near the $42,000,000,000 level, they are approximately five times as great.

Our Federal tax revenues of over $42,000,000,000 compare with Federal receipts of $5,000,000,000 10 years ago. Despite this eightfold increase the President is asking this Congress to levy $4,000,000,000 in new taxes. This in itself is more than the total cost of the Federal Government in any peacetime year in the decade 1922 through 1931, inclusive.

There are some in Government who believe that if an individual spends his own money it is inflationary or will not properly curb the disinflation, whereas if the Government takes it from him and spends it such is not the case. This is economic nonsense.

I make no claim that we can "unscramble the eggs" of Federal fiscal policies, but I do maintain that neither Congress nor the people should ignore the warning lights that have led to disaster when ignored elsewhere.

The budget can and should be balanced by reduced expenditures and not by new taxes. This will require intelligence and determination on the part of Congress and some restraint and sacrifice on the part of the people back home. Some ask: "Can it be done?" The alternatives are higher taxes, with their cumulative adverse effect upon our unsettled economy, or the start of a new extended period of deficit spending, which ultimately will lead to inflation, Government controls, and great changes in our economic and governmental structure. The answer then is: "It must be done." A solvent Federal Government is essential to our well-being as a nation.

Our Federal Government is now so large that prudent citizens and governmental officials must examine new proposals, regardless of how desirable, to see if they will endanger its solvency.

We have made great progress over the years in promoting in local, State, and National Governments social-welfare programs. An insolvent Government would jeopardize all this progress to date.

There is a vast difference between sound social-welfare legislation advanced in amounts that can be carried and the doctrine of the welfare state that would seek to gain utopia overnight and destroy our American system in the process.

Security alone is definitely not the answer. The most secure man in the world is the one who has his housing, medical care, food, and clothing guaranteed for life as an inmate of San Quentin Prison.

The pseudo liberals, fellow-travelers, and outright Communists who advocate statism as their objective should be recognized and labeled for what they are—Red reactionaries.

It has taken western civilization centuries to rise out of the clutches of all-powerful governments. Magna Carta, the Declaration of Independence, the Constitution of the United States are all milestones along the way. Here under our Bill of Rights the individual has rights that the Government itself cannot take from him. We must not surrender these for any mess of pottage.

In the 4 years I have represented California in the Senate of the United States I have become more convinced than ever that this Nation is too large geographically and too complex economically for its industry, commerce, and agriculture to be either efficiently or effectively operated in peacetime by any Government in Washington.

For this reason I have opposed and will continue to oppose the recommendation of the President to reestablish economic controls. In my judgment, even so-called stand-by controls would be dangerous. There are many pressure groups, having little faith in our economic free-enterprise system, who would urge their use once the powers were given.

Under OPA we should have learned that you cannot effectively control retail prices unless you control all the factors that go into the cost of manufacturing, including labor and raw materials. In peacetime Britain the Labor Government found they needed the added power to freeze a worker to his job to prevent the flow of labor from lesser-paying to better-paying positions. We want no part of that in America.

In meeting the growing challenge of socialism and communism the dynamic American system must continue to demonstrate that labor, management, and investors, all have a vital interest in maintaining our way of life.

High productivity at low-unit cost and widespread distribution of that which our Nation can produce is more sound than the doctrine of scarcity brought about by stoppages of production or governmental decree. Expanding markets require fair wages for a fair day's work and our people should have the incentives of better wages and more goods of an expanding productive economy rather than the dismal future of the Socialist prospect in many European economies of sharing more and more of less and less.

A free economy has produced and can continue to furnish a higher standard of living for our people than any regimented economy of domestic origin or foreign import.

In the growth of our economy there have developed powerful groups in business and in labor. Not all of them have recognized that with power must go responsibility. No man or group of men in business or in labor have the right to strangle the economic life of 150,000,000 Americans and by so doing endanger the whole free world.

The Government of the United States many years ago established economic traffic laws to protect our businessmen and consumers against unregulated monopolies. These were the antitrust statutes.

More recently, first through the Labor Relations Act of 1935 and later through the Labor-Management Relations Act of 1947 the Government sought to bring some balance into the field of labor-management relations. Government should be the impartial umpire and not a player on one of the teams.

Our objective should constantly be to establish and maintain laws in this field that are fair and equitable not only to the employees and the employers but to the general public as well.

It is neither a constructive or realistic approach to the problem for Congress to be requested to repeal the 1947 Labor-Management Act and to reenact the old Wagner Act.

Widespread threats on the part of labor to defeat Members of Congress who refuse to go along for outright repeal is an attempt to legislate by intimidation. This is not the American way. While some well thought-out amendments may be in order they should be weighed in the light of their effect on the entire population and not just one segment of it.

Our entire national economy must never again be at the mercy of one man or small group who can give an order that will cause a creeping paralysis to close down our factories and transportation systems and work an extreme hardship on countless people. This is far too much power for any responsible man to want or any irresponsible man to have.

Each one of us should recognize the fact that we are all interdependent one upon the other. We ought to develop that sense of community responsibility that motivated the individual wagon owner when the wagon train was attacked by Indians while en route to California a hundred years ago and each man, woman, and child knew that if each did not contribute his utmost the whole group would be scalped.

With the same courage and common sense that motivated the members of the Constitutional Convention and the pioneers who settled the West there is no domestic problem we cannot solve, there is no foreign foe we need fear.

Denazification Program in Germany

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 22 (legislative day of Thursday, June 2), 1949

Mr. PEPPER. Mr. President, I ask unanimous consent to have incorporated in the Appendix of the RECORD the script of a radio program entitled "Is Congress Doing Its Job?" on which program the Senator from Iowa [Mr. GILLETTE] was interviewed by Ed Hart in support of a resolution recently offered in the Senate in connection with the denazification program in Germany.

There being no objection, the script was ordered to be printed in the RECORD, as follows:

This is Ed Hart speaking from Washington.

Two Democratic Senators, PEPPER of Florida and GILLETTE of Iowa, and two of their Republican colleagues, IVES of New York and HENDRICKSON of New Jersey, just the other day threw into the Senate hopper an important resolution. For some unknown reason that resolution received hardly any notice from the press or radio.

S. 125, that is its number, calls upon the Foreign Relations Committee of the Senate to conduct a full and complete (and now I am quoting) study and investigation of all matters relating to the conduct and status of our denazification program in Germany.

We Americans have been so busy fighting a cold war with Soviet Russia that we have paid scant attention to what has been happening to the nation that twice in one generation set the world afire. For many months snibits of news have been filtering through to the effect that the antidemocratic, antihuman philosophy of intense militarism and nationalism has been manifest, not only in the American zone of Germany, but all through the German nation. Of course, what happens in eastern Germany is the responsibility of the Soviets. But what occurs in the West is largely our responsibility. That is why four Senators have asked for a comprehensive survey of the result of our efforts to make human beings out of a people who used incinerators to destroy countless millions of innocent lives, and who made soap and lampshades from the chemicals and skin of their victims.

To discuss the various aspects of the resolution, its reason and design, I am delighted that our guest on this program is the very human and beloved Senator GUY M. GILLETTE, of Iowa, one of the two Democrats responsible for the resolution.

Senator GILLETTE, tell us why you place so much significance upon S. 125 and a few of the questions that you think would be answered if Congress approves the resolution and sets up a comprehensive investigation of our denazification program.

Mr. GILLETTE. As you have indicated, Ed, our resolution is nonpolitical—it is bipartisan. That is as any matter of legislation should be when it concerns the peace of the universe. While, as you have said, snibits of news have come through that

Germany is undergoing a resurgence of the political and social philosophy that twice in a generation brought Europe and the world to the insanity of war, we simply do not know whether our efforts to cleanse German society of its barbarity have been successful or not.

The world has invested a few hundred billions of dollars and tens of millions of human lives to defeat those who would ravish and plunder the planet. Would it not be wise, therefore, to take stock of our efforts to make normal human beings out of those people—those who attempted to enslave humanity and make barbarians out of all mankind.

Mr. HART. Well, Senator GILLETTE, the purpose of the resolution then is to determine whether or not we have had any success in eradicating the brutalitarian instincts of Germany.

Mr. GILLETTE. It is more than that, Ed. We want to determine whether we ourselves have been making the same mistakes that we made before. Hitler's Germany was an effect, not a cause. We, and all peoples, bear some responsibility along with the Germans. We allowed conditions to exist whereby poisonous seeds of militarism, of insane economic and political nationalism and of sadistic racism were planted and nurtured.

It seems to me to be very prudent on our part to make sure that we are not recreating the political, social and economic climate in Germany that led ultimately to a Hitler. The purpose of our investigation would be to determine whether Adolf Hitler really won the ideological triumph, though we won the physical victory. If the Nazi idea still rides high in the hearts and minds of most Germans, then I ask: who is safe?

Mr. HART. Do you have in your possession material which would lead you to believe, one, that we are making the same mistake we made before, and two, that there is a resurgence of Hitlerism in Germany today?

Mr. GILLETTE. As for our making the same blunders, I believe there are indications that the answer may be yes. That is one big reason why I want an investigation. After World War I there was a bidding for the favor of the Germans by the various victorious allies. Today the same process has recommenced. First the Russians, then the British and the Americans have begun once again to bid for the favor of the Germans. It may sound fantastic, Ed, but only a few months ago an American general was telling his high-ranking staff officers that the time has come to invite Nazis to cooperate with us. He wanted no further denazification proceedings, and he wanted to keep Germany militarized. Is it any wonder then that a Dr. Adenauer, leader of the Christian Democratic Union, a favorite party of the west, dared to say, in a public speech, "The German people did not surrender unconditionally—only the German army." Hitler, you'll recall, Ed, used to use those exact words in his harangues.

Mr. HART. Are there any other indications that we are making the same blunders, Senators, that we made before?

Mr. GILLETTE. Indeed there are, Ed. After World War I, you'll recall that the militaristic-minded industrialists who built the Kaiser's war machine were not replaced. The democratic forces of Germany ultimately were defeated by these people. And today we have the word of a most able former Congressman, Charles LaFollette, for a time director of our administration of Württenberg-Baden, who said, "It is tragic that former Nazis are taking over German industry."

Ed, the New York Times quotes an obviously conscientious but despairing American official who said, "What does it all matter? If we get out tomorrow, the Nationalists and Nazis would return in full strength."

Mr. HART. Senator GILLETTE, all this does not augur well for the break-up of the prewar German cartel system. If the same German industrialists and financiers, the men who backed Hitler, are restored to their former authority, that old cartel set-up that nearly defeated us, will, in all likelihood, remain in effect. Wouldn't this indicate that some of our enforcement officials have either been negligent or aiding the resurgence of nazism?

Mr. GILLETTE. We have to find out whether any of our officials have been remiss in their duties. That is one of the purposes of our investigation. There are indications that, through short-sightedness and irresponsibility on their part, plus a degree of stupidity, some of our people have been carrying on mutual-admiration societies with old German Nationalists, and the newer German Nazis. They would justify their philandering by an erroneous contention that we need these people on our side in our difficulties with the Russians. Brown shirts to check the Reds. Enlist storm troopers on the side of democracy.

Mr. HART. It seems to me an American official was removed from his office a few months ago because he protested just that type thing.

Mr. GILLETTE. You refer to the Sacks case.

Mr. HART. Yes, Alexander Sacks, a former Antitrust Division lawyer.

Mr. GILLETTE. I think his testimony bears out what we have been discussing. I have it here. Let me quote: "The policy of the Roosevelt and Truman administrations has been flagrantly disregarded by the very individuals who were charged with the highest responsibility for carrying them out. * * *"

Mr. HART. So much for our blunders, Senator GILLETTE. What evidence is there that the Nazis are still Nazis? If I recollect correctly, Senator, there were a few million Nazis.

Mr. GILLETTE. You wouldn't call the Herald Tribune a very radical newspaper, would you? Recently it carried an article a column long with this headline: "New Nazi-like party rising in west Germany" At party rallies, said the article, Deutschland Uber Alles is sung, amid the trappings and decorations of the old Nazi colors of red, white, and black. Their party chairman in a recent speech said: "The process of denazification is, in fact, a crime against humanity, the purpose of which is to rob prostrate Germany of its last remaining values and block the road to recovery."

Mr. HART. Senator, do you have any figures on the number of Nazis who are actually back in the political and educational life of Germany?

Mr. GILLETTE. A few scattered figures. I don't know how accurate they are but they come to me from reliable sources. Take for example Schleswig-Holstein, 91 percent of all judges, prosecutors, and court officials are former members of the Nazi party. The Bavarian Ministry of Education discloses that 11,000 former Bavarian teachers who had previously been dismissed because of their association with the Nazi party, are back teaching German children the ways of——

Mr. HART. Democratic society?

Mr. GILLETTE. Ed, what do you think?

Mr. HART. What about the German press, Senator?

Mr. GILLETTE. According to a well-written article in the Herald Tribune many German newspapers are attempting to build up their circulation by featuring militaristic, nationalistic, and anti-Semitic news and articles.

Mr. HART. They're using the oldest political trick of all—anti-Semitism.

Mr. GILLETTE. I am told that from March to June 1949, 19 Jewish cemeteries were desecrated in the American zone alone. I am also informed that a new anti-Semitic and Nazi group masquerading under the name of Jewish-Christian Friendship League has been organized in the American zone. Its leader is Dr. Scharangel, a notorious Nazi.

Mr. HART. Senator, the shambles of Berlin, Frankfurt, and other cities seem to have taught the Germans little. Now before we leave the air, I wonder whether you would be fairly explicit in telling us what ground you think an investigation such as S. 125 calls for should cover. Let's take a look at your resolution.

Mr. GILLETTE. There are eight points, Ed, but we won't go into the legalistic wordage of all of them. We want to find out the result of transferring responsibility for denazification from our authorities to German authorities. We want to know whether there is infiltration of Nazis into the denazification tribunals. We want to determine whether Nazis have been eliminated from high positions in the public and economic life of Germany. We want to look into the reinstatement of Nazi teachers in Bavarian and other public-school systems. We'd like to know how great is the resurgence of anti-Semitism and militant nationalism, whether or not there is a rise of strong new political parties based upon Nazi doctrine. We want to discover all there is to know of the reappearance of Goebbels'-type propaganda in the German press and we'd like to find out whether the German youth is being given the opportunity to learn the benefits of democratic ideas and institutions.

Mr. HART. Those are eight exceedingly pertinent points worthy of careful study. They are pertinent to the cause of world peace.

Mr. GILLETTE. We should have them answered, Ed, fully and completely, however embarrassing the answers might be to some. We simply must know what is going on in Germany, whether or not the German mind remains the repository for the Hitler doctrine. Left to fester and ferment, this poison will spread, and in 5 years, or 10, within our time and our children's time, we will be confronted with Nazi fascism again. Unless we destroy this force now, once and for all, while it is prostrate, its voice will rise and grow stronger, and the finale of our humanistic and democratic society, so abhorrent to the neo-Fascists, will be enacted to the accompaniment of Wagnerian music. Someone has criticized what we have been doing in Germany in an article entitled "Botch on the Rhine." We must get to the bottom of this thing and stop the botch on the Rhine at once.

Mr. HART. Thank you, Senator GILLETTE, for discussing so ably your efforts, along with Senators FEPPER, IVES, and HENDRICKSON, to keep a judicious watch on the Rhine.

This is Ed Hart saying good-by from Washington.

Government Pay Rolls in Utah

EXTENSION OF REMARKS

OF

HON. ARTHUR V. WATKINS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Wednesday, June 22 (legislative day of Thursday, June 2), 1949

Mr. WATKINS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial, entitled "Government Pay Rolls in Utah," from the Desert News, Salt Lake City, published under date of Wednesday, June 15, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GOVERNMENT PAY ROLLS IN UTAH

Government costs money; but we have to pay it, or lapse back into anarchy. Govern-

ment officers and employees have to be recompensed; we have to pay their salaries or do without their services. Nobody advocates the elimination of government spending; but many have wondered why government has to spend so much.

Getting away from the national spending problem, which is too big for most of us to grasp anyway, let us look at the situation close home, within the State. A recent bulletin issued by the Utah Department of Employment Security furnished some figures that should stimulate thought on the subject.

The number of people in Utah on government pay rolls—State and National, city and county—is given as 40,200. Note that figure.

The number of employees engaged in the mining industries is stated to be 14,000; why do we need nearly three times as many people to govern us as to produce our metals.

Employees engaged in construction total 9,500; why do we need more than four times as many people to run our government activities as to build our houses?

Manufacturing industries in Utah have pay rolls including 26,200 workers; why do we need 50 percent more to run our governmental units than we need to do the processing of all that we produce beyond the raw state?

Self-employed personnel in Utah is estimated at around 21,000. This includes doctors, lawyers, dentists, and other independent professionals, as well as independent salesmen, brokers, and such. Why should it take nearly twice as many to take care of our Government as it does to take care of our health, our legal rights, and our teeth and part of our purchases?

Agriculture in Utah has long been our greatest industry, but now, with 40,000 it runs second to government, and has done every month since the close of the harvest season. Why should it take more people to run our Government offices than to raise our food?

Government pay rolls list about 17 percent of the total number of earners in Utah. The Nation-wide average approximates 9 percent. Why does Utah need nearly twice as many Government employees in proportion to population, as does the rest of the country?

It seems entirely probable that there are perfectly good answers to some of these questions. It seems even more probable that there are not any good and sufficient answers to all of them.

In the face of these figures, is it any wonder that our taxes—direct and hidden—amount to more than our total grocery and meat bills?

Which brings up the big question, to which the others are all subordinate:

Why should Government cost more than food?

It should not.

Economic Conditions in the United States

EXTENSION OF REMARKS

OF

HON. SCOTT W. LUCAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Wednesday, June 22 (legislative day of Thursday, June 2), 1949

Mr. LUCAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial regarding economic conditions in the United States, from the Illinois State Register of June 16, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SENATOR LUCAS' TIMELY WARNING

A few days ago the State Register quoted from a well-known authority on economic trends to show that although there has been a heavy stock market decline, there is no cause for apprehension as to the Nation's future stability.

At that time we urged individuals and groups to grasp the importance of the psychology of depressions. We said that if enough people spread economic gloom they could talk themselves into a depression. The corollary of that is—adhere to facts and make the best of conditions to promote economic stability.

Senior United States Senator SCOTT LUCAS, of Illinois, stressed these very facts in an effective way in Washington yesterday. He said that in his opinion Republicans who are heckling the present administration are not doing any good, and may be doing much harm, by persistently talking about a mythical depression and thus creating fear.

Senator LUCAS recalled that the late Franklin D. Roosevelt said in 1933 that "the only thing we have to fear is fear itself."

Springfield, the very hub and center of the Nation, is a trustworthy standard of economic trends. We have no Wall Street, but plenty of Main Street in the heart of a vast agricultural area with industrial forces going strong.

Our banks are bulging with money, so to speak. Sales of "Opportunity" savings bonds are on the up and up. So with savings accounts and commercial deposits.

These barometers leave no doubt that economic trends are favorable, and that spreading gloom to the contrary is as inaccurate as it is deplorable.

Let us take one major line of merchandising, for instance. Automobile dealers can't meet demands for immediate delivery on new cars. As one authority said to me yesterday:

"If you want to get an interesting light on economic trends, just stand at the curbing a few minutes and watch the new automobiles of a great variety of makes go rolling by. There you have prosperity on wheels."

The writer of this editorial watched the milling throngs in the downtown shopping area during the noon hour yesterday. People have money. They look prosperous. They are well dressed. They represent prosperity on the farm, in the factory, in office buildings, and wherever the vast constructive forces of progress are at work.

Senator LUCAS urged that people everywhere look about them for these evidences of progress and talk about them in positive refutation of false alarms which breed disappointment and disaster.

Roosevelt College Grows Up

EXTENSION OF REMARKS

OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Wednesday, June 22 (legislative day of Thursday, June 2), 1949

Mr. DOUGLAS. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an article entitled "Roosevelt College Grows Up," written by Mr. Robert Lasch and published in the magazine New Republic, of the issue of June 6, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ROOSEVELT COLLEGE GROWS UP—THE SCHOOL THAT HONESTLY PRACTICES RACIAL EQUALITY IS GRADUATING ITS FIRST 4-YEAR CLASS AND BEING BAITED FOR DEMOCRACY

(By Robert Lasch)

This month three young Americans—James H. Andrews, Donald C. Ahrens, and Bernard A. Abrams—will be graduated from Roosevelt College in Chicago. They are members of the first senior class to go all the way through Roosevelt's 4-year curriculum. Roosevelt College is just 4 years old.

No college in America would think of denying admission to Andrews, Ahrens, or Abrams because their names begin with "A." But many colleges would close the door to Abrams because he is Jewish, and to Andrews because he is a Negro. For four successful years Roosevelt College, whose 6,000 students throng the historic corridors of Chicago's Auditorium Hotel on Michigan Avenue, has insisted that Andrews and Abrams have exactly the same right to a college education as Ahrens.

Roosevelt College meant it so sincerely that no quotas in any guise are established for racial groups of minorities; meant it so firmly that no applying student is asked any question bearing on race or origin; meant it so unequivocally that its records actually do not show how many Negroes, how many Jews, how many Nisei, or members of any other group compose its student population. Roosevelt College takes the novel view that one young person is as good as another, and that therefore race, creed, and color are irrelevant even in the college statistics.

That this elementary exercise in democracy should excite comment is a measure of the distance the Nation still has to go before it attains democracy in education. The other side of the story is that Roosevelt's example, standing unswayed through four crucial years, is beginning to leave its mark on colleges throughout the country.

Because Roosevelt has worked at full human equality and proved that the theory can be successful in practice, other colleges are finding it more and more difficult to justify the racial and religious quotas which they have long imposed upon their student bodies. Partly because Roosevelt crystallizes in its own experience the Nation-wide movement toward equality, one college after another is now quietly dropping from its admissions policy the racial and religious considerations which frequently reserve their opportunities for the best people.

Wellesley recently announced that its application blanks would no longer carry the questions by which a prospective student's race or creed can be assayed. The University of Illinois Medical College and the University of Chicago have abandoned the requirement that applicants submit photographs. Several colleges in Ohio have embarked upon a more liberal admissions policy. New York State has enacted into law the principle of nondiscriminatory education. The president of the Junior College of Connecticut, soon to become the 4-year University of Bridgeport, expressed the attitude of educators all over the country when he recently cited Roosevelt College as an example of the democratic principles which Bridgeport hopes to realize in its own community.

No doubt this movement would have taken place without Roosevelt College. Neither is there any doubt that Roosevelt's experience has accelerated it. As a laboratory tests the claims made for industrial products, so Roosevelt has been able to provide demonstrated answers to the many excuses and rationalizations that are drummed up to justify discrimination.

For example, take the canard that a kind of Gresham's law operates in education—the theory that unreserved devotion to a policy of nondiscrimination must lead to the taking over of the college by one or more minority groups. Even without exact figures, Roosevelt administrators know that in 4 years there has been no undue shift in the racial composition of the student body. Negroes and Jews are naturally more heavily represented than their proportion to the population warrants—since so many other colleges still exclude them. But minority representation has not significantly expanded since the college opened its doors.

Or take the assumption, frequently advanced, that a college which declines to discriminate while others continue to discriminate must encounter serious administrative or disciplinary problems as a consequence of being a free island in a society of prejudice. It just isn't so, they tell you at Roosevelt.

The college does not pretend to have eliminated prejudice. That is not its aim. Officials readily admit that young people who have been raised in an atmosphere of discrimination and who find discrimination widely practiced in the life around them will not instantly throw off all habits and influences to which they have been subject. In the cafeteria, in the elevators, one can detect an almost automatic self-segregation, which tends to separate the students into self-conscious racial groups. Equality is not realized overnight. But nobody expected that it would be.

What Roosevelt does is to deny official recognition to inequality. And it has found that no unmanageable administrative problems arise from that simple decision. There is no evidence of any unusual social problems, lowered academic standards, or irresponsibility. The college may have more than its portion of racial agitation—that is, active and vocal interest in the spread of democracy throughout Chicago and throughout America. It would be surprising if this were not so in a college conspicuously dedicated to that cause. The point is that the agitating fringe does not interfere with the main business of educating 6,000 young people.

From a nucleus of 57, the teaching staff has grown to more than 300 members. About one-third come from racial, national or religious groups that are subject to discrimination. None was hired who had any reservations on the equality principle. Has this meant an undue preoccupation with the race problem? In 3 years the dean of faculty has received only one complaint that a faculty member was preaching on the subject in an irrelevant manner. The curriculum is, for the most part, standard. A Negro professor does an excellent job teaching chemistry; one who happens to be Jewish is an outstanding teacher of sociology; a Catholic teaches physics with high competence. The conclusion is that an interracial educational philosophy does not necessarily involve disproportionate emphasis upon sociological problems. Rather it channels the entire educational process toward the ideal of individual merit in both teachers and students.

Among the students, there is no question that racial relations are a live issue. On several occasions student groups have picketed employers who practice discrimination in employment. Students, along with faculty members, have taken an active part with other community groups in combating discrimination in housing or other areas of civic life. Last year the student council demanded revision of a history outline book which contained a disparaging reference to Negro morals. A lively row broke out when the college paper accused the director of the college theater of discriminating in casting. The charge was found to be unjustified, and a public apology was tendered to the director. It turned out that he had merely insisted on casting Negroes in Negro parts.

As you walk about Roosevelt College you have little doubt that racial groups here are as thoroughly integrated as they could be, given the condition of American society at large. All college parties and dances are unsegregated, and members of all groups seem to accept the others with complete naturalness. On the other hand, student politicians who sought preferment solely on the basis of their race have been firmly rebuffed by the student body.

Perhaps one reason for the workability of democracy at Roosevelt is the fact that its administration, as well as its student body, functions on democratic principles. The college had its roots in revolt. It was born in 1945, when President Edward J. Sparling, of the Central YMCA College in Chicago, declined to accept a trustees' demand for the imposition of racial quotas to hold down Negro representation. Bucking the trustees, Dr. Sparling had an overwhelming majority of both faculty and student body with him. So the president, the faculty, and the students abdicated, leaving the Y trustees without a college. Roosevelt came into being with scarcely an interval.

As with all persons who fight discrimination, President Sparling discovered that many of his enemies were to be found among the community's best people. He reasoned that one potent source of discrimination in American colleges is the socioeconomic group which controls them. One study shows that proprietary, legal, and managerial occupations represented 73.6 percent of university boards of control in 1930, when the last survey was made. This social class, of course, has no monopoly on prejudice. Nevertheless, Dr. Sparling was convinced that the quota system and other forms of discrimination are at least related to the type of upper-middle-class mores which have dominated American schools in this country. He resolved that Roosevelt's trustees should represent not this class alone, but a cross section of the community as a whole.

Of the 21 members of the board of trustees, 5 are elected by faculty members from the faculty. The others represent business, labor, and the professions; they include Catholics and Protestants, Negroes and Jews. With this organization no segment of the board controls academic and administrative processes according to its own ideas. Roosevelt is probably the only college in the country with white students that has Negro trustees. It is one of the very few that have given labor a voice on their boards of control.

Economically the college may not have faced its most rigorous test as yet. Eighty percent of its support comes from tuition fees; in 4 years contributions have totaled less than $1,000,000. As a city college it has a high proportion of students (roughly, two-thirds) who work their way. Thus a depression, deflating both job opportunities and tuition payments, could throw Roosevelt's finances into jeopardy. But so far, so good. The college has been gaining students while others showed a downward trend. Much, though of course not all, of the initial hostility with which Chicago's business community viewed this venture into radicalism has disappeared.

Roosevelt has come of age. Not only is it turning out its first 4-year class in June but in April it achieved the distinction of being investigated, along with the University of Chicago, by an Illinois legislative committee on the hunt for subversive activities. The committee found nothing worth a second glance at either institution. The Communists, in fact, long ago gave up Roosevelt as a bad job after their efforts to dominate it had failed.

The only subversive activity at Roosevelt College is democracy—real democracy, the kind you can live, not the kind you just talk. It is pioneering, courageously and without compromise, in the field laid out for all colleges by the President's Commission on Higher Education, which said: "Colleges have a unique opportunity to offer an experience in tolerance and understanding which grows out of democratic relations with students from various national and religious backgrounds. Colleges should become laboratories of interrace and interfaith fellowship."

Postal Employees

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 22, 1949

Mr. MULTER. Mr. Speaker, the following is a statement which I filed with the House Committee on Post Office and Civil Service in connection with legislation benefiting postal employees:

Mr. Chairman and gentlemen of the committee, I am very pleased to have the opportunity to appear before your committee and voice my support of this legislation. I talk as one who started out in life as a railway-mail clerk, and, although I haven't been connected with the postal service for many years, I know from my personal experience in the service and my contact with Federal employees and other civil-service employees throughout the years that the postal group, by and large, is the most loyal group of men and women in Federal Government today. I think that these men and women are entitled to every possible consideration when it comes to compensation and we certainly would be remiss as governmental officials if we didn't at least do for governmental employees that which we require by statute for private employees. I think this legislation is late in enactment. These men and women should have been given an increase in compensation long since, commensurate with the increased cost of living. I am sure that you gentlemen do not need any statistics on the subject, because you have so many volumes of testimony taken by the various committees of both Houses indicating the stress under which these men and women must labor. They are entitled to an increase of $650 per year, 26 days vacation a year and 15 days sick leave. That will merely put them on an equal basis with other Federal employees.

They are entitled to credit for promotion in automatic pay grades for time served in the armed forces in World War II.

They should be allowed to retire after 30 years of service at age 55 with full annuity.

These are the very minimum that the postal employees are entitled to. I strongly urge the early enactment of this legislation.

Knotty Problem in Housing Outlook

EXTENSION OF REMARKS
OF
HON. ARTHUR V. WATKINS
OF UTAH
IN THE SENATE OF THE UNITED STATES

Wednesday, June 22 (legislative day of Thursday, June 2), 1949

Mr. WATKINS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Salt Lake Tribune entitled "Knotty Problem in Housing Outlook," published under date of June 16, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

KNOTTY PROBLEM IN HOUSING OUTLOOK

Now that the administration's public housing and slum clearance bill has been smoked out of the House Rules Committee the legislative body will come to grips with one of the most controversial measures of the period.

In one respect the issue boils down to economy, lately affecting leading Congressmen of both parties, versus keeping a promise which both parties made. Certainly Congress must apply the brake to unlimited spending and the figures tossed around in connection with the housing plan are frightening. But since platforms of the Republicans and Democrats both pledged public housing and slum clearance legislation, there is a solemn obligation to carry through.

Opponents of public housing brand it socialistic and point to the billions which might be involved, helping to push the United States into bankruptcy and making Communists glad. Proponents claim, contrarily, that furnishing decent housing to low-income families would be the best possible insurance against communism.

The Senate already has passed the bill by more than 4 to 1, but its fate is uncertain in the House. Contrary to the propaganda line that the Government would be put into the business of building, owning, and operating apartments, the bill provides that a local municipal authority would run the housing projects. It would act only as trustee for the community which needed housing and for the private enterprise which built them and financed them through bonds. (The question is academic, so far as Utah is concerned, since the State senate rejected a measure which would have permitted communities to participate in the national program.)

The bill would authorize, over 5 years, a maximum of $1,000,000,000 in loans for slum clearance, $700,000,000 for redevelopment, and $250,000,000 for rural housing. The loans would be repayable, and experience has shown these types are good risks. Authorization is included for $308,000,000 a year in subsidies until the cost is amortized and bonds (private capital) are paid off, where it is necessary to preserve the low-rent nature of the public housing. Such authorization has never been fully used in the past by low-income public housing units.

With deficit spending in the offing, it behooves Congressmen to examine carefully every spending program and to cut the corners wherever possible. It may be that the country cannot afford the National Housing Act of 1949, but neither can it afford to have its cities sink deeper into slums. In the words of Senator TAFT, it cannot afford to abandon large numbers of its people to subhuman living conditions.

Address by Hon. George W. Malone, of Nevada, on the Impact of Free Trade on American Labor and Industry

EXTENSION OF REMARKS

OF

HON. GEORGE W. MALONE

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 22 (legislative day of Thursday, June 2), 1949

Mr. MALONE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject The Impact of Free Trade on American Labor and Industry, broadcast by me over the facilities of the National Broadcasting Co. from radio station WRC in Washington, D. C., on June 17, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE IMPACT OF FREE TRADE ON AMERICAN LABOR AND INDUSTRY

I thank the National Broadcasting Co. for making its coast-to-coast facilities available to me tonight. In coming into your home through the medium of radio, I have something to talk over with you that is of tremendous importance to both of us. That something is your job and the jobs of the 65,000,000 other employable Americans caught in the current recession.

UNEMPLOYMENT

Today many of you found a pink slip in your pay envelope. Many more of you are about to join the ranks of the many millions already unemployed. Government sources tell us that already unemployment has reached some 4,000,000. Business publications estimate the total to be 5,000,000 with probably an additional 10,000,000 on part-time work.

In the Western States most of our copper and other metal mines are closed. In New England the woolen mills and shoe factories are operating on only a part-time basis. The same is true in pottery, glassware, cotton, and rayon textiles, in fisheries, and, yes, even in the automobile industry. Everywhere business and industry seem to be in a spiral of retrenchment.

Now there is a rather startling paradox to this unemployment picture. It comes at a time when economists tell us that we are still operating in a buyers' market.

FACTORS IN THE RECESSION

The American people today are hearing a great deal about a business recession, fear of large-scale employment, threatened devaluation of the Brtish pound, and dollar shortages in foreign countries. It is unfortunate that the separation of these items in the news makes them appear as separate problems. In fact, they are only different aspects of the same problem.

They all are directed to the American market which is the one market in the world which every nation would like to have.

It is the fear of American businesses that it will be deprived, through Government interference, of a share of its own market, that causes uncertainty and retrenchment. It is this new factor—dividing the source of our income—our own markets—which makes an accurate forecast of the future based on past experience impossible.

THREE-PART FREE-TRADE PROGRAM

The Congress of the United States has been plunged into a disastrous foreign economic undertow by a State Department operating through its three-part free-trade program, which can only result in leveling the American standard of living to that of the low-wage living standards of Europe and Asia.

TRANSFER AMERICAN JOBS TO FOREIGN SOIL

The ECA through its Director, Mr. Hoffman, is now advocating and financing an industrial production program, through the 16 ECA European nations, which will not only make them completely self-sufficient, but, in the Director's own words, will increase their exports 65 percent, chiefly to the United States under the free-trade program. This is a frank admission of a program to transfer American jobs to the foreign low-wage countries and slave labor of Europe.

There is no practical difference in importing the products of low-cost labor and importing the cheap labor itself.

THE BOLD NEW PROGRAM

In order to do the same thing on a world scale, the President has proposed a bigger and better Marshall plan or ECA, known as the "bold new program." Under this program, American taxpayers will guarantee foreign investments of manufacturers and processors not only in Europe but also in Asia and Africa—its magnitude will be sufficiently colossal that it will not only supply the foreign market that the original Marshall plan was supposed to develop for American wage earners and industry, but the surpluses that will stream into American ports from all over the globe will supply a large part of the American market itself and displace the American workingmen.

The three-part free-trade program will then be complete and American jobs will be transferred to foreign soil under the guise of promoting world peace.

I have coined a phrase to describe our present program. I call it the three-part free-trade program designed to level our wage standard of living with the nations of the world, and it includes:

1. Appropriations from American pocketbooks to make up the trade-balance deficits of the European nations in cash each year—currently labeled ECA—our chief export is cash.

2. Extend the selective free-trade principle adopted by the State Department through a 3-year extension of the 1934 Trade Agreements Act.

3. The copper rivet in the free-trade program will be the proposed adoption of the International Trade Organization—58 nations with 58 votes—each with one vote will meet each year to distribute among themselves the remaining production and markets of the world.

Since the end of the war, under the guise of making up trade-balance deficits, we have fed into the bottomless maw of Europe and Asia, the fantastic sum of $41,000,000,000. I wonder if you fully appreciate the magnitude of that sum.

Forty-one billion dollars is $5,000,000,000 more than the combined assessed valuation of the 11 Western States, including California, Oregon, and Washington—and the 14 Southern States, including Texas, and accounts for approximately 60 percent of the area of the United States. At this rate we can dispose of the whole business in a very short time.

THE FRENCH TRADE CONFERENCE

For some 3 months now the American delegates have been in France in an international conference designed to again slash United States duties rates. This is the second general slash in 18 months, despite complete ignorance of the effects of the first slash. When as a result of the horse-trading methods the foreign nations finally agree what the United States duty rates shall be, these rates will then be made permanent by signing an international agreement.

CURRENCY MANIPULATION FOR TRADE ADVANTAGE

Now in the beginning of my talk I mentioned the current lively interest in the value of the British pound and said that its value had a direct bearing on the present business uneasiness. I will now tell you why. As soon as the ink is dry on the international agreement fixing American duty rates, any lowering of a foreign currency, such as the British pound, renders worthless the entire agreement. The present pegged but artificial value of the pound is $4.03 and the international tariff agreement is being signed on the basis that the pound will continue to be worth $4.03.

If the pegging of the pound is discontinued and it is permitted to fall to the level of its real worth its value would be between $2 and $3. For example, a British imported item worth 1 pound now sells for $4 in our market, in competition with American items worth $4. After devaluation, the same British item would promptly be offered for sale in our market at a price reduced anywhere from 25 to 50 percent.

A flexible import fee bill which I have recently offered would automatically take into account the depreciated value of the British pound and our duty or import fee would vary in direct relationship to the economic situation. This would take away the incentive foreign nations now have to circumvent American duty rates by tinkering with value of their currencies. This flexibility permits immediate adjustments to changing circumstances which is impossible under a duty rate frozen by international agreement for an indefinite period.

The second step in the three part free-trade program was inaugurated through the 1934 Trade Agreements Act, under which the State Department has adopted the selective free-trade principle, and which is to be extended for 3 years at this session of Congress.

Free trade has been sold to this country through the catchwords "reciprocal trade."

CATCH PHRASE TO SELL FREE TRADE

The phrase "reciprocal trade" does not occur in the 1934 Trade Agreements Act—the act is not reciprocal and does not operate that way—but is simply a catch phrase to sell free trade to the American people, cloaked in more involved and less understandable phraseology.

Until recently each of the three-part program—the ECA—the 1934 Trade Agreements Act—and the International Trade Organization were each represented to Congress and to the Nation as great emergency legislation in itself—now, however, even the Secretary of State admits that it is all one program.

TRADE TREATIES A ONE-WAY STREET

No other nation wants this so-called trade agreements program which our State Department is pushing to apply to their own trade treaties. Last week Britain made a bilateral agreement with the Argentine in direct violation of this program and over the violent opposition of our State Department. Today's papers announced a similar treaty between Britain and Yugoslavia, which is equally contrary to the program, and, of course, our State Department in due time will make its routine but ineffectual protest.

Britain has already made similar trade treaties with other European countries, including Russia. There are some 88 bilateral treaties made by these very Marshall-plan countries with Russia and her satellites behind the iron curtain. Thus every important trading nation in the world has evidenced its opposition to the program by ignoring and disregarding it. However, these nations are always willing to sit down at any international conference and watch the United States reduce its remaining tariffs to whatever point these nations suggest—but as for reducing their tariffs—well that's a different thing.

They give that well-known diplomatic lip service to this program and promptly nullify every concession they have made through quotas, manipulation of their currencies for trade advantage and in other ways. Of course, these nullifications are couched in Alfonse and Gaston language, and our State Department never fails to extend its sympathetic understanding.

ECONOMIC STRUCTURE BEING WRECKED

The Members of Congress are kept busy on legislation to correct the problems of constituents who have been hurt, or afraid they will be hurt by some action of the administration taken under a previous congressional act, while the problem to wreck the fundamental economic structure of this country is supposed to go through almost without debate.

It is just like a mustang eared down by a buckaroo in a western rodeo—and bites his ear while the saddle is being cinched on him. The ear hurts so bad that he can only think of one thing at a time and when the buckaroo lets go of the ear, the saddle is on and he cannot buck it off.

Recently, however, a considerable number of Senators have denounced the State Department's free-trade program.

ASSIST FOREIGN NATIONS WITHOUT WRECKING ECONOMY

We can assist foreign nations by feeding emergency hungry people to the extent of our ability without injuring our economy.

We can loan money to private industry within the foreign nations whose integrity is important to us, in the same manner as the RFC loans money to our citizens in times of stress.

FLEXIBLE IMPORT FEE

We can adopt the flexible import-fee system to establish a market for the goods of foreign nations on a definite basis of bringing such goods in on our basis of costs—thereby maintaining our standard of living through the floor under wages while we are assisting other nations in raising their own. Such a tariff or import fee does not prevent imports—but brings such imports in on our level of costs.

I have recently introduced a bill in the Senate with the sole aim of restoring fair and reasonable competition in the American market between foreign products and those that we produce, and I intend to offer it as a substitute for the 1934 Trade Agreements Act when it comes before the Senate for the 3-year extension. Under the present Trade Agreements Act as amended last year, the United States Tariff Commission is directed to determine after investigation the rate of duty which should be applied to an imported item so that the rate below which the duty might not be cut without endangering American industry will be known in advance.

This is the so-called peril point to which the State Department has objected because they do not want that point of injury to American business to be a matter of public record. My bill would simply make the peril point the tariff or import fee, thus correctly representing the differential of cost of production due mostly to the difference in the standards of living and preserve our own standard of living with the floor under wages—while assisting other nations in raising their own.

I have no quarrel with anyone who believes sincerely that the wage-living standard of living is too high in this country and that it should be lowered through a reduction of the floor under wages which is the tariff or import fee making up the differential of the cost of goods produced by the low-wage foreign labor.

However, the same man cannot be for free trade and for maintaining higher wage-living standard—the two positions are simply not compatible.

The Bold New Program

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 22, 1949

Mr. MULTER. Mr. Speaker, I commend to the attention of my colleagues the following article by John G. Rogers, which appeared in the New York Herald Tribune of June 17, 1949:

THE BOLD NEW PROGRAM—UNDER PRESENT PLANS IT WILL EMPHASIZE TECHNICAL ASSISTANCE IN AGRICULTURE AND HEALTH

(By John G. Rogers)

LAKE SUCCESS, June 16.—The phrase "technical assistance" has become a shibboleth in international economic conversations ever since President Truman announced in January that the United States was projecting a bold new program to speed the progress of underdeveloped countries.

In the imaginations of statesmen and economists in backward or needy countries, there arose immediately the pleasant picture of the United States pouring out hundreds of millions of dollars to build dams and power plants and factories in scores of places around the world where such installations were needed.

The next development, however, was a great anticlimax and it caused the delegate of India to remark sadly and a bit caustically before the United Nations Economic and Social Council that the Truman plan seemed to be not bold, not new, and hardly even a program.

In that next development, which occurred in February, the United States simply asked the United Nations to set down on paper the outline of a plan through which underdeveloped countries might be assisted toward faster economic progress. Gone suddenly was the original vision of dollars immediately pouring out of Washington and heading all over the world.

Now, the United Nations and one of its specialized agencies have produced a paper plan that calls for spending $36,000,000 the first year and $50,000,000 the second year in a long-term program to supply expert know-how to countries which need it to enable them to make fuller use of their own resources.

Having received their first disappointment at the hands of the United States, the have-nots received their second one from reading the UN report. They found the figures small for a program that had started with the words "bold" and "new."

They found that they did not stand to acquire much of anything free excepting some instruction. They found that a potential recipient should be prepared to pay part of the cost himself. And they found that the $86,000,000 to be spent the first 2 years was to be raised through voluntary contribution by the countries members of the UN and the specialized agencies participating.

In plain fact, that means that if there is to be any substantial UN program of technical assistance to underdeveloped countries, the United States will have to foot the major part of the bill.

While the UN program is now out in the open, awaiting Economic and Social Council approval in Geneva next month and General Assembly approval here in the autumn, the United States is still working in Washington on a plan of its own. The first details are expected to be made public shortly.

It is not expected to be a big plan, in terms of dollars. And there will be still another disappointment for the potential recipients when they find that a good part of the American plan will be done through the UN framework. Instead of two plans—a UN plan and a United States plan operating side by side—the plans will duplicate in part, thus reducing the total of money to be applied.

The crowning disappointment of all will come if Congress fails to approve the American plan with its contributions to the UN plan in time for the whole program to get started early in 1950.

Most of these disappointments were caused because the potential recipients were not realistic and because they were misled by the "bold new program" phrase used by President Truman. Actually, the United States has been administering for some time now technical assistance programs to other countries of about $18,000,000 a year and the new totals of such work projected by the UN and the United States scarcely rate the adjective "bold."

Limitations on the size of these technical-assistance programs are practical ones. In essence, the programs are teaching programs. A man who can build a better mouse trap is sent out to impart his secrets to a man in another country. Such teachers and experts are not plentiful. After shortage of personnel, another limitation is the ability of the recipient country to use new projects and knowledge as quickly as would be desirable.

The technical-assistance planners, who aim to bring a country along in sound improvement so that it will depart from the poor-risk class and attract private investment, like to have first things come first. But they find that a country whose people are ridden with disease comes in with a request for some complicated machinery. A country whose farmers are 150 years behind the times in growing the simplest of foods, wants a strip mill.

The technical-assistance planners, be they United States or UN, will reject the requests. The first country will have to ask for a health project to get rid of some of the disease. The second will get an agricultural project to make the grain grow faster and better. Other things can come later.

One planner remarked recently, "We don't always give 'em what they want. We give 'em what they ought to want."

In the UN plan, it is significant that health and agriculture projects make up more than half the total for the first year, and nearly half for the first 2 years. So the emphasis at the start is not on dams and power plants. It starts at the bottom by trying to promote societies of healthy people with sufficient food.

And in those homely fields the technical-assistance programs are dramatic and exciting in their possibilities of achievement. Consider, for example, that in the Middle East 90 percent of the rural populations suffer from schistosomiasis through infection from polluted water. Consider that 30,000,000 tons of grain and legumes—10 percent of the world crop and enough to feed 150,000,000 persons—is lost annually through rot and insect and rodent damage.

Behind the citing of such situations there is an indignation. In a sense, indignation is one of the motives of techical assistance planning. To put in extreme terms, why can one man have all the comforts in the world when another can't even scrape together one meal a day? Isn't it possible to help the hungry one, to teach him to help himself?

Secretary General Trygve Lie also cited some strong practical reasons for technical assistance in a recent speech. He said:

"There is a potential long-range danger to the prospects of achieving a stable peace in one of the economic trends that has persisted after the war. I refer to the growing economic gap between the countries with the highest standards of living and productivity and those with the lowest. The peoples of the least-developed countries—and they constitute far more than half the population of the world—are increasingly aware of this growing gap."

It is inevitable that political considerations will figure in various ways in the projects of technical assistance. One political motive on a high plane is in the mind of Secretary General Lie. He thinks that the Near and Middle East should receive high priority in assistance projects not only because it is very badly needed in that area but also because it might set up fields in which Arabs and Israeli could cooperate and hasten the day when they might get along as friends and neighbors.

Another political aspect—the inevitable one that bedevils everything the UN does—will be opposition from the Russian bloc. A UN program financed largely by American money and staffed largely by western experts will be attacked by the Russians, who will say it is more economic imperialism, more western attempts to influence and gain control over other populations.

Such Russian talk, however, will weigh nothing at all with the countries in the potential recipient class and the technical-assistance program can be an effective anti-Communist program in a small way, as the Marshall plan was in a big way.

Talking Books for the Physically Incapacitated

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1949

Mr. KEATING. Mr. Speaker, under leave to extend my remarks, I include a letter from Mr. F. H. Price, librarian of the Free Library of Philadelphia, endorsing H. R. 4034, introduced on April 5, 1949, to extend to those so physically incapacitated that they cannot read in a normal manner the privilege of sharing, like the blind, in the program for furnishing talking books. I am hopeful that early and favorable action may be taken by the Committee on House Administration on this measure, which would bring a ray of sunshine to the necessarily drab lives of these unfortunates.

The letter follows:

THE FREE LIBRARY OF PHILADELPHAA,
Philadelphia, June 18, 1949.

Mr. KENNETH B. KEATING,
Washington, D. C.

DEAR REPRESENTATIVE KEATING: A copy of your House bill No. 4034 has just come to my attention, and I am writing to congratulate you for having drawn this bill, which I consider one of the most outstanding pieces of legislation and one which would provide reading matter to many invalids who are now prevented from using the Government talking-book records (which are now restricted to the blind).

As librarian of the public library, which circulates more literature for the blind than any other depository of the Library of Congress, I am writing to report to you that I have personally received (and was forced to turn down) many applications for reading matter from bedridden invalids, who, as the law now stands, cannot use the talking-book records.

I trust that your bill will pass at this session of Congress, and I assure you that it will be a great pleasure for the Free Library of Philadelphia to operate under this law in providing talking-book records to persons who are physically incapacitated, as established by a competent medical opinion.

Very truly yours,

F. H. PRICE, *Librarian.*

Growing Unemployment Must Be Stopped—Western Industries Require Protection

EXTENSION OF REMARKS

OF

HON. ARTHUR V. WATKINS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Wednesday, June 22 (legislative day of Thursday, June 2), 1949

Mr. WATKINS. I ask unanimous consent to have printed in the Appendix of the RECORD a radio address delivered by me over radio station KSL, Salt Lake City, April 25, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Friends of the Intermountain West, I want to discuss a problem that affects every man, woman, and child, as well as every business and industry in our great intermountain empire. More specifically I mean the Nation's tariff policy and our reciprocal trade program.

This matter has been forcibly called to my attention at this time by a letter from a Utah constituent. This correspondent specifically pointed out the decline in nonferrous metal prices and their effect on the western mining industry.

I also know that domestic oil production, the fur industry, the clothespin industry, the watch industry, and many other industries, are being hurt severely by foreign imports.

Presently before Congress is the administration's bill, H. R. 1211. This measure, now pending in the Senate, would repeal the Trade Agreements Extension Act of 1948.

The Trade Agreements Act first became a national law in 1934. That law authorized the President to enter into trade agreements with foreign countries within certain limits. In other words, the President could enter into agreements with foreign nations whenever it appeared that such foreign nation or the United States itself had duties or import restrictions on a commodity or commodities that might burden or restrict foreign trade.

This act was extended periodically with very little change until 1945, when Congress further granted the President the power to make tariff rate adjustments up or down, provided, that such adjustments did not exceed 50 percent of the tariff rate in effect in January 1945. The amended law further provided that the President could not transfer commodities from the duty-free list to the duty list or vice versa.

Utilizing this power, the executive department now has reduced tariff rates until they are at their lowest point in history. At the same time, factors governing the cost of production in the United States are at a near all time high.

The Eightieth Republican Congress only a year ago held extensive hearings on the tariff problem. As a result of these hearings, two important fundamentals were recognized:

First. High labor cost American industries could not compete in this country on a free trade market basis with the extremely low-cost industries existing in foreign countries.

Second: It was the conclusion of the committee hearings and the Congress that the only agency of the Government competent

enough to analyze and make recommendations regarding tariffs to the executive department was the Federal Tariff Commission.

Therefore, last year, the Congress passed the Trade Agreements Extension Act of 1948. The principal change over the old law was the recognition and establishment of a peril-point plan. This peril-point plan was a safety device designed entirely for one purpose and one purpose only—to protect American industry, labor, and agriculture from low cost of production of foreign competition.

It worked this way:

The President will notify the Tariff Commission of articles that might be affected by tariff agreement. The Tariff Commission would hold hearings and report its findings to the President. The findings would specify how low a tariff rate could be established without injuring the American producers. The Commission also should report instances where increased tariff protection should be established to protect home industry against foreign competition.

The President, under the act, must find that existing restrictions are burdening foreign trade and that purposes of the law will be carried out by the agreement.

If the President proposes to enter into an agreement with foreign countries which will relax rates below those found by the Tariff Commission to be advisable from a standpoint of protection to American producers, he must send a copy of such agreement to Congress setting out each article on which he did not follow the advice of the Commission and give the reasons for his failure to follow such findings. However, the President is not prohibited from making any agreement he deems necessary.

He has a free hand to make any agreement. The only requirement is that he follow the peril points of the Commission or report his reason for not doing so to the Congress.

This safeguard for American producers has not yet had a chance to work for the protection of our standards of living because no new treaties have been entered into since the 1948 act. At the present time, however, the administration is negotiating with 13 nations on a trade agreement which will adversely affect American producers by revising the tariff rates.

A repeal of the protection to American producers provided by the peril-point system will give the State Department a free hand in these negotiations. It is expected that further reductions in our tariff rates will be granted.

Let it not be forgotten that the American taxpayers' dollars through the Marshall or ECA program has enabled foreign countries to rebuild their industries with the latest labor-saving machines available. Cheap labor on these machines is competing for American markets. Without adequate protection our own money given to these foreign countries will bankrupt the American economy.

Administration spokesmen have constantly asserted that they do not intend to make any trade agreements which will jeopardize American producers. Yet the facts show otherwise.

The American watch industry is now facing extinction and its employees unemployment because there is not adequate protection against low-cost foreign competition.

Farmers, employers, and employees in the intermountain area might think that this program will have little effect on them. The fact of the matter is that there is hardly a western State whose industries could exist on a completely free-trade market.

Let's analyze our economic conditions. The wool industry certainly could not compete with South American and Australian wool if it were allowed to be sold in the United States without restrictions. Our feed prices, our wages for herders are far higher than in the countries named.

Our western sugar-beet industry would be completely wiped out in a free-trade market.

Our western mining and smelting activities would be unable to operate if the foreign producers could sell their products in American markets without limitation.

Now, how about the mining industry. I want to quote a letter I have received from a Utah producer on this matter.

Said the writer:

"The continuance of present low prices is attributable almost entirely to the huge importations of tariff-free metals from foreign countries. I refer specifically to the catastrophic declines in copper, lead, and zinc. Copper has dropped in price from 23½ to 18 cents per pound; lead from 21½ to 14 cents and zinc from 17½ to 12½ cents per pound.

"I can most emphatically assure you from my recent many contacts with our own employees and the heads of labor unions in this State that unless something is done in the very near future by our entire western congressional delegation, there will be a most bitter and violent reaction against the present policy of Congress in giving away our markets to underpaid competitors in foreign countries.

"Let me assure you most solemnly that this is a condition which we must face and not merely a theory," my correspondent concluded.

Recognizing these facts the Republican Eightieth Congress adopted the peril-point program. This program provided that Tariff Commission experts determine rates of duty below which domestic producers would be unable to compete with the imported products of foreign competitors.

This provision was objected to by the President upon advice of the State Department clique who believe in free world trade, regardless of the effect on American producers.

The State Department negotiates these treaties. Therefore, the administration bill, H. R. 1211, proposes to repeal this protection to the American public. They have called this protective provision a crippling amendment because it is their contention that the President would not have the courage to disregard the facts and recommendations of the Tariff Commission. They, the State Department free traders, fear that the President could not adequately justify any action of his which would go beyond the peril-point recommendations of the Commission. They fear, and justifiably so, that the voters of the country would likely support the tariff rates protecting the American public as recommended by the Commission.

It seems to me that it is a logical conclusion that the administration expects to reduce tariff rates to the detriment of many of our domestic industries. They apparently do not want these facts to become known to the public for fear of the consequence of such publicity.

It should also be kept in mind that the proposed North Atlantic pact was negotiated by the same free-trade clique in the State Department. Article 2 of that pact reads as follows:

"* * * They will seek to eliminate conflict in their international economic policies and will encourage economic collaboration between any or all of them."

What type of economic collaboration was contemplated by this wording? Remember, if the administration succeeds in amending the extension act of 1948, which includes the peril-point protection program, and if the pact is ratified, there will be no protection of any kind from cheap foreign competition.

The Republican Party is wholeheartedly in support of a reciprocal trade program. But the party members are also in favor of maintaining adequate protection for American producers. By adequate protection I do not mean a return to the old high-tariff-wall program. That is out. The Republicans seek only protection to the extent that foreign commodities are placed on a competitive-price basis with American-produced products.

If the administration leaders were sincere in their protestations, they would have no objection to continuing the peril-point protection features of the present law.

I intend to vote for amendments to H. R. 1211, which will insure the continuation of the peril-point protective device established by the act of 1948.

A Grateful GI

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1949

Mr. KEATING. Mr. Speaker, when so many recipients of Government aid of one form or another take such help for granted, it is refreshing to find a young man who takes the time and evidences the thoughtfulness to express gratitude for the aid he has received. As he has requested, I quote his letter in order that his thanks may be expressed to the Members of both legislative bodies.

It is not we, however, but the people of a grateful Nation who have given our fighting men this educational opportunity. I feel sure that most of them would echo the sentiments of my constituent.

The letter follows:

TODD UNION,
UNIVERSITY OF ROCHESTER,
Rochester, N. Y., June 16, 1949.

Congressman K. B. KEATING,
House of Representatives,
Washington, D. C.

DEAR SIR: I have just completed 3 years of training under Public Law 346 leading to the degree of bachelor of science in physics. Would it be possible for you to express my sincere thanks to both the House of Representatives and the Senate for the opportunity and the aid they have given me through the GI bill of rights during this time?

Sincerely yours,

WILLIAM SPRY.

The Basing-Point System Diverts Steel From Water Carriers to More Costly Rail Carriers

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1949

Mr. PATMAN. Mr. Speaker, one of the effects of the basing-point system in the steel industry has been to encourage

shipment of steel by rail where water carrier is available and where shipment by water would be a great deal cheaper. The reason is, in general, that the basing-point formula used in this industry for computing delivered prices utilizes factors which are based on rail freight charges.

BASING POINT THREATENED

Early in the year 1938 there were several Government actions pending which seemed to threaten the continuation of the basing-point system in the steel industry, a threat which caused apprehension among the railroads as well as among the steel companies. Among these were the following:

First, the Federal Trade Commission had issued a formal complaint against members of the cement industry, charging conspiracy to fix prices, through the use of a similar basing-point formula, and public hearings on this case had been in progress since the previous year.

Second, the Commission had, at the request of the President, in 1937, made an investigation of this system in the steel industry, and had submitted a report in the spring of 1938.

AFRAID OF TNEC

Third, the organization of the Temporary National Economic Committee—TNEC—was under way, and plans for investigations and studies were being drawn up. The basing-point system in the steel industry, was high, if not first, on the list of economic matters to be investigated. Members of the staff of both the Federal Trade Commission and the Department of Justice were assisting in the development of plans for this investigation.

All of these activities caused some apprehension in the industry and caused the railroads to fear that the system would indeed be stopped by application of the antitrust laws. The railroads expected, in this eventuality, that with an outbreak of competition in steel, the steel producers would be inclined to adopt more economical means of transportation wherever these means were available. The fact that this fear was a very real one and that the railroads took joint action to circumvent the possibility of losing traffic to the water carriers in the event the basing-point system was broken, is documented in the evidence presented by the Department of Justice in its Sherman Act suit against the railway associations in 1944. Among this evidence is the docket of the twenty-fifth meeting of the Traffic Advisory Committee of the Association of American Railroads, on July 20, 1939, which contained the suggestion that efforts be made to induce the steel companies to discontinue use of water transportation. Mr. Cleveland, vice president of the American Association of Railroads, had been urged the previous month, to have Mr. Pelley, then president of the AAR, arrange a conference with the chief executives of the larger steel corporations to discuss the question of rail versus water. The following is an extract from the proceedings of the meeting which ensued between the executives of the AAR and the executives of the major steel companies on August 4, 1938:

PROCEEDINGS OF MEETING, CHICAGO, ILL., AUGUST 4, 1938, H. WILSON, VICE CHAIRMAN, TRAFFIC EXECUTIVE ASSOCIATION, EASTERN TERRITORY, PRESIDING

This conference with representatives of the iron and steel industry had been arranged because of the desire of the rail carriers to ascertain whether the change in conditions arising from recent decision of the Federal Trade Commission with respect to competition in that industry and method of pricing iron and steel products would result in disturbing the present channels of transportation through diversion of traffic to other transportation agencies, because of desire to effect economies necessary to meet competitive delivered prices.

Request was made on behalf of the rail carriers that before negotiating with other transportation agencies, shippers discuss the matter further with the rail carriers in order that the latter may be apprised of the circumstances and be given an opportunity to ascertain what can be done to continue the traffic in rail movement.

From the discussion which ensued it was apparent that shippers were not certain as to the extent of the competition which they would be called upon to meet, and that until this question had been resolved they would not be in position to advise what readjustment of freight rates would be necessary to hold the traffic to rail movement.

Under the basing-point system, shipments of steel have in a great many instances been made by water, in which case the steel companies have usually charged the customers rail rates. This means, of course, that where water carrier is available, the steel producer may ship by this method and make some extra profit on the difference between rail and water rates. However, there have been a great many other instances, involving a very substantial volume of traffic, when shipment was made by rail, although water carriers could have been utilized at a lesser cost.

WHY STEEL PRODUCERS FAVOR RAILROADS

There are several reasons why the steel producers have a preference for the railroads over water carriers in any event. In the first place there is a financial community of interest between many of the railroads and the large steel producers. Both the roads and steel producers have the same financial backers who cement this community of interest. The influence of these backers is frequently out of all proportion to their direct holdings of securities in either of the enterprises. Such, for example, is the case where one of the prominent investment banks is the backer of both railroads and steel producers. The influence exerted by the banker is that of the financial mentor. Both types of enterprises depend upon the cooperation and good will of the banker when the need for new financing arises. Moreover, the various board members of both types of enterprise depend upon a similar good will whenever the need for financing arises in other enterprises in which they may be interested. In the second place, the relationship between railroad and steel producer is that of one best customer serving another. The railroads are very large purchasers of steel and, on the other hand, the steel producers are very large users of railway services. The result is that the business between railroad and steel producer tends to be an allocated business. That is, the railroads tend to distribute their purchases of steel among the various producers on the basis of the amount of traffic the producers provide to the road; and, on the other hand, the steel producers tend to divert and allocate their traffic among the roads on the basis of the amount of steel business the various roads provide.

But beyond this general community of interest between railroad and steel producer, there are several other specific reasons why use of the basing-point system tends to divert steel traffic to the railroads and away from alternative water carriers. One of the important reasons is, that since the customers of steel are charged rail rates anyway, many customers tend to insist upon getting the services which they know they are paying for. That is to say, since a customer knows that delivered prices charged for steel include all rail rates, he sees no reason why he should permit the steel producer to ship by water and take an additional profit on the sale. Furthermore, the shipment by water will frequently cause the customer some additional trouble in arranging for delivery by truck or other exceptional means from the water terminal to his plant, and he sees no reason why he should take this additional trouble when he is not permitted to share in the savings which result from water shipment.

A second reason is that the steel producers are themselves reluctant to ship by water carrier to many communities on terms which would require them to charge those communities rail rates for the shipments. Such a practice involves a rather clear and obvious piece of discrimination against the community which is likely to arouse a storm of protest which would threaten not only the continuation of this particular practice, but perhaps the entire basing-point system as well. Some communities are much more keenly aware than others of the far-reaching effects of discriminations upon their economic well-being, and are more alert than others in protesting such discriminations when they arise. Consequently, in the interest of the larger goal of preserving the basing-point system and thereby avoiding an outbreak of price rivalry between competitors, the steel producers are inclined to use rail shipments to such communities, maintaining a fiction that the alternative water carrier would not meet the needs of the sales transactions, or that the savings in costs would not be worth the time lost to the generally slower means of transportation.

While such diversion to a costly means of transportation is undoubtedly of benefit to the railroads, it discriminates against another type of business, namely, the water carriers; it adds unnecessary costs to the customer's steel bill; and it results in waste of national resources and

inefficiency in the economic system as a whole.

The TNEC recommended that the basing-point system be declared illegal by Federal act. The O'Mahoney substitute would legalize the basing point after it has been outlawed by the Supreme Court.

Municipal Judge Milton S. Kronheim, Jr., Exposes Questionable Credit Practice

EXTENSION OF REMARKS
OF
HON. PAT SUTTON
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1949

Mr. SUTTON. Mr. Speaker, recently appointed Municipal Judge Milton S. Kronheim, Jr., has pioneered the exposition of questionable credit practices in the District of Columbia. The action of Judge Kronheim is to be commended because of his exposition of certain credit rackets now existing in the Nation's Capital. Such courageous action on the part of our courts in exposing would-be credit racketeers will ultimately eliminate such unfair practices. Judge Kronheim is to be congratulated upon his fair-minded and considerate attitude for the downtrodden.

The following articles appeared in the local press and are explanations of the type of credit practices that are in existence here. More power, Judge Kronheim. Keep up the good work.

[From the Washington Star]

FAR-REACHING KRONHEIM RULING SEEN IN SMALL CLAIMS CASE

A ruling that may have a far-reaching effect on certain types of retail sales on credit was handed down yesterday in Small Claims Court when Judge Milton S. Kronheim, Jr., voided a contract between a merchant and customer in the latter's favor.

The merchant, the Universal Jewelry Co., Inc., 635 F Street NW., had brought suit for $11.95, the balance due on a pair of shoes sold to Joseph McIver, 65, colored coal hustler.

Mr. McIver, who is nearly blind and makes $18 a week, had paid $3 down on the shoes with the balance to be paid at $1 a week.

Judge Kronheim, declaring he did not think there was any sound basis for granting such a credit, dismissed the suit with prejudice against the plaintiff and ordered the $3 deposit returned to Mr. McIver.

STORE TO FILE APPEAL

Attorney Bertrand Bernath, counsel for the store, announced that the case would be appealed to the Municipal Court of Appeals and said that a tremendous amount of business here may be affected by the ruling.

In giving his decision, Judge Kronheim declared the credit extended in this instance was not a business matter, but rather a gamble or a serious business error, and he warned:

"I don't think Congress contemplated setting up a small claims court for the purpose of correcting such an error."

Testimony brought out that a salesman for the store sold the shoes to Mr. McIver last March 9.

But when Mr. McIver took the shoes, he warned that if his wife didn't like them he would have to turn them back, he testified. When he arrived home, his wife said she thought they were too expensive.

WANTED TO RETURN SHOES

The defendant testified, and the plaintiff denied, that he phoned the store to tell them he wanted to return the shoes. The suit was filed after the store later tried unsuccessfully to obtain the rest of the purchase price, the court was told.

A test given by Judge Kronheim in the courtroom showed Mr. McIver's eyes were so weak he was almost unable to read. His signature on the purchase agreement, testimony showed, was an X.

Attorneys for the jewelry concern argued that the shoe sale was a normal business risk, but Judge Kronheim held otherwise.

"In business as in war, calculated risks must be taken. But this is no calculated risk. I do not think there was any sound basis for granting such a credit," the jurist declared.

STUDIED STANDARD TEXTS

Judge Kronheim pointed out that he had studied standard texts on credits and collections. Citing one by title, he added:

"There is nothing in that book or any other book on credits and collections, or any businessman's experience, which in the court's opinion could justify granting judgment in this case."

The jurist also remarked that he had some doubt as to the jurisdiction of the small claims court over such a claim. The court adjudicates suits involving debts up to $50. It handled 2,500 cases last month, many of them brought by merchants selling on credit terms, officials said.

Announcing plans to appeal the judgment, Mr. Bernath last night labeled it "dangerous" and "arbitrary," and said it was essential that it be clarified.

"This decision violates the fundamental right of two perfectly competent parties to enter into a contract," Mr. Bernath asserted. "With this decision, because a man had bad eyesight or hearing, a merchant couldn't sell to him. A contract wouldn't be good without a physical exam."

[From the Washington Times-Herald]

CREDIT STORE'S SUIT REJECTED BY KRONHEIM

(By George Norris)

Under a finding expected to have a far-reaching effect in collection of small debts here, Municipal Court Judge Kronheim denied a $12 claim of a store because of what he considered a questionable credit practice.

The newly appointed jurist, sitting in small claims court, took issue with the methods of the Universal Jewelry Co., Inc., in its "ordinary course of business," in denying its claim against Joseph McIver, 65, Negro, 2600 block Stanton Road SE.

MAY SET STANDARD

Court observers believe Kronheim's decision will set a standard requiring that many debt collectors must show the conditions under which credit of less than $50 will be extended to borrowers or persons purchasing items on time. The ruling also is expected to have a marked effect on small downtown merchants doing credit business and who bring a large number of the 2,500 cases taken into court monthly.

In the trial, it was brought out McIver contracted a $12 debt with Universal on March 9 when a company salesman sold him a pair of $14.95 shoes on a southeast street near his home. The salesman had been selling shoes to another customer in a nearby house and met McIver on the street.

McIver said he was required to make a $3 deposit and pay the balance at $1 a week. He admitted signing a contract with an "X mark," but contended the salesman said he could return the shoes if he did not like them. The defendant said he called the store to arrange for return of the shoes. However, Donald C. Gorman, the store credit manager, stated the store had no record of the call. The store's attorney, Bertrand Bernath, argued McIver should be required to pay, stating "the contract was made in good faith and the defendant received the merchandise."

PATRON NEARLY BLIND

Kronheim found in a courtroom test that McIver was nearly blind, being able to read only large letters, and could not write. The judge, also noting McIver earned only $18 a week as a coal hustler, said:

"There is nothing in the books on credit and collections I've read which would justify granting credit in this case. I am driven to the conclusion that the credit given here was not as a business matter, but as a gamble.

"If it wasn't a gamble, then it was a serious business error. Congress, in setting up this court, did not contemplate that the court would correct such an error."

COMPANY PLANS APPEAL

Kronheim then dismissed Universal's suit and granted McIver's claim to recover the $3 deposit. He also ordered the shoes, which he said were still unworn, returned to the company.

Later Bernath said he will appeal, stating he felt the decision denied the constitutional rights of two perfectly competent parties to enter into a contract.

Address Delivered by Maj. Aubrey Eban, Representative of the State of Israel to the United Nations

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an address delivered by Maj. Aubrey Eban, representative of the State of Israel to the United Nations, at Brandeis University, Sunday morning, June 19, 1949, in Waltham, Mass.:

You have registered a moving and significant occasion in honoring the State of Israel through its representative within the walls of an institution bearing the name of Louis Brandeis. Our generation has beheld the fulfillment of a vision which many who went before us saw as an act of pure faith. It is the vision of Israel reviewed and established. Many who were never granted the boon of seeing this aspiration realized in their lifetime are nevertheless the partners of modern Israel in the laurels of its victory. The revival of Israel as a free polity and culture rooted in the soil of historic memory, taking its equal place amidst the distinguished families of mankind became the yearning and passion of Justice Brandeis in the dignity of his declining years. In his name the cause of Israel became linked with the highest traditions of American liberalism and Jewish solidarity. It remains so linked unto this day.

The rise of Israel to sovereign independence after 2,000 years of anonymity and submergence is no ordinary event of contem-

porary history. It represents one of those rare impulses whereby the human spirit from time to time bursts out from the confines of its ordinary limitations. Social science and political research will find this a fruitful area of inquiry, long after Israel has outgrown the attentions of topical journalism. One of the oldest cultures of mankind having somehow survived at the depth of the emotions which they challenge and arouse. While we look for peace we shall do ourselves and the world no service if we distort the true proportions of aggression and defense of innocence and guilt. When wars are waged and finished the world asks one question alone. It is the question of initial responsibility; the question who first chose war. They who are convicted by this challenge owe it as their least duty to take a preponderant, constructive, and humble part in repairing those ravages which are still within the capacity of repair.

The first year of Israel's independent national life found the new republic in a desperate struggle for survival. The second year presents it with problems of consolidation, no less intricate and hazardous than any of those which it has successfully surmounted in the past. The attention now focused upon our social and economic difficulties should not lead anyone to imagine that Israel's political tasks are over. Yet at least we face these tasks in the full stature of sovereign equality within the very United Nations of whose judgment the State of Israel was born. When we raised the Star of David in the honored circle symbolizing the unity and common fraternity of mankind, we were assuming added responsibility as well as enhanced privilege. The Jewish spirit must now prove itself upon a world-wide arena. The universal concepts of Israel's prophecy, which constitute the moral foundation of the charter, are faced with concrete challenges in the manifold issues of international relations and fundamental human rights.

Israel's policy within the United Nations will be based upon democratic principle, international brotherhood, and regional responsibility. The first two principles need little explanation. Israel can never be neutral between reaction and progress, between the lingering ghosts of nazism and the reviving spirit of democratic government. As for universal brotherhood, we dare not be forgetful of the grim and awful holocaust to which the doctrines of racial and religious discrimination led our own people who were consigned in their millions—men, women and children—to cold-blooded slaughter. Surely this unique and tormenting experience must have left us with a sharpened sense of individual sanctity, a deep and abiding concern for fundamental human rights. It is of the third principle, that of regional responsibility, that I would speak to you in my concluding words. By regional responsibility I mean a sense of Israel's identity with the genuine interests of the Near East. There is much in the Arab world that we can neither emulate nor admire. We cannot be associated with conceptions of government based on personal autocracy, regarding government in terms of privilege, not of responsibility. We cannot endorse the huge social contrast, the sad disparity between the squalor of the many and the extravagant luxury of the few. We look with sympathetic aversion upon the illiteracy, ignorance, endemic disease and primary poverty which ravage and degrade the somber life of the common man in the countries of the Arab East. The squalor of the present insults the greatness of the past. Yet, whenever we see an impulse for peace and liberation awakening among our neighbors, Israel will be identified with that impulse. It was in that spirit that we seized the occasion offered by the discussion on Italy's former colonies to affirm our sympathy with the desire of the Arab people for swift liberation from outside rule. Israel wishes for its neighbors that which it has obtained for itself.

Yet this objective of regional cooperation must await the conclusion of peace. Armistice agreements have been produced by brilliant and disinterested mediation, and they must be conserved until a new basis of agreement is reached. In no circumstances will Israel abandon this position; except in favor of a new one resting equally upon initial consent. Yet the transition to permanent peace is proving difficult; and the world is entitled to know the reason why. The Government of Israel and the Arab states are under imperative obligation to negotiate a settlement of all questions outstanding between them. This is precisely what Israel has agreed and the Arab states have refused to do. The resolution of the general assembly contains basic principles on the international responsibility of the holy places and Jerusalem, on the refugee problem, on access to ports, on the signature of peace agreements. Israel has made proposals, all with an element of concession, on each and every one of these basic principles. The Arab states have made no response to these proposals, have submitted none of their own accord, and still refuse to comply with the basic objective of the general assembly's resolution which is an injunction to negotiate a peace settlement. Israel must declare that this refusal to negotiate peace when called upon to do so by the United Nations constitutes a grievous offense against the international community and against peace-loving peoples everywhere. Until that attitude is changed the deadlock will endure and the prospect of a reviving united Middle East must linger in suspense.

But the prospect must on no account be relinquished; the stake is too momentous both for Israel and the Arab world. No amount of support which Israel can obtain in Europe or America, in the Old World or the New can compensate for the lack of a stable and secure relationship with the immediate environment in which we live. The Arab world will find no salvation for itself until it replaces the conflict with Israel by the pacific attitude which the charter dictates for the relations between member states. Will Israel's second year resolve the issue of peace as decisively as the first year settled the issue of war?

Few questions of international relations are of greater moment in our time. I know that the community of America together with public opinion generally will continue to follow this episode with vigilance and pride for Israel has given substance to the fact and the prestige of Jewish identity. It is good to work for such a people at such a time—for it is thus that we link ourselves with immortality. Israel sets out upon its journey from the United Nations haven in which it found original shelter, determined to play its part in the common defense of the human spirit against the perils of conflict and despair.

England Be Just

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 22, 1949

Mr. McDONOUGH. Mr. Speaker, in the current issue of the Catholic weekly, America, there appears an editorial entitled "Ireland and the Atlantic Pact." This editorial is very timely in view of the present consideration of the Atlantic Pact agreement in the other body and the frequently asked question as to why Ireland has not joined with the other European nations in signing this pact.

If Ireland were to join the Atlantic Pact, it would mean that Ireland would be in effect guaranteeing the independence of the six counties in northern Ireland, which are an integral part of the island and which should be an integral part of the nation. The six counties were cut off from the rest of Ireland by an act of the British Parliament for the sole purpose of maintaining a British foothold in Ireland and of retaining land and sea bases on which to design the defense of England. This was done without the consent of the Irish people, without the assent of a single Irish member of the British Parliament, and through the force of superior arms in the hands of the British.

It is time that the British Government should exercise at home the principles of democracy, individual liberty, and the rule of law which she professes to favor for the other nations of Europe. In short, England should first be just at home if she is to bring about justice abroad. This is so well-expressed in the editorial in America that I ask unanimous consent to have the editorial inserted at this point. The editorial, entitled "Ireland and the Atlantic Pact," reads as follows:

IRELAND AND THE ATLANTIC PACT

In a last-minute move on May 2, the British Government announced that the bill it was introducing on the next day to recognize the Irish Republic would contain a clause guaranteeing the perpetuity of the Government of Northern Ireland, which rules the six counties cut off in 1920 from the rest of Ireland. This move was in contravention of an agreement between the Irish and British Governments to consult together concerning their respective parliaments on the occasion of the setting up of the republic.

Since this raises the partition question, which is the sole stumbling block in the way of Ireland's adherence to the Atlantic Pact, it is worth considering what kind of government the British are guaranteeing in Northern Ireland. That Government was set up by the British in 1921. In 1922 it passed a special powers act, which became permanent law in 1933—an act giving the Government unlimited power of arresting and imprisoning without trial persons it deems dangerous to the state. The Government is little more than the state organ of the Orange Order, a virulently anti-Catholic body. Of the use of these special powers by the Northern Government, Britain's National Council for Civil Liberties—which included people like George Bernard Shaw, Lady Astor, the late H. G. Wells—had this to say in its report on the anti-Catholic riots in Belfast in 1935:

"Through the use of the special powers, individual liberty is no longer protected by law, but is at the arbitrary disposition of the executive. This abrogation of law has been so practiced as to bring the freedom of the subject into contempt."

In the summer of 1947 some 200 members of the British Parliament, which retains suzerainty over Northern Ireland, tried to have the British Government do something about this long-standing denial of civil liberties, but Mr. Attlee did not seem interested. In fact, at no time in the past 27 years has the British Government lifted a

finger to protect human rights in Northern Ireland. Its present action is a gratuitous insult to the Irish people and their Government, for existing legislation rendered the addition of the offensive clause completely unnecessary.

History would seem to be repeating itself. After the First World War, when the United States was debating the League of Nations, Irish-American opinion was inflamed against the League by Britain's denial in Ireland of the "right of self-determination" she was proclaiming for Europe. At the present moment, with the Atlantic Pact under consideration, Britain has gone out of her way to anger Irish-Americans by her disregard for "the principles of democracy, individual liberty, and the rule of law" which the Atlantic Pact, according to its preamble, is designed to safeguard.

The Irish Government understandably feels that to sign the pact under these circumstances would be tantamount to underwriting the existence of partition for the next 20 years.

In view of the paramount importance of building a strong defense against Communist aggression, it has been argued that Ireland should waive such considerations and sign the pact. It would be more logical to urge first that Britain show some concern about the denial of civil liberties in Northern Ireland. Surely we should ask England to be just before we ask Ireland to be generous.

It needs only a glance at the map to understand the strategic importance of Ireland in the Atlantic defense. Since the United States will bear so great a share of that defense, it would seem that our Government has sufficient standing to offer its services toward mending a situation that threatens to leave a dangerous loophole in the Atlantic armor.

Wasteful Spending and Destructive Taxing

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1949

Mr. ALLEN of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith some very fundamental economic thoughts as expressed to me in a letter from a constituent, Mr. Tom H. Kerr, of Galena, Ill.:

America attained her greatness through the freedom of enterprise and the law of supply and demand. The prospect of adequate reward for initiative has been the primary contributing factor in achieving our high standard of living. Under the profit system, government's position was intended to be that of a monitor—the maker and enforcer of basic rules to insure fair play.

Today, the greatest emphasis of government rests on promoting the welfare of the pressure groups that control the largest number of votes. Self-discipline and foresight are of secondary value in present-day politics. Each year since 1932, the drift toward the welfare state has been more pronounced. Funds to support the functions of the expanding welfare state naturally must come from the profits and income of individuals, business, and industry. While a constantly larger proportion of profits are drawn off by government in the form of taxes, the normal and healthy growth of individual and corporate enterprise from within itself becomes increasingly more difficult. We have reached the state where property can be sustained only when stimulated by outside forces—war, rehabilitation after war, and then deficit spending or monetary inflation. Apparently through such artificial stimuli alone can consumption be expected to support a high level of productivity.

Government now absorbs over 25 percent of national production and spends it nonproductively in keeping alive its own huge political machinery, in donations to pressure groups, and in aid to foreign competing systems. Unfortunately, under such a program of short-sighted extravagance, our system of private enterprise becomes overburdened. The only prospect of revival is in a resumption of "shots in the arm" from government.

The consequences of wasteful spending and destructive taxing are abundantly evident throughout history. Authorities say the Roman Empire in its closing days required 40 percent of average personal income for maintenance. A flight from money resulted in an unwieldy barter system. Free flow of trade on a broad scale became impossible. Thus deprived of its lifeblood, the whole order turned into chaos. Let us remember as our tax rates trend higher that levies approximating 40 percent have often been effected in the past; but, without exception, the economy of such nations collapsed and failed to recover over long periods.

This year the Dominion of Canada has announced a 32-percent reduction in personal income taxes. Furthermore, Canada has acknowledged that taxing corporate profits and also dividends received is double taxation. A large number of excise taxes are to be eliminated or reduced. Total Canadian tax reductions will amount to $370,000,000. On the basis that our population is about 12½ times that of the Dominion, this reduction would figure about $4,500,000,000 in our terms. Canada's total debt is now only $11,800,000,000. Again applying the population ratio, this would be the equivalent of $145,000,000,000 for the United States. But our actual national indebtedness, by comparison, is practically twice that of Canada.

Canada is to be commended for her prudent fiscal policy. It creates confidence in her government. Under the principles of true democracy, government should serve as an aid to the business of production for profit. It should act as an auxiliary stimulus to the individuals and corporations by whose efforts it is supported.

The greatest contribution the United States can make toward world recovery is to permit capitalism to function smoothly. This can be done only through business having confidence in government. Confidence that billions in tax revenue will not be spent to promote socialism. Confidence that government at least has the intent to foster conditions favorable to business health; favorable to initiative; favorable to the free flow of venture capital in normal wealth-producing channels.

The words "capitalism" and "democracy" are too often used as if synonymous. In their relationship there is a psychological counterplay that, while apparently incompatible, could be made to operate in the support of what we call our American way of life. The obstacle in the promotion of social stability is in the political strength of self-seeking pressure groups in both camps. The counterplay of antagonisms make for social unrest, economic insecurity, and the deterioration of investment values in our many corporations.

The security of labor and the stability of capital rests on the same foundation, their mutual welfare. Let us hope that labor and capital will soon discontinue their pressure-group antagonisms, for only by so doing can we retain our present form of government and our American way of life.

Independent Oil Jobbers' Cooperative

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1949

Mr. LECOMPTE. Mr. Speaker, for a number of years the Ways and Means Committee has had before it proposals for taxing cooperatives, but no definite conclusion appears to have been reached as to action to be taken. In the meantime, the cooperative movement has spread and very recently the Independent Oil Jobbers of Iowa announced that it plans to reorganize its State association on a cooperative basis, with the objective of benefiting under the tax laws. Under leave to extend my remarks in the RECORD, I desire to include therein the following story that appeared in the Des Moines Sunday Register on June 5, 1949, on the subject of the oil jobbers' plan:

OILMEN PLAN STATE-WIDE CO-OP—ACT TO OBTAIN TAX BENEFITS FOR JOBBERS

Independent oil jobbers of Iowa Saturday announced plans to reorganize their State association on a cooperative basis to provide for payment of consumer dividends of the same type now paid by cooperatives with which they compete.

Tax exemptions enjoyed by cooperatives also would be obtained for the jobbers under this plan.

DECISION REACHED

A State-wide jobbers cooperative, organized so that it will be exempt from corporation taxes, will be set up by the Iowa Independent Oil Jobbers Association. It is expected that 6 to 8 months will be needed to make the change.

A major shift in strategic tactics was apparent in the announcement to swing to the cooperative plan.

For many years the independent oil jobbers have been among the leaders demanding that Congress change Federal income-tax laws so that cooperative dividends would be taxed against the co-ops.

Decision to form the organization, to be known as the Iowa Petroleum Cooperative Association, was reached at a board of directors meeting of the Iowa Independent Oil Jobbers Association here last week.

PARENT GROUP

The jobbers association will be the parent group. The articles of incorporation and bylaws of the association will be changed by incorporating into them the provisions which now give cooperatives tax exemptions, said J. A. Dennis, of Des Moines, association secretary.

With approximately 800 Iowa jobbers eligible to participate in the cooperative, the usual cooperative practices would be followed.

Consumer dividends would be paid to the ultimate consumer—the motorist who buys gasoline for his car—under this plan.

No business, corporate or other, is taxed on patronage dividends paid as a result of a prior commitment to patrons. Money now paid by jobbers as corporation taxes presumably would help to swell the funds available for dividends to ultimate consumers.

TAX EQUALITY

Purchasers' certificates would be sold, which in turn would allow the corporation to pay patronage dividends to consumers, Dennis said.

Under this plan the individual oil jobber, or wholesaler, would continue to have a free

hand to buy from whatever source he might choose.

He would continue to sell to his regular filling-station customers. The filling stations would issue the purchase certificates to motorists buying their products.

At the end of 3 or 6 months—or some designated period, the dividends would be announced by the cooperative and the motorists participating in the plan would be paid dividends on the basis of their purchases.

"The independent-business man," Dennis said, "has fought for tax equality, and on the other hand the co-ops and the privileged groups have fought to maintain their tax exemptions. For several years these privileged groups, because of their tax exemptions and subsidies, have seen fit to engage in nearly all lines of business.

"Now the time has come when anyone in competition with such privileged groups is unable to compete with them unless he is afforded the same privileges.

"We speak now for the independent oil jobbers of Iowa, because in the petroleum business the co-ops and Farm Bureau have expanded to the extent that we can no longer ignore their existence.

"In order to compete in this field, it becomes necessary for the independent jobber to face the issue and do something about it.

FULL SHARE

"The independent oil jobber has heretofore paid his full share of the national tax burden, while his competitors, through the exemption, have been able to expand by buying production, refineries, and pipe lines.

"They have a big advantage, so regardless of our thinking in the past we must meet the issue head-on."

Dennis said that at present the association did not anticipate the plan would have any effect on supplying companies.

"Everyone making his purchases through a major supplier can continue as before," he said.

The approximately 800 independent oil jobbers in Iowa are in competition with about 130 separate units operated by the Farm Bureau and other cooperatives.

All oil jobbers in Iowa are invited to participate in the plan and association membership is a requirement, Dennis said. He added that a State-wide meeting to explain the plan will be called.

Veterans' Insurance Program Needs Improving—Let Us Create a Separate Government Corporation To Handle Veterans' Insurance on Sound, Businesslike Basis

---

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 22, 1949

Mr. EVINS. Mr. Speaker, I desire to congratulate the President upon his action in submitting to the Congress plans for making a reorganization within the executive branch of the Government. These reorganizations are needed and should be approved. They will effect improved efficiency and operation of the Government and also provide desired economy.

The American people are greatly interested in both—improvement and efficiency in the operation of the Government—so I commend the President in the recent bold and prompt action which he has taken in this connection. There is need for other reorganizations within the executive branch of the Government, and I am today introducing a bill to provide for the reorganization of the Insurance Branch of the Veterans' Administration—by creating a separate Government corporation along the lines of the RFC and the Commodity Credit Corporation—to administer the veterans' insurance program on a more efficient and businesslike basis. The measure which I have introduced is in line with the recommendations of the Committee on Reorganization of the Executive Branch of the Government and certainly it should be favorably considered.

Mr. Speaker, the matter of the Government's vast insurance program operated in the interest of the veteran and servicemen is, as we all recognize, one of the most important functions administered by the Veterans' Administration.

Yet, I believe, we recognize also that this major function of the Veterans' Administration has been for some time past and is presently the source of general dissatisfaction among veterans—a situation which has resulted in the failure of many veterans to reap the full benefits to which they are entitled and which they have every right to expect under the provisions of the United States Government life insurance program and the national service life insurance program.

It was certainly not news to many thousands of veterans when the Commission on Reorganization of the Executive Branch of the Government, after detailed and extended study of the Veterans' Administration, concluded that the type of service rendered by the insurance branch of the VA was unsatisfactory and inefficient. Veterans who have had insurance dealings with the VA are well aware that the type of service in this connection leaves much to be desired. Indeed, because of the unsatisfactory service many veterans through sheer frustration or disgust have dropped their service insurance altogether or have transferred all such business to private insurance companies. The permitting of veterans insurance to lapse is not in the best interest of the veteran nor in line with the intent of Congress in writing these statutes.

The Committee on Veterans' Affairs of the House of Representatives during the previous session of Congress made an inspection of the Insurance Division of the Veterans' Administration and held hearings on this operation for the purpose of evaluating the effect of the methods and procedures employed and for making recommendations for the effect of improving the insurance service to veterans. During the course of this study many officials of the veterans' insurance branch were questioned; field officers and offices visited; clerical and accounting personnel in the insurance division were observed and studied; documents and correspondence pertaining to the subject were examined. Representatives of veterans' organizations and officials of commercial insurance companies were interviewed. As a result of the inspection and hearings, it was determined that the VA insurance service to veterans and dependents was most unsatisfactory.

This branch of the VA has been the source of a greater number of complaints than any other VA activity. Yet this is the one service in the veterans' program that the veteran pays for himself. He is entitled to comparable service to that which he could purchase from a recognized company.

Among other things, he is entitled to an attractive policy—the only tangible thing a purchaser of insurance receives. He is entitled to prompt and regular notices of premiums due, follow-up notices if he overlooks payment, prompt notice if he permits his insurance to lapse, prompt action on requests for changes, prompt action on an application for conversion and dividends when due.

Only recently the Administrator of Veterans' Affairs announced that the refund on overpayment of premiums and dividends on VA insurance by veterans would perhaps begin to be made during January of next year. I am glad the VA Administrator has made this announcement. It is long overdue. Veterans have in many instances overpaid premiums and this money belongs to them and not to the Government. Likewise, dividend payments are long overdue.

The committee called this matter to the attention of the Veterans' Administration more than a year ago, but as yet no action has been taken in this regard. An efficient, businesslike organization with much less personnel would have properly handled this matter long before the present time.

Among other things causing a great number of complaints regarding veterans' insurance are:

First. Letters of inquiry and requests for action are invariably ignored, from the viewpoint of the veteran, because he received no acknowledgment or reply for weeks or months.

Second. Delays in accomplishing requested actions frequently result in overlapping actions, thus further confusing the status of the insurance.

Third. Veterans whose insurance has been paid regularly receive lapse notices.

Fourth. Other veterans who have not kept up premium payments do not receive lapse notices.

Fifth. No policies have been issued.

Sixth. Applications for conversion of term insurance to regular forms are unacknowledged and piling up into serious backlogs.

Seventh. Settlements of death and disability claims are subject to inexcusable delays which frequently cause hardship.

These and other insurance service deficiencies are freely admitted by VA officials. With a peculiar complacency which says in effect, "Considering all our difficulties, we are doing a pretty good job." The net result of the VA insurance efficiency is to cause veterans who

can afford insurance to drop it with resulting loss of insurance authorized for the veterans by the Congress.

A recent compilation of statistics by the Veterans' Administration show that there are approximately 5,688,000 national service life insurance policies in force. Further, United States Government life insurance policies in force number 540,000. Number of veterans carrying national service life insurance, 4,800,000; number of men still in military service, 2,000,000; number of remittances received per month, 2,000,000; number of employees in VA insurance division, 18,500.

It should be borne in mind, in analyzing the above figures, that, first, immediately following World War I there were approximately 4,000,000 Government life insurance policies in force, showing that the number has fallen off sharply, to 540,000 policies; second, that of a total of 19,000,000 veterans on the Veterans' Administration rolls only 5,340,000 have retained any kind of Government insurance; third, that of 4,800,000 World War II veterans retaining veterans' insurance, 2,000,000 men are still in service, requiring no attention from the Veterans' Administration; fourth, that the 18,500 people employed in Veterans' Administration insurance far exceeds the number of employees per policy required by any commercial insurance company.

The committee investigating this matter further found that methods and procedures employed by the VA insurance division was antiquated and provided very poor service.

An offer was made by an old-line and well-known commercial insurance company to make recommendations to the VA without charge for improving the service but VA officials turned this offer down.

Following its investigation the committee concluded that, first, the present methods, procedures and system used in the Veterans' Administration insurance operation are inefficient and inadequate for satisfactory service to veterans and their dependents; second, the continued refusal of the Veterans' Administration insurance division officials to act on suggestions for changes and improvements in methods or to concede that there is anything wrong with the present system indicates the desirability of a change of top personnel in the administration of veterans' insurance.

I do not wish my remarks in this connection, Mr. Speaker, to be interpreted as a general criticism of all Veterans' Administration operations. The VA as a whole is doing a good job and is the source of many beneficial actions in the interest of the veteran. My remarks are addressed only to the type of insurance service which the veteran is receiving from the VA and I want to add that it is my opinion that this operation is too vast and too complex for proper administration in its present set-up as a part of the regular business of the VA.

The veteran has a right to expect and does expect from the VA insurance division service comparable to that provided by private industry. On a peacetime basis, the Government insurance, as I have indicated, is largely paid for by the veteran himself. His expectation of commercial-type service is, therefore, natural and reasonable.

In this connection, Mr. Speaker, the bill which I have today introduced is directed, as I have indicated, at this service, and will, I believe, correct these unsatisfactory conditions.

As I have indicated, the bill is in line with recommendations made by the Hoover Commission. It would establish a Veterans Insurance Corporation—an organization separated and divorced from the VA—to handle all Government insurance matters.

This would in no way be a new bureau, as such, of the Government. It would merely effect the separation—a needed separation—of an operation which has become too big for the Veterans' Administration to handle along with all its other functions. It would be in the interest of efficiency and economy. When the Government's insurance service to veterans is put on the same basis of operation as the great commercial companies of the United States, we will not only have the benefit of economical and efficient service, but we will be rendering the type of service which every veteran has a right to expect and which is in his best interest.

Address by Brig. Gen. Hugh B. Hester, Commanding General, Philadelphia Quartermaster Depot, at Flag Day Exercises, Betsy Ross House, Philadelphia, Pa., June 14, 1949

EXTENSION OF REMARKS

OF

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1949

Mr. WOLVERTON. Mr. Speaker, on June 14, of this year, Flag Day was observed in the city of Philadelphia with ceremonies at the Betsy Ross House in that city.

It is the custom of the city of Philadelphia to observe Flag Day each year by having an outstanding and distinguished person deliver a commemorative address at the birthplace of the American flag. This year Brig. Gen. Hugh B. Hester, Commandant of the Philadelphia Quartermaster Depot was selected for the honor of delivering the annual address. His address was of a high character. He expressed thoughts that are entitled to have the careful and thoughtful consideration of all citizens. Therefore, in accordance with consent of the House granted to me I submit the speech of this distinguished soldier delivered on the above occasion:

It is a great honor and privilege to meet with you at the American Flag House and Betsy Ross Memorial in commemoration of our flag, which was adopted here in this city 172 years ago. In a way, it is particularly fitting and appropriate that I meet with you at this shrine, as the organization which I command, the Philadelphia Quartermaster Depot, is the real heir, flagwise, of Betsy Ross. At the depot we manufacture many thousands of flags annually for our armed forces and other agencies. Like most material things in our life, flag-making today is vastly different from that of the time of Betsy Ross. In her day, many hours, perhaps days, were devoted to the making of a single flag. At the Quartermaster Depot, hundreds are made daily through advanced techniques.

We like to think, however, that what the flag represents today has changed in no fundamental way. It was then a rallying point of the defense of our country's ideals, an emblem of our unity, strength, and purpose as a people. That purpose meant freedom from the arbitrary exercise of power over our lives, from whatever source, including our mother country; freedom to seek truth, goodness, and beauty in our own way. We like to think, too, that through the years this emblem has come to signify a love for liberty and freedom, not only for ourselves, but for others with similar aims.

Liberty and freedom, unfortunately, cannot truly be inherited by a nation or a people, any more than children can inherit the knowledge, courage, and character of their parents. Each generation must learn to understand and must dedicate itself anew to the pursuit of liberty and freedom. Unfortunately, these do not have the same meaning for all of us. To some, liberty means license; to others freedom means its denial to some. Of one thing we are sure, however, in the time of Betsy Ross, liberty and freedom were the two most meaningful words in the English language, and while their flame may have flickered and become dim at times, even in our minds and in our national struggles, nevertheless we have always recovered as a people to restore their brightness and strengthen our resolve to secure even greater liberty and freedom for ourselves and to assist others in their struggle for them. I urge now that we dedicate our lives again as individuals to the pursuit of freedom, which means not only for the American people, but for all people a freedom from want, a freedom from fear, a freedom from intolerance; a liberty that permits men and women, not only in the United States, but everywhere, to live in a world where their highest physical, intellectual, and spiritual possibilities may be achieved.

Liberty and freedom, when combined in a political system, become democracy. In a democracy, the individual is the important thing. The welfare of the individual is the supreme purpose for which government is formed. It has no other purpose, no other reason, than to free men, women, and children to live their lives according to their own choice, provided that choice does not interfere with its proper exercise by others. It means men and women have the power to achieve, as well as the right to work for a fair wage, a fair profit, free speech, free assembly, and freedom of worship. In its finest form, it means the absence of intolerance and bigotry, the freedom to seek truth wherever it leads.

I repeat, liberty and freedom, which when synthesized become democracy, must be sought and achieved by each generation. Today, as a backwash of war, liberty and freedom everywhere are under attack. Rumors of war and fears of depression are coming thick and fast and may frighten us into abandonment of some of our liberties and freedoms; yes, even into an imitation of totalitarianism. Some say we must limit freedom of inquiry, freedom of research, freedom of assembly, even freedom of dissent, for purposes of national security or some other equally plausible reason.

I do not believe our democracy is so weak that it must imitate in any way the methods of the dictator. Our real danger is fear or mistrust of our own way of life, a lack of faith in those things which gave birth, strength, and direction to our country—the

liberty and freedom which are democracy. Fear of fear itself can and may cause us to commit national suicide.

I'm a professional soldier, and in speaking to you here on Flag Day, I represent the officers' corps of the armed services—a corps that has no politics, a corps that will lead your sons and daughters into any future war of ours as efficiently, as gallantly, as courageously, as devotedly, as their abilities permit. Have no doubt about that. However, you, our citizens, have a great responsibility to make certain that we have no future war if avoidable, and if unavoidable, that it be a just war. It is my prayer, and I believe it is the prayer of the overwhelming majority of the officers' corps, that it may never again be necessary to lead your and our sons and daughters into battle. If it should nevertheless become necessary, I pray, and I believe you all pray too, that it will be in defense of a way of life that is true and good and beautiful—the way of life symbolized by the flag which Betsy Ross made 172 years ago.

I want to thank you, Mr. Chairman, for the privilege of assisting in this commemorative exercise in Philadelphia, a city so filled with the shrines of our country's past and the cradle of its liberties.

Mr. Mayor, yours is a friendly city, still possessed of that charm and fine community spirit and pride that marked our colonial and pioneer life. We have been here barely 7 months now and already feel that we are citizens of your city; we admire and revere its past; we take pride and satisfaction in its present achievements; we have faith and confidence in its future.

Are the Nation's Schools in for a Witch Hunt?

EXTENSION OF REMARKS

OF

HON. E. E. COX

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 22, 1949

Mr. COX. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Atlanta Journal:

ARE THE NATION'S SCHOOLS IN FOR A WITCH HUNT?

Taken at face value, the statement issued by Chairman JOHN WOOD'S House Committee on Un-American Activities Saturday should comfort educators who feared that the committee's inquiry about textbooks meant the schools of the Nation were in for a well-publicized dose of tar and feathers. The committee now reassures the public with the assertion that it does not desire to censor textbooks or interfere in any way with academic freedom.

Not only has the House group not accepted as gospel the petition made by the Sons of the American Revolution, Mr. Wood's statement emphasized, but "it is of no concern to the committee if the Communist Manifesto or any other book or document containing the tenets of communism is being studied for comparative purposes in our educational institutions." That is clear enough.

What the Sons of the American Revolution have charged, in asking the investigation, is that the national security is threatened by a subversive textbook problem, national in scope. Their petition says so-called progressive educators have succeeded in introducing material slanted in favor of socialism and communism. Some of it is designed, they add, to convert this country into a social-welfare type of State. As a preliminary to weighing these allegations, the House committee asked a number of schools for lists of their textbooks. The result has been a storm of protest and criticism.

This newspaper has not joined the chorus because it seemed to us that Mr. WOOD'S committee, if it does merely wish information, should not be attacked for seeking the truth. If investigation should reveal that a group of Red plotters are poisoning the wells from which the youth of America is drinking, then a disclosure of this fact would be a proper function of the committee and a matter of concern for every citizen. We may think the SAR's fulmination absurd but a sane, reasonable weighing of the charge should be no threat to academic freedom.

That, of course, is just the point. Can the House Committee on Un-American Activities be trusted to make a sane and reasonable judgment or will it, in fact, use the information that it gathers on textbooks as a springboard for another harmful and thoroughly inconclusive publicity extravaganza? The spectacle of politicians meddling with school texts is one that fills liberal-minded people with horror, as well it might. Considering the committee's past record, small wonder their inquiry into the schools has brought misgivings.

But the caliber of the new un-American group has not yet become evident. This is in fact its first real test. Mr. WOOD has shown thus far none of the limelight-seeking proclivities of his predecessors in the chairmanship. Let us hope that he has too much judgment and common sense to allow his committee to be used for a hysterical tar-brush campaign against the Nation's teachers.

Failure of Denazification

EXTENSION OF REMARKS

OF

HON. GUY M. GILLETTE

OF IOWA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 22 (legislative day of Thursday, June 2), 1949

Mr. GILLETTE. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Denazification Fails, German Editor Says," written by John London and published in the Washington Post of June 20, 1949.

There being no objection, the article was ordered to be printed in the RECORD as follows:

DENAZIFICATION FAILS, GERMAN EDITOR SAYS

(By John London)

The western powers have definitely failed to denazify the Germans because of the military government's ignorance of German psychology, a prominent German publisher stated here last night.

The statement was made in an interview with Franz Joseph Schoningh, publisher and editor of the Sudeutschen Zeitung, largest newspaper in southern Germany, with a circulation of 280,000, and Hochland, leading Catholic monthly periodical.

Schoningh, on a visit here with other newspapermen to study American journalism, outlined several reasons why the occupying powers have not reached the mind of the average German.

While stressing that his views are not meant as a rebuke to the military government, many of whose officials have heard his suggestions sympathetically, Schoningh pointed out:

1. Most Germans realize Goebbels' propaganda was false. They also suspect any source of information now.

They can only be persuaded as to the wrongness of nazism by facts, facts, facts—and the western powers have failed to produce documented, proven facts.

GOT OFF TO BAD START

2. The Allies got off to a bad start. They initiated reeducation of the Germans by stressing mass guilt of the German people, which created resentment and suspicion, not conversion and belief.

3. The Allies have not sufficiently used German leaders to enlighten the people. What the Allies themselves have said about Hitler's schemes for world conquest and the vicious brutality of nazism has been held suspect. After all, the Germans thought, conquerors and occupiers were doing the talking.

4. Denazification courts boomeranged. By hauling into court masses of small fry, many of whom belonged to the Nazi Party only for expediency, by delaying action against bigwigs, the courts antagonized the masses and discredited themselves.

As an example of the lack of documented material on the history and roots of National Socialism in Germany, and how it led to war, Schoningh pointed out that he had to get material from Switzerland to produce an article on the subject.

Textbooks in the schools mentioned nothing at all about recent history, not a word about nazism, how it arose and what it did to the world, he said.

"If I ask a man in a German street why World War II started," said Schoningh, "9 out of 10 say it was because the English declared war over the Polish corridor.

"They have a feeling instinctively that something the Nazis did wasn't right because it all ended disastrously—but what was wrong they don't know."

This reaction is understandable, inevitable, he said, noting that only one small book has been published in Germany since the war to explain the causes of the holocaust. That book, by one Kordt, tries to show how Hitler connived for war—but it is written for "highbrows," beyond comprehension of the masses, he declared.

NEWSPRINT SHORTAGE CITED

It is even difficult to keep Germans informed of current events, because of the shortage of allocated newsprint, he said. "During the Nuremberg trials my paper could only publish twice a week," he said, "and then we were happy to get 16 pages of newsprint all week.

"We need a flood of pamphlets, books, articles—all positively, irrefutably documented—and cheap enough for the man on the street, on such topics as: Did Hitler want war? Was it Hitler's intent to destroy the Polish Nation? What really happened to the Jews?"

Then, he said, "there will be an answer for the average man who asks for proof when he is told of the evils of the Hitler regime."

He stressed the importance of the Hosbach documents, vital evidence in the Nuremberg trials. They are documents of a high-ranking Nazi official who attended secret policy conferences when Hitler blueprinted his scheme for world conquest.

Such documents, the publisher insists, should be reproduced prolifically, made available to all German educators, writers, intellectuals, politicians, and other leaders.

NEED RESEARCH CENTER

Schoningh believes the Allies should help establish a German research center, to probe into the origins and history of nazism. This would be the academic fountainhead for documented information to convince the people, he asserted.

Other media, such as radio and films, should be utilized by Germans themselves to sell democracy on the basis of sound understanding of the German mind today, he suggested.

For example, he said, "the Allies after the war showed films depicting atrocities in concentration camps. At first attendance was terrific. But the commentary indicted the entire German people, also, not just the regime and its leaders."

"The terrifying impact was wasted," he is convinced, "because the approach was psychologically unwise."

SUGGESTS SEQUENCES

He suggested such documentary sequences be knitted together:

Scenes from the Twenties of July, filmed at Hitler's behest. It shows the trial and hanging of German military leaders whose plot to kill Hitler was foiled.

One sequence shows a German officer being asked by an hysterical judge why he as an officer turned against his Fuehrer. He replies: "Because I was shocked and horrified by the savage murder of innocent civilians in Poland."

That scene—showing top German officers themselves were disgusted with nazism—and a scene showing a conspirator being hung by thin wire, at Hitler's request, so his agony would be protracted—should be capped by documentary shots of Nazi atrocities, Schoningh advised.

Another idea would be to show a frantic Nuremberg Nazi Party rally, followed by the Russian documentary on the slaughter of German youth at Stalingrad.

WOULD STRIKE HOME

"That would strike home," he said. "They would see the connection, how it began, yes, and where it ended—in destruction."

By such means, Schoningh said he believed the Germans can positively be convinced of the evils of the old regime, a necessary prelude to their acceptance of democracy.

"Meanwhile," he said, "Russian propaganda has happily failed in the western zone." This was because the recent currency reform has raised the western zone standards of living while Russian maltreatment of Germans in their zone has been made known, by word of mouth, throughout the country.

DENAZIFICATION PROBE ASKED

Senator GILLETTE, Democrat of Iowa, yesterday urged an immediate congressional investigation of the denazification program in Germany to prevent what he called a threatened revival of fascism.

Speaking over local radio station WWDC, Gillette revealed that he and three other Senators are supporting a bipartisan resolution to authorize such an inquiry. He criticized short-sighted, irresponsible, and somewhat stupid American policies in Germany and said there are indications that some of our people have been carrying on mutual admiration societies with old German nationalists and newer Nazis.

Southern Key to Housing

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 22 (legislative day of Thursday, June 2), 1949

Mr. SPARKMAN. Mr. President, there appears in the New York Times of today an editorial entitled "Southern Key to Housing." I ask unanimous consent that this editorial be printed in the Appendix of the RECORD, and I commend it to the careful reading and consideration of everyone.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SOUTHERN KEY TO HOUSING

The South may gain more from the passage of the housing bill now before the House than any other region of the Nation, and its representatives hold the key to its program in the Eighty-first Congress. Out of 435 Members of the House, 84 come from the southern States of Alabama, Arkansas, Florida, Georgia, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, and Georgia. The 21 Congressmen from Texas should be added to this group, making 105 House Members from below the Potomac. A coalition of northern and southern opposition to the bill could defeat the long-deferred program of public low-rent housing, farm housing, and slum clearance in the Eighty-first Congress.

Yet no region of the Nation has shown more interest in the continuation of the housing program than the South. Included in the portfolio of applications for additional low-rent housing units filed by local housing authorities with the Public Housing Administration, a total of 94,813 units, or more than 25 percent of the 374,840 units requested, would be located in those States which hold the key to the program's future. There are 191,700 public low-rent housing units now in operation under the housing act of 1937, and 56,000, or 29.6 percent of the total, are located in the South.

In no American region has the public housing program been more successful than in the southern region. More than half the families living in its public-housing projects are Negro families, many of whom formerly lived in slums subsidized by the costs of an excessive burden of services they imposed on municipalities. The passage of the housing bill would spur the industry of the South and other regions. Local housing and redevelopment authorities could clear a slum area, acquired through purchase or condemnation, and then make the site available for redevelopment by private enterprise. Private capital could move in when the slum was moved out.

Lie Offers UN Plan for Aid to Retarded Areas

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 22, 1949

Mr. MULTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article by David Perlman which appeared in the New York Herald Tribune of June 17, 1949:

LIE OFFERS UN PLAN FOR AID TO RETARDED AREAS—SAYS MUCH OF THE FINANCING MUST COME FROM DOMESTIC SAVINGS IN SUCH COUNTRIES

(By David Perlman)

LAKE SUCCESS, June 16.—United Nations Secretary General Trygve Lie today offered the world's underdeveloped countries a program for raising an estimated $17,000,000,000 a year over the next 4 years to finance their difficult climb toward economic health.

Mr. Lie outlined the program in a 142-page report to the UN Economic and Social Council that, in effect, proposed the second phase in the UN drive to raise living standards on all the continents.

Phase one was the technical assistance plan, under which the UN is called for an expenditure of $86,000,000 in the next 2 years, to teach the underdeveloped nations how to lick such problems as disease and food shortages, so they can be ready for modern, economic development in industry and agriculture.

The second phase, according to Mr. Lie's report, must be accomplished largely by the underdeveloped nations themselves, and involves the far more difficult task of finding the money for large-scale modernization and expansion of all forms of production.

WOULD CALL ON SAVINGS

A major part of the money, the report points out, must come in the form of domestic savings, and the plowing back of investment income into planned expansion within each underdeveloped nation.

At least $4,000,000,000 a year, however, will have to come from foreign investments, according to a report of the Food and Agriculture Organization, which formed a part of Mr. Lie's report.

The FAO's analysis showed that this amount has already been funneling into the underdeveloped countries since the war, but that 90 percent of it came from governments, and three-quarters of that total came from the United States and Canada alone.

International financing by governments is on the decline, the report pointed out, and the underdeveloped nations must now turn to private investment for funds. But to get private money from abroad, Mr. Lie said, substantially greater incentives than now exist must be given to foreign investors by the nations concerned.

THREE MAJOR INCENTIVES

Mr. Lie detailed these three major incentives by which foreign capital can be attracted to the underdeveloped areas:

1. Tax relief, either through preferential tax treatment of foreign investments, or—at the very least—through agreements abolishing the old bugaboo of double taxation, under which investors have in the past paid taxes in their own countries as well as the country in which their income is earned.

2. Fair compensation to foreign investors when nations decide to nationalize or expropriate investments; and nondiscriminatory treatment of foreigners on tax questions, employment of domestic personnel, or the participation of domestic nationals in management of foreign-owned enterprises.

3. Guaranties to foreigners that they can take their earnings out of the country and convert their earnings into their own national currencies.

DOMESTIC FINANCING

Domestic financing of economic development by the backward countries themselves, the report said, could be spurred by these means:

1. Increasing the amount of voluntary savings by popular campaigns, by insuring adequate interest rates, and security of savings accounts, and by avoiding inflationary fiscal methods that cut the real holdings of savers unless they channel their money into uneconomic hoards of gold or foreign exchange.

2. Prodding savers to put their money into useful channels through such methods as differential rates of interest or preferential tax treatment, special taxes on speculative gains, or direct control of the investment policies of banks and insurance companies.

3. Using import duties to build revenue and to curb unessential consumption.

4. Using direct controls to restrict consumption, to channel labor into development projects and to allocate raw materials through essential enterprises.

5. Increasing exports to obtain foreign currencies with which to buy raw materials and equipment abroad for building up factories and farms.

An idea of the role that investments, both domestic and foreign, will play in the economic development was given in the FAO annex, which illustrated the need for them in the underdeveloped countries:

"Dams for flood control, irrigation and power can increase food supply and provide electric power for villages and industries. New roads, canals, and railways can move food from areas of floods to where it is needed.

"Processing in refrigeration plants can save perishable products and expand food production. Expanded production of textiles, home equipment, and farm tools and machinery can make jobs for surplus farm populations and raise living standards."

The FAO estimated that of the $17,000,000,000 which the underdeveloped countries will require annually for the next 4 years, $3,000,000,000 will be needed for agricultural development and the rest for industry, public works, and other projects. The countries themselves should be able to raise $13,000,000 a year through domestic financing, the FAO said.

Mr. Lie's report, with annexes from the FAO, the International Bank, and the International Monetary Fund, will be debated at the ninth session of the Economic and Social Council, opening at Geneva on July 5

Mr. Byrnes Dissents

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 22 (legislative day of Thursday, June 2), 1949

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Mr. Byrnes Dissents," published in the Richmond News Leader of June 20, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MR. BYRNES DISSENTS

The importance of former Secretary Byrnes' denunciation of the Truman welfare state, as voiced at Washington and Lee Saturday, lies in the prominence of his position as one of the few seniors of southern public life who had remained a supporter of the administration. A few notorious weather vanes and some time servers among the older southern Senators and Representatives continue to do lip service to the revived New Deal. Included in the southern delegations are some like CLAUDE PEPPER, of Florida, who were elected by labor in a divided field and are committed so far that they could not turn back if they would. Byrnes outside the Senate and CONNALLY in its membership were the only other men of large political stature and long experience who continued to say aye, aye to orders from the bridge. Our guess would be that Senator CONNALLY is by no means reconciled to the program Mr. Truman has presented, but that the gentleman from Texas keeps silent on other issues because he has a special and commendable sense of responsibility for the Atlantic alliance. In the belief that he must rally as many of his colleagues as possible to support a sound foreign policy, he does not put himself in a position where prejudice against his views on other questions will hamper his handling of the treaty. If this is true, then Byrnes' dissent removes the last of so-called elder statesmen of the South from the councils of President Truman. We except Mr. BARKLEY for the obvious reason that, as Vice President, he is in honor bound to stick by his chief. In his heart of hearts he probably lacks a great deal of being a hundred-percent Trumanite.

Most of Mr. Byrnes' address at Lexington was devoted to an exposition of the foreign policy of the administration, which is far more his and Marshall's than Truman's. The dissent of Mr. Byrnes was from the domestic policy of the existing regime and was epitomized in these monitory sentences: "Where we will wind up, no one can tell. But if some of the new programs seriously proposed should be adopted, there is danger that the individual, whether farmer, worker, manufacturer, lawyer, or doctor, soon will be an economic slave pulling an oar in the galley of the state."

Every word of that is somber truth. The cost of the various programs advocated by Mr. Truman, when added to the current expense of government and of past wars, will reach a total of at least $60,000,000,000 a year. That represents between 20 and 25 cents of every dollar the American people are receiving today in income of all forms. If we taxpayers were as realistic as we flatter ourselves we are, the humblest wage earner among us would take one-fourth of his wages every week and put it back in the envelope to pay, directly and indirectly, to the agents of the Federal Government. Men of larger income have learned long ago that at least half of what they make every day must be deducted in advance for taxes.

This burden, which Mr. Truman would increase by at least $4,000,000,000 in the next fiscal year, is a load that barely can be supported now. It will be intolerable if and when national income declines. Many indications of a falling off in income are observable already. Those that have to do with American exports are not yet discernible to any except the far-sighted, because America is pouring out billions for European relief. That is an elaborate way of saying that the emergency of European prostration has compelled us to give our customers the money with which to buy the goods on which we foolishly think we are making a profit. This European recovery plan is fundamentally sound and, in fact, is part of the price of peace, but it is to terminate in 1951 or 1952 at most. The inevitable loss of European markets will cut a big hole in American governmental revenues at a time when most American consumers will have restocked their homes with the articles they could not procure during the war.

To illustrate what this means, we may take a text from the experience of the kindly little Virginia town of Bridgewater, which had a flash flood Friday and Saturday. This created an emergency during which many household furnishings and supplies were destroyed. Bridgewater merchants consequently face today a brisker demand for goods than usual. Many things they normally sell in very small quantities will be in large demand. If, as a result, every merchant in Bridgewater raised his own standard of living, enlarged his store and began a program of expansion, all of us would call him a fool. Could he not realize, we would ask, that he was dealing with a temporary demand—that he would not possibly sustain the income he was having during the emergency created by the flash flood?

So, on an infinitely greater scale, it is with America. Millions are assuming blindly that demand created by the shortages, the restrictions and the rationing of wartime are going to continue indefinitely. They cannot; they never have after previous wars when there was as much economic quackery and as much tinkering with the industrial machine as that which now afflicts America. It is entirely possible that even in terms of devalued dollars, national income will dwindle to half the present total. If, meantime, we continue to pile up governmental costs and to make commitments that politicians never will have the courage to undo, we shall be compelled as a people to put aside at least 40 or 50 cents of every dollar for Uncle Sam—though we shall have fewer dollars to start out with. That is what Mr. Byrnes means when he says we are heading for the time when we shall be the economic slaves of government.

Some short-sighted farmers, some trade unionists, and some advocates of pensions for all veterans will read this and will say complacently, "It all may be true; millions of Americans may be 'pulling an oar in the galley of the state,' but it will not be I. No, sir; I'll be sitting on the deck, because I belong to the new class of masters, and I'll be taking it easy while the other fellow pulls the oar."

A man could not make a worse mistake. If our political system is so organized that any group can make itself the new master of America, then surely it may find itself unseated in turn precisely as the old ruling class was. Political and economic revolution may be ceaseless and may be faster in accomplishment.

Besides, no matter how confidently a man may boast of the political power of his class, experience has demonstrated times unreckoned, that there can be no real and permanent prosperity for any class apart from the economic unity, advance or decline, of all elements of society. Every man who has common sense ought to learn before the crash comes that the maximum benefit or subsidy which Government gives a favored class cannot equal the wages an honest man can make by diligence. If he destroys the economic stability by bankrupting the Government, he loses his job. How, then, is he to eat? What can he do, except to come down from his passenger's chair and take his place among the sweating economic galley slaves? Is he wise enough to see this? We shall not give up faith in American sanity even though we remember that men of another secure society, that of the town of Pompeii, laughed confidently even when they heard rumbles and saw ashes shooting upward from Mount Vesuvius.

Disclosure of Secret FBI Files in Judith Coplon Trial

EXTENSION OF REMARKS
OF
HON. ANDREW F. SCHOEPPEL
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Wednesday, June 22 (legislative day of Thursday, June 2), 1949

Mr. SCHOEPPEL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Too High A Price," published in the Washington Daily News of June 10, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TOO HIGH A PRICE

Attorney General Clark made what looks to be a monumental mistake when he decided

to go ahead with the Judith Coplon trial after Judge Reeves ruled that secret FBI files must be presented to the jury in open court.

Great damage has been done to the future effectiveness of the FBI, by the disclosure of serious and important information gathered by its agents in counter-espionage work. Those people are in a dangerous business. When their identities are revealed, their usefulness is ended and their very lives imperiled. Naming names in open court will close up sources of information vital to national security. Information revealed will be invaluable to our potential enemies. So much for the serious data.

Information of another type recklessly spread on the record has unjustly smeared the reputations of innocent citizens. These papers read in court are for the most part only unsubstantiated complaints and accusations. They are merely work sheets in proposed, pending, and inconclusive investigations. As the first line of defense against the Communist underground, it is the FBI's duty to run down reports it receives, wherever they may lead, even though it knows most of them may wind up in blind alleys.

The Coplon case is a mere rabbit hunt compared to the real job to be done. It would have been better to have dropped the prosecution than to conduct it in a way which may wreck our whole counter-espionage organization and destroy the good names of innocent citizens.

Mr. Clark in the past has jealously guarded the FBI files in cases that might have embarrassed politicians and public officials, even denying scrutiny to committees of Congress.

But mere citizens have been thrown to the wolves of scandal and the FBI's counter-espionage work has been compromised by the Attorney General's red-faced eagerness to punish a person accused as a spy in his own office.

Reciprocal Trade Agreements With Czechoslovakia

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1949

Mr. PATTERSON. Mr. Speaker, I am in receipt of a communication, under date of June 13, 1949, from George B. Roberts, chairman of the American Legion, Frank A. Johnson Post No. 758, Johnson City, N. Y.

Mr. Roberts cites arguments relative to the damage being done to the American rubber footwear industries because of the negotiation of reciprocal trade agreements with Czechoslovakia.

I called this matter to the attention of the President and Congress on March 24, 1948, as I was much disturbed, at that time, by our action in negotiating these reciprocal agreements with the Communist-dominated Czechoslovakian Government.

I believe that the facts and figures quoted by Mr. Roberts are sufficient vindication for my previous actions, and should awaken in the minds of our Government officials the danger which is befalling American enterprise because of this ill-conceived negotiation. American labor, now facing increasing unemployment, will be further retarded by the increasing inroads of Czechoslovakian imports.

I still fail to see what reciprocity is existent in the agreement which we undertook at that time.

THE AMERICAN LEGION,
FRANK A. JOHNSON POST, NO. 758,
Johnson City, N. Y., June 13, 1949.

DEAR CONGRESSMAN PATTERSON: As chairman of the committee of the American Legion which has been actively engaged in endeavoring to call official attention to the grave danger inherent in the operation of the reciprocal trade agreement with Czechoslovakia, and in support of the American Legion in your district, I am writing you this letter so you will know that your participation in the effort to forestall the threatened prosperity of our country is most essential right now and will be greatly appreciated.

It is understood by our committee that a letter concerning this subject has been written by Mr. Ernest A. Gross, Assistant Secretary of State, to several Members of Congress who are concerned with this situation. In this letter, Secretary Gross seems to infer to some extent that the American Legion (and the same thing, of course, would be true also of other veteran and nonveterans organizations) is unduly alarmed concerning this situation. With this letter he has provided summaries of pertinent information with regard to production, exports, and imports of rubber and leather footwear, tariffs now imposed, and the relation of imports to the footwear industry. By this letter, and also by the accompanying data, it is made to appear that competitive Czechoslovakian industry is so, comparatively, inconsequential, as far as American trade is concerned, that no harmful effect upon American industry and employment is to be anticipated and, therefore, American labor and industry should not be alarmed or unduly concerned because of the present competitive situation as far as it is affected by the Czechoslovakian trade agreement.

The main observation which should be brought to your attention concerning this view is that it relates entirely to past conditions. The statistics cited are invalid as to the future. This is so because these industries in Czechoslovakia have only recently become rehabilitated to such an extent that production has become many times what it had been up until the year 1949. The communication by Secretary Gross ignores the fact that salesmen of American industries (speaking for a moment only of the footwear trade) have found that they are losing orders to the large wholesale purchasers because they have been underbid from 20 to 40 percent by representatives of Czechoslovakian industry in this country. These are orders taken during the present year, which provide for deliveries during the latter part of this year. For this reason, the idea conveyed by Secretary Gross that American industry has not suffered greatly from Czechoslovakian competition up to the present time may be true, but this is no reason why we should blind our eyes to the present development which is certain to bring about widespread unemployment and distress among workmen. To avert depression and distress, to retain the American standard of living, immediate action must be taken.

Another most important comment as to the attitude of the Department of State, as far as this is indicated by the letter of Secretary Gross, is that his observations are confined to the footwear industry only. The trade agreement embraces about 125 different industrial lines and products. Attached hereto is a clipping from a Buffalo, N. Y., newspaper which shows that Czechoslovakia, behind the iron curtain, is shipping into these United States large exports of religious articles. This should give the American people and their legislators an idea of what can and will happen to our American markets in the future as to all industries generally, unless adequate remedial measures are rushed into effect.

Why does the Department of State annually spend billions of dollars protecting and safeguarding these European countries, with the only thought in mind that these nations in the future will be our friends and quit their Communist connections? Should not the Department of State look into the future of the American worker and manufacturer, with the same vigor that they seem to be exercising on behalf of Soviet-controlled industries?

It is we, the people who are making it possible for the Department of State to spend the American dollar lavishly in European countries, with the hope that we can depend on their friendship in case of another crisis. This money is coming from the taxes levied against the American worker and he needs some protection and must receive it.

At the Popular Price Shoe Show of America held in New York May 24, 25, and 26, a St. Louis, Mo., importer offered the following items of waterproof footwear manufactured in Zlin, Czechoslovakia, at firm prices, f. o. b. New York City. By comparison, these prices run from approximately 14 to 41 percent lower than similar items manufactured by United States rubber footwear manufacturers:

Women's shearing cuff, zipper stadium boots	$2.65
Child's brown one-strap gaiter	1.19
Child's white one-strap gaiter	1.30
Misses' brown side-zip boot	1.88
Child's brown side-zip boot	1.75
Women's black pull-over boot	1.52
Women's red pull-over boot	1.75
Women's white pull-over boot	1.80
Misses' brown pull-over boot	1.46
Child's brown pull-over boot	1.38

Yours for America first,
GEORGE B. ROBERTS, *Chairman.*

[From the Buffalo Courier-Express of April 21, 1949]

LABOR

(By Victor Riesel)

A kid's love for a wide-eyed doll and the yearning of the devout for comforting prayer, even in moments than these holy days, should be immune from the international shenanigans of Communist operators. But, neither the young nor the worshiping are exempt from leftist weltpolitik. They are exploited to make a buck for the "cause" as today's unholy tale will quickly prove. Let me pick this story up for you as a letter is laid on State Secretary Acheson's desk a week ago. A letter, oddly enough, from the CIO Playthings, Jewelry, and Novelty Workers, whose leaders had a weird story to tell.

For a year they had been counting imports from Czechoslovakia forced-labor factories and now were able to report that the Communists had been flooding America with millions of articles of religious devotion.

Of these imports over 1,250,000 were rosaries, skillfully and anonymously poured into the United States. Religious buyers have had no idea they were subsidizing the regime set up a year ago by the first successful revolt of specially trained and secretly armed Stalinist Action Committees. At a strategic moment in February 1948 these committees streamed out of the very factories which today produce these objects.

The traveling action committees not only seized Czechoslovakia but later were shifted into Austria, where they now await a signal for similar assaults. They also slipped quietly into Hungary. There they helped

"keep order" during Cardinal Mindszenty's "trial."

Now the iron-curtain Reds need United States food and machinery, so they set aside huge plants for the manufacture of articles of devotion for sale to unsuspecting American Catholics.

Czech Communist industrial commissars ordered also the construction of large new jewelry factories, to flood us with bracelets, brooches, clips, and other such items, on which profit in American currency is large.

And from Hyman Powell's AFL International Jewelry Workers, which unionizes United States toy manufacturers, it is learned that these special Czech plants are turning out also dolls which they hope you'll buy for your youngster next Christmas.

If you do, there may well be the tears of many a Czech worker on the doll's garments—for there no longer is free labor in Czechoslovakia.

Unions there have been reduced to registration headquarters. The 5- and 6-day week have been wiped out and with them went the 8-hour day. In their place are slave camps, officially and publicly established some 10 months ago by the Communist regime.

To these camps are sent work shirkers and disrupters.

Our own United States Bureau of Labor Statistics reports the meaning of these terms—"So ill-defined, and so sweeping it appears they may be applied to anyone whose political and economic character is not acceptable to the (Communist) government."

That means Czech factories producing rosaries or dolls, religious articles, or brooches for the show-off who loves to boast of imported jewelry are manned by forced labor at peons' wages.

Because the United States has not torn up the 1948 treaties we had with the chainless democratic Czech regime of the beloved Benes, the Communist trading chiefs can still flood the United States with cheap slave-made products.

Aside from the sacrilegious aspect of these gruesome goods, there's the serious problem of the American jewelry workers—now hit by mass lay-offs.

In his letter to Acheson, the CIO union chief, Tony Esposito, said:

"The jewelry trade has been one of the first to feel the effects of the growing recession and unemployment which is now general. Large-scale lay-offs, a phenomenon not seen since before the war, have again become commonplace.

"The Czechoslovakia of today is not the government with which trade agreements were originally negotiated. I believe there must be some administrative remedy."

If there isn't, we might as well package our folding money and send it to Moscow direct. We'll save them trouble and ourselves the embarrassment of the stupid.

Radio Broadcast by Al Warner

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 22, 1949

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio broadcast by Al Warner:

A former sergeant in the Air Force, shot down over Germany on a bombing mission, both legs gone, spoke from a wheel chair today at a Senate Civil Service Committee in behalf of his job, his security and his sense of being wanted. The Government which sent him out on the bombing mission is now firing him from his Veterans' Administration job which he has filled acceptably for 27 months.

He and about 120 other badly disabled veterans throughout the country who have lost arms, legs, or eyes have received their ouster notices—their firing papers in the VA retrenchment program which is dismissing more than 8,000 employees throughout the Nation. From crutches and wheel chairs the representatives of the small group of badly disabled veterans are asking Congress for prompt action on the bill of Senator HUBERT HUMPHREY, of Minnesota, to give special priority to those 60 percent or more disabled or suffering from severe loss of limb or eye.

The sergeant who testified is William C. Bardon, of Cincinnati, Ohio. He is listed as 100 percent disabled, both legs gone near the hips. He was shot down over Ludwigshaven on December 30, 1943. He was a prisoner of war 9 months. In the prison hospital in Germany he counted the roses on the wallpaper around the border of the room, to keep, he said, from going nuts. Altogether he spent 40 months in hospitals. Then he got a job with the Veterans' Administration and has filled it capably for more than 2 years. He has been contact man, listening to the stories of veterans and telling them their rights. But a few weeks ago he received a notice that he was fired as of June 24. Then came another letter. He was offered another job at a lower rating, losing $800, perhaps $1,300 a year. Some other badly disabled veterans who are VA employees didn't even get this consideration.

"I got married 3 months ago," said Sergeant Bardon. "Now I get fired from what is probably the only job I can get, or take a pay cut and maybe even then the job is not secure."

Other of the disabled veterans said that if they are kicked from their jobs, it may be they will have to end up going back to their jobs where they will be much more of an expense upon the Government.

David Fass, of Brooklyn, who was a private in the infantry, and lost his right arm, noted that the Government has been carrying on a campaign to have private industry hire the physically disabled. And now the private organizations are saying: How can the Government ask us to hire them when the Government itself is firing them?

Robert Lewis Coffey, Jr.

MEMORIAL ADDRESS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1949

On the life, character, and public service of Hon. ROBERT LEWIS COFFEY, JR., late a Representative from the State of Pennsylvania

Mr. WALTER. Mr. Speaker, in the long history of the House of Representatives many men, some of them very great men, have passed through its portals and, in its records, have left the imprint of their personalities and their labors upon the Nation and the world.

But I venture the prophecy—it can be vindicated only by the records of another world, though I still venture it—that none who served with us so briefly as ROBERT LEWIS COFFEY gave larger promise of joining the company of the great on earth before becoming a part of what the ancient liturgy of the church speaks of as "the cloud of witnesses looking down upon us from above." We find ourselves in something of the mood that led Thomas Gray to write his immortal Elegy in a Country Churchyard, that in some hallowed spot, in this case, there has been laid:

Hands that the rod of empire might have swayed,
The applause of listening senates to command,
The threats of pain and ruin to despise,
To scatter plenty o'er a smiling land
And read their history in a nation's eyes.

Fortunately, with reference to our late colleague, his influence had already gone far beyond the village stage. It had spread out from the confines of the congressional district he had been elected to serve, also. Having been born in Tennessee and educated in Pennsylvania his call to duty in the service of his country during the late war took him, through his days of training, into Florida and Kansas and Virginia. In all of them he left his mark of leadership and with the famed poet of our Union, Walt Whitman, he could say "I hear America singing—the varied carols I hear." He carried that song in his heart when he flew combat missions over Italy, Yugoslavia, France, and Germany. He did not forget it either when, after the war, he served as military attaché in Chile and from which vantage point he journeyed into other areas of the great neighbor continent that lies to the south of us. That South American stay alone should have augured well for his future statesmanship, for we need hemisphere solidarity and friendship.

Of course the mere experience of travel—whether in war or peace—does not of itself guarantee the worth of a man. There are all too many encirclers of the globe who see and feel no more than if they had stayed at home. But not Colonel COFFEY. His world-wide background—for those who knew him—was one of his assets—one of his most potential assets to an America which he firmly believed must assume an ever more significant role in world affairs. It was to be, therefore, an American strong both in her own might and in the might of cooperation with those other nations who share our hopes and our fears.

Only 2 weeks before his death he was pleading in a radio forum in Philadelphia for the ratification of the Atlantic Pact, urging our immediate getting together with all of the freedom-loving peoples around us and reminding us of our tragic failure to do that in the aftermath of World War I. "Tragic" is the word for it today, likewise, for it is tragic—and yet symbolic—that death came to Colonel COFFEY while he was helping to make this Nation's contribution to the Atlantic Pact as powerful as is humanly possible. He died while at the controls of a jet plane—a type of plane in the perfection of which he saw vast possibilities for our safety.

At any rate—whatever our own future—death came with wings for our lamented coworker; and if we value his

vision and his spirit we will ourselves assume wings, yes, of death, too, if it becomes necessary to rain war from the skies upon an enemy, though always with the prayer that the angel of death will become at last the angel of life and of peace and good will on earth even as we believe that it is in heaven.

Alfred Lord Tennyson puts the matter as beautifully as it has ever been put and all the more significantly, also, because he wrote these lines before the advent of the airplane.

For I dipped into the future, far as human eye could see,
Saw the vision of the world, and all the wonder that would be;
Saw the heavens fill with commerce, argosies of magic sails,
Pilots of the purple twilight, dropping down with costly bales;
Heard the heavens fill with shouting and there rained a ghastly dew
From the nations' airy navies grappling in the central blue;
Far along the world-wide whisper of the southwind rushing warm,
With the standards of the peoples plunging through the thunder storm;
Till the war-drum throbbed no longer, and the battle flags were furled
In the parliament of man, the federation of the world.
There the common sense of most shall hold a fretful realm in awe,
And the kindly earth shall slumber, lapped in universal law.

ROBERT LEWIS COFFEY is part of that prediction. At least he will be if we will strive to bring it to pass by our own assumption of leadership in that direction.

The Housing Bill

EXTENSION OF REMARKS

OF

HON. FREDERICK C. SMITH

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 22, 1949

Mr. SMITH of Ohio. Mr. Speaker, my position on this socialistic housing scheme which the House is about to consider is well known in the Congress, my district, and throughout the country. I am opposed to it because it is communism in its rankest form. When politicians own your home, they own you and your family.

Another reason I shall do everything humanly possible to defeat passage of this housing bill is that on a population basis it will fasten an additional tax burden of $1,044,000,000 on the State of Ohio and $24,500,000 upon the people of the Eighth Ohio Congressional District, which amounts to approximately $536 for every family in my district and totals for each county:

Crawford County	$4,766,514
Hancock County	5,466,262
Hardin County	3,626,174
Marion County	6,016,332
Morrow County	2,096,564
Wyandot County	2,575,212

And this will only be a starter.

Long-Range Farm Plan

EXTENSION OF REMARKS

OF

HON. HAROLD O. LOVRE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 22, 1949

Mr. LOVRE. Mr. Speaker, because of the uncertainty that is developing over enactment of a long-range farm plan at this session of the Eighty-first Congress due to dissension among the leaders of the majority party and the difference of opinion among farm organizations, I have today introduced a bill which would repeal the Aiken farm law but which would continue indefinitely support prices at 90 percent of parity as provided in the section of the law now in effect.

It is not meant as a substitute for long-range farm legislation. It is, instead, a stopgap measure presented to prevent the disaster which would fall on the American farmer if the 60 percent of parity provisions of the Agricultural Act of 1948 were allowed to become effective.

This bill is presented to protect the farmer until farm organizations, farm-minded legislators of both political parties, farmers themselves, and the administration can agree on a workable long-range farm law that will not bankrupt the Nation, but which will provide the family-sized farmer with full parity of income without making him the slave to Government controls. In our deliberations, we should constantly keep in mind the fundamental philosophy of providing the family sized farmer with full parity of income with the fewest controls at the least possible cost to the taxpayers.

It is absolutely imperative that we have fair farm price support levels at this time, in view of the downward trend in crop prices and the general trend of agricultural economy. Because of the dissension over the method of arriving at a long-range farm plan and the opposition to some programs which has been expressed, I believe that it is wise to give the matter further careful study. My bill provides the means whereby Congress and others can give the matter careful attention, at the same time not jeopardizing the farmer's present economic footing.

In connection with a farm plan which is being considered by the House Agriculture Subcommittee, I might say that I believe there is considerable merit to the proposal. However, I believe that the basing of farm economy on revolutionary price-support standards and production payments as proposed therein should be given more intense study. In these critical times when our entire agricultural economy is endangered, I believe that we should be careful not to drift away from proven concepts of parity and price supports while groping for untried new methods. I do not mean by that I do not believe in change, but I do believe that before we attempt change, we should be absolutely sure that such changes will not work a hardship on the very industry we set out to protect. I call attention to the fact that the support price of wheat is lowered 7 cents a bushel under this proposal.

I am willing to give the committee proposal careful study, along with other plans which have been advanced. My main interest in this bill at this time is that the farmer continue to be protected through adequate legislation and that he not be made the goat in what is developing into a game of political chess playing for the advantage of some at the polls. I repeat that I am willing to remain in session this summer if the Congress will devote itself to a farm plan.

Any farm program which is developed should be one upon which the farmer can depend for years to come. It should be one which will be as nearly independent of the whims of Congress as possible and it should be completely divorced from the realm of partisan politics. Playing politics with the Nation's farm economy is as dangerous to the farmer's welfare as if he himself depended upon a game of Russian roulette to determine his future.

Man and Science

EXTENSION OF REMARKS

OF

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1949

Mr. BROWN of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Brig. Gen. David Sarnoff, chairman of the board, Radio Corp. of America, at the International Congress on Rheumatic Diseases, New York City, June 1, 1949:

MAN AND SCIENCE

In addressing this learned group, I must at the outset disclaim any specialized knowledge of the fields I shall venture to discuss. As a part-time student in the "university of life," certain phenomena have stimulated my curiosity, and I have chosen them for discussion tonight because they seem related to the great profession you are dedicated to serve.

I appear before this notable group of experts on medicine in the role of an amateur, but I gain some measure of courage from the fact that I also began my career as a wireless amateur. After 43 years in radio, I do not mind confessing that I am still an amateur. Despite many great achievements in the science of radio and electronics, what we know today is far less than what we have still to learn.

Probably the same may be said of biology and medicine and of many phases of the older physical and social sciences. The opportunities that lie ahead for research and development in all these fields, and especially in the new divisions of science involving atomic energy and radiobiology, would seem to be unlimited.

THESIS

My thesis is this:

1. Despite the great advances of science and technology, the human race remains in dangerous ignorance of itself. Largely because of this ignorance, a world that might have peace and plenty and happier and wiser inhabitants, is threatened by violence, hunger, and desolation.

2. The time has clearly come in the life of mankind for a penetrating study of man himself—employing and coordinating every new force at our command in the realm of the physical as well as the social sciences, to learn what makes man "tick."

3. These studies should include the use of atomic energy and radiations, electronics, and all the other scientific tools now available for research and investigation. Used together, these should point the way to improve man's health and his physical, mental, and spiritual equipment.

4. Only through such a concerted scientific study of man, as well as of machines, can we make full use of our God-given powers to improve man's mental capabilities and his spiritual outlook.

A NEW THRESHOLD OF OPPORTUNITY

The subject of atomic energy has long fascinated me. In fact, in 1945, before the splitting of the atom created the death-dealing blast at Hiroshima, I had prepared a paper entitled "Science for Life or Death"—the theme of which was atomic energy. At that time, I thought primarily of the application of atomic power to science, industry, and warfare Since then, I have been thinking about the possibilities of atomic energy and electronics, inside of man as well as outside of him. My thoughts on the subject, therefore, first concerned what man could do with atomic energy, and then, what atomic energy could do with man.

It is my belief that controlled atomic energy puts us on the threshold of new opportunities. Coupled with electronics, it offers vast possibilities to look inside of man—and perhaps to discover what makes him function and why he behaves as he does. Men have explored and have begun to comprehend the very hearts of atoms. Yet, they largely fail to understand each other. Men may see and hear electrically to the utmost limits of this planet. Yet, their minds fail to cross even the narrow boundaries of their individual and group consciousness. Nor do they understand how their thoughts and emotions are born and by what power they grow to fruition.

Is this force electricity? Is the human body an electric powerhouse? Does it have a communication system that continually radiates waves of thought and emotion?

When we understand each other, is it because we are attuned to each other electrically, or should I say electronically, in much the same way that a distant radio receiver is in tune with a broadcasting station? If this be so, we should learn the electrical characteristics of the human body. We should learn how its communication system functions. That cannot be done alone by social science or psychiatry. It calls for the help of the physical sciences, including the science of the electron and the atom.

If we can determine that each individual has such a system of communication, and if we can measure its intensity and frequencies, then possibly we can learn from the outside what causes thoughts and emotions inside the human body. It may be that people who are incompatible have divergent frequencies, and are therefore completely out of tune with each other. Nervous people afflicted with hypertension may have too violent an excitation or too high a frequency; lazy people may have too feeble an activation or too low a frequency.

Think of the vast possibilities if we learned how to detect and influence these human frequencies. The eminent scientist Nikola Tesla declared that all radio communication is nothing but light; that every person is but a light wave. Physicists tell us that the material atoms, which make up our bodies, are but orderly arrangements of electrons, protons, neutrons, and possibly mesons—all of which have a wave aspect.

RADIONETICS

Electronics, first associated with radio, is spreading into many fields of activity, including medicine. The electron microscope has revealed new and unknown worlds in the study of bacteria, viruses and the internal structure of the human cell itself. We may well hope, therefore, that the electron and its atomic companions will lead us to the cure of dread diseases. And it may be that in the further study of man's electrical frequencies and his intercommunication system—in the application of electronics to the human body—we shall develop a new branch of science. Coining a new word to describe it, I would offer the term "Radionetics."

Recently, in this field, eminent physicians have reported the development of electro-acoustic devices, sonic and ultrasonic, as aids in the detection of kidney stones and gallstones, in the location of foreign objects in the body, as well as tumors in the brain, Further, a new technique for detecting cancer of the cervix has been reported, in which a simple electrical test shows when a malignant growth exists in the body.

Cancer is a scourge. We are told that this malignant growth destroys living cells. To fight the disease, we attack the malignant growth and, by so doing, run the danger of destroying healthy tissues and thereby destroying life itself. Scientists have expressed the hope that atomic tracers may be sent through the body to ferret out the spots where malignancy is attacking and killing the living cells. By this new means, the physician may be able to act early enough to repair and restore the cells under attack.

If human cells can be destroyed, why should there not be some way to protect and heal them without resorting to surgery? There would seem to be some reason for hope in this idea, for already we have discovered how to split, change, and control the atom and its energy. If we can learn how to do the same with the human cell, we may discover how to control the individual cells of man and thus be enabled to improve the functioning of the human body.

NEED FOR STUDY

This is but one of the possibilities that emphasizes the urgency of a penetrating study of man himself, as well as of the methods and plans which would secure to all mankind the benefits to which the individual instinctively feels himself entitled. The need of such a program cannot be overemphasized. The impact of new scientific advances on the mind, emotions, and physical make-up of man has been profound and at times bewildering.

Atomic energy, electrical power, instant communication, winged transportation, radio, television, motorcars, and a host of other dynamic manifestations of life have basically changed the human environment. No wonder so much of humanity finds its surroundings confusing and, therefore, is unable to adjust itself to these rapid changes.

COORDINATED SCIENTIFIC STUDY OF MAN

There is grave need for a new type of scientific worker or, to be exact, groups of workers and associates, to conduct as their supreme quest—the study of man. These scientists should be highly skilled experts capable of carrying out original research in their individual branches of knowledge. But they also must be well-informed and capable of understanding the techniques, methods, and data of allied fields. They should be able to apply the knowledge of their own specialized fields to the other branches of science.

Until scientists possessing this over-all knowledge can evolve, specialists should be coordinated in carefully associated groups. On the one hand, there will be needed experts in mathematics, physics, chemistry, and engineering, to provide the fundamental methods, physical laws, apparatus, and analogues necessary to research on man himself. But there must likewise be assembled correspondingly skilled men in the fields of biology, psychology, and medicine. The latter will define the problems, analyze them, and use their cumulative knowledge of science toward finding the solution.

Fortunately, significant beginnings have been made toward accomplishing these aims. An important instance of such integration of the various branches of science is found in the work of Norbert Wiener, a professor of mathematics at Massachusetts Institute of Technology. He has applied the theory, methods, and equipment used in the fields of communications and electronics to the study of biological processes. He has termed this new study of the behavior of living things, in the broad light of their communications aspects, "cybernetics," a term derived from a Greek word meaning the "steersman"—thus indicating the governing function of communications in living bodies.

Another instance of coordinated attack by physical and biological scientists has been made by the Sloan-Kettering Institute for Cancer Research and the Memorial Hospital in New York. I am happy to say that the research laboratories of the Radio Corporation of America are cooperating in this vital work. For this privilege we are indebted to Mrs. Albert D. Lasker, who first suggested the idea to me and arranged a meeting between the scientists of RCA and of the Memorial Hospital which led to this cooperative effort.

TOOLS NEED DEVELOPMENT

It is clear that the tools needed for any fundamental research of man himself will be complicated and numerous. Means will be required to measure many types of characteristics. Computing methods and machines must be supplied to deal quickly and easily with the many variables involved, and to discover the controlling relationships or laws. These tools will include electronic, electro-mechanical, electro-chemical, and acoustic devices. And there will be needed visual aids for the close observation of the human structure under extreme magnifications, as well as means for the deliberate and planned modification of body elements.

The control systems of electrical and electronic engineering, as well as the scanning processes used in modern television, offer great promise toward providing new methods for studying certain biological actions. Television scanning and its related techniques offer special possibilities in the realms of computation, and it is interesting to observe that computing machines exist which can perform some of the functions of the human mind—but far more swiftly than any mind can think. They can make calculations in a few seconds that would take the human mind months to perform. They can store more facts better than the human memory and make them available for use, when needed.

STUDY OF LIVING CELL

There are many lines along which such an intensive study of man might proceed. One of the most promising directions is to select that element in man which is found at the smallest end of the scale—namely, the living cell. Considered as a biological specimen, man consists of trillions of such individual cells. Each carries an indication of the nature, personality, and behavior of the individual to whom it belongs. Each cell also

carries some mechanism or structure which controls its own functions as well as its part in the life of that particular human being.

MAN'S COMMUNICATION SYSTEM

A group of cells, acting independently, would never function in any effective fashion. But the cellular assembly, known as an animal, is provided with an amazing intercommunication system. Somehow the cells, individually and in groups, are interconnected so that whatever messages and orders are required for their effective functioning and responses are carried from point to point.

Incidentally, the invention of the coherer, the first detector of radio waves, by Edouard Branly, French physicist, resulted from his rather accidental discovery when testing different theories as to how the nerves carry messages from the skin to the brain and back again. He observed that nerves are not continuous fibers, but are forms of neurons and synapses, massed closely, but not necessarily in contact. The coherer used in wireless telegraphy resulted from the application of that observation.

Branly was on the right track for it has been found that man's communication system consists of a number of groups or portions which operate concurrently. It is what communications experts term a "multiplex system." Thus there are communication channels, or neurons, which carry impressions of the outside world from the sense organ to corresponding cells within the central nervous system—the brain and spinal cord; and reverse communication channels from from this central system to the muscles, glands, and all other parts of the body. Scientists tell us that there are billions of cells in the brain which make possible the voluntary and involuntary functions of the individual. And, perhaps even more striking, there are additional channels which continually report back to the brain cells the extent to which a willed act has been or is being carried out.

Some of the present limitations of the human communication system are, however, most serious in their practical effects. For instance, the required speed of the reflex actions of the skilled combat pilot in the guidance of a fast plane, as well as the necessary accuracy in handling its armament, are rapidly reaching the point where human capabilities falter or fail. Men are literally too slow to respond accurately and safely to conditions which change radically in minute fractions of a second. Therefore their perception and translation into instant thought and action must be aided, perhaps by electronic devices of greater speed than man's internal communication system.

In studying the carrying of messages by the nerves of the human body, there is evidence that these normal carrier or excitation currents do exist. The electronic study of heart action by means of the electrocardiograph, and of brain conditions through the electroencephalograph, are of course conventional and accepted diagnostic methods. A study of nerve actions has revealed that there is generally a series of impulses passing through each neuron. The frequency of such impulses per second varies, as does their wave form. But the nature of these impulses and their frequency have definite meaning, both in health and illness, and have equally definite effects.

To understand more clearly the functions of these complex living systems, and their interrelations, there is need for more intensive study, analysis, and experimentation. It is within the realm of possibility that such investigations would teach us how to improve the functioning of the communication system of man himself. It might also teach us how to repair defects or how to substitute artificial channels for those that have been worn out or destroyed by accident or disease.

STUDY OF THE INFINITESIMAL

Wherever we turn, we discover additional evidence of the wisdom of working in the world of the infinitesimal, of studying the power of little things in the hitherto unseen, submicroscopic world. The molecules of the gene determine the major structures and capabilities of the individual. The civilization of Europe came near its end when the infection of the black plague—carried by then invisible and tiny agencies—turned that continent into a shambles of the dead and dying. More recently, the fission of the atom turned the harsh dreams of a ruthless empire into barren regrets.

By dealing with tiny things, man has released atomic energy and literally clasped hands with Nature. But he should be warned that unless his mastery of the other forces of the world of the infinitesimal increases apace, he may unintentionally annihilate his own dwelling place and himself. Even this solid earth might be reduced to glowing gas or drifting dust through lack of human knowledge and wisdom of how to control the forces within the atom. To paraphrase a famous saying: Never will so many depend so much on so little.

So we may be watching the birth of a new philosophical concept, based on dependence on the tiniest elements. Its human and physical significance may well be incredibly greater than that of the older modes of thought which centered on large bodies or theorized vainly and incorrectly about small ones.

USE OF ATOMIC ENERGY IN BIOLOGY

The course of research into the utilization of atomic energy in the human body has already begun, and it has progressed to a point where it is rapidly becoming significant. Physicists have learned how to make artificial radioactive elements. These materials break down, either slowly or rapidly, depending on their nature. In the breakdown process they release atomic energy in the form of rapidly moving matter of more or less powerful radiation. On an extremely minute scale they are the original atomic bombs.

These synthetic radioactive elements are now in ample supply. They can be introduced into living beings, and their action in the body studied by electrical, photographic, and other means. They open the door to a host of new biological and medical techniques. These substances have been aptly termed "tracers." In living organisms they act as "biological detectives" and reveal much that would otherwise be unknown. This is a branch of scientific investigation which is already in rapid evolution. It will facilitate the detailed study of body functions, metabolism, and circulation in the living animal.

In studying the effects of radioactive materials introduced into the human body, it was found that the effects of these materials on healthy tissue were often different from those on nonhealthy tissue. Admittedly this is an art in its earliest stages of development, and one requiring much research for the full realization of its potentialities. However, the medical results already obtained offer hope of startling advances in the future.

One may pass into the realm of speculation at this point by assuming that atomic energy will not only serve for the treatment of abnormal conditions of the human body but may be used to repel bacterial invaders and perhaps strengthen and stimulate normal cells and tissues. How far such tissues and their cells might be increased in their efficiency and probable life span, is so far unknown. Who can say how powerful and long-lived man may become as he learns further how to master these fundamental cosmic forces and to apply them to himself as well as to the outside world?

HELPING MAN'S NERVOUS SYSTEM

There is another field of conceivable application of atomic energy to the human body which is of particular interest in these days of storm and stress. This relates to modifications of man's nervous system. Under existing conditions, modern man is subjected, to an increasing and dangerous extent, to the need of living at high speed under continued and sometimes intense strain, and to the necessity for enduring these conditions for prolonged periods. Many persons suffer severely, particularly in their nervous systems, by the pace of life today. Sedatives and similar expedients are poor substitutes for a stronger, more enduring nervous system. Maybe correctly selected and applied forms of atomic energy will feed and strengthen our nervous make-up, thus helping us better to meet the pressures of life.

Today man is largely ruled by his emotional reactions. Perhaps, even the human brain can be strengthened in its relation to the remainder of the human controlling mechanism. If so, much good would come to mankind.

HUMAN BODY MAY BE POWERHOUSE OF ENERGY

So powerful an agency as atomic energy naturally encourages speculative thought as to its potentialities for other uses. It is stimulating to go beyond the frontiers of present-day knowledge and hazard a guess as to the future use by man of the vast atomic power within himself. This at least is certain: if man were capable of releasing and beneficially controlling even a minor portion of the atomic energy within himself, his powers would be tremendously enhanced.

What is more, there would be placed at his disposal a practically limitless reservoir of energy. Today, men face such questions as: Why does our individual store of energy deteriorate and our physical and mental powers progressively weaken until eventually we die? Often, old age and its cramped capabilities are inflicted too early in life. Could it be that our stores of energy are atomic in character? Could it be that through lack of our control of them they gradually decrease and finally fail?

It is well known that our cell structure gradually loses its orderliness as the years pass and that our power to restore energy within ourselves wanes. The injury, that heals in an hour in youth, may prove fatal in old age. It is fascinating to speculate that there may some day be discovered, processes of recharging human beings, through the use of atomic energy or other agencies, so that we may reform or repair our own constitutions, both chemical and physical.

Today our circulatory system must ceaselessly perform its appointed task in waking hours and in sleep. The pumping of our heart continues through the decades. But, in all too many instances, weariness or malfunction at last overtakes that faithful servant and we succumb. If, instead of the forces of limited scope which now keep our hearts at work, we had available greater stores of energy, the ultimate cardiac breakdown might be longer deferred.

If this seems too fanciful, we have but to reflect that plants feed on sunlight—a form of radiation. If radiation of one sort may bring into the world the beauty of a flower, the growth of a tree, and of food for our bodily nourishment, may not energy or radiation of another sort bring strength, order, and endurance into the human frame?

It is true that today we have no more idea of just how such a process could be carried out than primitive man had of the action of radio, television, or nuclear fission. But the unknown is not the unknowable. In the case of atomic energy, there is a strong intuitive feeling that this agency will yet lay rich stores of amazing gifts before us, if

only we have the determination to overcome the barriers which now guard these gifts.

IS MAN A SELF-CONTAINED COSMOS?

When we consider the external universe, and compare it broadly with an individual man, certain striking resemblances or even identities are found. This thought is less radical than it seems, for the universe, too, contains matter and energy moving in evolutionary trends. All parts of the universe influence each other. By the law of gravitation a central sun controls the paths and, the physical conditions of its satellites. Radiation profoundly affects the neighboring stars and planets. All are controlled by orderly evolutionary processes.

Each man is a self-contained aggregation of matter, endowed with certain stores of energy, and passing through a series of broadly predictable stages in his path through life. All parts of his body are manifestly coordinated by forces which, though of a nature that is still largely obscure to our biologists and biophysicists, nevertheless, exist and function with amazing orderliness. In fact, if one contemplates the complex and coordinated cosmos which we call man, one can truly be amazed that it functions effectively for even the briefest fraction of a second.

However, if we regard man as an evolving cosmos within himself, he seems to have capabilities and potentialities as yet unrealized. Thus the theory of the cosmic nature of man suggests the possibilities for speeding up these evolutionary processes.

HOPE FOR MAN'S IMPROVEMENT

In the history of mankind, the struggles of men often have been mainly for sheer survival. For his continued existence, man has needed food, shelter, and clothing. The world wars which devastated the earth have sprung primarily from the desire on the part of one or another people to control the limited resources of this planet. Vital resources are not evenly distributed on this earth and this fact has produced dissatisfaction and hatred.

With the increase in our understanding of the universe and of our mastery of the great forces of atomic energy, the struggle for mere physical survival should disappear. With freedom from this physical struggle, the opportunity for advancing mentally and spiritually will be immeasurably increased. With greater powers and better functioning of our physical bodies, may we not reasonably hope for a corresponding improvement in our mental capabilities and spiritual outlook?

In conclusion, I would like to repeat my belief that the new tools, including electronics and atomic energy, which science continues to make available put us on the threshold of new opportunities. Likewise, they impose upon us great obligations to use them constructively. The hour has come to bring their vast potential benefits to humanity through concerted and systematic research for the development of man himself. Only through such coordinated scientific efforts can man be assured of his survival in this atomic age and of the full use of his God-given powers to progress, to live in peace, and to fulfill his destiny.

Arab Refugees and Point 4

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 22, 1949

Mr. MULTER. Mr. Speaker, I commend to the attention of my colleagues the following article written by Marquis Childs which appeared in the Washington Post of June 11, 1949:

WASHINGTON CALLING

(By Marquis Childs)

ARAB REFUGEES AND POINT 4

No one knows better than Dr. Ralph Bunche, the skilled United Nations troubleshooter, that the present peace in Palestine is no more than a temporary truce so long as certain causes of friction exist in the explosive Middle East. That conviction is behind a confidential report Dr. Bunche made after his return from his successful mediation of the Palestine war.

There can be no permanent peace, he reported, until some solution is found for the problem of the 700,000 to 800,000 Arab refugees who fled from their homes during the war. These refugees are now being cared for with United Nations funds in temporary camps that are seriously overcrowded.

The same conclusion was reached by George McGee, new Assistant Secretary of State for Middle East Affairs. McGee has just returned from a month in the Middle East, much of his time having been spent in a study of the Arab refugees and what to do about them.

A plan is being worked out, as yet carefully shielded from publicity, to apply President Truman's now-famous point 4 to the problem of what to do about the Arab refugees. Point 4 in the President's inaugural address, it will be recalled, proposed to apply America's advanced technical skill to retarded regions in order to raise living standards.

Trygve Lie, Secretary General of the United Nations, made a speech the other day intended to prepare the way for a point 4 plan for the Middle East. He was speaking at the University of Chattanooga in Tennessee and he took as his theme the great achievements of the Tennessee Valley Authority and the urgent need for the same approach in the impoverished Arab countries. Referring to point 4 and the presence of the refugees on the borders of Israel, Lie said:

"The interests of the new state of Israel, the newest member of the United Nations, coincide in respect to economic development with the interests of the neighbors with whom she has been in conflict. Lasting peace in Palestine, and in the whole Near East, cannot be achieved by any possible political settlement alone. It will require a comprehensive economic development plan that will harness the waters and other resources of the region for the benefit of all the people living there in the way that TVA has done for the people living in this valley."

Lie urged that with boldness and "the best speed possible," the valleys of the Jordan, the Tigris, the Euphrates and the Nile be developed with hydroelectric, irrigation, and flood-control projects. A somewhat similar proposal comes from the American Zionist Emergency Council in a memorandum prepared by Eliahu Ben-Horin urging the extensive development of Iraq as a home for the refugees.

A political issue arises here. Israeli officials until recently opposed the return of Arab refugees to communities within Israel from which they fled, making an exception for broken families, where the man of the household left behind his wife and children. They have just announced their willingness to restore a larger number in the framework of a general peace treaty.

The Arab countries insist that the refugees be returned to the villages from which they came. The deadlock might be broken by the kind of speedy action to restore the fertility of desert valleys that Trygve Lie called for.

But here, of course, you come up against politics in the United States. At the thought of going to Congress for a point IV appropriation, which would either be part of a UN fund or spent directly under American supervision, State Department officials look unhappy.

With the request for arms for western Europe added to aid for Greece, Turkey, and assorted trouble spots, the bill for foreign spending is already threatened with drastic economy cuts. But if a Middle-East plan is not worked out and the drift continues, then trouble will follow.

Therefore, all possible ingenuity must be used. Perhaps private capital could be interested in some form of investment underwritten by UN authority, this to be combined with a small initiating fund provided directly by UN.

The time is short. In August the fund now being spent to maintain the Arab refugees will be gone. Then at the very least a new relief fund will be necessary.

During the inflation it was argued that America could not spare equipment to be shipped abroad. Now in a deflationary period the economy argument is raised against any proposal to implement point VI. But leadership—and tangible, practical assistance—can only come from this country.

Paraplegic Housing

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 22, 1949

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks, I include a letter I have received from two badly disabled veterans who are patients at Cushing General Hospital, Framingham, Mass.

These veterans are vitally interested in my bill, H. R. 3116, which would extend to those veterans who were paralyzed as a result of brain trauma the same benefits now enjoyed by paraplegic veterans whose disability was caused by spinal cord injury. Under Public Law No. 702, Eightieth Congress, the latter are given assistance in building houses specially adapted for paraplegics.

This was a most worthy and fine law, and through an oversight was limited to those paraplegics who had suffered a spinal cord injury. There are only about 25 of these combat-wounded veterans who were denied the benefits because their paralysis was caused by brain injury.

The two veterans who wrote this letter came to Washington several weeks ago to urge prompt consideration of the proposal. They met a number of Senators and Representatives and it is in answer to their questions that this letter is submitted. It follows:

FRAMINGHAM, MASS., *June 8, 1949.*

DEAR SIR: This letter contains information requested by Members of Congress during our interviews with them on May 25, 26, and 27. This information is meant to clarify certain points concerning S. 1938, a housing bill which was introduced in the Senate on our behalf, as well as H. R. 3116, introduced by Mrs. ROGERS in the House.

Among the issues then raised were the following points:

1. Why is this bill, which is, in effect, an amendment to Public Law 702, Eightieth Congress, necessary?

2. Approximately how many veterans would receive benefits from this new legislation?

3. What would be the approximate cost of this legislation?

4. Would this legislation further the rehabilitation of the veteran affected by it? If so, how?

5. Would it be possible for us to obtain a statement from a doctor who is familiar with the type of disability covered by this legislation containing information as to the direct and indirect effects of this type of injury, its degree of disability, degrees of permanency, and any other medical data which would be pertinent to it?

Our sources of information have naturally been limited by the time element involved, by the limited amount of information that is to be had concerning this rare type of case, and by the fact that this type of information is not ordinarily given to patients. What few sources were accessible to us, however, are authoritative.

1. Why is this bill necessary?

Public Law 702, as it stands now, provides for Government assistance in the planning and construction of homes for veterans of World War II, who sustained a service-incurred paralysis of both lower extremities due to spinal-cord injury or disease only.

There are others of us who returned from overseas with lower extremities paralyzed, but, because of the fact that we had been paralyzed as a direct result of a brain injury, rather than spinal-cord injury, the very small number of us that are thus afflicted are denied the benefits of this legislation.

As long as we are denied these benefits, it will be necessary for us to remain in Veterans' Administration installations or in soldiers' homes, because the homes that we left to enter the service are not adapted to the specialized needs of the handicaps we bear as a result of that same service. Until we too can build our own homes and provide therein for our specialized needs, we must continue to be a perpetual drain on the resources of our Government. With these new homes we would have a chance to become once again citizens with a hope of living as normal a life as would be possible; citizens with something to look forward to; and, more important, citizens with something to work forward to. In this role, we may be considered on the credit, rather than on the debit side of the community ledger.

2. Approximately how many veterans would receive benefits from this new legislation?

To the best of our knowledge, and with the help of the few available records, we believe that there are approximately 25 to 50 cases wherein paralysis is present in both lower extremities as a result of damage to the brain proper, that was incurred in actual combat or in otherwise service-connected instances.

3. What would be the approximate cost of this legislation?

Computed with the above statistics as a base for calculation, the cost would range from $250,000 to $500,000. In some instances, as the individual desires a smaller amount, the cost would be lessened appreciably. Inasmuch as it is at present costing the Veterans' Administration close to $7,500, to maintain the average case of this type in a VA installation for 1 year alone, the $10,000 required to afford him a place to live alone and at home seems to be a trivial sum by comparison.

4. Would this legislation further the rehabilitation of the veteran affected by it? If so, how?

Yes. This legislation will further the rehabilitation of the veteran affected by it. Rehabilitation, defined, is a "restoration to former capacities, privilege, or rank." A wheelchair patient has only one of two choices. He can either live in a hospital because of its necessary conveniences or build a home incorporating those same necessary conveniences. It has been proven that living in a hospital eventually results in physical and mental stagnation. The pride of living in one's own home is a stimulus and catalysis in restoring the individual concerned to a life of usefulness, self-sufficiency, and prestige.

Respectfully yours,

IRVING NANNIS
ANTHONY J. DIGLIO.

Federal-State Oil Leases

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 13, 1949

Mr. HÉBERT. Mr. Speaker, I herewith submit the two concluding articles by Bernard L. Krebs, of the New Orleans Times-Picayune, on the proposed grab of the coastal waters of the several States by the Federal Government.

FEDERAL-STATE OIL LEASES

(By B. L. Krebs)

(This is the fourth of a series of five articles)

A Federal Department of the Interior oil and gas lease on 2,415 acres of Kisatchie national forest land in Winn Parish awarded on February 1 of this year, is within half a mile of a well producing oil and distillate at the rate of $12,000 a month.

The applicant for the lease paid the customary 50 cents per acre for the first 3 years, or $1,208 rental for the tract of nearly 4 square miles.

This lease was one of three applied for July 12, 1946, 3 days before the Department of the Interior issued its departmental order No. 2225 on July 15, 1946, providing for the administration by its Bureau of Land Management of the acquired lands of the United States, transferred to it by the Presidential Reorganization Plan No. 3.

The three applicants were Ernest Villere, who obtained the lease near the producing well; Lester Pallet, who on August 11, 1948, was granted a lease on 1,649 acres of Kisatchie land; and Donald W. Doyle, who obtained 2,140 acres of forest land. All are residents of New Orleans, made their applications the same day, and all three applications were sworn to before the same notary public.

Validity of the Government's title to the minerals under the land is involved in a suit against the Nebo Oil Co., now pending in Federal court. This does not, however, affect the methods under which the Department of the Interior leases the minerals under public land.

The story behind the Villere lease goes back to 1932, when the Goodpine Oil Co. was organized, and Bodcaw Lumber Co. and the Grant Timber & Manufacturing Co. vested in it the title to the minerals under 101,000 acres of land in Winn Parish. They received stock in exchange, the Goodpine Oil Co. being in effect a holding company for the minerals.

In 1934 the Bodcaw Lumber Co. sold 74,048 acres of land in Winn Parish to the United States Government for the Kisatchie Forest for a consideration of $148,096, "subject to the sale of all the oil, gas and sulfur under all of the land conveyed herein * * * wherein Bodcaw Lumber Co. of Louisiana, Inc., was the vendor and Goodpine Oil Co., Inc., was the vendee."

Seven years later Goodpine Oil Co. leased part of the Winn Parish minerals to H. L. Hunt, in checkerboard quarter-sections. The rest of the minerals apparently had been turned over to Nebo Oil Co., controlled by the same interests that held Goodpine Oil. The lease to Hunt did not disclose the terms or conditions, but referred to a certain agreement between the parties hereto copies of which were in the possession of both parties. This undisclosed agreement, never filed for public record, was to constitute a binding part of the lease as though set out herein at length.

Hunt drilled a well, Goodpine F-24, which in June, 1942, was brought in as a producer of gas and distillate, which is oil in the form of vapor in the gas. The well was closed in for lack of a market. There is speculation in Winn Parish as to whether the electrical survey of the well also disclosed oil sands which have not been placed in production. The Louisiana department of conservation has a copy of the survey, which it cannot disclose under an opinion of the attorney-general without Hunt's permission, which Hunt has never given.

Not even the conservation department has seen the electrical surveys of five other wells which Hunt drilled on three sides of the gas-distillate discovery, and which were reported as dry. Where a well is abandoned as dry the operator is not required to furnish a copy of the survey to the State authorities.

Villere filed his application in June, 1946, after the Hunt discovery well in the Calvin field had been closed in 3 years. The land he sought was southeast of the Hunt well, in the only undrilled part of the Calvin area.

The Villere application was on a printed form issued by the Department of the Interior, and those of Doyle and Pallet were on exact typewritten copies of the same form. Among other statements contained in the forms was the following declaration, required by the Department as a basic condition for its leasing oil and minerals without competitive bids:

"To the best of my knowledge and belief the lands applied for are not within the known geologic structure of any producing oil or gas field and are believed to contain oil and gas."

The applications were referred to the National Forestry Service in due course for comment, with an answer requested by the Department of the Interior to the following question, among others:

"What information does the Department of Agriculture have as to a competitive interest in these (oil and gas) deposits?"

On March 12, 1947, the Forest Service, through L. L. Bishop, acting regional forester, replied:

Villere application—"High competitive interest. Well already producing gas 1 mile northwest of this area."

On the Doyle application, which was for forest lands in sections 27, 28, 33, and 34, township 11 north, range 5 west, L. E. Hoffman, chief of the Mineral Division, reported on March 25, 1947, for Lyle F. Watts, Chief of the Forest Service:

"Well is now being drilled to depth of 9,500 feet in T. 10 N., R. 2 W., section 21. Another well has already been drilled in T. 12 N., R. 5 W., section 24 and produces gas; and another one is now being drilled in about T. 11 N., R. 5 W., section 25."

The same report was made by Hoffman on the Pallet application, the words quoted above being repeated, and preceded by the comment: "High competitive interest."

The Villere application, which included land previously leased by the Goodpine Oil Co. to Hunt, stayed in the files of the In-

terior Department through 1948. Meanwhile, in April of that year the Government filed suit against the Nebo Oil Co. on land in another area of the forest, seeking to obtain title to the minerals originally sold to the Goodpine Co. in 1932.

It was contended by the Government that under Louisiana law minerals cannot be held separate from the land for longer than 10 years, unless they had been brought into continuous production. Since there had been no drilling and no production on the tract involved in its suit, the Government asserted, the minerals had reverted back to the land in 1942, and since the Government was owner of the land surface by purchase from the Bodcaw Lumber Co. in 1934 it had become the owner of the minerals when the 10-year prescription went into effect. This claim of the Government is being contested by the Nebo Oil Co. against which the suit was directed.

Hunt's long-closed discovery well in the Calvin area assumed sudden importance at the close of 1948. Tennessee Gas & Transmission Co. had built a long-distance natural gas transmission line through the area, and made a contract with Hunt to purchase gas from the Goodpine F-24.

The well was reopened January 1, 1949, and by the end of the month had produced 80,000,000 cubic feet of gas and 2,862 barrels of distillate, worth conservatively $12,000.

On February 1, with the Hunt well in active production, the Department of the Interior made up its mind about the Villere application, after 2½ years. The lands sought to be leased did not fall within the known geologic structure of a producing oil or gas field, it decided, therefore it was precluded by law from asking for competitive bids.

The lease thereupon was signed over to Villere.

FEDERAL-STATE OIL LEASES

(By B. L. Krebs)

(This is the fifth of a series)

In July, 1948, the State mineral board of Louisiana, at competitive bidding, leased 2,700 acres of land in the eastern end of Lake Salvador, south of New Orleans, to the Union Producing Co. It received a bonus of $275,000 and an overriding royalty of one forty-eighth in addition to the regular one-eighth royalty.

Immediately to the north of this lease, again at the eastern shore line of the lake, Union Producing Co. obtained an additional 1,000 acres as a second lease from the State, for a bonus of $40,000 and an overriding royalty of one forty-eighth.

The average return from these two leases, covering the first year only, was $85.14 per acre.

Immediately adjoining the leases, within the shore line, is a tract of 322 acres of land which has been owned by the United States Government since the days of the Louisiana Purchase.

Six months after the State had obtained a bonus of $85.14 per acre for the first year only, plus an overriding one forty-eighth royalty on water bottoms in the lake the Bureau of Land Management of the Department of the Interior leased the Government's acres.

It obtained from Tidewater Associated Oil Co. 50 cents per acre for 3 years, and no override.

The Government's return from this lease for a 3-year period was $161. This is in accordance with the Federal leasing law, which provides that leases can be let at competitive bidding only if the land is within the geological structure of a producing gas or oil field.

Had this Government land been under control of the State of Louisiana, and been offered at a public letting in accordance with State law, it should have brought $27,000 for the first year and half that amount for each of the two succeeding years, unless drilled upon in the meanwhile.

The Lake Salvador leasing demonstrates certain vital differences between methods of the State of Louisiana and of the Department of the Interior in making oil and gas leases, which State authorities believe make them vastly more competent to administer the 6,000,000 acres of tidelands in the Gulf of Mexico, off the shore line of Louisiana.

The State leases are limited to 3 years, except in the tidelands themselves, where 5-year leases are granted because of the greater difficulties encountered in exploration and drilling.

By requiring a rental for the second and third years equal to half the bonus, the State discourages the bidding in of State water bottoms for speculative purposes.

The Union Producing Co. leases, for instance, must either see the start of drilling by July 8 of this year, anniversary date of the letting, or the company has the alternative of surrendering them or paying the second year's rental in order to hold them without drilling. This would be $137,500 for the 2,700-acre lease at $85.14 per acre, and $20,000 for the 1,000-acre lease at $40 per acre.

Again at the end of the second year, if drilling had not started, the same alternative would confront the lessees.

Union Producing Co., in fact, has already started drilling a well on its 2,700-acre Lake Salvador lease, which is cheaper than holding on to it and paying the State of Louisiana $137,500 for a second year's rental in July. But had the water bottoms of Lake Salvador been under control of the Department of the Interior, the leasing situation as between the State and Federal Government, with the tract undrilled for 3 years, would have been:

Under State leasing, bonus $275,000; 2 years' rental, $275,000; total $550,000.

Under Federal leasing, no bonus; 3 years' rental at 50 cents per acre, $1,350.

At that time the holder under State lease, not having drilled the acreage, would have to surrender it, and the State could try some other bidder (as has frequently happened).

But the holder under Federal lease, not having drilled in the 3-year period, could pay an additional 25 cents per acre, or $675 for the 2,700 acres, and hold them another 2 years. After that he could pay $1 an acre, or $2,700 and hold them the sixth year, and so on up to 10 years.

These policies of the State mineral board, in conjunction with the mandatory provision of the law requiring public advertisement and bidding on all State lands, have almost entirely eliminated the speculator and the middleman. When the State leases its lands for mineral development—and that is what the State wants—it is assured that the tract will be drilled in 3 years or the land will be returned.

The situation in the Gulf of Mexico off the coast of Louisiana is analagous to this. A brief 4 years ago the first tidelands leases were made—after competitive bidding. Little was known of the productivity of these submerged ocean acres.

Drilling platforms cost a million dollars each to build—and one was toppled over in a hurricane, and another million-dollar operation went up in fire when a well blew out.

Transportation methods to get oil ashore, once it was in production, had to be developed—one platform with three flowing wells was on restricted production for 2 months when stormy weather interfered with the barge fleet carrying oil to shore, and closed in wells sanded up.

New techniques for subsurface exploration had to be devised—in the first geophysical operations it was found that the gulf waters distorted the sound waves, giving erroneous maps or pictures of the underground formations.

The reason for the great development that has taken place in the offshore area, in the opinion of Louisiana officials, is to be found in the application of State leasing policies that had already proven effective for the inshore water bottoms.

With the bonuses from tidelands leases averaging $23.51 per acre at the last letting of the State mineral board, prior to the filing of the Government suit to take the tidelands away from Louisiana, the question as to whether development of a lease by drilling would more likely result under State practices or under Federal regulations can be determined by the following:

Customary tidelands lease, 5,000 acres.

Bonus and rentals in five years under State regulations at the October, 1948, price for leases, if not drilled sooner, $352,650.

Rentals (no bonus) for five years under department of interior leasing law, at 75 cents per acre, $3,750.

These are the reasons why the State of Louisiana, conscious of its 757 tidelands leases covering 2,000,000 acres of Gulf water bottoms, its $36,000,000 in bonuses and rentals collected in four years, its 17 known areas already discovered in the Gulf either producing or known to be capable of producing oil and gas, its 26 wildcat wells now seeking oil in new areas in the Gulf waters; and looking at the Department of the Interior "50 cents per acre" leases, says to the Federal Government:

"The tidelands belong to us.

"But if you are trying to take them away from us, not merely to cut-in on these oil-rich areas as a lot of people think, but only to see that they are properly developed, as you claim:

"You had still better leave the business to us."

Freight Absorption—News Report on Address by Senator O'Mahoney

EXTENSION OF REMARKS

OF

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Thursday, June 23 (legislative day of Thursday, June 2), 1949

Mr. JOHNSON of Colorado. Mr. President, recently the Senator from Wyoming [Mr. O'MAHONEY] delivered a most timely and significant address before the luncheon session of the Chicago Association of Commerce and Industry on the general subject of freight absorption.

I ask unanimous consent to insert in the Appendix of the RECORD the Chicago Journal of Commerce of June 23 news report quoting from the Senator's speech under the glaring headlines "Freight cost assimilation held urgent." Also the report of the Chicago Daily Tribune.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Chicago Journal of Commerce of June 23, 1949]

FREIGHT COST ASSIMILATION HELD URGENT—O'MAHONEY CALLS DELAY COSTLY

(By Harry Adams)

Senator JOSEPH C. O'MAHONEY declared yesterday that early action on his bill to legalize freight absorption is necessary to

prevent present uncertainty on the issue from having a dampening effect on general business.

He told a luncheon session of the Chicago Association of Commerce and Industry in the La Salle Hotel that the longer action is delayed on his measure the worse it would be for business.

"As the economy climbs down from its all-time high," he said, "any action that promotes uncertainty also tends to promote unemployment."

STRIKES AT UNCERTAINTY

Senator O'MAHONEY stressed the fact that one of the main purposes of his bill was to abolish uncertainties among Government officials and business leaders on the status of delivered prices and freight absorption.

His bill contains a simple declaration that it shall be lawful for a seller, acting independently, to quote or sell at delivered prices or to absorb freight. Action taken in a collusive agreement by a group of sellers would be unlawful.

Senator O'MAHONEY said delivered prices and freight absorption of themselves are not fundamentlly wrong. He added that he could see where these practices could be used in a conspiracy in restraint of trade.

WARNS OF F. O. B. PRESSURE

If his bill is not enacted, the Senator warned, an argument now being used that an f. o. b. method is the only legal pricing system would continue to circulate. This means uncertainty on the issue that could be detrimental to business, he said.

Senator O'MAHONEY's bill has been passed by the Senate. It was approved Tuesday by the House Judiciary Committee.

[From the Chicago Daily Tribune of June 22, 1949]

O'MAHONEY HITS MUDDLE OVER PRICING—URGES ACTION BY CONGRESS

Congress should clear away the existing confusion and uncertainty regarding the basing point and f. o. b. price systems so that business and industry can get its bearings, Senator O'MAHONEY (Democrat, Wyoming) warned yesterday at a luncheon meeting of the Chicago Association of Commerce in the LaSalle Hotel.

He said recent decisions of the United States Supreme Court leave doubts in the minds of many businessmen regarding their legal rights in pricing their goods. Under the basing-point system, producers quote delivered prices and absorb freight on some distant shipments to meet competitive prices. Under f. o. b., prices are quoted at the factory and the buyer pays the shipping costs.

COURTS CREATE DOUBT

Until a year ago the basing-point system was in wide use throughout the country. Then several court decisions created doubt regarding the validity of such prices. Shortly afterward the steel industry generally abandoned basing points. Some industries followed, but others did not, legal opinion being sharply divided on the exact meaning of the court decisions.

O'MAHONEY, recalling the Supreme Court's 4-to-4 decision in the Rigid Steel Conduit case, said that when "the Court is divided 4 to 4 on a question you can understand why businessmen and their legal counsel might have some varying opinions in this matter."

"What we need more than anything right now is to promote the investment of private capital in business and industry," O'MAHONEY said. "With the Court divided 4 to 4 on a question that affects business and industry throughout the country, there is created a dampening effect on investment because of the uncertainty and confusion."

He believes widespread adoption of the f. o. b. prices would "utterly upset business and would be a disturbance of great magnitude."

He is author of a bill which would permit delivered prices and freight absorption provided "that this shall not make lawful any combination, conspiracy, or collusive agreement, or any monopolistic, oppressive, deceptive, or fraudulent practice."

The measure, which the Wyoming Senator believes is a "definite restatement of existing law and the least possible disturbance to business," has passed the Senate and is in the House Rules Committee for assignment to the Legislative Calendar.

Columbia Valley Administration—Statement by Hon. Charles W. Hodde

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Thursday, June 23 (legislative day of Thursday, June 2), 1949

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by Hon. Charles W. Hodde, speaker of the House of Representatives of the State of Washington, before the Senate Committee on Public Works on the Columbia Valley Administration bill, on June 22, 1949.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF CHARLES W. HODDE, SPEAKER, HOUSE OF REPRESENTATIVES OF THE STATE OF WASHINGTON, BEFORE SENATE COMMITTEE ON PUBLIC WORKS, ON COLUMBIA VALLEY ADMINISTRATION BILL, JUNE 22, 1949

Mr. Chairman and members of the Committee, my purpose in appearing before you with relation to Columbia Valley Administration legislation stems from the very real necessity of continued and rapid progress development of the Pacific Northwest. Previous development in the region sponsored by the Federal Government and the necessity of rapid expansion of industry during the war has brought us a population increase and established a trend in population movement that our resource development is not keeping abreast of at the present.

With little over a million and a half population 10 years ago we have nearer two and a half million in the State of Washington today. Our burdens as a State are heavy due to the increase. We are forced to make large investments in schools, State institutions, and public facilities. Our State tax system depends largely on excise taxes for its revenue. Our income is directly related to business activity. Our unemployment rate is high because of new people in the region and our failure to provide industry opportunity in proportion to our increased population. Locally, we will spend several hundred million in new construction of facilities within the next 5 or 6 years. Our welfare problem is acute. Costs are over $100,000,000 per year. Much of this is due to migration of opportunity seekers from other States. They are good citizens but not the most affluent. In the State of Washington, we can meet these problems properly only if we get our opportunities back in balance with our numbers.

With the rapid development that must be accomplished comes the very real problem of proper coordination of all related resources in the region. There is definite danger that failure to establish coordinated development will result in irreparable injury to some resources. Production of power is, at present, the greatest problem, but failure to consider related subjects concurrently will lead to serious impairment in the future.

Soil erosion is not a theoretical but a very real problem in the Northwest. Fish and wildlife are definite business assets. Recreation is an industry. Reforestation is in the national interest and development in mineral production is very important. Some of these resources are not especially regional in importance, but their development is essential to the national welfare and must be coordinated and considered with every development in the region. Improper location of dams can make mineral resources unavailable and failure to attend to erosion problems will eventually make dams useless.

Most of us interested in State government are very jealous of our local prerogatives. Some are of the opinion the States should be the ones to plan and carry out regional development. In the two most important respects, the States are incapable of doing this. They do not have the financial ability nor the authority to carry out the necessary work. The development of the Columbia Valley involves international agreements inasmuch as a large part of lower Columbia water originates in Canada.

An illustration of the failure of proper jurisdiction for a State to develop its own facilities lies in the fact the Columbia River, greatest development project in the region, actually forms the boundary between the two largest States in the region. In the relatively small matter of the Columbia River salmon industry, the States have worked for years in an effort to coordinate their programs without very satisfactory results. A compact of the States involved would be unsatisfactory unless the larger States were dominant in the organization and if they were, the smaller States would be but poor relatives in the program. The proposed act does not prohibit any State from doing anything they can now do to enlarge on the powers of the Federal Government. It would make more effective the work of both.

A minority, composed largely of the same people and groups that have opposed Federal development of power in the past, are being very vocal in opposition to the CVA. The Governor of the State of Washington has publicly opposed it on occasion. The Governor is a fine fellow and undoubtedly sincere, but his election was occasioned by other matters in no way related to this problem. To my knowledge, all the other elective State officials are supporting the Columbia Valley bill. Almost all of the members of the legislature elected at the last election are supporting it.

In the Washington State Legislature, the house passed a memorial to Congress approving the CVA last spring by over a two-thirds vote, and it included the votes of several members of the Governor's party. Probably out of deference to the governor's personal opposition, the Republican-controlled State senate did not bring the matter to a vote. As you must realize, the question of centralization of Federal authority is being used to develop opposition to the CVA when the actual result would be to give the operation much more local activity and place the administration in a position where it would be reached by the thoughts of the region affected. Government furnishes a basis for composite public thinking, and doing a regional authority is the only vehicle that can adequately do this without becoming so far removed that considerations of elements extraneous to the region are in danger of becoming controlling factors. It is the proper compromise between centralization and provincialism. The proposed act would make mandatory certain considerations of local opinion that is not present in current statutes. The committee would find the people of the region agreeable if any

way can be found to still further guarantee this local recognition. I only point out that this act moves in the proper direction in this respect and would be distinctly better than the present situation.

May I say, in closing, that the opposition to this CVA is, in reality, opposition to public-power development. May I also call your attention to the fact that those people that said that when Grand Coulee was being built that we would never use the power sat in their homes last winter with lights dimmed to conserve power. Areas of similar size to the Columbia Valley with fewer and less varied resources are now supporting many millions more people. The degree of underdevelopment in this area compared to its possibilities is unbelievable, but this very fact gives us the opportunity to do a better job. Where little is done, there is little to undo.

Process of Obtaining Fresh Water From Sea Water

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, June 23 (legislative day of Thursday, June 2), 1949

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the RECORD a letter addressed to me by Mr. John J. Beckman, an attorney of Portland, Oreg., and the material referred to in his letter, relating to obtaining fresh water from salt water.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

PORTLAND, OREG., *May 3, 1949.*

Hon. WAYNE MORSE,
United States Senator,
Washington, D. C.

MY DEAR SENATOR: I have been watching for come time with great interest the various articles written on procuring enough water to take care of California and Arizona. One particularly that came to my notice was about the separation of salt and other solids from sea water. Last evening Lowell Thomas made some mention of it over the radio. So far as I have seen, no one has even speculated upon world-wide importance of the success of a process to obtain water from the sea. I have written a short article about this which I believe is self-explanatory, and also am enclosing a copy of a digest of Dr. Clift's article of the separation of the salt from sea water which was the subject of his address before our State college.

The more I think of it, the more I believe that the mobilizing of our scientists and universities to work out this problem is as important for us now as the atom bomb. It takes a man of your vision to bring about a general appreciation of what such a process would mean, not only in Congress, but among the people generally.

If you are interested, perhaps you might have this article of mine inserted in the CONGRESSIONAL RECORD. They tell me that some people do take occasion to read it. Please understand that I have no interest in this matter in a financial way, nor have any of my clients. I merely want to be of some help as I can.

With kindest regards and best wishes, I am,

Sincerely yours,

JOHN J. BECKMAN.

THE SEA FLASH PROCESS—V. S. CLIFT, UNIVERSITY OF SOUTHERN CALIFORNIA

Because of the current interest in the development of supplemental water supply for the Los Angeles area, a process of obtaining fresh water from sea water by use of modification of the Claude process has been investigated. In the process warm surface water is raised by siphon and vapor lift through a deaerator into a low-pressure flash drum where a small amount vaporizes and passes overhead to a condenser. The heat of vaporization is supplied by cooling the much larger amount of unvaporized water. The cooled reject water leaves the flash drum and is discharged to the sea at a subsurface level. The vapor from the flash drum enters a surface condenser shell and is condensed by cooling water brought up from the depths of the ocean. Since the water from the lower depth is at a lower temperature than the overhead vapor this condensation is possible. The only external power needed is for the pumping involved, including, (1) overcoming friction in the cooling water pipe, (2) overcoming the P in the condenser tubes, and (3) the removal of the condensate.

On March 31, the Journal published a front page article of a statement by William E. Warne, Assistant Secretary of the Interior which he made at Riverside, Calif., to the effect that the waters of the Columbia River could be utilized by transportation of especially built tankers to thirsty southern California and Arizona. Both States are contesting the allocation of water from the Colorado River. Some irrigators are now paying $40 per acre-foot for water. The tankers could deliver for $150 or less per acre-foot.

California is desperate. Arizona is desperate. Probably so it is in Nevada. Admittedly it is so in many other regions fairly contiguous to the sea. An equally chimerical idea has been proposed to use a pipe line to bring the waters of the Columbia from some point below the Bonneville Dam into California. The cost in either case would be well nigh astronomical.

Why not, at least, explore the possibilities that seem quite obvious?

Nature provides water for the land in the main part by evaporation from the sea, the transportation of this evaporation in clouds over the land, and precipitation, all through a combination of temperature and winds. Much of this water which comes from the sea is returned to it by the various rivers that we have. However, nature seems not to act with exactitude and precision, and we do have years of drought as well as of devastating floods.

It can be seen at an instant that if water could be annually provided from the sea to more or less arid areas, on an economical basis, this would practically amount to insurance against drought, year after year.

Recently there have been some advances in attempting to solve this problem. In January of this year at the Oregon State College there was a conclave of the student chapter of the American Institute of Chemical Engineers, consisting of students from some eight western schools who were all pursuing courses in chemical engineering. At that meeting, many papers were presented, and one of these reports was The Sea Flash Process for Obtaining Fresh Water From Sea Water. This was presented by Mr. V. S. Clift, of the University of Southern California. In the main, the process he described was to raise surface sea water by siphon and vapor lift through a deaerator into a low pressure flash drum where a small amount vaporizes and passes overhead to a condenser. The heat of vaporization is supplied by cooling the much larger amount of unvaporized water. The cooled reject water leaves the flash drum and is discharged to the sea at a subsurface level. Now this is an idea for a start, but as we well know, there is no limit to plumbing the secrets of nature. Separation of salt and other solid materials from water might well be brought about by some sort of catalyst or electrolytic process. Probably more efficient ideas may be developed.

We have, for example, the fact that people even from the time of Leonardo da Vinci have experimented with the idea of flying machines and it was on the principle that such a machine would have to imitate the bird in the way of flapping wings, and until it was discovered that the real reason that birds could fly was because of forward motion which created a vacuum over the wings and supported the bird, and then the rigid heavier-than-air flying device came into being. We have also observed that the atomic bomb which suddenly ended the last war was worked about through slowly discovered principles of Nature. No one has ever seen an atom, and further, no one has ever seen the constituents of an atom in the way of protons, electrons, and neutrons, and yet scientists have been able to say with assurance that certain types of atoms contain so many of each of the elements named.

Now, in view of the urgent necessities of certain regions of our own country, particularly the Southwest, it would seem that the Federal Government should mobilize all the great scientists and universities of this country into an intense and determined effort to discover an economical way to utilize the water of the seas for irrigation and other purposes. The cost of this would no doubt be just a drop in the bucket compared to what it cost to develop the atomic bomb and would be of infinitely more benefit to this country as well as the whole world.

Just something less than 3 years ago, King Saud of Arabia brought something like 60 or 70 county agents from this country who developed a 3,000-acre project around an oasis that converted it into a veritable Garden of Eden, which was supposed to be originally located somewhere around that area. They used American methods of farming, such as tractors and power-propelled machinery and other methods well known to us here. This is an indication as to how swiftly many countries could be made self-sustaining if we could utilize the waters of the sea. For instance, northern Africa, Arabia, Iran and Iraq, India, and the vast continent of Australia. In northern Africa alone, there is enough rich land which would be capable of feeding and providing for practically all of Europe, particularly the Balkan countries.

The people of any land who are self-supporting and able to provide themselves with the necessities of life are inherently indifferent to propaganda of any kind and care little or nothing about shouldering a musket.

The possibilities of this are tremendous. It would tend quite shortly to neutralize anything that Russia might attempt to do; make these satellite nations, that they dominate now, insist on being independent and reduce our own taxes through less cost of the Marshall plan, which, though the hope is thrown out that it will be gradually reduced in expense, just doesn't seem logical to be early terminated the way things are. Then too, there would be also the resultant diminution of cost of being the mightiest fighting nation in the world. If we could only get our Congress and the people of this country generally alive to the possibilities of utilization of the sea, and if our scientists and universities were financed to point the way, it would be well worth while. More than that, it would solve most of the world's perplexing problems.

In his inaugural address, President Truman said: "The supreme need of our time is for men to learn to live together in peace and harmony. * * * Democracy alone can supply the vitalizing force to stir the

peoples of the world into triumphant action, not only against their human oppressors but also against their ancient enemies—hunger, misery, and despair."

Here is the answer, if the brains and ingenuity of our scientists do just this thing which seems so fundamentally possible.

JOHN J. BECKMAN,
Portland, Oreg.

As the Editor Sees It

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1949

Mr. VURSELL. Mr. Speaker, with leave to extend my remarks, I am attaching hereto an article written by the editor, Mr. John D. Lope, of the Albion Journal, of Albion, Ill., in which he discusses the effort of certain people in New York City to ban Oliver Twist and the Merchant of Venice from the New York City schools.

It is important in the fact that it shows how clearly small-town newspaper editors and the people they serve are able to think in an atmosphere far removed from the metropolitan centers.

The article follows:

We read in the news dispatches that a society for the prevention of this or that is seeking to ban Oliver Twist and the Merchant of Venice from the New York City schools. They claim a couple of characters in these classics portray an unfair and intolerant picture of the Jewish race.

Which is a lot of "malarky."

Literature is supposed to mirror life—it can't be whitewashed—no story can be successful without conflict. Boy must meet girl—then lose girl, then get girl again. You've just got to have a villain. And to ban two perfectly good yarns—and they are just that—we know because once upon a time many years ago, we read both of them and liked them—merely because the villain happened to be Hebrew, is just as silly as to outlaw them because the menace was Italian or French or Ku Klux or of good old 100 percent tobacco chawing, long rifle lugging descent.

Shylock was no lily pure angel, and we'll admit that Fagin was far from an admirable character. But why pick on them?

Carry that line of reasoning to its final and logical conclusion and you'll ban all literature, except perhaps the Elsie Dinsmore series, and we will be fresh out of villains and almost everything else.

We'll wind up with no books at all—because if two volumes that have earned their places in the hearts of generation after generation can be banned because a race thinks that the villains are a personal slur at all of their people, some other race can think the same of some other book—and just as legitimately demand it's suppression.

When will minority groups quit insisting upon being minority groups, get the chips off their shoulders and settle down to being Americans—and we mean Americans without a prefix of some other nationality?

The melting pot is what made America great—and it functioned until the New Deal, with its divide and conquer policy, conjured up the minority group propaganda.

Now this group and that group whines that it is being persecuted and demands special favors as proof that it isn't. And usually it gets them.

So if it soon becomes illegal to read Portia's speech about the quality of mercy to the boys and girls of New York State, we're going to start agitation to ban "Harvey" from being played in Illinois.

We think the author made light of rabbits and as a rabbit lover and a rabbit out-of-the-hat snatcher we resent it.

Public Must Make Selves Heard To Cut Government Costs

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 23, 1949

Mr. DONDERO. Mr. Speaker, the House of Representatives has just granted me permission to extend my remarks in the CONGRESSIONAL RECORD. As a part thereof I include an editorial appearing in one of the great daily newspapers of the Nation—the Detroit Free Press—on June 19, 1949.

One of the most outstanding editors of national fame, John S. Knight, sounds a timely warning and, I hope, not in vain. Restraint in Federal spending does not exist. Collapse of our economic system or change in public thinking and demand alone can halt the trend which ultimately will bring wreck and ruin to our people.

The editorial follows:

PUBLIC MUST MAKE SELVES HEARD TO CUT GOVERNMENT COSTS

Each month, the National City Bank of New York publishes a thoughtful letter on economic conditions and Government finance. In the current issue, it foresees a probable deficit of $5,000,000,000 between tax revenues and Government expenses, even though the Government's prospective income is eight times larger than in 1939.

"This," says the National City Bank, sedately, "is an alarming trend."

This, say we, is a disastrous trend.

Unless it can be curbed, and quickly, Russia's fond dream that economic collapse will overtake the United States may not be as fantastic as it seemed a short few years ago.

The curse of the Nation today is big Government, a force far more sinister in its impact upon our daily lives than either of those twin whipping boys, big labor and big business.

Until the work of the Hoover committee was completed, few people paid much attention to the dangers of Government extravagance. Today, there is a growing awareness that if big Government is permitted to run hog wild, as it has for so many years, the crushing burden of the individual taxpayer will be more than he is able to shoulder.

According to the Hoover reports, the executive branch of Government employs 2,092,180 people who are distributed into 9 departments, 104 bureaus, 12 sections, 108 services, 51 branches, 460 offices, 631 divisions, 19 administrations, 6 agencies, 20 commissions, 19 corporations, 5 groups, 10 headquarters, 20 units, 3 authorities, and 263 miscellaneous and functionally designed parts.

A few examples of the disorganized manner in which these bureaucracies function may be interesting:

1. Two different Government agencies, the Army engineers and the Bureau of Reclamation, each drew up plans for the building of a reclamation project at Hell's Canyon, Idaho. Each set of plans cost the taxpayers a quarter of a million dollars. When completed, cost estimates differed in the amount of $75,000,000.

2. Not so many months ago, Congress appropriated money for a project in the Middle West on the assumption that it would cost $44,000,000. The actual cost turned out to be $131,800,000.

The Hungry Horse project in Montana grew from an estimated $6,300,000 to a final figure of $93,500,000, more than 15 times the original estimate.

3. Construction costs of Government hospitals run as high as $51,000 a bed as compared with $16,000 to $20,000 per bed for voluntary or private hospitals.

4. In a private insurance company each employe handles an average work load of 1,762 policies. In the Veterans' Administration, each employe handles only an average of 450 policies.

5. The difficulties of getting rid of incompetent or superfluous help in a Government bureau are appalling. It requires an average of 7 months to fire an incompetent worker. Some have held their jobs as long as 17 months by resorting to the appeal method. In one of the bureaus, it was found that 24 subordinates receive as much salary as the head of the department.

6. The Bureau of Ships in the Navy Department is financed by 27 appropriations, many of which have no apparent connection with it.

7. The Veterans' Administration offered no explanation of a request for an appropriation of more than $1,000,000,000 other than the title, "Salaries and Expense."

8. The Government pays 100,000 employes more than $270,000,000 a year to store and issue supplies. Fortune magazine says that most agencies have enough of certain supplies on hand to last them 1 to 50 years.

9. The Army requested $1,298,000,000 for the National Guard in 1950, as compared with $197,000,000 in 1949. Of this amount, $529,000,000 was set aside for the purchase of 1,567 M-46 tanks at $337,500 a tank. An investigation disclosed that most of the money was to be used in retooling industry to produce tanks—even though the Ordnance Department obtained permission in 1946 to retain the Detroit Tank Arsenal built during the war at a cost of $48,000,000 and was also given a large allotment of tools.

10. Government records in 1948 filled 18,000,000 square feet of floor space—the equivalent of six Pentagon Buildings. The rental value of this space is estimated at $20,000,000 a year; the value of the filing equipment in it at $154,000,000.

The Hoover report charges that the Government's housekeeping job is performed without central direction, under no orderly system, and with enormous waste.

Shocking as these examples of Government waste may seem to you, they represent only a few of the evils which are undermining our national solvency.

The chief threat lies in appropriating more money for welfare measures and reform than can possibly be paid for out of current Government income.

A continuation of this fantastic unrealism can only mean higher taxes, or deficit financing. In the end, it means insolvency.

Who is to blame? Where does the responsibility lie for such a sorry state of affairs?

In my judgment, it rests upon the President, the Congress, and the people themselves. Here is why:

1. The President, despite his own unfortunate personal experience in bankruptcy, seems to believe the resources of the country

are great enough to finance not only his welfare measures but the rehabilitation of the rest of the world as well.

It has long been evident to any informed citizen that Truman's campaign pledges and recommendations to Congress could be financed only in a period of boom-time prosperity. Now that the bite is on, the President and his economic advisers seem confused as to which course of action should be taken.

Publicly, he has not receded from his demand for $4,000,000,000 in additional taxes, even though new levies would constitute an additional load on business in a period when it is steadily declining.

The President has consistently scoffed at advocates of economy as typified in his remark that there are too many Byrds in Congress. Truman's reference to his fellow Democrat, the senior Senator from Virginia, was intended as a warning to other members of his party not to monkey with his spending program.

As President of the United States, Truman has set the political pattern for his followers in Congress and is therefore responsible for the fact that our country is living beyond its means.

2. Congress, both Republicans and Democrats, cannot avoid sharing a good measure of the blame. Members of both parties have voted for needless appropriations in order to serve their personal interests at election time.

Even Senator WHERRY, of Nebraska, the great economizer, voted against Senator PAUL DOUGLAS' proposal to cut the pork-barrel bill 40 percent.

Every Congressman knows the only way to reduce the budget is to eliminate useless functions of Government. Thus far, Congress has been anything but courageous in facing the problem. Last Thursday's vote giving the President broad powers to reorganize the executive branch of the Government shows, however, that Congress is finally catching up with the public's demand for retrenchment. It is an encouraging development.

3. Finally, the people themselves cannot dodge the responsibility for the extravagance of their Government.

Until the recent economic pinch set in, they were indifferent to the manner in which their taxes were spent; soft-headed over Truman security.

Even businessmen believed that Federal aid in the form of grants to communities and States was a sort of largesse that came from the Great White Father in Washington without costing them hard-earned tax money

As "good" citizens, they lobbied tirelessly for more Government funds.

No one seems to have given much thought to the fact that when more and more Government services are demanded by the people, someone has to pay for it.

They are learning now.

Big Government in the United States must be cut down to size. It is trying to do too many things at once, and in too ambitious a way.

The excuse that a 5-percent cut across the board would hamper vital functions of Government is nothing but drooling bunk. Every businessman knows it can be done without impairing the efficiency of his establishment.

Why should you pay out your hard-earned money to support waste and extravagance in Government? You don't handle your own affairs that carelessly.

Let your voice be heard. Write, telegraph, or call up your Congressman. Tell him how you feel. Be insistent that he vote against the spenders. Accept no excuses. Remember, he is supposed to work for you, not you for them.

If enough of you get tough-minded about it, those ear-to-the-ground public servants of yours will begin to listen as they did last Thursday in passing the reorganization bill.

For your convenience, a blank addressed to President Truman will be found on this page.

Use it! Let the President know that here in Michigan the people have decided the spending spree is over.

JOHN S. KNIGHT.

Is So-Called Brannan Plan the Brain Child of Wallace, Baldwin, Tugwell, et al.?

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1949

Mr. SHAFER. Mr. Speaker, the much-publicized Brannan plan is the brain child of Henry Wallace, Rexford Tugwell, "Beanie" Baldwin and other repudiated New Deal planners, according to word that has reached Members of Congress from responsible persons within the Department of Agriculture. They say it was written when Wallace was Secretary of Agriculture, then buried, only to be resurrected by Mr. Brannan when he became head of the Department. Dusted off, it is now to be "sold" the American farmer, regardless of cost, to "bring prosperity and prevent depressions," as a 1950 election issue. If the plan will bring prosperity and prevent depressions, as Mr. Brannan and his propagandists claim, then why wait until 1950 to put it over? In view of present conditions, it is needed now.

The fact is, the Administration already has a farm program, passed by the Eightieth Congress, if they will give it a chance to work—the Aiken-Hope law. When it was passed by the Republican Congress, it was supported by a majority of the Democratic Members of both House and Senate, and leaders of farm organizations. It also was endorsed by the then Democratic Secretary of Agriculture. Later, the Democratic National Convention and the President, himself, went on record in favor of the principle of the Aiken-Hope law.

Recently a greatly publicized meeting was held in Des Moines, Iowa, to inaugurate a campaign to put over the Brannan plan. It was not only attended by Washington officials, but also hundreds of AAA, SCS, REA and other Federal employees, all of whom made the trip on Government time, at the expense of the taxpayers. The meeting turned out to be a political rally rather than a session to study farm problems. Of all the farm leaders working on the farm question, and farm economists of the agricultural colleges in the Middle West, not one was invited to attend the meeting or consulted regarding farm legislation.

Mr. Brannan has had months to work out the details of this Wallace-Tugwell-Baldwin plan, but according to observers at Des Moines he was unable to reveal a single definite item on the cost. He did not answer charges that milk subsidies alone would cost the taxpayers nearly $2,500,000,000. He refused to hazard a guess on the cost of guaranteeing his miraculous income standard on corn and wheat surpluses. He merely asked the farmers to buy a mirage which he labels "prosperity," without any mention of cost to the taxpayer or without any mention of probable socialistic regimentation. Of course, AAA, SCS, REA, and other Government employees will now go forth among the farmers to sell the so-called Brannan plan. They will do it because they will be paid as employees of temporary bureaus who hope not only to perpetuate their jobs, but to take over through its subsidies, its controls of production and marketing and farm profits, in fact, the entire Nation's food production.

Leaders of independent farm organizations have repeatedly charged that Government employees are paid to administer laws and have no right whatsoever to set themselves up as a policy-making, law-drafting group. Farmers do not want their future dependent on the whims of political planners who, within a single year, have revised their own publicly announced platform. Farmers still resent the killing of little pigs, ordered by the Wallace-Tugwell-Baldwin combination 15 years ago, and they will resent the dictatorial controls Mr. Brannan proposes.

If the Democrats do not like the present Aiken-Hope farm program, why did they endorse it in the first place? Here is what the Democrats said in their party platform:

> Specifically, we favor a permanent system of flexible price supports for agricultural products, to maintain farm income on a parity with farm operating costs.

And here is what President Truman recommended on May 14, 1948:

> A permanent basis for a system of flexible price supports for agricultural commodities.

The Brannan plan repudiates the principle of flexible supports—and also the Democratic platform itself. The Des Moines meeting was stacked with men who are on the Federal pay roll, and who were instructed on how to sell the already-repudiated ideals of Wallace, Tugwell, and Baldwin.

As has been well said, when we start writing programs of this sort in Washington and then poking them down the people's throats, we can no longer call our Government a republic.

Editorial Comment by Washington Star on Speech by Hon. James F. Byrnes

EXTENSION OF REMARKS

OF

HON. BURNET R. MAYBANK

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, June 23 (legislative day of Thursday, June 2), 1949

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Our Coming Struggle," published in the

Washington Evening Star of June 23, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OUR COMING STRUGGLE

The speech which James F. Byrnes made a few days ago at Washington and Lee University, and the subsequent debate which it provoked in the Senate, have not received the attention they deserve.

Some of Mr. Byrnes' remarks were reported in the press. Unfortunately, however, although it is understandable enough, attention was centered on those of his remarks which seemed to be directed in criticism to certain aspects of the Truman legislative program. But Mr. Byrnes was talking about something more important and more fundamental than particular items of a particular program of legislation. And it is this which really deserves attention.

Here is a man whose thinking has been influenced by rich experience in all phases of American public life. Mr. Byrnes was an influential figure in both House and Senate. If not a New Dealer in the extreme sense, he had much to do with the implementation of what we call the New Deal. He served on the Supreme Court. He was at the very center of the war mobilization effort. Finally, he entered the Cabinet as Secretary of State and was a close adviser to the President.

Now the public phase of his career is closed. When Mr. Byrnes spoke at Washington and Lee he spoke as a private citizen, without partisan interests to serve. But he also spoke from a fullness of experience which commands respect for his appraisal of this country's basic political issue and its underlying causes.

It would be an exaggeration, perhaps, to say that Mr. Byrnes is frightened by the political dangers which he envisions. But certainly he is deeply disturbed. He believes that the philosophy of life and the attitude toward government of our forefathers, the men who laid the foundations of this country's greatness, have been forgotten. Their concept of a self-reliant people is dying out. In its place, as he sees it, there is growing up a society bent upon securing special privileges, a mounting clamor for Federal aid in furtherance of one special project or another. He describes the term "Federal aid" as an opiate—an opiate which blinds the people to the fact that there can be no Federal aid except as it comes from their own pockets, and which renders them indifferent to the curtailment of liberty which is apt to accompany the expanding proposals put forward in the name of the public welfare.

This philosophical break with the past, this new public attitude, is cited by Mr. Byrnes as one of the basic dangers confronting us.

The other danger concerns the reaction of politicians to the public mood. "Unfortunately," says Mr. Byrnes, "each political party tries to outpromise the other." That is true, all too true. But it is one thing to diagnose a political ailment; another to prescribe a remedy. Our recent political history seems to indicate that the people want more and more from the Government. And it also seems to indicate that the way to win elections is to promise the people what they want. If that is so, what prospect is there that any major political party will campaign on a program of self-denial, or, if it should do so, that it could hope to win an election?

The debate in the Senate came after Senator ROBERTSON, of Virginia, put the Byrnes speech in the CONGRESSIONAL RECORD. Some of the Republicans suddenly discovered in Mr. Byrnes qualities of statesmanship which theretofore had escaped their notice. So Senator PEPPER, of Florida, took the floor in behalf of the administration.

In contrast to some of his oratorical efforts, the Florida Senator, on this occasion, did an admirable job. He was both restrained and persuasive. It may be doubted that anyone in the Senate could have done better in defending what has been undertaken in the public-welfare field and the good intentions underlying this effort. But he did not really get down to the basic question—the question of where this kind of Government activity, once set in motion, can be stopped short of the kind of statism which everyone wants to avoid.

Senator CAPEHART, of Indiana, made an interesting point at this juncture. He recalled that when the Senate was debating the first Federal income tax the issue was whether it should be fixed at 3 or 4 percent. Someone suggested that it might be well to prescribe by law a limitation of 10 percent. President Wilson urged that this not be done because, he said, "that will be an invitation immediately to go to 10 percent." The intentions of the Senate in 1913 were moderate and good, but the Federal income tax now goes up to 91 percent.

It is essentially the same problem with which we are faced today. How and where is this trend of the people toward reliance on the Government, instead of relying on themselves, to be stopped? Will not the assumption by the Government of ever increasing responsibility for the welfare of the people lead necessarily to an ever growing demand for power to regulate the lives of the people?

This was what Mr. Byrnes had in mind when he spoke of a coming struggle between those who believe in individual freedom and those who subordinate the individual to the dictates of government. It is a struggle to which none of us can afford to be indifferent. For no matter how good our intentions, if the decision is in favor of more and more Government activity, and less and less dependence by the people on themselves, there is real danger, as Mr. Byrnes said, that today's free American "will soon be an economic slave pulling an oar in the galley of the state."

Action on Genocide

EXTENSION OF REMARKS
OF
HON. MARGARET CHASE SMITH
OF MAINE
IN THE SENATE OF THE UNITED STATES

Thursday, June 23 (legislative day of Thursday, June 2), 1949

Mrs. SMITH of Maine. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Action on Genocide," published in the New York Herald Tribune of June 18, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ACTION ON GENOCIDE

The brutalitarian modern state has posed a problem which the world hoped had vanished with the ancient conquerors, who marked their armies' track with mountains of skulls. It can no longer be assumed that victory in war or politics will not be followed by sheer extermination of the vanquished, or that the moral sense of mankind is sufficient to prevent mass murder in cold blood. But if the human race has discovered within itself the seeds of atavistic savagery, thinly disguised under theories of racial superiority or the "dictatorship of the proletariat," it has also found the means to express its higher aspirations in law. It is thus that the United Nations drafted its convention against genocide, the crime of attempting to destroy a national, ethnical, racial, or religious group." And, at last, this convention has been presented formally to the Senate of the United States for ratification.

It was in large part through American initiative that the genocide pact was drawn up. Ratification, to demonstrate that this Nation "is prepared to take effective action on its part to contribute to the establishment of law and justice," in President Truman's words, is the logical and necessary next step. The American people have sought through their representatives in the UN to embody their abhorrence for the crime of genocide into a treaty; they expect the Senate to seal the task without delay. The danger of group destruction will not, of course, be ended by this document. It is, however, a step, and an important one, toward a genuine code of international conduct—one which will proceed from the principle that there are crimes which nations cannot commit, crimes which cannot be excused as an exercise of national sovereignty, or condoned because the offenders are too many, or too powerful.

Pegler Ignores the Forest

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1949

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Buffalo Evening News of June 13, 1949:

PEGLER IGNORES FOREST

A number of readers have asked recently why the Westbrook Pegler column is no longer used regularly in the News. One factor in this decision was aptly summarized, paradoxically, in Mr. Pegler's own column the other day by a "guest columnist," the Reverend William J. Smith, S. J., who has frequently criticized what he calls the anti-union bias of the columnist's writings.

Father Smith gave all credit to Mr. Pegler for his diligence in exposing rackets, for his valid attacks on union abuses and for generally making his readers racketeer conscious. But then he made a charge that no friend or sponsor of Pegler could deny—that he "long ago * * * lost sight of the forest for the trees and the end result has been the formation of an antiunion mentality among a vast multitude of the reading public."

As a reporter, a digger for facts, Mr. Pegler is still one of the best in the business. But as an opinion purveyor, his viewpoint on certain subjects has seemed to us so bitter that the News has felt it could no longer sponsor him as a regular columnist.

Mr. Pegler, to be sure, spoke for himself and not for this newspaper. The News publishes many columns with which it does not necessarily agree, and some with which it sharply and frequently disagrees. But it does feel obliged to insist that the columnists it sponsors keep within the bounds of good taste, and that their viewpoints be reasonably tenable and constructive within the realm of the known facts. In the field of labor relations, particularly, Mr. Pegler has grown so obsessed with union abuses that he not only has "lost sight of the for-

est for the trees," but he seemingly can see no comparable trees of abuse in the rival forest of industrial management. He has made himself, in short, an antiunion special pleader.

The News has never shrunk from printing legitimate news of racketeering in labor, industry, or anywhere else. When Mr. Pegler has such news to offer, we deem it a privilege and duty to publish it. But when he adds up specific instances of union abuse into a general and one-sided condemnation, we part company with him, as we would with anyone who turned an attack on specific business abuses into a general indictment of the free-enterprise system.

Letter From Polish-American Congress

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 23, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following letter I have received from Mr. John M. Groom, president of the eastern Massachusetts district, Polish-American Congress, Inc.:

POLISH-AMERICAN CONGRESS, INC.,
June 21, 1949.

The Honorable THOMAS J. LANE,
House of Representatives,
Washington, D. C.

DEAR SIR: It is almost a decade since the Nazi hordes dealt a cruel blow to peace by attacking their Polish neighbors, abetted by the treachery of Soviet Russia. The heroic resistance of Poland against overwhelming odds and her uncompromising defiance of her enemies constituted an epic unrivaled in the annals of mankind, but this heroism cost that nation dearly, for 6,000,000 of her people vanished and found peace in cold graves.

Despite all this sacrifice and the immeasurable aid rendered to its victorious allies, the Polish Nation still remains enslaved, and the tragic plight of that nation is of deep concern to all who believe in justice and fair play. For the vast number of Polish-Americans it is a matter of grave concern, compelling them to speak out through their leaders for a righteous cause.

The Polish Nation, held in an iron grip of Communist dictatorship, cannot raise its voice for it is silenced, but we hear the voices of her oppressors which proclaim unity and love of the Soviet and hatred and defiance of the Christian world.

So, even at the risk of prickling the sensitivities of this, our beloved country, it is only right and proper to demand correction of the grievous errors committed by our leaders in making the pacts of Tehran and Yalta the instruments binding the Polish Nation to the Soviet slave caravan.

So appalling is the tragedy of the nation which President Roosevelt once called the inspiration of the world that we Polish-Americans stare uneasily and fearfully every time a conference of ministers is held. We fear that again, as in the past, compunction will give way to expediency, and in trying to woo the Germans to our side, our diplomatic elite may try to accomplish this at the expense of Poland and deprive her of her western territories which historically belong to her, but which were supposed to have been given her as compensation for her loss of eastern Poland to Soviet Russia.

Poland must not again be deprived of justice because of her enforced status as an iron-curtain country; we speak in defense of the Polish nation's interest and not of the present regime. There must be hope that as the future unfolds Poland is destined to be free once more, for her people will not succumb to the hateful immoral communistic ideology.

Therefore, on the behalf of the many thousands of Polish-Americans who live in this area, we feel impelled to call upon you that you may use your great office and your influence so as to prevent any further inroads that would inflict further adverse justice upon the Polish nation.

To phrase the above in short: We of the Polish-American Congress steadfastly hold that the territories of western Poland between the rivers Oder and Nisse are hers historically and ethnographically, and have finally been returned to their rightful owner. We also hold that the Tehran and Yalta agreements are not valid and highly immoral, and therefore must be repudiated by the Congress of the United States.

Sincerely yours,

JOHN M. GROOM,
President, Eastern Massachusetts District, Polish-American Congress, Inc.

Arms and Money for Atlantic Pact Countries

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, Henry Hazlitt, writing in Newsweek for May 30, 1949, points out there quite properly that the commitments made to the Atlantic Pact countries have been forced upon us by the belligerent attitude of Russia. These are grave and tremendous commitments, but there seems to be no good reason why we had to promise both monetary and military aid at the same time. Under leave to extend my remarks, I am including this challenging and interesting article by Mr. Hazlitt:

ARMS AND THE MONEY

(By Henry Hazlitt)

The commitment we have made to defend the integrity of western Europe has been forced upon us by the Russian threat. It is a grave and tremendous commitment. In return for it, our negotiators had both the right and duty to ask heavy quid pro quos. Instead, they assumed that they had to promise monetary and military aid in addition in order to bribe western European governments to accept the tremendous pledge from us for which they have been begging ever since 1914.

If western Europe has a will to defend itself, it will have little trouble in finding the means. The $1,130,000,000 grant that we have promised them for the first year is after all only 3 percent of the present total governmental expenditures of the Atlantic Pact nations. They can easily make that up by cutting less essential things out of their swollen governmental budgets.

On the other hand, as I pointed out in a Newsweek article of April 4, there is no way in which we can insure that either the money or the equipment we contribute would actually result in a net increase of European armament by that amount. To the extent that we free European governments from the necessity for military spending, we release just that much more of their resources for bigger social-security schemes, bigger food subsidies, bigger nationalization deficits, or what not.

It is now being argued that we can solve this dilemma by insisting that each beneficiary European government spend on armaments in the next fiscal year, say, at least as much as we contribute, in addition to the amount it has already been spending in the current fiscal year. But it is dubious policy to try to force any country to spend more on defense than it thinks it ought to spend. This could easily give rise to the unwholesome belief in that country that it was spending large sums on defense, not for its own self-preservation but as a favor to us. It might also tend to encourage bookkeeping fictions under which government expenditures were charged to the military budget that did not in fact belong under that budget.

If our administration is none the less determined to go ahead with its $1,130,000,000 military-aid program, then Congress, instead of adding this to the already dangerous burden upon our taxpayers, should take it out either of our proposed military budget of $15,300,000,000 or of the $5,430,000,000 authorized for the ERP.

Consider the military budget first. For a single year it already equals the military expenditures for the entire 19 years from 1922 through 1940. Must our military budget now be larger still? Does it make any sense to assume that our military expenditures with the Atlantic Pact must be actually higher than without the Atlantic Pact? Even if we do not assume that the Atlantic Pact in effect adds the existing military expenditures of western Europe to our own, can we not assume that if we transfer a billion dollars of our defense expenditures to Europe, it at least removes the necessity of spending that billion dollars here?

Finally, if the administration refuses to take this $1,130,000,000 out of the home military budget, Congress could take the whole amount out of the $5,430,000,000 authorized for the ERP. It could simply authorize the beneficiary European governments to use up to this amount of their ERP funds for buying armament from us instead of other things. As it is, we are about to throw most of this $5,430,000,000 away anyhow.

We are turning it over to European governments to meet a trade deficit that they themselves have brought about by exchange control with overvalued currencies. Our ERP funds, in short, are being used in the main to subsidize and prolong a vicious totalitarian device that strait-jackets economies, retards recovery, and makes impossible the free multilateral flow of world trade.

The further burden on our budget involved in the proposed European armament-aid program is without logic or excuse.

Housing Bill

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 23, 1949

Mr. JAVITS. Mr. Speaker, the bipartisanship of housing is again indicated by the following editorial in the New York Herald Tribune of June 17:

TIME TO MEND THE ROOF

The arguments for a public housing program that have been sufficient for the last

5 years hold with still greater force as the House, at long last and for the first time, prepares to face this legislative proposal. The opposition in the House to any housing program now finds it expedient to express its hostility in terms of the cost of the program. That cost has been atrociously misrepresented. But even assuming that capital grants for slum clearance and annual subsidies to secure low rents would come to around one-third of a billion dollars annually, the benefits to hard-pressed cities and ill-housed families would be cheaply bought, and the maximum rate of contributions would not exceed 1 percent of the present Federal budget. Poorly bargained economies are not a cloak of respectability in this case. Such arguments lack sincerity when found in the mouths of legislators who last year opposed the same program on the ground of its alleged inflationary effect. They too closely resemble the old saw about the right time to mend a leaky roof. We are more impressed when individuals so widely separated in ideology as Senator TAFT and Walter Reuther realistically plead for the bill as a necessary economic weapon in fighting back a slump in house building.

Any short-term arguments will fail to fit a long-range program like that proposed in the housing bill the House is about to consider. We have too long delayed attacking the twin problems of slums and the housing shortage. The sooner we get on with them the better. The legislative issue in the House is not the details of this program, but a declaration of national policy within which more precise determinations of program can later be made. That decision cannot be shirked. We hope it will be favorable.

Praise for President Truman's Calmness

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1949

Mr. KLEIN. Mr. Speaker, under consent, I am inserting in the CONGRESSIONAL RECORD sage comment from Samuel Grafton as published in his daily column in the New York Post Home News of June 21, 1949, and with it a brief extract from a new book, "Strategy for Liberals," which appeared in the Post immediately under Mr. Grafton's column, and is so apropos that perhaps the make-up man placed it there deliberately.

What Sam Grafton says makes sense to me. It follows:

I'D RATHER BE RIGHT
(By Samuel Grafton)

I am glad President Truman feels that the wave of hysteria which is now sweeping the country over the questions of disloyalty, subversion, etc., is going to pass away. I don't know whether this wave of fear is going to end quite as automatically and obligingly as the President seems to think. But, as I say, I'm glad he thinks so; if a Chief Executive can set styles, as sometimes happens in hats or necktles, then perhaps he can set a style in calmness, too.

The plain truth is that we have been living, politically, in a melodrama for the last year or two, and the President has perhaps dealt it a hard blow by indicating that he is bored with it. A melodrama can stand anything but that. If it can't keep the customers on the edges of their seats, it is a dying show, and the President's yawn may turn out to have been a first-rate political contribution.

The theme of the melodrama in which we have been living is that the great questions of human destiny can be decided, in our age, by a sinister figure creeping down a back alley at night. The idea is that the fruits of 175 years of our history can be blown up, if we are not careful, by one person's dirty work, by our failure to shut a window somewhere, or to notice a clue. Under this conception everything that Washington labored for, and Jefferson, too, everything that Lincoln struggled to achieve, and that we, all of us, have built with our hands, can be set at naught by any nondescript rascal with a mind to do us dirt. It was for this, then, that mankind struggled up out of the original muck, and went through an agony of thousands of years—to build a structure that can be knocked down by any casual individual outfitted with a secret number and an expense account.

It is a pretty spectacular piece of plotting, and I can see that it has its fascinations. After all, what is the function of melodrama? The function of melodrama is to make us forget the real drama of life. The mind that is tired of the realities of the struggle to win success in life finds refreshment in a tale of a criminal who can ooze through locked doors, and of a detective who can catch him by sniffing the wind. Politically, a good many of us have spent the last year or two curled up in a hammock with a detective story.

For such as these, the human drama has ceased to be a story in which nations win success by standing up manfully against their problems, against homelessness and depression. Life has become something like a rattling good yarn, instead; a much more garish, more superficially exciting tale, in which the great questions of our destiny are decided not in the innermost places of our hearts, but in the hall bedrooms of plotters and spies. Give us, we say to the invisible librarians of our spirit, none of your dreary stories about the long, hard struggle of mankind to solve its age-old problems; let us have, instead, a corking good tale of cops and robbers.

I am willing to admit that there are probably odd characters around who would like to do us harm, but it is my strong feeling that the police are probably well equipped to deal with them, and I have never heard it stated as a principle of law enforcement that an aroused or perhaps even hysterical public is of any great assistance in this type of work. Yet—let us admit it—it is sometimes hard to turn from Sherlock Holmes to Hamlet, from the fascinations of incident to the terrible strains of decision, from stories which are too frightening to be quite real, to problems which are so real as to be rather frightening.

PAGE PROOF

(From Strategy for Liberals, by Irwin Ross, to be published tomorrow by Harper & Bros.)

We must not only overcome our economic maladies; we must do so in a fashion that furthers political democracy. The goal must be economic stability in a setting of expanding freedom—the full dinner pail and free speech, not one at the expense of the other.

In recent years, the concept of the mixed economy has been advanced as a new answer to this old need * * *. The mixed economy would promote planning, abolish depression and unemployment—without threatening anybody's freedom. It would allow us to raise our economic sights without debasing our political morality. It would give the Government enough power to mastermind the economy, but not enough to mastermind the lives of its citizens. The mixed economy, in short, would combine the traditional virtues of both socialism and capitalism. * * *

For years Sweden and New Zealand have offered a rare counsel of sanity. They have proved that a mixed economy could work. It has been a laboratory demonstration, to be sure, under especially favorable, if not controlled, conditions. Other countries—America, particularly—may not be able to repeat the experiment quite as readily. But in a world threatened by an extremist smash-up it has been a laboratory demonstration well-nigh invaluable.

IRWIN ROSS.

The Atlantic Federation

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Thursday, June 23 (legislative day of Thursday, June 2) 1949

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two thoughtful editorials on Atlantic federation, one from the Houston Post, the second from the Anderson (Ind.) Herald. As we approach consideration of the Atlantic Pact, I hope Members of Congress will consider and act upon this necessary further step.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Houston Post of March 28, 1949]

ATLANTIC FEDERATION?

A resolution, sponsored by a group of distinguished Americans, will be introduced in Congress, asking President Truman to call a conference of representatives of the signatories of the Atlantic Pact to explore the possibilities of forming an economic as well as a military union of the western democracies. Congress should pass the resolution without delay and Mr. Truman should have no hesitancy in calling the conference.

Behind the movement to weld the western democracies into a compact group are such men as Houston's W. L. Clayton, who has had wide experience in international affairs; Owen J. Roberts, former Justice of the United States Supreme Court; and Robert P. Patterson, former Secretary of War. They are looking beyond the necessity of meeting the immediate peril involved in Communist aggression to a long range program designed to lay the groundwork for permanent peace.

If there is any virtue in the old adage about there being strength in union, the more closely the world's democracies are bound by political and economic ties, the better will be their chances of successfully meeting the challenge of communism. That challenge, it appears, must eventually be met on both military and economic grounds.

The pending Atlantic alliance will take care of the military phase. The Atlantic union committee is probably right in contending that military measures alone are not enough and it seems plain that in the prolonged struggle shaping up between the opposing ideologies, it will be necessary to pool economic resources as well.

At any rate, the proposal should be considered with open mind, thoroughly discussed and deeply pondered. An international convention to explore just how far the western democracies could wisely go at this time to form a true federation, would

bring the issue into the open. Something might be evolved which would make brighter the prospect of a world of peace and plenty.

[From the Anderson (Ind.) Herald of May 10, 1949]

STARRY-EYED, BUT SOUND

The movement initiated by a group of national figures to promote a federation of the present signatory nations of the North Atlantic Defense Alliance is an attempt to put into immediate and practical use the spirit of collaboration which the alliance pact contemplates chiefly on potential military grounds. The names of the backers of the North Atlantic federation are impressive, including former Associate Justice Owen J. Roberts, of the Supreme Court, ex-Secretary of War Robert P. Patterson, ex-Under Secretary of State Will L. Clayton, etc. There is no question of the lofty purpose of these men or their group—nor, for that matter, can the exalted idealism of other movements of global perspective and harmony-aspiring nature be questioned. The world can never have too many sincere idealists; some are ultravisionary, their heads in the clouds, their feet unbound to earth. Some are plain crackpots. A reasonable proportion inevitably are practical folks, working on a sound basis, ever cognizant of realities, never ignoring human nature, wary of the label of perfectionists.

The fundamental principles of the North Atlantic federation of the now more closely cemented democracy-loving and communism-fearing nations is the same as promoted by the World Federalists, the latter merely covering more terrain, paying less heed to military collaboration, and being not so much concerned with political philosophies. These and similar movements envision a slight surrender of national sovereignty by granting a degree of mutual intergovernmental direction to a joint organization. The basic idea rose and waned with the League of Nations, but will not down. Here in the Middle West are many sensible, rational persons valiantly sure the ultimate answer to world peace lies in just such an amicable union.

Why Renew Draft?

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 23, 1949

Mr. SHAFER. Mr. Speaker, according to the following article from the Michigan State College News, selective service plans to renew the draft in order to get men with better education in the armed services. Here is what the article says:

RUTHVEN SAYS DRAFTING WILL RESUME SOON

Drafting of men under the Selective Service Act will be resumed, possibly by June of this year, predicted Dr. Alexander Ruthven, University of Michigan president, in a speech before the annual banquet last Tuesday (May 10, 1949) of Michigan Alumni Club of Lansing.

He further predicted that in a year's time a plan would be instituted under selective service which would "exempt men from draft to attend recognized institutions of higher learning, provided they pass competitive examinations."

According to Ruthven, voluntary enlistments are filling the numerical needs of the military, but armed services educational requirements are not being fulfilled.

The reason for reopening the draft would be to obtain men with more education, he said.

I cannot quite understand, Mr. Speaker, why there should be talk of renewing the draft when the March 25 issue of United States News reported that the Army and Air Force has raised physical standards for enlistees and were accepting men only if they get a 90 grade on their mental tests. Even with these standards, said the United States News, there are one-third more eligible applicants than the Army is able to accept.

I agree with the following editorial which recently appeared in the Christian Century:

Peacetime conscription must be set down as a costly and unnecessary fiasco, which should not be repeated. On the record, this departure from American precedent was not justified and it should not be extended. The Selective Service Act expires on June 30, 1950, and the Army has indicated that no more men will be drafted before that time. As a matter of fact, the armed services now have in uniform 49,000 more men than the President has asked for, and his budget request of funds for 1,616,000 was high enough to satisfy any reasonable person. Since selective service conscripted only 32,569 men before it stopped drafting, and has now ceased operations in the field, the question might legitimately be asked what that department plans to do with the $27,476,700 which is its appropriation for the current fiscal year. The fact that this Government organization used 4,861 full-time paid employees, 1,303 part-time workers, and 35,115 volunteers—a total of 41,279—to draft 32,569 men indicates something of the sort of thing Congress led the people of this country into by its adoption of this legislation. Since the law runs for 2 years, it must be admitted that it wasted at least $50,000,000 in money, to say nothing of its harmful effects of a less tangible but no less important kind. That being the case, it is not too early to begin consideration of what is to happen when the present act expires a little over a year hence.

Housing Legislation

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 23, 1949

Mr. MULTER. Mr. Speaker, the following are the first three of a series of articles written by Mr. Charles Abrams and appearing in the New York Post Home News. Mr. Abrams is one of the foremost housing authorities in the country. His articles are most apropos and I commend them to the attention of every Member of this House:

WHY SOCIAL LEGISLATION RUNS OBSTACLE RACE

(By Charles Abrams)

WASHINGTON, June 10—I spent the last few days here seeking the answer to one of the most perplexing developments in the American political system. A technique seems to have been perfected for blocking social legislation in Congress, though it may have the strongest popular approval.

Between 1939 and 1948, a public housing bill passed the Senate on three separate occasions only to be throttled in the House each time. The Senate has now passed a housing bill for the fourth time by the overwhelming vote of 57 to 13.

Despite this, the House Rules Committee this week refused to release the bill for a vote. Because the House recently curbed the Rules Committee's power, the housing bill will nevertheless reach the floor in 2 weeks, but political observers believe the committee's delay has damaged the measure's chances and that despite the telling victory in the Senate, the House vote will be close.

That the overwhelming Senate vote reflects the people's attitude seems confirmed by the fact that 41 separate State legislatures representing a population of over 120,000,000 people have adopted public-housing legislation and set up housing authorities. The current measure has the overwhelming approval of the United States Conference of Mayors, and in a questionnaire circulated last year by Senator WAGNER (Democrat, New York) more than 80 percent of the governors polled, and almost all the Nation's mayors, favored the legislation.

Why the marked difference in attitudes between the Senate and the House, each of which is supposed to be speaking for the American people? Here are some of the answers:

Senator DOUGLAS (Democrat, Illinois): "Rural districts are overrepresented in important House committees where members sit on the basis of seniority. They are often reactionary and do not speak for the people. When a Senate committee reports a bill it automatically reaches the floor. There is a more enlightened group of Republicans in the Senate—men like TAFT, TOBEY, FLANDERS, and AIKEN who have given public housing their intelligent leadership."

Senator SPARKMAN (Democrat, Alabama): "A Senator represents both city and rural districts. He speaks the will of the people in his whole State. Some Congressmen haven't any public housing in their districts, yet they are on strategic committees or wield influence on the floor. Another thing—a growing wave of reaction against spending is sweeping the country and this is being used to curb social legislation. I've been amazed at the misinformation being spread about on the cost of the public-housing program. Some of it I've identified, of course, as stemming from those who make their living out of trumping up false issues."

Confirming the opinions of DOUGLAS and SPARKMAN, three southern Democratic members in the House Rules Committee, all serving through seniority, kept the housing bill from reaching the floor this week. Joining the Republican opposition in the Rules Committee, Representatives COX (Georgia), serving for 13 terms; COLMER (Mississippi), 9 consecutive terms, and SMITH (Virginia), 10 terms, voted to keep the bill pinned in committee. COX represents a rural district, COLMER a rural and resort area, SMITH a district heavily populated with Government employees who do not vote in Virginia but who are counted in establishing SMITH'S district.

CLIQUE DOMINATION

Joseph McMurray (secretary to the Senate Banking and Currency Committee and to Senator WAGNER): "Some congressional districts are dominated by a single powerful individual or a clique that controls the Congressman's renomination. The Congressman is more easily pressured than a Senator, who is often apt to be the policy-making member of the party by virtue of his position. His longer tenure of office makes him less sensitive to lobby pressure. Young progressives too often consider Congress a stepping stone instead of a career, leaving strategic positions to House diehards."

But there were other experts here whose reasons were less scientific, particularly when assured their name would be withheld. One

said: "There has been a great deal of money thrown around lately by the real estate lobby in the form of 'lecture fees,' counsel fees to Congressmen, and in other ways."

Another said that if the number of Congressmen who have been made counsel or directors of building and loan associations were disclosed it would shock the country.

Lee F. Johnson, executive vice president of the National Housing Conference, said: "Give the credit to the real-estate lobby. Congressmen are easier to get at. The power of the building and loan associations, with their $1-,000,000,000 of assets and the 'favors' they can offer, can't be written off easily. Nor can the power of the real-estate boards. Together they make up the most unscrupulous lobby the people have ever faced."

REAL ESTATE LOBBY IS PRESSURE GROUP CHAIN

(By Charles Abrams)

WASHINGTON, June 13.—President Truman has called the real estate lobby the most vicious in the country. Yet few people know who is behind the lobby and whether it is the real force behind the blocking of housing legislation in the House on the four occasions such bills passed the Senate.

The real estate lobby is actually a group of lobbies, no one of which really represents real estate owners. Many owners in fact do not oppose public housing. The National Association of Real Estate Boards, however, guided by suave and persuasive Herbert U. Nelson, proudly takes credit for being the lobby as well as for representing real estate.

In reality, Nelson's organization is a loose alliance of local real estate boards dominated by brokers. When Nelson, with much fanfare, tried to organize real estate owners into a National Home and Property Owners Foundation, he failed miserably.

Nelson's NAREB, however, is only a single link in a bigger lobby chain. NAREB's function is that of the whipping boy for the lobby. He openly advertises himself as a lobbyist and takes the spotlight from the real powers who work less openly with individual Congressmen.

Nelson's effectiveness is not to be underestimated. The income of NAREB has swelled handsomely since it made public housing its main target. Its 1948 receipts are close to $408,000, and among its expenses is an $80,000 item allocated to services described as "department of education," "department of public relations," "committee work and policies," "research and services," "professional and contractual services."

NAREB is lodged in a fine stone building at 1737 K Street, in Washington, where the services of 13 girls and a host of assistants turn out antipublic housing copy. In his Chicago office is another staff of a dozen girls and an office manager dispensing propaganda.

EDUCATIONAL, TOO

Nelson shares his Washington offices with some of his subsidiary organizations, like the Society of Industrial Realtors, the Institute of Real Estate Brokers, the Institute of Real Estate Appraisers, and the Urban Land Institute, all of which have additional budgets. The Urban Land Institute is the intellectual front for the lobby and is partly supported by NAREB, though it poses as an educational institute.

In contrast to Nelson's set-up is that of the National Housing Conference, headed by Lee F. Johnson, which is carrying the fight for public housing. The conference reflects the tough struggle of social legislation in the Washington arena.

For a four-page brochure called Headlines, which consists mostly of a weekly tirade against public housing, NAREB in 1948 got $206,619.06, most of which was profit.

But NAREB's $408,000 budget is only a fraction of the millions spent by the other links in the lobby chain. The most important groups in the chain are the United States Savings and Loan League, representing funds equal to about $14,000,000,000; the National Association of Home Builders, claiming to represent 126 local builders' organizations, the Producers Council (representing the materials industry). Also operating to a lesser extent against public housing are the National Retail Lumberman's Association and the United States Chamber of Commerce. Each of the links in the lobby chain has a stake in opposing decent housing and each plays a forceful role in the campaign.

HAS A REGULAR PARTY LINE

Each year that public housing legislation has come up, the party line against the measure is discussed and pressures are exerted in corners where they can prove most effective.

The party line differs from year to year depending upon the political climate in Washington: The reasons for delaying or scuttling public housing run about as follows:

1939: The localities should do the spending.

1940: All materials must be used for defense.

1945: We must wait on the Taft committee report.

1946: There is a shortage of materials.

1947: We must wait for the report of the Joint Committee on Housing.

1948: Public housing is inflationary.

1949: We can't afford it.

The current campaign by the lobby leans heavily on the Communist scare and on the economy drive. "It's communism," is Nelson's continuous cry, and the fact that public housing as a reform is supported by President Truman, by most governors and mayors and by 57 out of 70 Senators voting, has not made him alter his line.

On one occasion he even accused Senator TAFT of being a Communist, but when TAFT called him on it, he backed down. "I will not again imply that he is in any way interested in communism," he apologized.

LOAN LEAGUE SPEARHEADS DRIVE ON HOUSING BILL

(By Charles Abrams)

The most important link in the lobby chain opposing the Federal housing bill is the United States Savings and Loan League. This organization of building and loan associations claims to speak for about $13,000,000,000 of assets that belong mostly to moderate and low income families. Yet with the funds deposited by these families, the league wages a persistent campaign against housing legislation, the beneficiaries of which would be many of the depositors themselves.

The building and loan association was intended to be what its name implies—an agency to build a home for a worker and lend him the money with which to build it. As time went on, however, it ceased being a builder and became a bank and a mortgage lender on homes for higher income families. Control of the associations became vested in self-perpetuating directorates.

GET HELP FROM UNITED STATES

With the establishment of the Home Loan Bank System, the building and loan associations burgeoned into big business. The Government bought $300,000,000 of their stocks and rediscounted their mortgages at a fraction of the rate they charged on their mortgages. Better still, the Government has lent them $2,700,000,000 since 1932 and now insures their shareholders or depositors against loss.

Since the associations charge upwards of 5 percent to homeowners and can offer depositors a somewhat higher interest rate on savings than savings banks can, deposits have zoomed. Today, thanks to Federal aid, their assets are increasing at the rate of $1,000,000,000 a year.

The steersman for the $13,000,000,000 lobby is one Morton Bodfish and the swelling benefits of Government aid have made his associations jealous of any competition for the Federal bounty. Once their main lobbying activities were directed toward securing tax exemption. Now their main aim is to destroy public housing. When Representative BUCHANAN, Democrat, Pennsylvania, last month asked Bodfish why he opposes loans and subsidies to help slum-dwellers but doesn't object to the Government's lending his own associations $2,750,000,000 at Government rates, Bodfish made this distinction—"I consider it an aid but not a subsidy."

A GIVE-AND-TAKE PLAN

The relationship between the United States Savings and Loan League and the Federal Home Loan Bank System is one of the remarkable innovations in politics and banking. It is developing into a give-and-take proposition in which the Government agency makes concessions to its member banks and, in return, relies on the league for congressional support in legislation and appropriations. The description by its former administrator, John H. Fahey, of the Home Loan Bank System as a cooperative alliance of its member associations is apt. When Fahey was asked at Temporary National Economic Council hearings in Washington why the associations were charging home owners 5 to 6 percent when they were borrowing from the Government at as little as 1½ percent, the Federal Administrator said he saw "no real public advantage" in giving home owners a lower-interest rate.

In his efforts to influence Congress, however, Bodfish has shown his real skill. He and his associates have boasted of their good friends in Congress and their many friends in the lower House.

When Congressman ABRAHAM MULTER (Democrat, New York) at the hearings on the housing bill last month asked Bodfish "why there was so much pressure last year to prevent the House from acting * * * why are your people afraid to let the House pass on the bill," Bodfish did not deny his role in the blocking of the legislation.

The campaign of persuasion includes newspaper advertising by his associations against the public housing bill paid for with depositors' funds, and costly propaganda campaign of which the latest product is a booklet subtitled "Some Facts About the Dangers of Public Housing," says the booklet, will bring about a black market in materials, skyrocketing building costs, and inflation.

A spokesman for the Federal Home Loan Bank System, when asked whether there were any limits on lobbying by agencies for lobbying purposes, they are private agencies anyway, and since the American Bankers Association and the CIO are allowed to lobby, why shouldn't federally aided associations?

In Washington, Bodfish's lobby has been called the most powerful force in the "invisible Congress." The liaison between federally aided companies, Federal agencies, and Congress, and the influence of these companies on legislation is one of the novel, if dangerous, political phenomena of the decade.

Arab Refugees—A Sorrowful Commentary on the United Nations

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 22, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, the American people are always prompt to protest against injustice.

Hitler's treatment of the Jews in Germany was resented by every right-thinking person and contributed considerably to our decision to enter the war. Now a situation prevails in the Holy Land which, from all reports, is beyond description. It is much worse than that which prevailed in Germany. Under leave to extend my remarks, I am including a news article from the Washington Star under date of June 20, 1949, containing a statement by Mrs. Mark Ethridge in which she attacks the treatment of Arabs by Israel. Also, another news article which appeared in the Washington Post on June 21, 1949:

[From the Washington Star of June 20, 1949]

MRS. MARK ETHRIDGE ATTACKS TREATMENT OF ARABS BY ISRAEL

NEW YORK, June 20.—Mrs. Mark Ethridge said today she considered it very unfortunate that Israel was admitted to the United Nations before it agreed to internationalize Jerusalem and take back Arab refugees.

Mrs. Ethridge, author-wife of the former United States delegate to the United Nations Palestine Conciliation Commission, arrived here today after a 3-month tour of Israel. She was a passenger aboard the liner *La-Guardia*.

Referring to Palestine problems, Mrs. Ethridge said, "I don't think we'll have peace there for generations and generations. The bitterness in the Arab refugee camps is simply terrific."

Mrs. Ethridge said there were 910,000 displaced Arabs who had fled or been "pushed out" of Israel by the Jews. These refugees, said added, now are living "in the most squalid and horrible conditions in the valley of the Jordan."

Mrs. Ethridge's husband, who is publisher of the Louisville Courier-Journal and the Louisville Times, resigned from the Palestine Commission post June 10.

Mrs. Ethridge said the plight of the Arabs was not well known in America because "they have no publicity in this country to tell us about it."

The Jews, Mrs. Ethridge said, have refused to "take back one single Arab."

Creation of the Jewish state provided a haven for 250,000 European displaced Jews, but in so doing, the displaced Arabs have presented a "much more serious problem," Mrs. Ethridge said, adding:

"They're living under worse conditions than the Jews ever did."

[From the Washington Post of June 21, 1949]

MRS. ETHRIDGE REGRETS UNITED NATIONS LET IN ISRAEL

NEW YORK, June 20.—Mrs. Mark Ethridge today said she considered it "very unfortunate" Israel was admitted to the United Nations before it agreed to internationalize Jerusalem and take back Arab refugees.

Mrs. Ethridge, author-wife of the former United States delegate to the United Nations Palestine Conciliation Commission, arrived here today after a 3-month tour of Israel. Mrs. Ethridge said, "I don't think we'll have peace there for generations and generations. The bitterness in the Arab refugee camps is simply terrific."

She said there were 910,000 displaced Arabs who had fled or been "pushed out" of Israel by the Jews. These refugees, she added, now are living "in the most squalid and horrible conditions in the valley of the Jordan."

Creation of the Jewish state provided a haven for 250,000 European displaced Jews, but in so doing, the displaced Arabs have presented a "much more serious problem," Mrs. Ethridge said, adding:

"They're living under worse conditions than the Jews ever did."

Repay Veterans Now

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 23, 1949

Mr. SHAFER. Mr. Speaker, nearly 2 years ago a group of Republican Congressmen, of which I was a member, began probing into the national service life insurance to which at least 16,000,000 American men had subscribed during World War II.

We learned, to our surprise, that, according to actuarial studies, at least $2,000,000,000 and perhaps $3,000,000,000 had been overpaid by our men in uniform.

Naturally, we began to agitate for this money to be returned to the veterans who had paid it in, for it was the veterans' money and not the money of the Government.

We received assurances from the Veterans' Administration in mid-1948 that this money would be returned just as soon as the bookkeeping problems involved could be solved.

Some delay was to be expected. A Veterans' Administration representative and a representative of the Bureau of the Budget pointed out that at least 6 months or more would be required.

After a year had elapsed and the bureaucrats in the Veterans' Administration had not acted, I took the floor of the House of Representatives. Word had come to me that the administration intended to hold up these repayments to the veterans until next year, just before election.

In a speech on the floor of this House, I declared that—

It was unconscionable to delay these repayments because they may have a political effect (naturally favorable to the Democrats) in the elections of 1950.

I say that it is a cheap political trick that ought to be shouted from the housetops.

I continued:

With the number of superfluous employees in Washington and the tremendous facilities of the Veterans' Administration, there is no excuse for these payments to be delayed any longer.

I am serving notice on the Veterans' Administration right now that they had better get those checks out to the veterans within the next few weeks or months. If they do not, they will not have heard the last of it.

That speech was delivered on March 25, 1949.

On March 30, the Veterans' Administration issued a lengthy press release, assuring veterans that the repayments would be forthcoming this year, instead of in 1950. A month later, the Veterans' Administration again issued a release assuring veterans the money was forthcoming.

Now, the Veterans' Administration has said definitely that distribution of the checks will begin next January 1, and will continue through next June.

It is better late than never for our veterans to get their money back, but it still smells to high heaven to anyone who is familiar with the workings of the New Dealers and the Fair Dealers. Nineteen fifty is an election year. They will want the millions of veterans to think that these checks are a gift from Fair Deal heaven, when, in reality, each check is merely the veterans' own money coming back to him, long overdue.

This is a perfect example of how the Fair Dealers handle your money. If you make a mistake, you get a notice from the Bureau of Internal Revenue in 3 days telling you to cough up or get locked up. But if they make a mistake, it takes 3 years for them even to find out how much they owe you, if they ever do find out without prodding from the outside.

The 16,000,000 veterans will get close to $3,000,000,000 back in refunds. The payments will range from $50 to $300 a person, depending upon how long he kept his NLSI and other factors.

This money has been due to the veterans since VJ-day. No veteran should give the Fair Deal credit because he is getting his money back 3 years late—without interest.

Now It's Hysteria

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 23, 1949

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Mount Vernon (Ohio) News:

NOW IT'S HYSTERIA

President Truman the other day branded the current spy hunt as the part of postwar hysteria which he said is sweeping the country.

And on the day he was making this statement a former State Department employee testified at the perjury trial of Alger Hiss, another former State Department official, that he as a Communist sympathizer had handed over secret documents from his office to Whittaker Chambers, self-styled courier for a Russian spy ring, and a second man.

The witness was Henry Julian Wadleigh, an economist who was educated in England and who had held jobs with two United States Government agencies and with the UNRRA.

Mr. Wadleigh testified that at the time he entered the employ of the State Department he was a Communist sympathizer and as such was willing to do anything to further the cause of communism.

Mr. Wadleigh said he later became disillusioned when Russia entered into a nonaggression pact with Nazi Germany.

But the fact remains that he, a highly educated American citizen, used his office in the United States Government for the purpose of aiding a foreign ideology at the time he was accepting his salary from taxes contributed by the American people.

He is not alone in this. Mr. Chambers, the confessed former courier for a Russian spy ring, has testified that he served the cause of communism, and that he perjured himself by swearing he was not a Communist in order to obtain Government jobs in this country.

The fact that two have owned up in court to subversive activities while in the pay of the Government they were operating against indicates there must have been more.

A number of men and women have been mentioned in this connection. Probably some have been unjustly connected with Russian espionage, possibly some others may succeed in clearing their names.

But two men alone could not successfully operate a spy ring which naturally would have the task of stealing all of this country's most valuable secrets.

The fact that Russian espionage has been established beyond reasonable doubt is significant.

Therefore, Mr. Truman's attempt to pass off the spy hunt as a part of postwar hysteria deserves little consideration.

It takes rank with his declaration that congressional investigations into Communist activities in this country are a "red herring."

We wish the spy hunt was hysteria, and the congressional investigations were a "red herring." The country would be a lot safer if this were the case.

Arab Refugees

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 23, 1949

Mr. JAVITS. Mr. Speaker, there are appended an editorial from the New York Herald Tribune of June 13, 1949, and an article from the New York Times of June 21, 1949, on the subject of Arab refugees in the Near East. It is important that the facts should be very clear as the efforts proceed to bring a lasting peace to the Near East.

The editorial and article follow:

[From the New York Herald Tribune of June 13, 1949]

THE ARAB REFUGEE

Mr. Mark Ethridge, American representative on the United Nations Conciliation Commission for Palestine, has returned from Lausanne with a pessimistic account of negotiations there. Both Arabs and Israelis, according to Mr. Ethridge, "are like trains running on parallel tracks. They back up and go forward, but they never meet." This, in itself, is not surprising. The difficulties, psychological and material, in the way of any long-term settlement of the Palestine problem are still very great, and the passage of time will not, unassisted, go far to reduce them. In some respects they become more serious.

The principal bone of contention is the Arab refugee, who left his home during the fighting, and who is now being maintained, precariously, as an object of international charity. The Arab states insist that some beginning be made on the problem which the refugee represents; the Israeli Government refuses to do so except within the context of a general agreement. There is no easy solution. Modern Palestine is not, after all, a land flowing with milk and honey. To make of Israel an economically viable nation will require years more of the toil and sacrifice that have already been given in such lavish measure; to cope at once with the Jews who seek their homeland and the Arabs who may wish to return could place an intolerable burden upon the new state. Nor, for both economic and political reasons, can the refugees be readily absorbed by Israel's neighbors. The whole Near-Eastern region, shaken by war, largely undeveloped economically, plagued by divisions, is in a very poor position to deal with the dislocation of hundreds of thousands of persons.

Outside help could be of real value in meeting the material needs of the resettlement or the return of the Arab refugees. But even more important is the recognition by every interested party—and, thanks to the responsibilities imposed upon the United Nations, this includes the world at large—that harsh words and brusque gestures will only intensify the difficulty. Admitting that the bitter residue of passion remaining among the late combatants, the shame of defeat or the elation of victory, are not conducive to objective thought and action, it is still essential that the problem of the refugees be approached with humanity and statesmanship. Attempts toward a solution should not be blocked by protocol, or used as a counter in bargaining. A forthright statement from Israel, which has already expressed a willingness to accept some returning Arabs as part of the peace settlement, as to the numbers, or percentages, which it considers feasible to admit under existing circumstances, would go far to bring the question out of the deadlocked confusion which now perplexes world opinion.

And, by the same token, forthrightness on the part of the American Government would be useful. The attack by the Israeli Foreign Minister, Moshe Sharett, on American policy in the Near East is confusing because the American people do not know what that policy is. If this country is not to enter again upon the dreary round of official double-talk and half-secret diplomacy which characterized the earlier phases of the Palestine dilemma, it is time that the public be informed as to what steps its representatives have taken at Lausanne and Tel Aviv—and why.

[From the New York Times of June 21, 1949]

ISRAEL PROPOSES ARAB PLEBISCITE—SHARETT ADVISES VOTE TO LEARN WHETHER PART OF PALESTINE WANTS TO JOIN JORDAN

(By Gene Currivan)

TEL AVIV, ISRAEL, June 20.—Moshe Sharett, Israeli Foreign Minister, told the Knesset [Assembly] tonight that he had advised the Lausanne delegates to advocate a plebiscite in Araba Palestine to determine whether the inhabitants desired a separate state or annexation to Jordan.

The aim of this strategy, apparently, was to dispel the uncertainties of the present situation in Palestine in which no one knows what Arabs are represented by whom. It is not clear whether the Arabs now residing in Arab Palestine are properly represented by King Abdullah, who seems to have taken over the country, or whether those outside Jordan would rather have a separate state.

Israel consistently has advocated a separate state, in accordance with the resolution of the United Nations Security Council of November 29, 1947, but at the same time Israel has indicated that she would not fight against control by Jordan. This problem, it was said, indirectly solves the refugee problem, as it is difficult to come to terms with a country divided within itself.

SOME REFUGEES TO RETURN

M. Sharett said that plans had been formulated to receive the refugee wives and children of Arabs already here. These, he said, will be special cases and subject to screening.

Two Arab members made strong appeals tonight in the Knesset for the return of Arab refugees. Foreign Minister Sharett, who recently reiterated the Israeli policy that refugees would be considered only at peacetable talks, showed unusual interest in both speeches.

Seif el Din el Sabi and Amin Jarjura, both representing Nazareth Democrats, who lean toward the governmental Mapai party, caused quite a stir with their addresses.

Both insisted that the return of refugees would not constitute a "fifth column" as charged by the government, but would be a humanitarian gesture appreciated by all Arabs. No figures were mentioned, but it was implied that those who had homes and families to return to should be permitted to find sanctuary in Israel.

ARAB LEADERSHIP CRITICIZED

Mr. Sabi charged that the Arabs who had fled had been "ground under the heels of imperialism and so-called Arab leadership."

He held that history would absolve the Jews for the Arabs' flight because it was known that they had tried to persuade the Arabs to stay. He held that the Arabs had fought against the Jews under duress, but that the Arabs wanted to return and live as loyal citizens.

Mr. Sabi declared that the Arabs had had a taste of imperialism and would fight for Israel against any outside interference. He said the Arabs had learned their lesson after having been chased from pillar to post by the Arab state and their leaders. The Arab states, he said, are exploiting the fate of the refugees.

Housing Legislation

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 23, 1949

Mr. MULTER. Mr. Speaker, the following are the fourth, fifth, and concluding articles of a series written by Mr. Charles Abrams and appearing in the New York Post:

HOME BUILDERS ASSOCIATION THIRD LOBBY CHAIN LINK

(By Charles Abrams)

The third link in the lobby chain opposing the Federal Housing bill is the National Association of Home Builders, a group claiming to represent 126 builders' associations.

NAHB is another byproduct of Government expansion in the housing field. It speaks neither for construction contractors nor for large builders, but for a group of 15,000 builders of small homes who are the beneficiaries of Federal Housing Administration mortgage insurance.

Like the building and loan association lobby, these home builders have a stake in Government aid and are out to thwart any competition for it. They therefore oppose any subsidies to local housing authorities for slum clearance and are fighting the Federal housing bill that now faces a tough battle in the House.

Prior to FHA, the bulk of these home builders were petty operators, with the average home builder putting up no more than four houses a year.

The advent of FHA did not rationalize the home-building operation but it did give these home builders a vested stake in Government aid and they rose to the occasion with all the lobbying strength they could muster.

The logic of their position was clear. The FHA system insured mortgage lenders against loss and the mortgage lenders in turn felt safe in advancing to the builders as much as 20 percent more than houses cost to build; the builders thus needed no cash investment of their own with which to venture. When

they sold the houses the 10 percent equity money put up by the home buyer was added profit. The building and loan associations favor the FHA system too because, they admit, it enabled them to insure their less desirable loans.

Following the pattern of the building and loan lobby and its liaison with the Federal Home Loan Bank System, FHA, home builders are lobbying for bigger and better FHA legislation. In turn, FHA is reasonable with their builder-beneficiaries. FHA has acquiesced in the guile essential to make the FHA formula look respectable, such as land-cost inflation by builders and juggling of building cost estimates. It has winked at poor design and workmanship. When building costs went up, it cut standards and approved the economy house, a substandard, two-bedroom job, less than 600 square feet in area. Until recently FHA even joined with builders in keeping Negroes and other minorities from FHA developments.

FHA also boomed home ownership for the builders, establishing a series of better-sales meetings, conducting radio programs and sponsoring expositions to tempt home-buying prospects. As a former deputy FHA administrator put it at a builders' meeting, "Gentlemen, the National Housing Act is a profit-producing sales tool for realtors."

From the beginning FHA and the builders have worked hand in hand and have had a pleasant relationship. Last week FHA announced it is investigating two FHA officials who have just resigned for allegedly accepting gifts from builders. Most often, however, the relationship between builders and FHA officials is one strictly of political give and take.

On the eve of "Dewey victory," for example, the Home Builders Association advised the Republican Party to continue FHA officials in office and avowed that neither Housing Administrator Foley nor FHA Administrator Richards would be displaced by "President Dewey."

The main task of the home builders in the lobby chain is to work on local newspapers and get them to publish attacks on the proponents of public housing. "Remember, the more noise you make, the more attention you will get," it advises.

HOUSING BILL STRATEGY LAID BY A REALTY GENERAL STAFF

(By Charles Abrams)

When the housing bill finally reaches the floor of the House of Representatives next Tuesday, the opposition will reflect the concerted work of one of the most effective pressure coalitions this country has ever known.

Once the various factions of the real estate lobby acted independently. Now they work in concert, meet in Washington week after week to discuss common strategy and parcel out tasks. Between now and Tuesday their job will be to high-pressure the 65 uncommitted Congressmen on whose votes the fate of the legislation now rests.

Three of the groups which make up the lobby have been discussed in previous articles.

The fourth link in the lobby chain is the Building Products Institute, headed by Douglas Whitlock who also guides the Producers Council. These two organizations represent the materials manufacturing industries.

The National Lumber Manufacturers Association is a fifth link in the lobby chain that speaks for lumber interests separately.

Building material is the largest single item in the cost of a home, ranging from 45 to 60 percent of building cost. Control is closely knit and power concentrated. Four leading corporations control 82 percent of prepared finished plaster and 91 percent of molding and gaging plaster. More than three-fourths of the output of important plumbing products are manufactured by four producers. Two corporations control 95 percent of all plate-glass production and four companies almost 80 percent of copper production.

The practices of the materials industry have often come to the attention of the Attorney General, but little has even been accomplished to break the blockade. Large producers of mill lumber continue to peg prices in metropolitan areas; associations set and maintain base prices for windows, window frames, stairs, banisters, door frames, cabinets, and ornamental woodwork. Dealers and jobbers of plumbing supplies are often forbidden to sell directly to the job on penalty of being disciplined. Manufacturers have cancelled trade discounts of jobbers who sell direct to the consumer or to the contractor. One lumbermen's association distributed membership lists to wholesalers and if they sold to a nonmember they were penalized or faced boycott.

While other links in the lobby chain are assigned the jobs of reaching Congressmen, tackling the home-town newspapers or political leaders, the Building Products Institute and Producers Council have done their most effective work in influencing the editorial policies of major publications. Their members are large national advertisers.

One very important magazine in a chain of national publications was recently importuned to change its friendly attitude toward public housing on the threat of a cut-off of advertising by members of the producers council. This magazine not only served the building field but supplied information on housing to other magazines in the chain whose circulation runs into the millions. In recent months the attitude of the magazine toward public housing has changed and Whitlock boasts of having done the trick.

The National Lumber Manufacturers Association was organized in 1902, and in 1921 moved to Washington to increase its contacts with the Federal Government. It openly fosters the notion that the road to genuine low cost housing should be lined with frame houses. Crying socialism, its real reason for opposing public housing projects is that they are built of fireproof materials instead of wood.

REALTY LOBBY HIT AS PRIVATE GOVERNMENT

(By Charles Abrams)

The real-estate lobby has effected a profound change in the American political system. But by taking the offensive against public housing and hurling epithets of communism and socialism at its proponents it has succeeded in obscuring the change.

The American system was built around a capitalist economy and a plan of checks and restraints to keep any single group from dominating the organs of government. Lobbies have a legitimate function when their exertions are confined to pressure and counterpressure in legislation. But when a lobby imbeds itself into the administrative and legislative organs of government, it is no longer a lobby but private government.

The first phase of the liaison between government and the expansion of Federal interest in housing. The following then occurred:

1. The business of mortgage insurance was nationalized and put into a Federal Housing Administration.

2. A formula was devised under which only lending institutions were eligible for the insured loans and despite Federal backing of the mortgages, interest rates on home loans remained the same or more than on uninsured loans.

3. The Federal credit became the principal influence in home financing through a federally owned Home Loan Bank system which lent $2,700,000,000 to building and loan associations, bought their stock and insured their shareholders.

4. A socialization of risk in small-home construction took place through the use of Federal credit enabling home builders to venture without investment of their own other than "front money."

The Federal Government intervened in public housing too, but it was a traditional intervention through grants to public bodies for a public purpose. In the private-housing field, however, the governmental expansion gave rise to four powerful interests competing for the Government bounties: building and loan associations, builders, mortgage lenders, and materials manufacturers. These interests have now organized into a lobby chain. The coalition operates as follows:

1. The lobby defends the Government agencies and works for their appropriation in Congress.

2. The Government agencies in return repay the lobby by making concessions to it. FHA reduces building standards to enable the builders to profit, winks at their double bookkeeping methods, sells indiscriminate home ownership as a national policy through federally sponsored sales meetings, radio programs, and other devices and has even joined with builders in encouraging racial discrimination.

3. The beneficiaries of governmental subsidy who are behind the lobby interest Congressmen in various activities connected with building and loan associations or real-estate operations, hoping thereby to induce favorable votes in committees or on the floor.

4. The Government agencies have become umbrellas for the protection of private entrepreneurs against prosecution for rigging interest rates stifling competition, and other practices.

Of Italian fascism it was said that through it "the state administration allies itself with private enterprise and the preservation of the capitalistic order." This was declared to be the "most practicable and feasible means for serving national interests."

While I believe we are still a long way from fascism, it is also clear that the new liaison is hardly consistent with democracy. When housing legislation, which the people want and desperately need can pass the Senate on three separate occasions and fail each time in the House, a danger signal flares over Capitol Hill. It cries for an investigation. What happens next week on the House floor in the fourth effort of the housing bill to clear the lobby blockade may make history.

Chinese Red's Infiltration Into United States Agencies in China Revealed

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news story from the Washington News of June 23, 1949. Is it any wonder our activities in China have so frequently been ineffective when the internal security of our organs in China, both military and civilian were infiltrated by Chinese Communists who could pass on to their comrades secret

information of greatest value; and, perhaps even more important, could in some degree influence the thinking and planning of the American officials with whom they worked? Is it surprising that so many Americans came home from China indoctrinated with the myths about the Chinese Communists which have led us to disaster in Asia?

The article follows:

CHINESE RED'S INFILTRATION INTO UNITED STATES AGENCIES IN CHINA REVEALED

(By Clyde Farnsworth)

TAIPEH, FORMOSA, June 23.—Chinese Communist infiltration into United States agencies in China was disclosed here today by a reliable Nationalist.

The most recent case reported was that of a Chinese telephone operator planted in the United States Embassy at Nanking. He escaped arrest by the Nationalists through a mysterious tip-off a week before the capital fell to Communist troops.

My informant said the Nationalist Foreign Ministry secretly informed the Embassy it had a Communist telephone operator.

The nationalists couldn't make an arrest because the embassy grounds are not under Chinese law. But United States authorities were informed that Chinese police would wait outside the embassy and arrest the man when he stepped into the street.

HE GOT AWAY

Secret agents took up their vigil. They waited for a few hours but the operator never appeared. Inquiry in the embassy disclosed that the man had gone to the employees' dormitory. That area was searched but the Communist had escaped.

The usual practice in local employment by United States agencies is to make a security check of prospective workers who might have access to secret papers. My informant said Chinese authorities were seldom consulted in such matters, the Americans preferring to make independent investigations.

TWO PREVIOUS CASES

The disclosure of two previous cases of Communist infiltration was made possible recently by publication in Communist New China News Agency of the names of two men now identified as Communist partisans. One served in Maj. Gen. A. C. Wedemeyer's headquarters in Chungking during the last year of the war and the other was chief secretary to F. M. Fisher, head of the China Office of War Information, also in Chungking.

Nationalist sources said the first was Chin Ju-chi, a graduate of Chicago University. In the war with Japan he became a brigadier general and deputy director of the information and civil affairs bureau of Chinese Ministry defense. Later General Chin became chief Chinese secretary of the United States Army's Chungking headquarters.

Still later, Chin appeared in Hong Kong where he acted as spokesman for the democratic league, an organization which had been outlawed as a Communist front by the nationalist government.

Now the Communists have identified him as one of their own.

MANY WERE IN OWI

My nationalist informant said the Chinese staff in the OWI office in Chungking included a host of Communists, mostly from Yenching University in Peiping, over which United States Ambassador Leighton Stuart once presided. They were brought into the OWI through influence of Liu Tsun-chi, chief of the Chinese division of OWI.

Liu recently was identified by the Communist news agency as an official of the Communist youth league.

Can Air Power Alone Win a War?

EXTENSION OF REMARKS

OF

HON. RAYMOND E. BALDWIN

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Thursday, June 23 (legislative day of Thursday, June 2), 1949

Mr. BALDWIN. Mr. President, during the past few weeks we have heard a good deal of discussion about the conflict which goes on among the admirals and the generals concerning the national defense establishment of our country. I am one who believes that that fight is not as bitter as it has been represented to be in some quarters. On the other hand, I recognize that it deals with some vitally fundamental questions which are of great consequence to the national welfare, inasmuch as they pertain to our defense. It seems to me that these questions must be very carefully considered by the Congress and by the people of the country, and that we will make a grave mistake if we accept the recommendations of any authority or claimed authority on the subject, be he an admiral, a general, or otherwise, without looking at what some other authority may say on the other side of the question.

For example, there are many people who feel that all we need in the United States for an adequate defense is an Air Corps, and I am one who subscribes to the proposition that we need the best air force in the world; but, I do not subscribe to the proposition that we can provide a complete and adequate national defense with an Air Corps alone. I still believe that we need an Army and a Navy to supplement the Air Corps, and the Air Corps to supplement them, and each to supplement the other.

So, Mr. President, I ask unanimous consent to have inserted in the RECORD an article by a distinguished officer, which is published in this week's Saturday Evening Post, and which is entitled, "An Admiral Talks Back to the Airmen." The article is written by Rear Adm. D. V. Gallery, of the United States Navy. In my humble opinion, it is a notable, thoughtful, able contribution to this whole subject by a man who knows a great deal about it, who has the courage of his convictions and is willing to speak out frankly and boldly.

Rear Adm. Dan Gallery is, on his record, as much an airman as any Air Force officer. He has been roaming the wild blue yonder since 1926, and has over 5,000 hours of pilot time in torpedo planes, dive bombers, patrol planes, and fighters. The article contains a picture of the admiral in the cockpit of a McDonnell Phantom jet fighter. Last summer he and two other admirals formed a stunt team and performed in single-seat jet fighters at Idlewild and the national air races.

Admiral Gallery is now Assistant Chief of Staff for Guided Missiles. During the war he demonstrated his versatility by commanding a submarine; but he first had to capture it from the Germans at sea with his flattop, the U. S. S. *Guadalcanal*, before he boarded it.

This article, Mr. President, expresses opinions which are the admiral's own private opinions, and are not to be construed, by his own statement, as official or reflecting the views of the Navy Department or of the Navy service at large.

I have had an estimate made of the cost of printing this article. I find that it runs a little over two pages, and that the cost of printing it will be $187.50; but, because of the real value that the article has, the character and knowledge and ability of the man who wrote it, and the fine contribution it makes to the whole subject of national defense, I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AN ADMIRAL TALKS BACK TO THE AIRMEN

(By Rear Adm. D. V. Gallery, U. S. N.)

This article may put me on the spot, but I have to write it just the same. The United States has treated me well during the 29 years that I have served it in the Navy. I feel it is my duty to speak up now when the country is being deluged with propaganda designed to sell an unsound concept of the national defense.

Of course, naval officers are not supposed to discuss such subjects as this. For the past 2 years they have been "advised" to avoid controversial matters in their public utterances. They have been permitted to make forthright statements about freedom of the seas, the Constitution of the United States, and the Star-Spangled Banner. But they have evaded such debatable questions as how to defend the United States against foreign aggression.

I know there is a lot of talk these days about knocking a few brass-hatted heads together to settle differences among the armed services, and I suspect that mine will be one of the first to get knocked. The Air Force Association will demand my scalp, and they may be powerful enough to get it. However, I feel that at this critical stage in world history, when we are reorienting our defenses for the atomic age, the American people have a right to expect more from the naval officers whom they have supported and trained than bedtime stories and nursery rhymes. So, I'm going to tell the truth as I see it, and let the chips fall where they may.

The most important question that faces this country today is: How should we realine our military forces to protect our way of life and to provide maximum security to the country? Starting last December, the country has been snowed under with propaganda to take the greatest gamble in our history and buy a package labeled: "Quick and Sure victory—at bargain rates." This label has great popular appeal. But the package to which it is currently attached will neither prevent war nor insure winning it if war comes.

We are now being told by the Air Force Association and by a man named William Bradford Huie, who has been using the Reader's Digest to peddle his wares to a large and trusting audience, that if we simply build enough long-range bombers and atom bombs, our way of life will be secure and we will all live happily ever after. These "men of vision" say that armies and navies are a useless drain on our resources, and that all we need now is an Air Force. "In-

stant and devastating retaliation from the air" is the magic concept which will keep peace in the world. If, in spite of this formula, war should come, then, say the prophets, the atomic blitz will insure victory for our arms and restore a lasting peace. The only instruments needed for negotiating this peace will be the B-36 and the A bomb—so goes the story which the United States has had served up to it for the past 6 months in a sensational publicity campaign.

There are a few booby traps in this idea of the atomic blitz. It is a desperation concept which holds good only for a war of the United States versus the rest of the world. It is an all-out business which can't stop at geographical or political boundaries. Neutral or allied countries may simply provide safe havens for the ground forces of our enemy if we commit ourselves to a purely aerial war. While we are devastating the cities of the enemy hinterland with intercontinental bombers, his ground army may be occupying the rest of Europe.

What happens then? Do we blitz Paris, Rome and Brussels?

That kind of atomic victory might do more to advance the cause of communism than years of propaganda from the Cominform. We might win the war in 30 days and lose the peace for the next 300 years

A recent talk by a great American soldier sums this whole question up very much better than I can do it. This soldier-statesman said, "I do not deprecate the vast capabilities of air power as a priority weapon for attack against any aggressor state. But I must part company with those enthusiasts who ascribe to air power limitless capabilities in winning an instant decision. However crippling air attack can be, I am convinced beyond any reasonable doubt that should this Nation be forced into still another conflict, we shall once more be forced to gain the inevitable victory over dead bodies—those of our soldiers on the ground. Ultimately a war between nations is reduced to one man defending his land while another tries to invade it. Whatever the devastation in his cities and the disorder in his existence, man will not be conquered until you fight him for his life."

Of course, statements such as the above are brushed off by Hule & Co. as being the stubborn last-ditch stand of oxcart soldiers and battleship admirals who refuse to recognize that this is the atomic age. If you want to put me in that category, I will be in distinguished company, because I am quoting one of the most illustrious military men of our time, Gen. Omar Bradley.

Quoting further from this same speech of General Bradley: "To provide long-term security for the Nation, our military requirements must be related both to American foreign policy and to the known offensive capabilities of likely enemy states. They must be predicated upon preparedness for a plan of war—a strategy that can defend our shores, aid our allies, and preserve a foothold from which to strike the aggressor in his homeland.

"If we were to accept the inevitability of enemy superiority on the ground, we should not only be forced to abandon our allies with frail hope of liberation, but we might also find ourselves trapped in a long and punishing war of attrition through air bombardment.

"While the odds in such a conflict would presumably lie with us, an air war of attrition could readily lead to disaster—to a duel in the best fabled tradition of the gingham dog and calico cat who ate each other up."

Ideas such as these, are, of course, very unpleasant to dwell upon. How much more comfortable it is to think of simply lobbing atom bombs across the ocean until the misguided enemy sees the error of his way. But this sort of wishful thinking is really the last vestige of die-hard isolationism. Since it is now apparent that we cannot actually isolate ourselves from European wars, we are seeking a way to participate only from the side lines at long range.

Another objection to this blitz concept is that it commits the United States to a war against a population rather than against its leaders. In every war we always say we have no quarrel with the enemy people—our grievance is against their government. We say today that our potential enemies are really a potentially friendly but misled people who would probably be eternally grateful to us if we were to throw out their leaders and make it possible for the common people to enjoy the same freedoms as our citizens.

But the atomic blitz is a war against the common people. The atom bomb is a weapon of indiscriminate destruction and mass slaughter. You win an atomic war by destroying so many cities and killing so many little people that their leaders finally decide to give up. How many million little people you must kill before this happens remains to be seen.

However, in winning such a war there is a good chance that you will alienate the affections of the potentially friendly survivors.

What the blitz enthusiasts are actually driving at was shown very clearly in recent newspaper stories which stated that after painstaking study by our military experts 70 strategic targets in a possible enemy country have been selected for destruction in case of war. These targets were said to be so shrewdly chosen that their destruction would paralyze the enemy's economy and insure early victory. A glance at a reference book shows that there are 70 cities of more than 100,000 population in that country. How simple strategy has become. One bomb, one city; 70 cities, 70 groups.

All that the Joint Chiefs of Staff need to plan the broad strategy of a war is a handy reference book. The prophets of the blitz profess to aim at strategic objectives, but what it really boils down to in the long run is simple destruction of cities.

The major mistake we are making now is: We are losing sight of the fundamental fact that war is simply a means to an end. War is not like a football game, in which the sole objective is to win the game and then go on about your business. Wars are fought for political objectives, and the accomplishment of the objective doesn't begin until the war is over. It is quite possible to win a military victory and to lose the political objective for which the war was fought. There isn't much use in winning a war if the manner of winning it makes it impossible to accomplish the purpose for which the war is fought.

Wholesale destruction of the populated areas of an enemy country is a poor way to promote a lasting peace. It merely sows seeds of hate for another war. All over Europe we are discovering to our sorrow now the penalties which the victor pays in the postwar peace for indiscriminate destruction. A large part of the billions now being appropriated for the European recovery program can be charged to this account.

It is true that our possession of the atomic bomb has a powerful deterrent effect, up to a certain point. Winston Churchill says it is the only thing which has prevented the communization of Europe and the bombing of London. But this effect is not permanent. Back in 1938, fear of a devastating attack on London was largely responsible for Munich.

A year later, London still expected wholesale obliteration or saturation with deadly gases the moment war was declared. Nevertheless, Britain finally chose war with Hitler despite a prospect which was just as frightening to them at that time as the prospect of an atomic blitz is today. Whether you expect to be killed by a TNT bomb or a nuclear explosion, the prospect is equally grim.

Fear is a greatly overrated emotion. You get used to it after a while. Every normal soldier is scared when he goes into battle, but he does his duty anyway. If fear were the deterrent which we are now asked to believe it is, the pages of history would not record the endless series of battles in which so many men have been killed. A nation bent on aggression can always persuade itself that it will be able to fend off the opponent's attack or to strike a crippling blow first. Japan had no trouble convincing her people that the military might of the United States was greatly exaggerated. England and Germany both saw their cities devastated from the air on an unprecedented scale, but neither gave the slightest consideration to surrender on account of terror bombing.

The only thing that a dicatorship fears is the possibility of being overthrown. Speaking of a dictatorship, Churchill recently said, "Self-preservation, not for their country but for themselves, lies at the root and is the explanation of their sinister and milgnant policy."

It is especially futile to think that you can scare a di tatorship into behaving itself by the threat of killing large numbers of its citizens. Why should this threat bother a police state which kills its own citizens in wholesale numbers? Certainty of losing the war is the only factor that may deter them, and it is very difficult to convince dictators that they are certain to lose a war.

Heavy casualties among their own people in the early part of a war, which might turn out successfully in the long run, would be a matter of very small moment to a dictatorship.

"But," say the prophets of the atomic blitz, "if we don't succeed in scaring them into keeping the peace, we'll blast them out of existence in 30 days after war starts."

This is simply wishful thinking of a very primitive kind, although I must say it isn't quite so new an idea as you may think. Read the following and see if it doesn't sound as if it came out of yesterday's newspaper:

"For example, take the center of a large city and imagine what would happen among the civilian population during a single attack by a single bombing unit. For my part, I have no doubt that its impact upon the people would be terrible. * * *

"What could happen to a single city in a single day could also happen to 10, 20, 50 cities. And, since news travels fast, even without telegraph, telephone, or radio, what, I ask you, would be the effect upon civilians of other cities, not yet stricken, but equally subject to bombing attacks? What civil or military authority could keep order, public services functioning, and production going under such a threat? And even if a semblance of order was maintained and some work done, would not the sight of a single enemy plane be enough to stampede the population into panic? In short, normal life would be impossible in this constant nightmare of imminent death and destruction. And if on the second day another 10, 20, or 50 cities were bombed, who could keep all those lost, panic-stricken people from fleeing to the open countryside to escape this terror from the air?

"A complete break-down of the social structure cannot but take place in a country subject to this kind of merciless pounding from the air. The time would soon come when, to put an end to horror and suffering, the people themselves, driven by the instinct of self-preservation, would rise up and demand an end to the war—this before their army and navy had time to mobilize at all."

Does this have a familiar ring today? Does it sound like Huie and his atomic blitz? Don't jump to any such hasty conclusion—this is taken from General Douhet's book, Command of the Air, written 20 years ago. In the closing chapters of this book, Douhet gave us his idea of what World War II would be like. This "man of vision" predicted World War II would last 48 hours.

"Oh, but that was back in the primitive days before Hiroshima," say the blitz prophets. "Everything is changed, now that we have the atom bomb."

Studies by outstanding atomic scientists show that the damage done by the bombing of Germany was the equivalent of the damage to be expected from about 500 atom bombs. Germany is a comparatively small, compact country. But still, as proved by the official records of the Strategic Bombing Survey, her production of munitions and aircraft kept going up until after the invasion, in spite of the bombing. We had to invade Germany and defeat her armies before she surrendered. Hitler didn't simply blitz a lot of Russian cities, he actually captured the entire Ukraine. But still Russia didn't give up. I don't think anyone, except perhaps Huie, will claim that Japan was defeated by air power alone. Japan surrendered because of the combined effect of naval blockade, of air bombardment made possible by our amphibious operations, and of our obvious ability and readiness to invade her homeland.

The British can testify, from experience, as to the futility of terror bombing unless it is backed up by the ability to invade. I was in London during the blitz and the millions of people I saw sleeping underground on the subway platforms every night are not apt to underestimate the effect of indiscriminate bombing. But the considered opinion of the British is that this form of warfare does not pay off. Leading British experts, such as Admiral Dickens, General Fuller, and Air Commodore MacLean, condemn bombing cities as being a losing proposition. Even the RAF now concurs with this view that area bombing is useless. These opinions deserve great weight because they come from people who have had actual experience with the blitz, from the point of view of both the man in the bomb shelter and the one in the bomber's cockpit.

I favor playing this atomic-blitz threat for all it is worth and using the bomb itself, if we have to. At what point the atomic threat becomes more inflammatory than deterring is a judgment not for military men. But we've got to be able to back up this threat with sea power and ground forces—in case the handful of men against whom it is directed decide to shoot the works and call our hand.

This instant and devastating retaliation plan is doubly dangerous because it has terrific appeal to the popular imagination. It sweeps all the unpleasant facts of war under the rug and promises easy victory without much fighting, in case war does come. It offers us a sort of sugar-coated war in which the only horrors are experienced by the enemy, and which we win at the expense of comparatively few long-range-bomber crews. Of course, the air war over Germany cost us and the RAF over 150,000 airmen, which is not so few, at that. But there will be no more amphibious landings, no more tank warfare, and no more Battles of the Bulge—it will all be over in a hurry and will be more or less painless for us. As an additional bargain attraction, you can reduce the Army and Navy to practically nothing, thus saving the harried taxpayer many billions of dollars. That is an easy bill of goods to sell, and you can hardly blame the public for buying it so eagerly.

But it's no good. The very fact that it offers something for nothing should be enough to arouse our native American suspicions. War has always been a ghastly business and always will be. The only way to avoid the horrors of war is to avoid war itself. War will never be cheap, either in money or lives, no matter how you fight it. One of the greatest dangers of the current easy-war propaganda is that it may lull us into thinking war is not so bad after all.

Even from the purely cold-blooded military point of view of getting the shooting war over with as soon as possible, blasting cities does not pay off. Such bombing has much more effect on post-surrender problems than it does in bringing about surrender. It is a diversion of effort and may, therefore, prolong instead of shorten the war. The United States Strategic Bombing Survey Summary Report, drawn up after careful postwar studies by a group of experts from the Air Force, Army, Navy, and civilian life, states on page 16:

"The Germans were far more concerned over attacks on one or more of their basic industries and services—their oil, chemical, or steel industries or their power or transportation networks—than they were over attacks on their armament industry or the city areas."

Düsseldorf was one of the most heavily and frequently blitzed cities of the Ruhr. The Detailed Study of the Effects of Area Bombing on Düsseldorf, by the United States Strategic Bombing Survey, says on page 4:

"From the study of Düsseldorf, as detailed in the accompanying report and summarized here, it must be concluded that area raids, as they were planned and executed against this city, did not and probably could not permanently cripple the economic activities of the community nor seriously affect for long the industrial production of its plants."

The blitz prophets seem to have forgotten that the air operations which really paid off during the war against Germany were of the much belittled tactical variety. The attack on transportation, just preceding the invasion of Normandy, not only pinned down the German armies but did more to stop production than all the so-called strategic attacks combined. The Survey Report states on page 12 of the summary:

"The attack on transportation was the decisive blow that completely disorganized the Germany economy. It reduced war production in all categories and made it difficult to move what was produced to the front. The attack also limited the tactical mobility of the German Army."

One of the prime targets for strategic attack was the German aircraft industry. It turned out that even these attacks on aircraft factories actually had little effect in reducing German fighter strength. The Survey Report says on page 6:

"The culminating attacks on the German aircraft industry began in the last week of February 1944. * * * In that and succeeding weeks every known aircraft plant in Germany was hit. * * * Production was not knocked out for long * * * acceptances were higher in March, the month after the heaviest attack, than they were in January, the month before. They continued to rise."

One of the big lessons of the aerial war was that bombers cannot operate deep in enemy territory beyond the range of the fighter escort. In two disastrous attempts to destroy the ball-bearing factory at Schweinfurt, we lost 98 planes shot down and 138 badly damaged out of 428 B-17's taking part in the unescorted raids.

What actually broke the back of the Luftwaffe and gave us command of the air over the Normandy beaches was the attrition of German fighters shot down when fighter escorts accompanied our bombers.

This by-product of the bombing actually had more influence in speeding up the end of the war than the bombing itself. But, of course, fighter escort is out of the question when you talk about 3,000-mile bombers.

The bombing survey reports that more than 2,500,000 tons of bombs were dropped on Germany. This is, indeed, a staggering total. The very size of this figure should give pause to those prophets who now claim they can blitz much larger countries than Germany out of existence. Of course, tons of bombs dropped has always been one of the vital statistics of the blitz business, but it is really a measure of effort rather than an index of accomplishment. All of that tonnage did some damage of course, but a lot of it is affecting postwar recovery more than it affected the military course of the war.

In addition, this whole quick and sure concept rests on the blithe assumption that we can blitz any city in the world, using planes based on this continent. I do not intend to take issue in detail with this assumption for several reasons. To debunk the fantastic newspaper stories, on which it depends, you would have to produce actual performance figures, and these figures are, or at least should be, confidential.

Stories about long-range bombers usually quote the maximum altitude ever reached, the top speed wide open and maximum range at economical speed. These data are all thrown together in such a way as to convince the public that this is average performance throughout a normal mission. The big danger in this is that enemy pursuit pilots may not read these same newspapers, and so may shoot down our long-range bombers in naïve ignorance of their advertised performance. The survivors of Schweinfurt can tell you that deep pentration of enemy territory by unescorted bombers is a bloody and costly business.

I have no proposals to offer here as to what better methods of winning a war there may be than the atomic blitz. This is not the proper place to make such proposals. The war plans of the United States belong in a top-secret safe rather than in public print. My plea is simply that we quit kidding ourselves into thinking that all we need is long-range bombers. Let's have an Army to help our allies and a Navy to get it across the Atlantic Ocean.

I am emphatically in favor of a powerful Air Force with fast long-range bombers—very much faster and very much longer range than any we have now! But I also favor a reasonable number of lowly foot soldiers and an adequate Navy. I don't want to see this country throw away its aces in the hole and at the same time bet its shirt on a strategic concept which has been discredited by actual war experience.

I believe in air power as our first line of defense. After all, I have spent nearly half my life flying Navy airplanes and helping in a small way to fight the battle for recognition of air power within the Navy. I believed enough in air power to risk my neck for it for 22 years, but I'm afraid that an aviation admiral is rapidly becoming a displaced person now.

If I ever got started on what the Navy can contribute to survival in the air age, this article would go on interminably: "Three-quarters of the earth's surface is water * * * carriers are mobile air bases * * * antisubmarine warfare is vital * * * vulnerability of carriers is a myth * * * you can't fight a major war without command of the sea, etc., etc." I believe in these things, and my belief has been tested in battle using live ammunition. I have learned these things, at public expense, over the past 29 years, and I feel that I owe it to my employers to tell them what I have learned while in their employ.

Of course, it is rather late for me to sound off now. For the past 9 years the Air Force Association, a powerful unofficial organiza-

tion which can do and say what it pleases, has been promoting the blitz doctrine with consummate skill. Under the spell of this propaganda, one publication, at one point, stated that it would not publish anything on the other side of the question, because in its opinion there was no other side. This statement was made, mind you, by an American publication!

I have great confidence in the common sense of the American people, but if the people are to decide this question intelligently, they must hear both sides of it. So far, they have heard only one. This is a dangerous state of affairs because it means that one of the most vital questions of our times may be settled on the basis of hysteria, whipped up by publicity stunts and sensational headlines.

For example, the headlines say: "Round the world flight proves we don't need bases." Of course, the one thing which this splendid flight did prove beyond all doubt is that to fly around the world you have got to have advance bases. However, this question of the 30-day blitz has got beyond the realm of logical argument and has become a sort of religious crusade. Anything tending to support the popular cause of quick, cheap, and sure victory gets the right-hand column of the front pages. But facts debunking this proposition make unpleasant reading bordering on heresy and are relegated to the inner pages.

Putting forth such arguments in the face of the Air Force Association's gale of publicity is very much like shoveling snow against the wind. You are even apt to find yourself accused of giving aid and comfort to the enemies of the United States.

In such an argument as this you run up against one of the very baffling facts of modern life. That is that, in the year A. D. 1949, a "fact" is not by any means what the dictionary says it is. A "fact" is any statement which has appeared in the headlines often enough.

I have seen certain statements in headlines which I know contradict the laws of physics and of aerodynamics. But I wouldn't think of getting into a public argument about these facts. After all, what are the laws of physics and of aerodynamics compared to the power of the press?

If a high public official makes the front pages with a statement that says you can hang four turbo-jets under the wings of a propeller-driven airplane and thereby increase not only its speed but also its range, the simplest thing to do is just forget what you learned in engineering school and readjust your ideas to conform to this new concept. After all, this is the atomic age, so relax and enjoy it.

The quest for cheap and sure security from the ravages of war is a will-o'-the-wisp which can never be caught, particularly if we blithely accept the inevitability of war and simply concentrate on finding a way of waging war at bargain rates. When two powerful nations decide to settle their differences by war, the issue is determined by blood, sweat, and tears, at a cost of billions of manhours and millions of lives. Every major war in history has always been more expensive than the one before it, and this pattern will continue.

The major objections to the blitz plan for world peace are:

1. It leaves our friends in Europe out on a limb.

2. It makes war look too easy and painless.

3. It provides only for weapons of mass destruction and, therefore, commits us to a war against a population rather than against the military forces of a dictatorship.

4. It gambles the future of the United States on the big bomber by discarding the Army and Navy.

5. It calls for a form of war which insures losing the peace, even if we win the war.

Antitrust Policy

EXTENSION OF REMARKS
OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1949

Mr. JAVITS. Mr. Speaker, an article from the New Republic of May 2, 1949, entitled "The Unseen Revolution," by Amos S. Basel, a member of the New York bar, shows a point of view on antitrust policy entertained by many liberals. It is well worth comparing with other considerations which must also be considered by liberals if we would give adequate room for opportunity in our economic system.

It is true that there are great concentrations of industry in America and they have been increasing in size, and it is also true that mass production and high wages were first made possible by some big businesses. The Supreme Court has said that size is not itself an offense against the antitrust law.

Also, small-business men complain bitterly about how the antitrust laws hurt them in preventing them from cooperating together to get the benefits of size without many of its disadvantages. Many small-business men say that the antitrust laws hamper them; hence, make them less competitive with big business, put some of them out of business, and are therefore partially responsible for the continued advances in the size of big business. In short, a repetition of the traditional arguments of the 1880's and 1890's and the early 1900's with respect to trust busting, certain of which are covered in Mr. Basel's article, is not complete in the modern day.

We cannot be doctrinaire or partisan about this issue. The antitrust laws are as much a Republican as a Democratic policy. Senator Sherman, the author of the original antitrust law was a Republican and so was President Theodore Roosevelt, who first enforced the law. Great improvements through the Clayton Act and the Federal Trade Commission Act were made under President Wilson. Our fundamental problem is to adapt the antitrust policy to the complexities of the modern day. It will take a flexible system involving more rather than less regulations. I have suggested such a plan in the proposal for a National Economic Commission with power to approve agreements in business and industry and to supervise performance under them, fitting these activities into established goals of production and consumption for our private economy.

This is one suggestion, there should be others. The problem of maintaining the virility of our private economy so essential to the maintenance of our freedom will not be solved merely by adding another phase to the antitrust laws or by stricter enforcement, desirable as these may be in certain situations. An amendment to the Federal Trade Commission Act to cover acquisitions of assets as well as acquisitions of securities of competitors such as Mr. Basel's article contemplates seems unobjectionable and logical although it certainly is no complete answer to the antitrust problem.

The article from the New Republic follows:

THE UNSEEN REVOLUTION

(By Amos Basel)

The vanishing American of the twentieth century is the small-business man. He is being devoured, or as lawyers put it, "absorbed, merged, and acquired," at such a rate that the whole process amounts to a little-publicized revolution in the American free-enterprise system.

Going on under the diverted noses of United States consumers is a great upswing toward complete economic concentration. Between 1940 and last year, 2,450 independent manufacturing and mining firms disappeared by merger into gargantuan corporations, and this total includes only two areas of the whole American economy. These 2,450 formerly independent companies had assets worth $5,200,000,000. They furnished competition among themselves and with the giant corporations that dominated their industries. Today, like the cigar-store Indian, they have vanished.

The present trend toward monopoly and bigness in American business is far more widespread, more important, and involves much more money than ever before in our history. The period of the growth of the trusts, from 1879 to 1894, when Rockefeller and Morgan led the way, looks like small potatoes in comparison.

New methods, entirely legal under present laws and court decisions, are being used to remove the small-business man from the market place. The trust had its beginnings in simple arrangements among competing businessmen concerning prices, markets, outlets. The next step was to establish such working arrangements legally. The tycoons devised trusteeships as an ideal method.

That type of trust is out of date and dead as a modern tool of monopoly. It had its day during the final quarter of the nineteenth century, when the railroad, oil, meatpacking, and other big American industries were rising and sweeping across the continent. Under these trusteeships, the voting stock of the various companies to be brought together was placed in the hands of trustees who thereafter operated the combination for the benefit of the stockholders. Obviously, it was not of any benefit to the stockholders to allow the companies in the trust to cut one another's throats. Markets were allocated, prices were set, and everybody benefited except the competitors and the general public.

Rockefeller's Standard Oil Trust was the first such arrangement. The Lead Trust, the Cottonseed Oil Trust, and others followed rapidly in its wake. The elimination of competitive business went forward at such speed that the public began to take notice and complain. The giants of American industry were threatening political democracy, some said. Legislatures were corrupted, public officials were bribed, and the public clamor grew so great that Congress took action. It passed the Sherman Antitrust Act in 1890 with one dissenting vote.

This law declared that all combinations in restraint of trade were illegal. It contained provisions for jail sentences and heavy fines. Temporarily, at least, it threatened the trusts and halted the dangerous tendency toward monopoly. Between 1894 and 1896 not a single combination of importance was created. The businessmen who had organized this economic concentration liked the idea of staying out of jail. They stopped their now illegal actions. They waited to see what the Supreme Court would say about the Sherman Act. In the meantime New Jersey passed legislation which made the holding company legal in that State. Many leading corporation lawyers were of the opinion that the

Sherman Act did not apply to holding companies organized in and operating under the laws of New Jersey. The Supreme Court backed them up. In 1895 it held that the American Sugar Refining Co., a New Jersey holding company, could not be prosecuted as a monopoly under the act. This despite the fact that American Sugar Refining controlled 98 percent of the industry.

When the gates had thus been opened the new gold rush to monopoly rapidly got under way. A little more than 9 years after this ruling 318 industrial combinations were in existence. They had a total capital of more than $7,000,000,000. Of the 318 giants, 234, with capital of $6,000,000,000, were organized between 1898 and 1904. The holding companies controlled two-fifths of the manufacturing capacity of the United States.

Once more, public opinion became aroused. This time the hue and cry was so loud that even the Republican platform of 1900 carried a mild antitrust plank. As a result, when Theodore Roosevelt entered the White House by virtue of a historical accident, he had his party's lip service as a basis for his trust-busting activities. Even though such powerful figures as J. P. Morgan and James P. Hill were involved, the Northern Securities case was brought to trial.

In that action, the Supreme Court in 1904 broke up the holding company which had consolidated the Northern Pacific, Great Northern, and the Chicago, Burlington, and Quincy Railroads. Trust busting became popular politically and a large number of antitrust actions were carried on under Presidents Roosevelt and Taft. Corporation consolidations and mergers fell off.

Under the drive of Woodrow Wilson's new freedom, the Federal Trade Commission Act and the Clayton Act were passed in 1914. These laws accepted the current concentration of wealth in the United States, but were designed to control such economic concentration and prevent it from spreading.

More than half a century later after much political oratory, laws, legal actions, and campaigns against monopoly, how does the picture look?

In June 1947, the 78 largest manufacturers held net working capital of $10,000,000,000. These assets, in highly liquid form, were more than enough to purchase all the 50,000 manufacturers who listed individual assets of less than a million dollars each. The 78 had more than enough ready cash to buy out 90 percent in number of all United States manufacturing corporations.

Today there are 48 American corporations, each with assets of a billion dollars or more. Many of the 48 are richer than most State governments.

Fifty percent of the Nation's manufacturing plant is owned by 113 companies, each worth $100,000,000 or more.

The earnings of the small companies—those grossing less than $250,000 per year—made up 23.4 percent of the total gross income of all corporations in 1914. In 1942 these small companies grossed only 11.6 percent of the total, and the situation has rapidly worsened since that date.

Five companies control more than 90 percent of the rubber-tire business; three companies, with annual sales in excess of $3,000,000,000, do more than 86 percent of the cigarette business; 11 bank holding companies own or control 330 banks with 800 banking offices in 20 States and with aggregate resources of nearly $14,000,000,000.

The same pattern repeats itself throughout our economy. How has this tremendous concentration come about despite all the laws on the statute books? Why the disappearance of the little fellow the antitrust laws were to protect?

The present situation is largely the consequence of the corporations discovering another loophole—one of the biggest of all time. The gateway to a large part of concentrated economic power lies in section 7 of the Clayton Act. This section was intended to prevent companies from merging when such a merger would substantially lessen competition in the industry or tend to create a monopoly. The intent of the act seems plain.

However, here is the loophole: The act controls only stock mergers, i. e., companies combining when one of them buys up the outstanding stock of the other. The Federal Trade Commission, charged with administering the Clayton Act, was given the power to prevent such mergers.

Unfortunately, the FTC was not empowered to stop one company from buying the physical assets of the other. For example, the tycoons discovered that if one company bought up the outstanding million shares of another company in order to control the market for a certain product, the FTC could step in and stop the action. But if the first company bought up the name, factory buildings, machinery, trucks, and other physical and intangible assets of the second company, the FTC couldn't do anything. Such actions by corporations were perfectly legal and and proper, even if they tended to create monopolies, because the law did not specifically prevent them. The intent of the Clayton Act died a horrible death in the process. It was often undesirable, however, to buy the assets first. A dodge was tried. The stock was purchased in violation of the law. The acquired stock was then voted to accomplish merger of the assets. Once the assets were owned, the argument was made that the Commission was helpless to act because the law allowed assets to be acquired. The Supreme Court decided, 5 to 4, that it was legal.

The next step in the final undoing of the act was to buy the stock, and if the FTC went after you, to buy the assets. The Court again approved, also 5 to 4. At this point the Commission threw in the towel and ceased attempting to enforce this section of the law.

These Supreme Court decisions were handed down during the days of Coolidge and Hoover, when the Department of Justice paid little attention to antitrust enforcement. It happened during the period when the Court held that United States Steel and International Harvester were not monopolies since they achieved their size and economic power by lawful means. It was the postwar, loose-money, speak-easy age, and business was as fancy free as the rest of the population. Large wartime earnings were available for expansion and were used lavishly, unimpeded by legal hurdles. These attitudes, plus the lack of teeth in the Clayton Act, brought the second great merger era, which rose to its height in 1928 and 1929. Thus between 1919 and 1930, there were 7,259 mergers, 1,029 in the utility field alone.

Since the clear intent of the Clayton Act continues to be evaded, we are now in the midst of the third great period of merger. The FTC recently summed up the practical results of the law as it is now:

"The antitrust laws condemn attempts to control the market by means of mutual understandings or agreements among competitors, but if the same objective is achieved through the purchase of physical properties * * * antitrust agencies are powerless to act. In other words, the weaker less effective methods of eliminating competition are prohibited, but the permanent and more effective method of consolidating ownership under a single management is permissible."

Not only are the Federal enforcement agencies hog-tied by the interpretation of this antitrust legislation, they find that the harder they try to enforce the law, weak as it is, the more they defeat their own purpose. For when they move against "mutual understandings or agreements" among competitors, their actions are an inducement to those very same companies to get a move on and combine through legal means. An example of this is the cement industry. Liberals cheered loudly when the Supreme Court held that the basing-point system of price fixing in the industry was a violation of the antitrust laws. However, while the case was being tried, from 1937 to 1948, more and more cement companies got together. The 10 largest companies now own more than 60 percent of the industry.

For 22 years the Federal Trade Commission, a bipartisan body, has unanimously urged the amendment of the antitrust laws to eliminate this loophole. The Temporary National Economic Committee, also a bipartisan group, made a similar recommendation. In the Seventy-ninth and Eightieth Congresses, Senator JOSEPH C. O'MAHONEY (Democrat, Wyoming), and Representative ESTES KEFAUVER (Democrat, Tennessee) introduced bills to carry out such recommendations. The bills were blocked in committee. They have been reintroduced in this session by O'MAHONEY and KEFAUVER in the Senate, and CELLER, of New York, and HOBBS, of Alabama, in the House.

The greatest percentage of recent asset acquisitions has been in the food, nonelectrical machinery, textiles and apparel, chemicals and transportation equipment industries. In the past, these have been mainly areas of small business.

The big boys have moved in on such industries as steel drums, wine and tight cooperage, always considered a bulwark of small business. The great steel corporations have increased their ownership of steel-drum fabricating capacity from less than 10 percent before the war to 87 percent now. They have also gone into other types of fabricating. Since steel is scarce, they supply themselves first. The independent who can't get his materials from the giant corporations is driven into the gray market or the bankruptcy courts. The case of the Bronx contractor who was unable to bid on the job of building structural-steel skeletons for Government hospitals in New York is fairly common. The only bidders were Bethlehem and United States Steel. When the producer becomes the fabricator, competition exists only by his sufferance.

The activities of the distillers are typical. In order to guarantee themselves a supply of whisky barrels to age their stocks of alcohol, they took over 10 independent companies. These former independents made up almost 100 percent of the tight-cooperage industry in the United States. At the same time, the large distilling firms bought up nearly one-fourth of the Nation's wine-storage capacity, and about one-half of all the aging wines. By 1946, the Big Four distillers held 75 percent of whisky stocks aged 4 years or longer.

Another acute danger to small business in the United States economy arises from corporations which reach backward to buy up suppliers. For example, during the war, Safeway Stores, Inc., now the Nation's second largest grocery chain, grew from 966 to 2,442 stores. At the same time, it moved into the manufacturing field. Safeway purchased 12 meat packers, a gelatin-dessert manufacturer, a biscuit and cracker factory, a butter plant, and 15 cheese companies.

Such acts squeeze the small corner grocery or butcher shop particularly hard at a time when supplies are short and the market is tight. The independent finds it impossible to survive. He becomes dependent upon the large chain. His former supplier often becomes his competitor. As more and more suppliers are cemented into the country's monopoly structure, the chances of the small-business man's staying afloat get steadily smaller.

The merger of various types of unrelated business into one organization concentrates

enormous economic power in the hands of a small group of men. Such power can then be wielded over many scattered industries. For example, the Universal Match Co. purchased three candy-manufacturing companies. Only recently, Schenley Distillers changed its name to Schenley Industries. Its great variety of activities no longer was covered by the original name.

Another, American Home Products Co., a pharmaceutical concern, spread out into cosmetics, insecticides, dyes and paints, chemicals, waxes and polishes, and food specialties. If this conglomerate organization, for example, ever decided to drive an independent from the market, it could take a loss on its product in that field while financing the loss through profits on its other businesses. Such mergers are one of the major dangers to small business, and more than 22 percent of recent mergers were of this type.

If the economists' predictions that depression can only be avoided by lower prices and increased production are true, more monopoly will mean a bigger depression quicker. The favorite economic pastime of large corporations is to keep prices up, and output down, while salting away reserves for the bad times ahead which such actions make inevitable.

Study after study has shown that in times of deflation, competitive prices are forced down rapidly, while prices of products in monopolistic industries decline little, if at all. If the present trend toward monopoly continues, competitive American small business, the healthy core of free enterprise, will be destroyed. If that occurs, one of two things will happen: the Nation will have to control industry, or be controlled by it.

There is still time to check the trend. A long, necessary step toward keeping the free-enterprise system free will be amendment of the Clayton Act. Of course, after the law is changed, rigorous enforcement measures will be necessary to outlaw mergers which tend toward monopoly. This in itself is not enough. But it is crucial in the fight to prevent giant corporations from continuing to increase their power at the expense of small business.

The continued life of the small-business man makes the free-enterprise system free. If he passes on it will die with him.

Address of Raymond M. Foley, Housing and Home Finance Administrator

EXTENSION OF REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1949

Mr. MONRONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call attention to the Members of the House to the following address by Mr. Raymond M. Foley, the Housing and Home Finance Administrator, which he made before the regional conference of the National Association of Home Builders in Oklahoma City on June 18:

Let me start by thanking you for this opportunity to appear before a representative assembly of residential builders of the Southwest at a time that appears to me of the greatest significance in the development of housing progress in America. You have given me a chance today to further the performance of my very weighty duties as administrator of the Nation's first peacetime permanent over-all housing agency—and placed upon me the responsibility of speaking with the frankness necessary if I am to be essentially helpful to you.

Over the years we in America have come to a better realization of the importance of good housing to the welfare of the people and, therefore, of the Nation. During the recent World War we were forced suddenly to an understanding of how essential it is to national safety in a time of armed conflict under modern conditions. Since the war we have had a concentrated experience in realization of the directness of its impact upon peacetime security.

If there ever was a day when we could ignore bad housing conditions in this country with impunity, that day has passed. If we have learned anything at all from the experience of other modern nations, we have learned that the living conditions of the people have a very direct bearing on their degree of satisfaction with their form of government and that they find a significant expression of their living conditions in the sufficiency of their housing for wholesome family life. Even if we were willing to forget the individual human problems involved, we could not isolate large numbers of badly housed people from the rest of the Nation and thereby keep the whole free from bad effect. Our society has become too closely interwoven and interdependent for that.

In America we pride ourselves upon the free-enterprise system, commonly but rather narrowly called private enterprise, and the advantages and progress it has brought us under a democratic form of government of which it is a cornerstone. But pointing with pride to its accomplishments does not relieve us of a responsibility for its shortcomings. In housing, as measured against our American standards, only an unreasoning advocate could claim there are no present areas of failure.

You all know from the years of my activity in official connection with housing that I am a champion of private enterprise. I believe in the system. I have worked to make it work better in housing. And the longer I have worked, the more I have realized that there remains much room for improvement in performance and results. In spite of its great and continuing accomplishments, I sometimes feel like blushing for some of its practitioners and apologizing for the statements of some of its spokesmen. In that feeling, I know I am not alone in the ranks of those who believe, as President Truman has stated, that the great bulk of the housing job must be done by private enterprise.

But what is the housing job?

And what is free enterprise?

And what have some spokesmen of the builders meant when they have declared in effect: "The industry wants only to be left alone; we will solve the whole housing problem"?

This is perhaps the best moment in the history of housing effort for the responsible Government official and the conscientious private advocate of private enterprise to examine those questions.

For right now, after years of discussion and parliamentary struggle, we stand on the threshold of debate of those questions in the final legislative forum. We are about to have the long-denied opportunity for decision on major housing questions on the floor of the United States House of Representatives.

You have suggested in your official program that I talk about an interpretation of Federal housing legislation. Since you already have the actual interpretation of existing legislation, through experience, I take it you refer to major pending legislation. It would be a mistake, however, to consider pending housing legislation, especially H. R. 4009, as though it stood alone and were the first step in Federal legislation on housing. It must be considered against the background of past legislative history and of governmental performance with respect to industry aids, and public assistance in emergency, as well as with reference to other pending proposals advocated by the administration, such as are contained in Senate 712. Time will not permit a review of all the past, but you know the picture of governmental aids to your industry well enough to let it be a background in your minds for this discussion.

First. What is the housing job?

I have no intention of tiring you now with another recital of statistics of housing need today or 10 years from now. Those estimates have been made by many and often published. They vary in size. But the significant fact is that all the estimates are very large. The lowest call for a sustained production never yet reached and maintained by the industry in this country. Another significant fact is that they identify the areas of worst housing as the areas in which we have given least evidence of ability to serve the need under present conditions. The identification is incomplete and imperfect, it is true. Why is that true? It is because after all the years of debate we don't have the facilities and authority anywhere to find out many of the things we need to know to push our progress faster. We have never had an adequate statistical and research program.

Take your choice of needs estimates as to numbers. They are all high. But on one point you have no choice, unless you wish merely to ignore the situation. There are problem areas of housing so serious that no present facility can be demonstrated to have the capacity to solve them reasonably soon. If you doubt that, go as I have into the slums of cities, large and small. It is said that people make slums. I agree, but seldom, and in only very small part, are they voluntarily created by the people who have to live in them. I grant you there are local variants in the situation, and you pride yourselves, perhaps, that your locality is better than another. But we must evaluate the situation nationally.

If you doubt further, look in town and country at the housing conditions of a very large percentage of our minority groups, especially the people of the Negro race. No realist can believe that we can long ignore that problem, to the profit of the Nation.

If you doubt still further, consider the plight of the families of low and modest income who cannot buy homes for a variety of reasons and must rent. In most areas of the country we are producing nothing in rental accommodations many of them can afford.

You and I are more fortunate. But some of us have experienced something of those problems in our youth. We managed to surmount them. So the cynic may say all these other millions can do so also. By and large that is exactly what they want—the chance to do it. So I sum up the housing job thus:

"Our task is to bring about, by use of all our American resources, within a reasonable time, a situation within which the mass of American families may with industry and thrift attain a decent home in a suitable environment."

You will all say "amen" to that, as a leading middle western editor did when I made such a statement recently. "That," he said, "is a far cry from socialism."

But before you say that disposes of the problem—think. What is a reasonable time? Spokesmen of the industry who imply that our present progress is all that is needed are mostly silent on that point. Gentlemen, I measure the pressure of time with the eyes of children. There are hundreds of thousands, probably millions, of them growing up today in slum surroundings, urban and rural. Their future is being shaped there.

Their outlook on life, on America, on citizenship—on our system of free enterprise, is being shaped by the impact of slums upon them. Can we safely assume that it is being well shaped? And the years of their childhood are few.

I have four grandchildren. Many of you have small children or grandchildren. Their lot in life is more fortunate. You and I may take some credit for that. Despite this, but for the grace of God, they, too, might be living in slums.

So to my second question: What is free enterprise in the home-building industry?

You operative builders are not the building industry. Examine your relationship to it; then examine that of labor and of land and of finance. Put these parts all together and then examine the sum of them. Will you have then an industry that could be expected to function readily, smoothly, and steadily in our modern complicated social scene? The answer is "No." There would still be an important factor missing; namely, government. I mean government in the broad sense of the exercise of common authority and the application of common resources. Without that today your troubles in providing a million houses a year would be insurmountable. To me it is obvious that free enterprise today in the building industry is a team of labor, management, finance, and government, each doing its proper part, and each doing a part the others cannot practicably do for themselves. I was questioned on this point in Congress recently and my reply in brief was: "Private enterprise in the residential building scene is a combination of private management, private capital, labor, and governmental resources. Through the teaming of them together to do each the part it can best do, and perhaps which it alone can do, we further most the free-enterprise system of this country."

In the minds of the mass of people that is the conception of American free enterprise. To them the proof of the pudding is in the eating; the sufficiency of the system is judged by the extent to which it serves their needs. So long as the system in total leaves a large segment of them badly served, you can expect the whole system to be more and more under attack.

And then the third question: What do some spokesmen of parts of the industry really mean when they declare they can solve the whole housing problem unassisted and assert that government should be taken out of the picture?

I think I know what most of them do not mean. They do not mean repeal of the FHA and the insured-mortgage system which brought the residential building industry out of the depression and brought about reform in home finance and liberal lending that has made thousands of big builders out of little ones. They do not mean to abolish the Home Loan Bank System and the Federal Savings and Loan Insurance Corporation that have developed stable home financing resources for thousands of communities. They do not mean to abolish the Federal Deposit Insurance Corporation which has given a security to savings in banks that unquestionably has contributed vastly to the availability of pooled funds to make your marketing task easier. They do not mean to discontinue the veterans' home-loan system. Nor do they mean to abolish the Bureau of Labor Statistics, the Forest Products Laboratory, or the Bureau of Standards—to name only a few of the activities of Government at the Federal level that bear directly on housing.

They mean, I suppose, only those activities of Government that they claim compete with or curtail their activities. But even in that regard there is no agreement. Some would abolish the Federal National Mortgage Association secondary market as to some extent entering the field of private lenders. I wonder how many operative builders would agree with that. Some would even abolish the Federal Housing Administration. I have heard such voices. How many of you builders would agree with that?

Why are there these differences of opinion? It is because the whole complicated business of producing housing is not an industry in the ordinary sense, with one broad, inclusive, single point of view. Maybe it never can be. But by the same set of circumstances, it has never been in a position to treat the whole of housing as one broad single national problem, although seeking to claim it all as its exclusive field of operation.

That is a basic mistake. Housing is a national necessity, a national asset, and a matter of national concern. Perhaps in the next 2 weeks it will have been officially declared so by Congress for the first time. Not the least important part of the major housing bill up for debate is the declaration of national housing policy. I don't know how many of you have read it for yourselves. In some places I have found but few builders who have actually studied the legislation they are opposing. They are taking someone else's word about it. If any of you are going to be content with that, then I am glad you have asked for my view. It is this:

The best long-range interest of the American public in housing will be served by the strongest, best coordinated, most efficient private building industry we can devise. The long-time interest of the private building industry will be served best by so utilizing public and private resources that there will be no large and long-continued fester-spots in our housing economy. The best way to bring ourselves into that situation is to marshal all possible public resource and authority to improve the effectiveness of the industry and so to hasten the broadening of its operation in the whole field. In the meantime, because of the stark considerations of social and human necessity the Nation and free enterprise will be best served if we supplement what we more narrowly call private enterprise with public assistance in the provision of housing for those whose need we cannot serve otherwise.

I believe pending housing legislation officially declared to be in accord with the program of President Truman, in H. R. 4009 and S. 712, is soundly conceived in the American tradition to further exactly those objectives. I hope they will be enacted. I believe those in the industry who have been opposing one and supporting the other are mistaking their own real interest. As a champion of private enterprise in the true sense, I believe you should be supporting both. I think they will be enacted and in a decade many of you will be glad they were, because you will find your industry the better and more useful for it.

We come now in this frank discussion to other points of keen interest. What of the immediate future, for instance? Can we go on with large production this year and next? I believe we can. I think so chiefly because I see progress in the attack upon high costs of building. There can be no question that costs have been too high to maintain a market of last year's volume. In my opinion they have been unnecessarily high. They could be reduced without any cut of basic hourly wages or basic unit material costs. That process has begun. It can continue with elimination of contingent items, increased efficiency all along the line, development of new materials and better use of those we have, better design and method, and a sharper pencil on the profit margins of general and subcontractors. We think there is large promise in cooperative undertakings. The need for these moves and the possibilities of them have been clearly apparent since the first postwar difficulties were surmounted. The housing agency has called attention to them for 2 years. The economy housing program launched as a joint endeavor this year was based upon a firm belief in those potentialities and of the possibilities of joint action to accomplish them. We have always held that the best market and a great challenge was in the middle-income field. There were voices of protest. We were accused of deceiving the people, of promising the impossible, of weakening the market. One builder wrote me last fall that only a general depression would lower housing costs and prices, and that our economy compaign would hurt the market. The other day he wrote me he has hundreds of orders for his 1949 model—reported to be the equivalent of one selling for several hundred dollars more last year.

The economy housing program was misinterpreted by many as being only a small-house campaign. It was and is a campaign to reduce the cost of all housing production, with emphasis upon a lower-priced market. It is succeeding. The average FHA mortgage is declining in size; the percentage of modest house business is increasing rapidly. But there is much farther to go. We have too much emphasis on two-bedroom houses. We need many more threes and fours. Following our long-time policy of applying the most liberal financing method to the lower priced field, we have proposed special applications of 95 percent insured mortgages in that area. Our experience with the beginning test in section 203 (d) has been encouraging and grows more so. We hope for early passage of that legislation, too, because we believe the industry can make a better, faster attack upon the moderate priced housing need through it. In this bill also are provisions for a better secondary market for mortgages in the lower brackets; an improved proposal for cooperatives; a back-up of Federal direct loans for rental projects where private funds are not available. There is a very promising revision of title II structure for FHA and a provision for mortgage insurance in place of class 3 title I new houses. By that means we believe we will be offering an extremely useful means for builders to enter a market for small, low-priced houses in certain areas for which financing has often been nonexistent.

I believe we, all four factors of that private enterprise team, can achieve growing progress in cutting costs as reflected in prices and rents. You in the Southwest area have been leaders in the progress. I congratulate you—but I urge you not to rest on your oars. You have certain advantages, which should help you to keep in the forefront.

What, you will ask, about availability of finance? That situation is still not uniform—but it is notable that the worst predictions of last fall have not come to pass. There is still, on the whole, ample finance available, but it is somewhat spotty and not flowing freely for all types of loans. Again, I believe, the federally financed secondary market is proving its value as a backstop and a stabilizer, rather than as a substitute for private lending. Provisions of S. 712, if passed, will further improve that picture.

What of materials? The bugaboo of 2 years ago is gone. Very rare today is a report of a shortage delaying construction. Incidentally, there goes, too, one of the original causes and later excuses for a part of high costs. There seems no reason to fear shortages of materials this year or next.

What of market? The housing need remains great, where it always was great, among the people of modest income. Builders producing a good value below $10,000 in many areas, and below $9,000 or $8,000 in others, are not even yet having to be salesmen. We will have a better situation when you do find selling is required, in the sense of healthy competition for customers in those fields. And the market for rentals at $60 downward for a good family accommodation is only just being scratched. But there is evidence that builders, in a number of areas

are getting very much interested in that field, too.

I must bring this talk to a close without touching on a great mass of detail that might interest you. Rather than spend time on that, I want to discuss a subject of paramount importance to us all. If pending major legislation passes, including public housing, slum clearance, research, farm housing, and the proposed added aids to private enterprise in S. 712, what will be the result? What will be the attitude of the administration and its housing agency with regard to the situation thus created?

There have been prophecies of doom, aimed to prepare you for the worst. In my considered opinion, the prophets are seeing ghosts.

If you want to know fully what the attitude will be, read the testimony of the Administrator before committees of Congress. Or, more briefly, read the declaration of policy in H. R. 4009. Remember that those statements are officially declared to be in accord with the program of the President and, therefore, of the executive agencies. They are susceptible to only one interpretation. The Government aims to use every authority and resource granted to assist in extending to the utmost the effectiveness of private operation in the field of housing. It will regard the legislation as a mandate from Congress so to do. It will use to the utmost the resources and facilities of private enterprise in carrying out its task. For instance, for some reason unfathomable, there was formerly bitter resistance to a research program, on the ground it would set up a tyranny over business. In spite of that, the Eightieth Congress passed a bill calling for a partial research program, limited to building codes and standardized measurements for home building. We have established that research. We are seeking to use to the full the facilities of private enterprise. The expressions of satisfaction at the approach are general. Opposition to a general research program has lessened. One of the ghosts is by way of being laid.

And why do we seek a public housing program? The prophecies of doom say it is to invade the field of private enterprise in the low-income groups, to begin to socialize all housing, to gain political control of the tenants, and so on. If the defenses private enterprise depends upon in the lowest-income field are the slums that serve many of them now, it is hard to envision the entry of public housing there as an invasion. The fact is that there is no truth in any of those charges. The position of the administration has been clearly stated. There is no desire to have public housing for its own sake. There is nothing in pending legislation that expresses or encourages such a purpose.

There is no desire to invade or preempt any field of housing, nor to enter in any field further than is required to serve the need and to bring about a means whereby it can be served otherwise.

The major point the prophecies of doom overlook is that every proposal for governmental aid to the needy is far overbalanced by a great variety of proposals to help private enterprise do the job itself.

I don't pose as a prophet—but let me point out that for years there was grave apprehension over what would happen to the industry if a peacetime housing agency were established. It was said the Administrator would be a czar, a tyrant, a dictator. You now behold the tyrant. Two years have passed since the Agency was set up to succeed the wartime emergency agency. In that time the industry has equalled its all-time record of sustained production. The Congress proposes more tasks for the Agency. The industry, if I may judge by all the signs, is coming to realize that that fear, too, was only the seeing of a ghost.

It all boils down to this: We have a great and challenging task to do. The Nation cannot and will not permit it to go undone. We have the soundest foundations in the world on which to build our future building industry. It can be progressively improved, but we can't go back to the nineteenth century. We must use all our resources under twentieth-century conditions and conceptions. All that is proposed in the legislation I have discussed is that we use all we have, together, to strengthen America in its most vital bulwark—the home of the average family, and that we do it in such fashion and in such time that the total American system, based as it is upon free enterprise, will be fully justified.

What I Believe

EXTENSION OF REMARKS

OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1949

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I am incorporating an article written by a great American, Henry E. Sheets, of Shelby, Ohio. This article was written prior to Pearl Harbor, but it certainly is applicable as of this date. I hope that every Member of this Congress will read what Henry Sheets has to say, because it is a philosophy worthy of all of us.

The article follows:

WHAT I BELIEVE

(By Henry E. Sheets)

THE FUTURE OF AMERICA AND THE WORLD IS BOUND UP IN YOUR BELIEFS

I believe that the vast majority of labor, whether in field, factory, or forest, is honest. I believe that the vast majority of management throughout this land is likewise honest and trustworthy. I believe in the old maxim, that the laborer is worthy of his hire; that his compensation should be based on his intelligence, his loyalty, his ability to perform, and his value to the business that employs him.

I believe that the lazy, the shirker, the troublemaker, the indifferent, the inefficient, should have a merit rating based upon their value. That the good should be weeded from the bad, and that preference should go to the deserving. All of the above applies to management whose acts and methods largely influence those less fortunately situated.

I believe that the future of this world of men and women is largely bound up in what men and women think and do today. I believe that the old adage, "The survival of the fittest," will hold true in the future as it has always done since man came on earth. I believe that those now in authority, whether it be the President of the United States, the Congress, or the Supreme Court, have a tremendous responsibility. I believe that much of the future is bound up in what labor organizations, management of business, and the public as a whole decide to do.

I believe that the enemies of mankind are always busy. That they have no vacations, and that constant vigilance, whether in peace or war, is necessary if the people of the world desire any degree of liberty or the possession of happiness. I believe that the good in men will always survive, no matter how long oppression and injustice hold away. I believe there is no such thing as a millennium. That the evil is constantly working against the good of society, and that society must be in constant anticipation of the outbreak of those whose desire it is to dominate.

I believe that peace to all nations in the future years is bound up in what future generations of men and women will do. That the thoughts of those living will be no guide to those living 25 or 50 years hence. Every generation must learn the hard way. It has always been so, and likely the future will bring no change in human thought.

I believe in economy and thrift, whether it relates to the great corporation, the Government, or the humblest citizen. I believe in efficiency in knowledge applied to the work in hand, to the end that the greatest volume of product may be produced, thus permitting it to be sold at the lowest possible price. I believe in the unrestricted liberty of every citizen so long as he obeys the laws.

I believe all men and women possess the inherent right to work where they choose, and to follow such occupations as pleases them best. I believe all men and women, unless prevented by nature, should earn their own way in life and that they should have every opportunity to secure an education that will permit them to become useful, patriotic citizens.

I believe in the elimination of every bureau and commission that assumes to enact laws through directives from the President. I believe that the functions of the President should be strictly confined to his constitutional limits. I believe that the Supreme Court should represent all classes of our society; that they should be men who believe in American institutions and not foreign ideologies; that they should be selected for their legal knowledge, their belief in the Constitution, their fairness, and not because of political favoritism.

I believe in the Constitution of the United States. I believe in all the freedoms which it gives to every citizen—freedoms that were bequeathed to us by generations over a century and a half ago. I believe in the limitations which the Constitution places upon every branch of our Government. I believe in our courts of justice, in our jury system, and the fair interpretation of the law. I believe in fairness and equal opportunities to all citizens; that there shall be no favorites before the laws, and that all men and women shall have equal rights and privileges.

I believe that some business management has been unfair to labor and the community. I likewise believe that some labor management has been unfair to business and the Nation as a whole. I believe that the laws relating to industry and labor are unfair to the public because they recognize but one element of our working population. I believe that paternalism in any form to any group of our people will eventually work disaster to all of us.

I believe in making money on your business operations, so long as money is the measuring stick of human activities. I believe in the profit system because of its incentive to greater accomplishment. I believe in being regarded as prosperous other than a reputation of a failure. I believe in the profit system; that it develops the best as well as the worst in the human mind; that it creates employment for others, and in the end builds a better society than any other system yet devised.

I believe in steady employment to the end that all may be prosperous. I believe that strikes, lock-outs, and other upheavals of business disrupt society, create enmities and bitterness to any community. I believe in getting together with the other fellow to the end that men and women may live together in peace and harmony. I believe in cooperation, recognizing the rights of the other fellow as just as important as my own. I believe in good wages to the employed—vacations with pay—profit sharing—free insurance—and, above all, an atmosphere that makes every employee—from the president to the janitor—feel that each is an integral

part of the successful operation of the business.

I believe in free enterprise; that every human in America has the right to engage in any legitimate business; that every man and woman may organize his or her industry in his or her own way without consulting any bureau of government; that governmental retrictions on the honest leads to oppression, favoritism, extravagance, waste, and eventual decay of all mental aggressiveness; that before the people of the world can hope to better their condition, a complete reversal must be accomplished in the constant spending of money through the sale of bonds; that deficit spending now means plenty of trouble in the future; that pay-as-you-go is imperative if we wish to survive as a nation of free people. There is no substitute for living within your income. Thousands have tried it in the past, and the invariable answer is disaster.

I believe that regardless of treaties and the complete defeat of all enemies of civilization, human nature will not change; that there is and always will be a sizable portion of the human family who will seek to dominate the vast majority; that this minority is constantly active; that eternal vigilance is required on the part of the good to protect society from the bad.

I know that history will appraise the period of peace in the same way that it renders a verdict on armed conflict; that those living in peace must assume responsibility for future conditions under which men and women must live; that we now are building for tomorrow. Let us hope that greater wisdom will prevail in building the new structure that has been the case in past attempts.

I believe that Government can, within its authority, lead America into security, happiness, and prosperity, or disaster that will enter every household and penetrate into every industrial institution. If, during peace, our outgo constantly exceeds our income—if we must, year after year, issue bonds and still more bonds to make up our deficits, then we are on the high road to national bankruptcy. If we place a premium on idleness through the payment of excessive unemployment compensation, excessive distribution of money to any group of our people, then we face a constantly increasing demand for still larger payments from those who represent these groups.

If, on the other hand, thrift is our watchword—if, after the war with Japan has been victoriously concluded, we balance outgo with income—if we use common sense in our over-all expenditures—if we can pay something each year on our public debt—if we can maintain the purchasing power of the dollar—if we can give industry and the individual a constant lowering of taxation, then we can look forward with the satisfaction that the road has been found that leads to security, happiness, and full employment.

Whatever future America has is entirely in the decision of the people of this country. Labor can do much to steer the ship of state in the right direction. Management of industry is also a great factor. But above all single groups, the destiny of America must rest in the decisions made by all the people.

I want to envision the day when mankind will have a new birth of freedom. A birth that will outlaw war as an instrument in the settlement of international disputes. When men and women will gather in peaceful converse to discuss and settle the question of nationality without venom or hatred. When labor, management, and the public will outlaw strikes and lock-outs, and thereby secure justice to all elements. When a free world of people will know no boundary lines of opportunity. And when each individual will be unrestricted in his or her efforts to make the world a better place in which to live.

Chiropractic and the Nation's Health

EXTENSION OF REMARKS

OF

HON. ANTHONY F. TAURIELLO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1949

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article:

CHIROPRACTIC AND THE NATION'S HEALTH

(Prepared and submitted by the International Chiropractors Association, Davenport, Iowa)

PREFACE

Various proposals are before Congress designed to increase the availability of adequate health care to the people of the United States. None of them make specific reference to chiropractic, and presumably a citizen would have no right to request chiropractic care under any of said proposals if adopted in their present form. Attention is invited to the accompanying resolution adopted by the officers and board of control of the International Chiropractors Association. This brief has been prepared for the purpose of presenting the need to include chiropractic in any national health plan which may be enacted into law.

RESOLUTION

Whereas the Government of the United States of America, acting through its authorized agencies, has made an exhaustive and comprehensive survey of the Nation's health needs, and

Whereas the welfare of the people of the United States requires that the Congress inquire into the problem of making adequate health care available to all people regardless of economic status, and

Whereas a large portion of the people of the United States now regularly depend upon chiropractic for their health care, and

Whereas the practice of chiropractic is separate and distinct from the practice of medicine, and

Whereas the Congress is now considering various national health proposals, and

Whereas some of the proposals now being considered by the Congress would not permit the people to exercise freedom to choose the particular type of health care to be employed in their respective cases, and

Whereas freedom of choice is the bulwark of a democratic form of government; now, therefore, be it

Resolved by the officers and members of the board of control of the International Chiropractors Association, That the Congress of the United States be respectfully petitioned to include the practice of chiropractic on an equal basis with other branches of the healing art in any national health plan which it may hereafter enact into law, to the end that every person shall have the unqualified right to the selection, use, and benefit of chiropractic health care.

Be it further resolved that copies of this resolution be furnished to the President of the United States, the President of the Senate, the Speaker of the House of Representatives, the Chairman of the Senate Committee on Labor and Public Welfare, the Chairman of the House Committee on Interstate and Foreign Commerce, and to the Federal Security Administrator.

In witness whereof we have hereunto subscribed our names this 30th day of April, A. D. 1949.

Officers: President, B. J. Palmer, D. C., Ph. C., Davenport, Iowa; First Vice President, L. George Grupe, D. C., San Angelo, Tex.; Second Vice President, A. A. Adams, D. C., Tacoma, Wash.; Third Vice President, Herbert R. Reaver, D. C., Cincinnati, Ohio; Secretary-Treasurer, M. E. McDermott, Davenport, Iowa; Board of Control: Ernest S. Grandchamp, D. C., Ph. C., Holyoke, Mass.; Walter O. Peterson, D. C., Ph. C., Pueblo, Colo.; C. F. Aumann, D. C., Ph. C., Indianapolis, Ind.; Charles Heiss, D. C., Ft. Lauderdale, Fla.; A. E. Lill, D. C., Belleville, Ill.; E. R. BeBout, D. C., Ph. C., Indianapolis, Ind.; G. M. O'Neil, D. C., Ph. C., Fort Wayne, Ind.; L. K. Griffin, D. C., Fort Worth, Tex.; Walter Gingerich, D. C., Reseda, Calif.; Elmer G. Green, D. C., Ph. C., Seattle Wash.; Fred C. Sears, D. C., Worcester, Mass.; R. W. Tyer, D. C., Ph. C., Jackson, Miss.

CHIROPRACTIC PROFESSION SERVES LARGE PROPORTION OF POPULATION

More than 30,000,000 people in the United States have accepted chiropractic health service * * * served by the second largest of the healing arts professions, chiropractic, comprising nearly 20,000 practitioners located in every section of the country.

If a national health plan is adopted, the 30,000,000 chiropractic patients must be provided for in a way which will permit freedom to choose chiropractic care as well as medical and dental care, and on the same equal basis.

CHIROPRACTIC SEPARATE AND DISTINCT FROM MEDICINE

Chiropractic has approached the problem of the cause of disease from an entirely new and fresh viewpoint from that of medicine. It was developed independently from medicine, and does not employ medical procedures.

Furthermore, chiropractic offers a type of health service not otherwise available. Medical doctors do not practice chiropractic * * * Chiropractors do not practice medicine. The two types of service are entirely separate and distinct. This separate and distinct, coequal and independent, status of chiropractic has been recognized by State legislation and licensure without reference to medical licensure.

SCOPE OF CHIROPRACTIC PRINCIPLE AND PRACTICE

Chiropractors limit practice to the adjustment, by hand only, of the articulations of the human spinal column for the purpose of removing interference to the transmission of nerve energy between brain and body.

Briefly, chiropractic holds that human ailments are caused by interference to the natural flow of nerve energy between brain cell and tissue cell. Thus, if an organ of the body is failing to receive normal quantity flow of nerve energy, this is manifested in the particular organ affected by either lack of function or excess of function, which is disease.

Interference to free flow of nerve energy occurs most frequently in the nerve trunks passing through the spinal column. The interference is produced by misalignment (called subluxation) of the vertebral segments composing the spinal column.

SCIENTIFIC CHIROPRACTIC ANALYSIS

The chiropractor detects subluxations by use of palpation, X-ray and other scientific instruments. The chiropractor determines whether interference to natural flow of nerve energy is present. From this analysis, the chiropractor decides whether the particular case is a chiropractic case, or whether the individual should be referred to another type of practitioner. If, in the opinion of the chiropractor, there is a chiropractic case, the chiropractor will make an adjustment of the subluxated vertebra or vertebrae in the manner indicated by the analysis, thus removing the interference to natural flow of nerve energy between brain and body. Func-

tion of the affected organs of the body is thereby restored to normal—which is health.

Chiropractic services do not depend on medical diagnosis for a proper application. None of the analytical procedures above outlined are medical procedures. However, the chiropractor is adequately trained to recognize the various diagnosed conditions for the purpose of complying with health laws, rules and regulations.

CHIROPRACTIC REGULATED BY SEPARATE LICENSURE

The chiropractor is an expert in a particular field of practice, as evidenced by licensure recognition in the various State jurisdictions, the District of Columbia and Territories of Alaska and Hawaii. Thus, the people are assured of qualified practitioners, and the maintenance of high professional standards. Wherever legislators have failed to provide coequal status with medicine, the regulations are frivolous, unrealistic, and unenforceable. Medical students are not examined to test a knowledge of chiropractic principles; chiropractors are not trained to practice materia medica. Studies of sciences which are dissimilar in theory and practice are bound to be poles apart. For these reasons, the national health plan must give recognition to the independent status of chiropractic.

CHIROPRACTIC RESEARCH

Science is a body of provable facts. Science, therefore, is not the subject of belief, but the subject of observable phenomenon. Chiropractic is a science and has demonstrated the indisputable fact that correct application of the chiropractic principle restores health to sick people in the vast majority of cases in which chiropractic care is indicated. Therefore, it is of no consequence that a particular group of individuals believe in or do not believe in chiropractic. Chiropractic is performing a vital health service to the Nation, and a vital health service to the people, and that service must be recognized by including chiropractic in the national health plan.

THE PEOPLE MUST BE SERVED

Public sentiment is the most vital constituent of our democratic society. No law can endure against public opinion.

The chiropractic profession has continued to grow because the science of chiropractic gets sick people well. The same people will demand that chiropractic be accorded a proper coequal status in Federal health legislation. Not only chiropractic patients, but all who believe in justice and equality before the law, insist that in any issue as important as the Nation's health, full consideration must be given to the rights and privileges of all citizens.

Respectfully submitted by International Chiropractors Association, B. J. Palmer, D. C., Ph. C., president.

Reorganization of Executive Branch of the Government

EXTENSION OF REMARKS

OF

HON. CHET HOLIFIELD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1949

Mr. HOLIFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following analysis of the status of the recommendation of the Commission on Reorganization of the Executive Branch of the Government:

FIRST ANALYSIS OF THE STATUS OF THE RECOMMENDATIONS OF THE COMMISSION ON REORGANIZATION [1] OF THE EXECUTIVE BRANCH OF THE GOVERNMENT, AND OF BILLS, REORGANIZATION PLANS AS WELL AS OF OTHER PERTINENT MATERIAL (81ST CONG., 1ST SESS., TO JUNE 20, 1949) [2]

Commission Chairman's letter transmitting statement in regard to filing of the Commission's report in a series of parts or volumes with the Congress, and recommending that authority be granted the President to initiate reorganization plans; filed January 13, 1949 (H. Doc. No. 37).

Report

General Management of the Executive Branch. Filed February 7 (H. Doc. No. 55). Appendix E, Task Force Report on Departmental Management. (Only those supporting documents published by the Commission as appendices are listed here.)

Status in House

Report referred to House Expenditures Committee.

Status in Senate

Report referred to Senate Expenditures Committee.

President's message of January 17 (H. Doc. No. 42) recommends enactment of a new reorganization act.

Status in House

H. R. 1569, Reorganization Act of 1949, introduced January 17; referred to Expenditures Committee.

H. R. 2361, Reorganization Act of 1949, introduced February 7; referred to Expenditures Committee. Reported February 7 (H. Rept. No. 23); passed February 7.

Status in Senate

S. 526, Reorganization Act of 1949, introduced January 17; referred to Expenditures Committee; reported April 7 (S. Rept. No. 232).

S. 942, General Executive Management Act of 1949, introduced February 14; referred to Expenditures Committee.

Senate asks for a conference, May 16. House agrees to a conference, May 17. Conference committee reports, June 16 (H. Rept. No. 843).

Conference report agreed to in Senate and House, June 17. Bill signed by the President, June 20, now Public Law 109, Eighty-first Congress.

President's message of June 20 (H. Doc. No. 221) transmits seven reorganization plans, with explanatory comment, for the consideration of the Congress.

Status in House

H. R. 2613, General Executive Management Act of 1949, introduced February 10; referred to Expenditures Committee.

H. R. 103, Federal Traffic Bureau Act of 1949, introduced January 3; referred to Interstate and Foreign Commerce Committee.

Status in Senate

S. 1095, Federal Traffic Bureau Act of 1949, introduced February 25; referred to Interstate and Foreign Commerce Committee.

REORGANIZATION PLAN NO. 4 OF 1949

Transferring the National Security Council and the National Security Resources Board to the Executive Office of the President (H. Doc. No. 225); submitted June 20, and referred in each House to the Committee on Executive Expenditures.

President's message of May 9 (H. Doc. No. 176) contains statement on reports of the Hoover Commission.

[1] Referred to hereafter as "The Hoover Commission."

[2] Whenever a date is given below, it is understood to refer to the year 1949.

Report

Personnel Management. Filed February 10 (H. Doc. No. 63). Appendix A, Task Force Report on Personnel Management.

Status in House

Report referred to House Expenditures Committee.

H. R. 808, to increase the salaries of the President, Vice President, the Speaker of the House, and of the heads of executive departments; introduced January 5; referred to Committee on Post Office and Civil Service.

H. R. 5181, to provide for the extension of the civil service; introduced June 16; referred to Post Office and Civil Service Committee.

Status in Senate

Report referred to Senate Expenditures Committee.

S. 103, to increase the salaries of the President, Vice President, the Speaker of the House, and of the heads of executive departments; introduced January 5; referred to Committee on Post Office and Civil Service.

S. 498, to increase rates of compensation of the heads of executive departments and independent agencies; introduced January 13; referred to Post Office and Civil Service Committee; reported March 18 (S. Rept. 130).

S. 1762, Position Classification and Pay Act of 1949; introduced May 4; referred to Post Office and Civil Service Committee.

S. 2111, to revise the personnel policy governing the civil service of the United States, and for other purposes; introduced June 20; referred to Committee on Post Office and Civil Service.

REORGANIZATION PLAN NO. 5 OF 1949

To provide for unified direction by the Chairman of the United States Civil Service Commission of the executive affairs of the Commission (H. Doc. No. 226); submitted June 20, and referred in each House to the Committee on Executive Expenditures.

Report

Office of General Services-Supply Activities Filed February 14 (H. Doc. No. 73).

Status in House

Report referred to House Expenditures Committee.

Status in Senate

Report referred to Senate Expenditures Committee.

Report

Appendix B, Task Force Report on the Federal Supply System. Appendix C, Task Force Report on Records Management.

Status in House

H. R. 1745, for the more economical operation of the general supply fund of the Bureau of Federal Supply, Department of the Treasury, and for other purposes.

H. R. 2641, Central Administrative Services Act of 1949, introduced February 14; referred to Expenditures Committee.

H. R. 2781, Federal Property Act of 1949, introduced February 16; referred to Expenditures Committee. Reported May 18.

H. R. 4754, Federal Property and Administrative Services Act of 1949, superseding H. R. 2781; introduced May 18; reported May 24 (H. Rept. No. 670).

Status in Senate

S. 597, revising provisions relating to the general supply fund in the Treasury Department, introduced January 24; referred to Expenditures Committee.

S. 990, Federal Property Act of 1949, introduced February 17; referred to Expenditures Committee.

S. 991, Central Administrative Services Act of 1949, introduced February 17; referred to Executive Expenditures Committee.

S. 1809, to simplify the procurement, utilization, and disposal of Government property,

to reorganize certain agencies of the Government, and for other purposes, introduced May 9; referred to Expenditures Committee; reported May 9 (S. Rept. No. 338).

S. 2020, superseding S. 1809, introduced June 8; referred to Expenditures Committee; reported June 8 (S. Rept. No. 475).

Report

The Post Office. Filed February 17 (H. Doc. No. 76). Appendix I, Task Force Report on the Post Office.

Status in House

Report referred to Post Office Committee.

H. R. 5177, to provide for the reorganization of the Post Office Department, introduced June 16; referred to Committee on Post Office and Civil Service.

Status in Senate

Report referred to Senate Expenditures Committee.

S. 2062, making changes in laws applicable to the Post Office Department in order to furnish a basis for a reorganization of the Department, and for other purposes, introduced June 13; referred to Post Office and Civil Service Committee.

REORGANIZATION PLAN NO. 3, OF 1949

To provide for the strengthening and improvement of the organization of the Post Office Department (H. Doc. No. 224), submitted June 20, and referred in each House to the Committee on Executive Expenditures.

Report

Foreign Affairs. Filed February 21 (H. Doc. No. 79). Appendix H, Task Force Report on Foreign Affairs.

Status in House

Report referred to House Foreign Affairs Committee.

Status in Senate

Report referred to Senate Expenditures Committee.

President's message of March 4 recommends the reorganization of the Department of State.

Status in House

H. R. 3559, to strengthen and improve the organization and administration of the Department of State, introduced March 15; referred to Foreign Affairs Committee; reported May 3 (H. Rept. No. 500); laid on table May 12; S. 1704 passed with amendments, May 12, in lieu.

Status in Senate

S. 1704, to strengthen and improve the organization and administration of the Department of State, introduced April 16; referred to Committee on Foreign Relations reported April 26 (S. Rept. No. 304); passed May 6; passed House, amended, May 12. Senate agrees to House amendments, May 16; approved May 26; became Public Law 73, Eighty-first Congress.

Report

Department of Agriculture. Filed February 22 (H. Doc. No. 80). Appendix M, Task Force Report on Agricultural Activities.

Status in House

Report referred to House Agriculture Committee.

H. R. 5179, to provide for the reorganization of the Department of Agriculture, introduced June 16; referred to the Committee on Agriculture.

Status in Senate

Report referred to Senate Expenditures Committee.

S. 2055, to permit the President and the Secretary of Agriculture to effectuate the recommendations of the Hoover Commission relating to the Department; introduced June 13; referred to Committee on Agriculture and Forestry.

Report

Budgeting and Accounting. Filed February 25 (H. R. Doc. No. 84). Appendix F, Task Force Report on Fiscal, Budgeting and Accounting Activities.

Status in House

Report referred to House Expenditures Committee.

H. R. 5178, to improve the budgeting and accounting systems of the Federal Government, introduced June 16; referred to the Expenditures Committee.

Status in Senate

Report referred to Senate Expenditures Committee.

S. 2054, to authorize the President to determine the form of the national budget and of departmental estimates, and for other purposes, introduced June 15; referred to the Expenditures Committee.

Report

National Security Organization. Filed February 28 (H. Doc. No. 86). Appendix G, Task Force Report on National Security Organization.

Status in House

Report referred to House Armed Services Committee.

Status in Senate

Report referred to Senate Expenditures Committee.

President's message of March 7 (H. Doc. No. 99) recommends transfer of certain authority within the National Security Organization to the Secretary of Defense.

Status in House

H. R. 2216, to amend the National Security Act of 1947, to provide for an Under Secretary of Defense, introduced March 8; referred to Armed Services Committee. Reported March 10 (H. Rept. No. 104); passed March 18; passed Senate May 7; became Public Law 36, Eighty-first Congress.

H. R. 3845, to convert the National Military Establishment into an executive department, introduced March 28; referred to Armed Services Committee.

Status in Senate

S. 108, amending the National Security Act of 1947 by establishing a single executive department (Department of Defense), introduced January 5; referred to Armed Services Committee.

S. 1269, to convert the National Military Establishment into an executive department, introduced March 16; referred to Armed Services Committee.

S. 1845, National Security Act Amendments of 1949, introduced May 12; referred to Armed Services Committee; reported May 12 (S. Rept. No. 366); passed May 26; referred to House Armed Services Committee May 27. (To convert the National Military Establishment into an executive department, and to enlarge the powers of the Secretary.)

S. 2054, to authorize the President to determine the form of the national budget and of departmental estimates, and for other purposes; introduced May 13; referred to the Expenditures Committee.

Report

Veterans' Affairs. Filed March 2 (H. Doc. No. 92). None.

Status in House

Report referred to House Veterans' Affairs Committee.

H. R. 1844, to establish a Department of Veterans' Affairs, introduced January 25; referred to Expenditures Committee.

Status in Senate

Report referred to Senate Expenditures Committee.

S. 2019, to establish a Veterans' Insurance Corporation, introduced June 8; referred to Finance Committee.

Report

Department of Commerce. Filed March 7 (H. Doc. No. 100). (See Task Force Report, Appendix N, on Regulatory Commissions.)

Status in House

Report referred to House Interstate and Foreign Commerce Committee.

H. R. 5180, to provide for the reorganization of the Department of Commerce, introduced June 16; referred to the Committee on Interstate and Foreign Commerce.

Status in Senate

Report referred to Senate Expenditures Committee.

S. 2058, to provide for an additional Assistant Secretary of Commerce and to facilitate the effectuation of the recommendations of the Hoover Commission relative to the Department, introduced June 13; referred to Interstate and Foreign Commerce Committee

REORGANIZATION PLAN NO. 7 OF 1949

To transfer the Public Roads Administration from the Federal Works Agency to the Department of Commerce (H. Doc. No. 288); submitted June 20, and referred in each House to the Committee on Executive Expenditures.

Report

Treasury Department. Filed March 10 (H. Doc. No. 115).

Status in House

Report referred to House Expenditures Committee.

H. R. 2084, directing the payment by the United States of premiums on bonds of Government officers and employees, introduced April 7; referred to Expenditures Committee.

H. R. 2871 and H. R. 2945, identical bills, were introduced February 21 and 22, respectively; referred to Expenditures Committee.

Status in Senate

Report referred to Senate Expenditures Committee.

S. 193, directing the payment by the United States of premiums on bonds of Government officers and employees, introduced January 3; referred to Expenditures Committee.

S. 1559, to establish a National Monetary Commission, introduced April 11; referred to Banking and Currency Committee; reported June 1 (S. Rept. No. 43); passed June 1.

Report

See appendix F, Fiscal, Budgeting and Accounting Activities, under Budgeting and Accounting, above.

Status in House

H. R. 2830, directing the payment by the United States of premiums on bonds of Government officers and employees, introduced February 17; referred to Expenditures Committee.

H. R. 5174, to provide for the reorganization of the Treasury Department, introduced June 16; referred to the Committee on Ways and Means.

Status in Senate

S. 1692, to amend title VI of the United States Code to provide for the issuance of official bonds covering Government officers and employees without charge to such officers and employees, and for other purposes, introduced April 25; referred to Expenditures Committee.

S. 1997, to establish a Fidelity Trust Fund to issue fidelity bonds to Federal employees without cost to them, introduced June 6; referred to the Expenditures Committee.

S. 2058, to permit the President and the Secretary of the Treasury to effectuate the recommendations of the Hoover Commission relating to the Department, introduced June 13; referred to Finance Committee.

Report

Regulatory Commissions, filed March 12 (H. Doc. No. 116). Appendix N, Task Force Report on Regulatory Commissions.

Status in House

Report referred to House Expenditures Committee.

H. R. 306, Department of Transportation Act of 1949, introduced January 3; referred to Expenditures Committee.

H. R. 5173, to provide for the reorganization of the regulatory agencies, introduced June 16; referred to Expenditures Committee.

Status in Senate

Report referred to Senate Expenditures Committee.

S. 402, Department of Transportation Act of 1949, introduced January 13; referred to Interstate and Foreign Commerce Committee.

S. 2059, making certain changes in the laws applicable to regulatory agencies, so as to effectuate the recommendations of the Hoover Commission relating to them, introduced June 13; referred to Expenditures Committee.

S. 2073, identical with S. 2059, introduced June 14; referred to Expenditures Committee.

REORGANIZATION PLAN NO. 6 OF 1949

To strengthen the administration of the United States Maritime Commission by making the Chairman the chief executive and administrative officer of the Commission and vesting in him responsibility for the appointment of personnel, and the supervision and direction of their activities (H. Rept. No. 227); submitted June 20, and referred in each House to the Committee on Executive Expenditures.

Report

Department of Labor. Filed March 14 (H. Doc. No. 119). None. (No bill relating to the reorganization of this Department during the present session of the Congress has come to the attention of the staff of the Executive and Legislative Reorganization Committee.)

Status in House

Report referred to House Expenditures Committee.

Status in Senate

Report referred to Senate Expenditures Committee.

REORGANIZATION PLAN NO. 2 OF 1949

Transferring the Bureau of Employment Security from the Federal Security Agency to the Department of Labor and vesting in the Secretary of Labor the functions of the Federal Security Administrator with respect to employment services and unemployment compensation (H. Doc. No. 223); submitted June 20, and referred in each House to the Committee on Executive Expenditures.

Report

Department of the Interior. Filed March 17 (H. Doc. No. 122). Appendix L, Task Force Report on Natural Resources. Appendix Q, Task Force Report on Public Works.

Status in House

Report referred to House Public Lands Committee.

H. R. 5176, to provide for the reorganization of the Department of the Interior, introduced June 16; referred to the Committee on Public Lands.

Status in Senate

Report referred to Senate Expenditures Committee.

S. 2057, to permit the President and the Secretary of the Interior to effectuate the recommendations of the Commission relating to the Department, introduced June 13; referred to the Committee on Interior and Insular Affairs.

Report

Social Security, Education and Indian Affairs. Filed March 18 (H. Doc. No. 129). Appendix P, Task Force Report on Public Welfare.

Status in House

Report referred to House Expenditures Committee.

H. R. 782, to constitute the Federal Security Agency a Department of Welfare, introduced January 5; referred to the Expenditures Committee; reported February 15 (H. Doc. No. 122).

H. R. 1402, to establish a Department of National Health and Welfare, introduced January 13; referred to Expenditures Committee.

H. R. 5175, to provide for the establishment of a Department of Welfare, introduced June 16; referred to Expenditures Committee.

Status in Senate

Report referred to Senate Expenditures Committee.

S. 656, National Education Agency Act of 1949, introduced January 27; referred to Labor and Public Welfare Committee.

S. 2060, to establish a Department of Welfare, introduced June 13; referred to Committee on Expenditures.

REORGANIZATION PLAN NO. 1 OF 1949

To provide for a Department of Welfare, which will perform the functions, and conduct the programs, now administered by the Federal Security Agency, this Department is to take its place among the principal executive departments of the Government (H. Doc. No. 222); submitted June 20; referred in each House to the Committee on Executive Expenditures.

Report

Medical activities. Filed March 21 (H. Doc. No. 128). Appendix O, Task Force Report on Federal Medical Services.

Status in House

Report referred to House Expenditures Committee.

H. R. 184, Health, Education, and Security Department Act of 1949, introduced January 3; referred to Expenditures Committee.

H. R. 1402, Department of National Health and Welfare Act of 1949, introduced January 13; referred to Expenditures Committee.

H. R. 5182, for the establishment of a United Medical Administration, introduced June 16; referred to Expenditures Committee

Status in Senate

Report referred to Senate Expenditures Committee.

S. 1581, to establish a National Health Agency, introduced April 4; referred to Committee on Labor and Public Welfare.

S. 1679, to establish a national health insurance plan, introduced April 25; referred to Committee on Labor and Public Welfare.

S. 2008, to establish a United Medical Administration, introduced June 7; referred to Committee on Labor and Public Welfare.

Report

Overseas Administration. Federal-State relations. Federal research, filed March 25. (H. Doc. No. 140). None.

Status in House

Report referred to House Expenditures Committee.

H.R. 5172, to provide for the administration of overseas activities, introduced June 16, referred to Expenditures Committee.

H. R. 2389, to establish a temporary National Commission on Intergovernmental Relations, introduced February 7; referred to Expenditures Committee; hearings held by joint committee May 9–13.

H. R. 3184, H. R. 3994, and H. R. 4507, identical bills with H. R. 2389.

H. R. 12, National Science Foundation Act of 1949, introduced January 3; referred to Interstate and Foreign Commerce Committee.

H. R. 185, H. R. 311, H. R. 1845, H. R. 2308, and H. R. 2751, identical bills with H. R. 12.

Status in Senate

Report referred to Senate Expenditures Committee.

S. 2061, to create a commission to study the administration of the overseas activities of the Government and to make recommendations to Congress with respect to these activities, introduced June 13; referred to the Expenditures Committee.

S. 2072, identical with S. 2061, introduced June 14; referred to the Expenditures Committee.

S. 767, to establish a National Commission on Intergovernmental Relations; introduced February 3; referred to Expenditures Committee.

S. 810, to establish a temporary National Commission on Intergovernmental Relations, introduced February 7; referred to Expenditures Committee.

S. 1946, to establish a permanent National Commission on Intergovernmental Relations, introduced May 26; referred to the Expenditures Committee; reported June 13.

Senate Joint Resolution 41, to establish a Commission To Study Intergovernmental Fiscal Relationships, introduced January 27; referred to Expenditures Committee.

S. 247, National Science Foundation Act of 1949, introduced January 10; referred to Labor and Public Welfare Committee; reported March 3 (S. Rept. No. 90); passed March 18; referred to House Interstate and Foreign Commerce Committee, March 22.

Report

Business enterprises. Filed April 1 (H. Doc. No. 152). (No bill relating to the reorganization of business enterprises during the present session of the Congress has come to the attention of the staff.) Appendix J, Task Force Report on Revolving Funds and Business Enterprises. Appendix R, Task Force Report on Lending Agencies.

Status in House

Report referred to House Expenditures Committee.

Status in Senate

Report referred to Senate Expenditures Committee.

Report

Concluding report. Filed April 20 (H. Doc. No. 197).

Status in House

Report referred to House Expenditures Committee.

Status in Senate

Report referred to Senate Expenditures Committee.

This report contains an index to all commission reports and all published task force reports.

NOTES

This material has been prepared by the staff of the Subcommittee on Executive and Legislative Reorganization, in cooperation with the Legislative Reference Service, Library of Congress, and the staff of the Senate Committee on Expenditures in the Executive Departments. It is the intention of the subcommittee to provide Members of Congress from time to time with information relating to these important reports. All pertinent additional information regarding their progress will be inserted in this analysis in future revisions.

Typescript reports: In addition to the Commission reports and the published task force reports, there are available in many cases additional typescript reports. These were not reproduced in such quantities as to permit of general distribution, but a complete set of them is available in the office of the subcommittee (room 1611), where they may be consulted.

Indexes of reports: Reports and Published Task Force Reports, an index prepared by

the Legislative Reference Service, Library of Congress, for the Senate Committee on Expenditures in the Executive Departments, appears (1) in the Concluding Report of the Commission and (2) as a Senate committee print.

Unpublished Task Force Reports: An index of these was also prepared by the Legislative Reference Service, Library of Congress, for the Senate Committee on Expenditures in the Executive Departments.

Summaries of reports: Among numerous summaries of these are listed below in separate groups. So far as summaries emanating from private sources are concerned, the staff assumes no responsibility for either their contents or their adequacy, but lists them here because it is believed they may be useful.

Reorganization: A Time-Honored Means to Good Government

EXTENSION OF REMARKS

OF

HON. NEIL J. LINEHAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1949

Mr. LINEHAN. Mr. Speaker, the attention of the entire Nation has been directed to the need for reorganization within the executive branch of our Government. The accomplishment of this, it is felt, will reward with new standards of economy and efficient service. In 1947 with bipartisan sponsorship, we saw the creation of a Commission on Organization of the Executive Branch of the Government. This body was composed of 12 distinguished citizens, drawn from various phases of public and private life.

The reports submitted to the Congress by this Commission have met with enthusiastic response in all quarters.

At this time it may be well to point out, that the reports of the Commission on Organization, sometimes referred to as the Hoover Commission, do not in themselves embody a plan or blueprint. They are primarily drawn to focus attention on keystone needs in the departments of our Government. It might be well to add also that not all of the reports submitted to the Congress were unanimous. Accordingly, we find frequent dissents among the commission members themselves as to the feasibility of this or that proposal. In this respect they parallel the decisions of, for instance, the Supreme Court of the United States. It would be well to bear in mind also, that appropriate weight should be given to many of the dissenting views, because they were offered by individuals with specific experience in the particular field under study. These recommendations represent a real beginning in improved administration and reduction of the costs of Government. Needless to say, consideration for possible enactment has met with a most heartening reception among the Members of the Eighty-first Congress.

It becomes apparent after a study of these reports, that a very real problem confronts our Congress today. They have the difficult task of evolving from these recommendations legislation which will achieve the objective sought, and desired by all interested citizenry.

The recommendations of the Commission on Organization can be accomplished by substantive legislation initiated by the Congress itself, on the one hand, or by reorganization plans submitted by the President to the Congress, or finally, by Executive orders of the President.

With the passage of the reorganization bill of 1949, the good faith of the President and his sincere desire to carry out the recommendations of the Commission on Organization was demonstrated when he submitted, on June 20, 1949, seven far-reaching reorganization plans. In another instance, earlier than this, the House of Representatives passed the Federal Property and Administrative Services Act of 1949. This measure passed the Senate on June 21, 1949. In this bill, a piece of substantive legislation, we see congressional action, paralleling in kind and degree, the reorganizing enthusiasm of the President. It is expected that after further appropriate study, Executive orders will be formulated, aimed at achieving certain much needed and specific improvements for better Government.

I am happy to report that my Democratic colleagues from Illinois, Congressmen DAWSON, O'HARA, GORSKI, CHESNEY, BUCKLEY, O'BRIEN, YATES, PRICE, MACK, SABATH, and GORDON, as well as other forward-looking Members of the Congress, favorably endorse the work of the Commission on Organization.

Again I state a real job now faces the Congress. It must, through drafting of legislation and hearings thereon, develop such remedial steps as to bring to our Government improved service and reduction of unnecessary duplication and governmental overlapping of services and pyramided costs. It would be well, however, to state that this cannot be accomplished in a brief space of time. However we urge all possible speed, consistent with thoughtful reflection of our needs. If we are to seek the best in reorganization, appropriate weight must be given to all the views expressed by the Commission on Organization. We all know a mere series of general recommendations cannot of themselves produce worthwhile legislation. Nor can the best of intentions produce a better and a more economical governmental administration. Action is needed.

In keeping with these recommendations, it is well to remark that only by attracting to the Government service an influx of high-calibered individuals can the best governmental planning and legislation be carried into effect through capable administration.

The Commission on Organization has completed a most laudable project and my colleagues of the Illinois Democratic delegation, together with the other Members of the House, are indebted to them for the industry and zeal they have shown in the service of their country. We intend that this shall not have been without avail, but shall be reflected in prompt enactment of worth-while legislation, based on these studies, which will create higher governmental standards of efficiency with resultant savings to the American taxpayers.

Wisconsin Farm Income

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1949

Mr. MURRAY of Wisconsin. Mr. Speaker, the following is an excerpt from a communication from a representative of the Bureau of Agricultural Economics of the United States Department of Agriculture and indicates what is taking place in Wisconsin:

For Wisconsin the income from marketings in the first 4 months of the year is down 17 percent. For the United States the decrease is only about 5 percent. The income in April shows a decrease of about 17½ percent in Wisconsin compared with April of last year. For the United States it is about 9 percent.

One reason why the Wisconsin farm income has been reduced nearly twice as much as the national farm income is because the Department of Agriculture has not carried out the present price-support law on milk and its products.

On June 1 I received the following official information from the same source:

The price of milk estimated for the middle of May in Wisconsin was $2.85 per hundred pounds compared with $4.27 in the same month of 1948, a decrease of 33 percent. For the United States the May milk price averaged $3.60 compared with $4.65 in May 1948. This is a decrease for the Nation of over 22 percent. Most other farm products have not declined in price as much as has milk.

A large percentage of the milk produced in Wisconsin is converted into

manufactured dairy products, and thus this milk does not enjoy the special privilege legislation accorded the milksheds. The legal, lawful support price for milk used for manufactured dairy products should be $3.21 per hundred pounds. The Wisconsin average of $2.85 per hundred pounds includes the milkshed milk, so the milk used for manufactured dairy products is bringing from 40 cents to 60 cents less per hundred pounds than the legal support price under the present law.

There is not much logic in promising higher prices when the present support law is not being followed. Less promises and more performances is the need of the day.

Statement of Dr. Israel Tabak

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 23, 1949

Mr. MULTER. Mr. Speaker, much has been said in the American press recently about Soviet suppression of religion and more particularly about Soviet anti-Semitism. Reference has also been made to the statement made by Dr. Israel Tabak, president of the Rabbinical Council of America during the course of its annual convention in Atlantic City, N. J., on May 23, 1949. I am very pleased to submit herewith the following excerpt from Dr. Tabak's presidential message delivered at that convention as follows:

The time has come for a redefinition of the principles of Judaism in terms of the new turn which Jewish history has taken. We must become aware of the fact that the birth of the state of Israel has changed the course of Jewish history. It has marked as complete and as radical a departure from the established patterns of Jewish life, as the discovery of the atom has done with regard to the experience of humanity in general. In order to meet the challenge of the new age a concept of Judaism will have to be advanced that will be broad and sweeping so as to fill the spiritual needs of every Jew, no matter what his ideas on religion may have been a year or 2 years ago. Divisiveness and denominationalism within Judaism is a manifestation of the Galuth. Now that there is one people of Israel and one state of Israel there should be but one religion of Israel. The time has come to shake off all symptoms of Galuth—right here in America.

Reports have reached us through reliable sources that a systematic attempt is being carried on to suppress all the religious, social, and cultural life of the Jewish people in Poland, Rumania, Hungary, and other countries under Soviet domination. It is frightening to contemplate the lot of these people who are the only surviving Jewish communities left in Europe. I know these people well and I am fully convinced that by depriving them of their religious institutions and denying them of the privilege of educating their children in religious schools, those responsible are depriving them of the very elements of life.

We feel impelled to bring their cry before the conscience of mankind from the platform of this convention. It is ironical indeed that the forces of the Soviet Union that have saved these people from the clutches of the Nazi murderers, should now compel them to die a spiritual death.

If there is no room for Judaism and for Jewish culture in these countries, let the authorities remove the iron bars, which have been used even more rigorously of late, and permit all those wishing to do so to emigrate to Israel.

If the Soviet countries expect a more amicable relationship to be reestablished between east and west, they will have to make amends for this injustice and inhumanity.

Chinese Adventure

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 23, 1949

Mr. BLATNIK. Mr. Speaker, some 14 months ago during the Marshall plan debate I pointed out that granting military aid to the rotten and corrupt Chinese Government of Chiang Kai-shek was a foolish and "rat hole" operation. But there were those in the House that refused to face facts, and who chose to regard Chiang as a "knight in shining armor who was defending western civilization." Since then it has become a well-documented fact that much of American military aid was sold outright to the Chinese revolutionary forces, and the rest was surrendered without a fight. Now comes a report by Drew Pearson to the effect that even as America was giving arms to the Nationalist regime, Chiang was seeking a deal with the Russian Government whereby he would change sides in the cold war. I believe that there is a moral to this story, so under leave to extend my remarks in the RECORD, I include Drew Pearson's column which appeared in the June 21, 1949, edition of the Washington Post.

CHINA-RUSSIA DEALING HUSHED UP

(By Drew Pearson)

An amazing story of Chinese bargaining between the United States and the U. S. S. R. has been carefully hushed up by the State Department. At one time during the China war the Chiang Kai-shek Government was almost on its knees before the Soviet Ambassador to patch up a deal with Russia—at the very same time it was yelling for aid from the United States.

The hitherto untold story began 9 months ago, September 1948, when the Soviet Ambassador at Nanking suggested that the Nationalist Government sign a nonaggression pact with Russia—including a highly important clause whereby, in case of Russo-American war China would side with Russia.

The Chinese nationalists stalled their reply. Meanwhile, Russian pressure increased in Manchuria. Finally, on October 11, Chiang Kai-shek replied that China would accept a nonaggression pact provided it did not contain the clause putting China against the United States in the event of a Russo-American war.

News of this leaked back to Washington 3 days later, October 14. But it was not until October 17 that someone thought to inform the White House or else the White House woke up to the situation.

At any rate, on October 17, at 5:30 p. m., Presidential Assistant John Steelman phoned Gen. Al Wedemeyer, head of the War Plans Division, with the ultimatum that unless the President received a full report on sending war materials to the Nationalist Government, the Pentagon Building would be blown higher than a kite.

Supplies to China must start moving within 2 weeks, Mr. Steelman warned. The first ships actually left November 16. But meanwhile, on November 2, the Nationalists evacuated Manchuria.

Later, as the Chinese Communists approached the Yangtze River, the Nationalist Government decided to accept the Russian treaty overtures of last September. Suddenly Soviet Ambassador Nikolai Roschin was informed that China was willing to accept the nonaggression pact with no reservations whatsoever. It would even accept the clause against the United States.

By this time, however, Russia had cooled. Knowing that victory was just around the corner anyway, Ambassador Roschin replied that there was no hurry.

But the Nationalist Government was now frantic. It informed the Russian Ambassador that it was willing to sign anything—provided General Mao Tse-tung and his Communist army was stopped. And the Chinese Ambassador to the Kremlin went so far as to state that since the United States had betrayed China, the Nationalists were willing to make any kind of arrangement with Communist leader Mao. They were even willing to enter a coalition government with Mao as prime minister.

Two years before, Gen. George Marshall had urged that Chiang Kai-shek form a coalition Chinese government with Communist leaders in his cabinet, but with Chiang retaining control. Chiang had said no. But by spring of this year, the Nationalist Government was so desperate it was even willing to accept its hated enemy, General Mao, as premier. This time it was the Russians who in effect said no.

Latest stage of the frantic Nationalist attempts to make an alliance with Russia came last month after the government was moved to Canton. Once again Nationalist Foreign Minister George Yeh tried to draw the Russian Ambassador into a discussion of a Nationalist-Soviet alliance. But once again the Ambassador was coy. Studiously he avoided all personal contact with the Nationalist leaders.

Premier Hu Ying-Ching then held an official reception to which all foreign envoys were invited, and the Russian Ambassador was urged to come ahead of time for a conference. He refused, however, on the ground that such action would cause unfavorable comment among the other diplomats.

Then he was asked to stay behind after the reception. This he also refused, for the same reason.

Finally Ambassador Roschin was told that unless he accepted this invitation tendered by the head of the Chinese Government to come early to the reception, he would become persona non grata and his recall would be requested forthwith.

Roschin therefore finally agreed to arrive at 8 p. m., knowing that the Premier had an appointment with the British Ambassador at 8:45.

He actually arrived, however, 5 minutes late, and without giving Premier Hu a chance to say a word, launched a long series of complaints about the fact that he had been in Canton since April, housed in lamentable quarters, and in all this time had not been able to get a telephone. Communications, he said, were abominable. He had suffered great delay in receiving mail, the servant shortage was terrible.

By the time Roschin had rattled off this stream of complaints, the British Ambassador had arrived for his 8:45 appointment. The Russian Ambassador bowed out.

British-Argentine Pact Points Up Trade Problems

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 23, 1949

Mr. MULTER. Mr. Speaker, the daily press has recently been filled with news items and commentaries on the manner in which Great Britain is again garnering unto herself the world trade markets, much of it being done with the money and help of this Government. I call the attention of the Congress to another such article, which appeared in the Brooklyn Eagle of June 21, 1949, by Ernest Lindley, pointing out how Britain in violation of her agreements and pledges with and to the United States is taking over the trade with Argentina. It is high time that some of our officials put America first in their thoughts and efforts. What Great Britain is doing, as indicated by this article, in the Argentine is typical of what she is doing in every corner of the world. On the Continent, in the Middle East, in the Far East, and throughout Latin America, to the detriment of American traders, she is making agreements depriving this country of the right to do business.

The article follows:

NEWS BEHIND THE NEWS
(By Ernest Lindley)
BRITISH-ARGENTINE PACT POINTS UP TRADE PROBLEMS

There is scarcely a doubt that the British-Argentine bilateral trade agreement violates the spirit of the British trade agreement with the United States and the general pledges to work in the direction of freer trade made by Britain in return for Marshall plan aid. Although not published at this writing the agreement is said to give Britain a virtual monopoly of the market for machinery in Argentina in return for Argentine beef.

The United States Government already has protested. It realizes that the British are in serious straits and that this agreement is not different in character from many bilateral agreements previously made by them. It would not object so strenuously to an agreement for 1 year. But it had hoped that within 5 years great progress might be made in the direction of a freer flow of trade.

The British also have been resisting the American-backed proposals for a new intra-European payments agreement—an agreement, that is, providing for a greater degree of convertibility for European currencies. They hold that the end result of the plans proposed would be a demand on them for dollars which they could not satisfy. They may be right about this.

These are only two examples of the obstacles the United States is running into in trying to promote a greater flow of international trade. The blame cannot be put entirely on an ideological preference for controlled economies in Britain or other more or less socialistic countries.

One of the difficulties is that Europe seems to be—or feels that it will be—faced with a chronic shortage of dollars after the Marshall plan expires in 1952. The easiest way for most European countries to meet this problem probably will be to cut down imports from the United States. This means manufacturing for themselves, or planning to buy elsewhere, things which they bought in the United States even before the war.

At the end of last year each of the Marshall plan countries submitted its program for attaining self-support by 1952. These revealed a strong tendency toward separate, more or less self-sufficient national economies. The OEEC—the central planning ground of the ECA countries with headquarters at Paris—is trying to check this tendency. But some of the partners do not see how they can make their own way after 1952 unless they make for themselves some of the things they now buy abroad

The problem is complex and not easy to solve. But there is growing feeling in Washington that greater pressure must be put on the Marshall plan countries to cooperate with one another and with us in promoting a freer flow of international trade. It is beginning to be realized at the same time that this may require some changes in the Marshall plan concept.

Prices and Perspective

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 23, 1949

Mr. MURRAY of Wisconsin. Mr. Speaker, the following editorial appeared in the Christian Science Monitor on Friday, June 17, 1949:

PRICES AND PERSPECTIVE

The business boom has ended. But America does not have to have a "bust." The long-desired buyers' market has arrived. If "competition is the life of trade," business is going to be healthier than for many a year.

Failures of weak businesses and the loss of jobs bring individual hardships. But the national economy may be strengthened by processes of natural selection which weed out the inefficient and stimulate the enterprising. That does not mean a depression is desirable. For then millions suffer through no fault of their own, and vast maladjustments of the industrial machine cause intolerable waste. The American people are determined to prevent anything like another 1929.

Indeed, there are already proposals for the Government to step in with pump priming in amounts ranging from $50,000,000 to $15,000,000,000. Rare judgment will be needed in determining when and how much governmental action is wise. In this situation it seems to us two considerations should get primary attention.

First is the need for perspective. Manifestly 1949 is not 1929. The crash 20 years ago came from an extreme credit inflation. What is ending now is a price inflation. Then Americans had indulged in an orgy of speculation; today good stocks are going begging. In 1929 private debts totaled nearly twice the national income; in 1949 they are roughly 85 percent of national income. Then banks were in precarious condition; today their assets are largely fluid and deposit insurance is in force. In 1929 cash and bank deposits were only $55,000,000,000; in 1949, they are three times that and savings bonds provide a further backlog of near $50,000,000,000.

Further perspective can be gained by comparisons with 1948. Great alarm has been caused by rising unemployment in the last few weeks. But in May more Americans were employed than a year ago. Personal incomes were reported to have dropped sharply from March to April, but the actual decline was about four-tenths of 1 percent, and the April figure was still 2.5 percent above April of 1948. Most prices are still near or above 1948 levels. The trend is down, but this is no time for panic.

The second point we should like to emphasize is that the primary job of stopping a depression is one for private enterprise. The tendency to expect the Government to take care of us is dangerous economically and politically. It should be noted that Government is already spending tremendous amounts. Social security, farm price supports, public-construction projects, vastly increased arms expenditures, and $5,000,000,000 for foreign aid—these all have the effect of governmental support for purchasing power—raising bulwarks against a slump. To increase them risks additions to the national debt, which should be done only if the danger of depression is clear.

Moreover, private business still accounts for four-fifths of the national income and must be the chief reliance for continued prosperity. Many businessmen are alert to this fact, and are taking vigorous, forehanded measures to cut costs and prices. Many who have decided to cut prices 20 percent now rather than trying to barely shade them now and risk a 40-percent cut under depression pressures, are keeping up sales and employment. Some Government policies should be reviewed in an effort to give business more freedom to help itself, but wise businessmen today, by putting the emphasis on enterprise, are going far to prevent a depression and maintain free enterprise.

Mr. Speaker, as stated in the editorial, "manifestly 1949 is not 1929." In 1930 the Democratic Party had control in the House of Representatives and a working control in the Senate. I have read many of the debates held in Congress in 1930 and found them rather empty. Many positions were taken in the House which were for political advantage only, utterly disregarding the welfare of the country. I saw first-hand how our citizens suffered as a result of the politics displayed by the Seventy-first Congress in 1930 and 1931.

In the present Eighty-first Congress the Democrats hold a majority of 91 Members in the House and 14 in the Senate. Being in minority today the Republicans cannot and will not embarrass the administration to the extent that the Democratic Seventy-first Congress embarrassed the Republican President in 1930 and 1931. I do not believe that any Member of Congress, who is worthy of representing the people of his district, should vote against or oppose desirable legislation strictly for partisan advantage, even though the Democratic controlled Seventy-first Congress indulged so freely in this process.

Unemployment is being accelerated mainly because of the positions taken by the present administration. First of all, employers are being constantly confused by the administration spokesmen, and, secondly, efforts are still being directed toward inflation control while deflation is evident on every hand. We hear demands for more and more taxes instead of making a constructive effort to reduce Federal expenditures.

And now we are faced with the new and various proposals for agricultural legislation. This certainly cannot help but have an evil effect on the livestock industry, as the livestock industry operates on a long-range program. No one

will be willing to expand livestock production without some assurance that his program will not be ruined by the political meddlers in Washington. Can you expect a farmer to invest in sheep and wire for sheep fences without some assurance that sheep industry is not to be tampered with continually? Is it then surprising to learn that the sheep industry has reached a 50-year low, and that we import twice as much wool as we produce in the United States?

Evidently present unemployment is hitting the cities first and hardest in this recession. As pointed out in this editorial, the one-fifth of our economy dependent upon Federal funds is not sufficient to carry the load.

Address at St. Joseph Church, Webster, Mass.

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1949

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following account of an address I made at the St. Joseph Church dinner on May 30, 1949:

"This gathering is a notable landmark in the history of American free religious worship in the town of Webster," said Congressman PHILIP J. PHILBIN at the St. Joseph Church dinner, "and this occasion will long be remembered as exemplifying the superb faith, unflinching loyalty and unbounded generosity of the Polish people of this community.

"America is the richer for the strong infusion of Polish blood," said the Congressman. "Blessed with historic traditions of liberty and democracy, your people have contributed greatly and constructively to the building and preservation of the Nation. This church and its outstanding spiritual leader and his associates gloriously adorn this community and stand for the very highest type of American citizenship. For God and country has indeed been your motto. Cling to it always."

The Clinton Congressman bitterly denounced the continued enslavement of Poland. "It was a great and tragic error, a ruthless and cold-blooded betrayal of our own ideals, to permit enslavement of Poland by Godless Russian communism," said PHILBIN. "Imperialists and dictators and other misguided people may consider Red domination as an accomplished fact. But so long as the spark of freedom animates America, so long as our people honor the hallowed dead who have died in order that freedom might live, so long as justice finds a place in the American heart, just so long will all true lovers of liberty and all true Americans sponsor the cause of Poland.

"This gallant nation cannot be abandoned to this cruel fate. It must be restored to its rightful place among the self-respecting nations of the earth. Its gallant people, who have contributed so much to the world, must be liberated from the shackles which now hold them in bondage. It is the duty of this Government to work in international councils and in every other way, for the early liberation of Poland. The American people will be satisfied with nothing less."

Government and Business

EXTENSION OF REMARKS
OF
HON. HARRY J. DAVENPORT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1949

Mr. DAVENPORT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article from the Pittsburgh (Pa.) Press which contains a speech made by Irwin D. Wolf, vice president of Kaufmann's Department Store:

SEVEN-POINT PROGRAM—GOVERNMENT URGED TO AID BUSINESS, NOT SNARE IT WITH MORE RED TAPE—"BUREAUCRATS" HIT BY IRWIN D. WOLF

NEW YORK, June 22.—A plea that Government help business, rather than entangle it with more red tape, was made by Irwin D. Wolf, vice president of Kaufmann Department Stores, Pittsburgh.

Mr. Wolf outlined a point-by-point program of what business could do to help free itself from "bureaucracy" in a talk before the mid-year convention of the merchandise division of the National Retail Dry Goods Association. He spoke at the Hotel Statler.

LAWS OF CONGRESS

All the laws that Congress has passed since 1789, Mr. Wolf pointed out, have been codified in four volumes.

On the other hand, it takes a full 47 volumes to hold all the rules and regulations of Federal agencies.

"Do not think for a moment that their job is ended," Mr. Wolf told the group. "Not at all—in fact theirs is an unending project."

CRITICAL QUESTION

The Pittsburgh executive said the question was particularly critical now because of the part business is being asked to play in the ideological and economic battle now being waged.

"American business," he said, "because of its part in this battle, stands at bay to the forces of regimentation, almost as did England not quite 10 years ago. If our battle fails, the last substantial bulwark of free enterprise will be swept away, and American business will be swept with it."

Mr. Wolf pointed out that, since World War II, our business system has been the big gun used to influence if not shape, the political pattern of the world. He cited the billions spent for European recovery.

ROLE OF BUSINESS

"Business must accept that responsibility and must equip itself to meet the demands which that role entails," he said. "Government, on the other hand, must now make it possible for business to discharge these responsibilities which have been thrust upon us."

In this connection, Mr. Wolf said, it is the prime duty of Government to strengthen and foster conditions under which business will thrive.

"Are we able to maintain the volume of business which is necessary to support our own standards of living, provide for our own needs, meet our fiscal problems * * * and at the same time contribute to the needs and welfare of others throughout the world?" he asked.

"I, for one, am confident we can, provided we recapture for business the basic principles of democratic life which have made our Nation great."

Mr. Wolf stressed that he was not attacking the present administration or any other administration.

HITS BUREAUCRATS

"But," he said, "bureaucrats have again reared their ugly heads * * *. Hardly a day passes without presentation to Congress of additional and dubious proposals for further regulation or control of some phase of our life-giving business."

He concluded with the following seven-point program which he suggested business leaders fight for:

1. End the merger of legislative, judicial and executive function in the administration of laws affecting business. Keep them separate.

2. Do away with Federal business laws so loosely worded they confuse legitimate businessmen. Simplify and make uniform all laws governing business.

3. Resist further Federal centralization; encourage action by State and local government in local affairs.

4. Eliminate State burdens on and barriers to interstate trade. They incite demands for further Federal regulation.

5. Insist on recognition of the fact that the overwhelming majority of businesses are honest. Promote self-regulation as distinguished from Government regulation.

6. Foster a study of business laws by all segments of business, and help propose revision of existing law with unselfish interest for the welfare of the Nation.

7. Encourage the Government to reactivate the Department of Commerce so it will function as effectively in national decisions as have the Departments of Agriculture and Labor in past year.

"Ike" on Education

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Minneapolis Morning Tribune of June 18, 1949:

"IKE" ON EDUCATION

Popular "Ike" Eisenhower, president of Columbia university, is proving that as an educator he intends to stand by his convictions, whether they are popular or not.

Eisenhower has reaffirmed his opposition to proposed Federal aid to education legislation already passed by the Senate and enthusiastically backed by the National Education Association.

In a letter to the House subcommittee conducting hearings on the Senate-approved bill, Eisenhower says he favors Federal aid to areas which can't raise enough in taxes to keep schools up to standard. But he flatly opposes "any grant by the Federal Government to all States in the Union for educational purposes."

Eisenhower is convinced such a policy would create an ambition—"almost a requirement"—to spend money freely under the impulse of competition with other localities in the country. He feels it would "completely decry and defeat the watchful economy that comes about through local supervision over local expenditures and local revenues."

Contractual arrangements with schools for scientific research and even Federal scholarships are often in the public interest, he admits. The Federal Government has made many such arrangements in the past without

weakening local government or sapping community enterprise. But they are a far cry from "blanket usurpation of local responsibility and obligation."

What about the argument that since the Federal Government skims off so much available tax revenue it might as well take on more local responsibilities?

Completely spurious, replies Eisenhower:

"If local communities do their job, then there will be no need for additional centralized revenues for Nation-wide subsidies of an essentially local character; and we will avoid the certain pitfalls of extreme centralization."

The army of persons who urge greater centralization of authority and greater dependence upon the Federal Treasury, in Eisenhower's opinion, is "really more dangerous to our form of government than any external threat that can possibly be arrayed against us."

These are strong words for amiable "General Ike." But they are those of a man who so earnestly believes education is the key to preservation of the American free system that he doesn't want to see the educational process used directly to weaken that system.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 23, 1949

Mr. ADDONIZIO. Mr. Speaker, I had hoped that the House would quickly follow the lead of the Senate in the passage of S. 246, the Federal aid to education legislation which is so vitally needed today. I was very much disappointed that the House measure on this subject, the so-called Barden bill, differed from the Senate version in specifically directing that under no circumstances would nonpublic school pupils receive the health benefits and transportation services provided for children attending public schools. It must be remembered that schools under religious control exist by right in our country, and hence the discrimination contained in the Barden bill cannot be justified. I was happy to learn that my distinguished colleague from New Jersey, Congressman CHARLES HOWELL, as a member of the education subcommittee voted against reporting the bill to the full Committee on Education and Labor because of these discriminatory features. I wish to compliment him on his position on this issue which is consistent with his fair and reasonable approach to all legislation. Included at this point is an editorial from the Trenton Evening Times of June 21 entitled "Howell's Creditable Position":

HOWELL'S CREDITABLE POSITION

Representative HOWELL of the Fourth District has taken a reasonable and commendable position in his opposition to the Barden bill providing for $300,000,000 in Federal aid to education in local school districts. The need of Federal aid if municipalities are to maintain adequate standards is manifest. School costs are rising constantly and the ordinary needs of local government are becoming so onerous that they cannot be met without almost intolerable taxation.

The Barden bill, however, is not designed to meet this problem equitably and adequately. For the purposes of obtaining Federal funds under the prescribed formula, all children are included, regardless of race and religion. But in the actual distribution of the Federal funds, the children of parochial and other private schools are excluded.

This money is for use in the transportation of children to and from school and for various health needs. Discrimination in these fields of governmental responsibility is not defensible. The children involved are American children who are being educated without expense to the public and they should have the benefits of the health and transportation programs which would be financed with Federal funds.

Mr. HOWELL, although a consistent advocate of Federal aid for education, voted against reporting the Barden bill to the full committee of the House because of what he considers its discriminatory features. Senate bill 246, for which the Barden bill is a substitute and which does not include these prohibitions, is the more satisfactory measure.

Relationship Between Home, School, and Church

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 23, 1949

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address I made at a meeting of the Wincherdon (Mass.) Parent-Teacher Association on April 3, 1949:

These time-honored institutions have been responsible in largest measure for the progress of our Nation. I can hardly find words to congratulate this fine group upon the distinct and invaluable contributions which it is making to civic betterment and our future moral and spiritual well-being.

I wish that there could be groups like this in every community in the land animated by the same high purposes, because if we are going to retain the home, the school, the church, and other American institutions, we will have to be prepared to fight unitedly against malignant forces studiously and deliberately working to destroy them.

It is of utmost importance that people in a democracy be educated and informed, and they must also be self-disciplined in the ways of free government. There is a clear distinction between liberty and license which must be kept in mind. There are certain basic principles and values relating to our relations with the Government and with each other which must not only be taught to the young but scrupulously observed if the free way of life is to be sustained.

The fiercest attacks of radicals are leveled at organized religion because subversive groups know that so long as people believe in God and remain true to their faith that no atheistic, totalitarian doctrines can possibly gain headway. It is by the destruction of the church and everything it means by which Communists hope to weaken the moral fiber, discipline, and restraint of our people and open the floodgates of license. It is by subverting the school system into a giant source of poison and propaganda that they seek to accomplish their ends. It is by breaking down respect for the home and the family unit and thus inculcating bestial materialistic ideologies that they hope to destroy Christianity and democracy and the free institutions which are associated with them.

But Americans are not guileless and they are not gullible. Most of our people have perceived the evil designs upon our freedom and it will not be long if we remain united that the influence of subversive groups will be smashed. Let us, however, not fail to recognize the widespread gains which communism has made throughout the world. It has reached its tentacles over a great many nations on continental Europe and across the wide stretches of the Orient. The leaders of the Kremlin are well on their way to bring over a billion people under their dominion and sway or about half the population of the world. Regrettable and tragic as it is, particularly in the light of our colossal sacrifices during the recent war, the Nation must be prepared to cope with the widening orbit of power, pressure, propaganda, infiltration, and force which are being manifested by the Soviets and their puppets. We must have the strength and the zeal to command the respect of every nation and to implement and sustain a strong affirmative foreign policy which will protect the security of the Nation.

There are some encouraging signs that with our help the tide of Communist influence in Europe has been stemmed but we are living in a world of dread and apprehension where men, women, and children are yearning and seeking universal peace but where constant danger of horrible destruction is lurking. Before our potential enemies secure the atomic bomb in significant military quantities this Nation must arrive at definite understanding concerning the maintenance of world peace, the security of democratic institutions, and our own safety.

Believing in peace with all our hearts and striving to achieve it with every ounce of our energy, united, courageous, and confident, by adhering to the American pattern we will in the end, God willing, stifle the forces of subversion and aggression which are threatening all nations outside the iron curtain and inaugurate a reign of just and lasting friendship and amity among nations. Keep up your good work in this community so that you may continue to serve the health and well-being of our children and thus contribute your full share to the building of a stronger and better America.

The Butte, Mont., High School Band Blossoms at the Rose Festival

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 23, 1949

Mr. MANSFIELD. Mr. Speaker, the Butte High School Band has added to its laurels because of its outstanding performance at the festival of roses held in Portland, Oreg., on June 9 and 10 of this year.

The American beauties from the richest hil' on earth put on a magnificent show and captured the hearts of the citizens of Portland.

The entire West, from Mexico to Canada, knows now of the outstanding qualities of this great musical and marching organization. It is my hope that the Butte High School Band, the Nation's

best, will seek further honors and will make its next trip to the Nation's Capital.

All honor to a great bunch of young Americans who have again put Butte and Montana on the map. They are a credit to their school, our State, and our country.

Mr. Speaker, I am inserting two articles from the Montana Standard of June 10 and 11, 1949:

[From the Montana Standard of June 10, 1949]

BUTTE HIGH BAND ACCORDED ROUSING ACCLAIM AT JAMBOREE IN PORTLAND

(By Frank Quinn)

WITH THE BUTTE HIGH BAND, PORTLAND, June 9.—Who said you can't see music?

The Butte High School Band, Thursday night, disproved that theory when it was accorded the rousing acclaim of approximately 18,000 spectators in Multnomah Stadium here.

During the second annual territorial band jamboree in which 16 high-school bands participated the only thing to top the Butte band in applause was a lighted blimp soaring over the stadium. The pageantry students from Butte staged a great and colorful show which was greeted with great applause.

There were exceptional concert bands among the eight out-of-Portland high school organizations to perform as individual units, but from a pageantry standpoint, Butte's nearest rivals in applause and performance were the Bremerton and Roseburg organizations and the Dalles boosters girls. Among the concert bands, splendid and show-stopping music was provided by the Eugene, Oreg., and Vancouver, Wash., organizations.

The Eugene, Vancouver, and Klamath Falls bands were outstanding in concert performances. Eight Portland high school bands performed as a single unit in a most imposing spectacle.

Weather was perfect—cool and clear—for the performance.

Dick Glasgow, manager of Multnomah Stadium, said, "They are the best Portland ever saw. A huge stadium crowd even watched them during practice here this afternoon. The show tonight was great. I wouldn't miss them Friday night for anything."

Selected as the No. 1 band in the pass-in-review entrance of the band jamboree, the famous Montana musical organization, also was honored in the fact that it closed the program of individual band exhibitions with one of its spectacular stadium shows as a finale. Director Schiesser, for this, the opening stadium appearance of the band in Portland, where it will perform again in Multnomah Stadium on Friday night, used a western motif as a theme.

The demonstration was thrilling with its fast-moving action, inspiring music and clever majorette effects. The show, which, following outstanding performances given by other bands, required every iota of perfection in playing and intricate maneuvering by the Mining City boys and girls to equal, let alone surpass the splendid work of their predecessors on the jamboree scene. That the Butte band accomplished this feat was evident from the rousing applause it received.

Following a grand entrance with rapidly changing marching maneuvers, during which they played Western Fanfare, Out Where the West Begins, and Montana the band swung into a variety of western numbers. These included Pony Boy, Wait for the Wagon, Wagon Wheels, Red River Valley, and Bury Me Not on the Lone Prairie.

With typical precision and speed the band members, with charming majorettes and twirlers, depicting Indian dancers, prancing ponies, lariat-swinging cowboys or square dancers, presented nine different formations in record-breaking time.

The formations included a tepee, bow and flying arrow, during which majorettes formed arrowheads to light Indian fires as the band played Fire Dance, a prairie schooner, a buffalo skull and cattle brands depicted in red lights in a darkened stadium, a fiddle and bow, and as a finale a queen's crown, honoring Barbara I, Queen of Rosaria for 1949. As the band formed the crown it played Hair of Gold, and then Land of Hope and Glory as a closing selection.

At conclusion of the jamboree performance the Butte youngsters, after receiving a well-earned demonstration, joined other bands to bring the jamboree program to a close with a mass concert conducted under direction of Prof. Andy Loney, director of music in Klamath Falls School.

Then, tired but happy over the success of their first rose festival appearance, 139 boys and girls headed back to their hotel headquarters and some few hours of sleep before facing their sternest test on this year's band trek, appearance on Friday morning before nearly a million spectators who will witness the grand floral parade over a 5-mile route which starts in Multnomah stadium where on Friday night the Butte band will be the top attraction in a command performance honoring the Queen of Rosaria, her princesses and royal court.

[From the Montana Standard of June 11, 1949]

BUTTE HIGH'S BAND CAPTIVATES CROWD IN PORTLAND

(By Frank Quinn)

MULTNOMAH STADIUM, PORTLAND, Friday night, June 10.—The American Beauties from Butte, 139 well-groomed, fresh, and wholesome young men and women from the site of the "richest hill on earth," Friday night captivated the "command performance" crowd of the Portland rose festival.

The toast of Oregon, following their superb showing in the grand floral parade Friday morning, Butte high-school band members, majorettes, and twirlers Friday night, before more than 23,000 persons who filled spacious Multnomah Stadium, staged a "Barnum-Bailey-Billy Rose-Earl Carroll-George White" extravaganza all wrapped up in one spectacular show.

Never before, according to rose festival officials, did subjects of the Queen of Rosaria, traditional ruler of the Portland spectacle, pay more magnificent homage to the reigning monarch than the boys and girls of Butte rendered Queen Joyce, her princesses, white-clad Rosarians, and other court attendants. And never before, veteran news writers covering the "command performance" said, did a musical organization of the type of the Butte high-school band receive a more enthusiastic ovation.

Bob Broeren, who is prime minister for the rose festival and a prominent Portland attorney, said, "The band was the most terrific I have ever seen, including organizations of its type at the Mardi Gras in New Orleans and in other national festivals."

He added, "The band surely should receive national acclaim."

Bob Hancock, publicity chairman for the festival, said: "The band made tonight's show in addition to having drawn more public attention than any other organization ever invited to the festival."

The young mining city musicians shared the spotlight with the 80-voice Multnomah Athletic Club Balladeers, a 43-piece professional modern-concert orchestra, and 80 Clark Junior College choristers, splendid, outstanding instrumental and vocal groups. As favored subjects of the queen, Butte's best, honored group for the stadium show, were last to perform. And despite the highest class amateur and professional competition, the pride of Butte fully lived up to the top billing.

For the moment the band opened its spectacular Parade of the Months show, with an intricate pass in review entrance, until the concluding number on its stage concert, and Melodies in Roses review dedicated to Portland, the City of Roses, it won roaring acclaim from the thousands of spectators in the stadium.

Playing 41 compositions, entirely from memory, and employing every trick known to gridiron pageantry, Henry J. Schiesser's musicians, and the flashy majorettes and twirlers, trained by Mrs. Schiesser, never before performed in the ear-pleasing, eye-striking manner with which they drew the resounding plaudits of the overflow multitude. Their display was a glorious combination of music, beauty, pageantry, and gaiety, combined in one great spectacle. There is no doubt they left a lasting memory in the hearts and minds of those who witnessed Friday night's superb performance. Once more the Butte High Band reflected everlasting credit to the metropolis of the Treasure State.

Eye-appealing dances and novelty effects highlighted the parade-of-months portion of their program. In a little more than 17 minutes, to continuous and appropriate music, the Butte teenagers unfolded a complete calendar year and its celebrated events before the cheering throng. Rapidity and precision with which 26 major formation changes were made were amazing even to the scores of Butte residents in the stands, who had watched the band in similar maneuvers in Naranche Stadium. To the thousands of Portland residents and their rose festival guests it was breath-taking.

Striking lighting effects in which color blended into color until they were living, shimmering rainbows, were used to advantage during portions of the program presented in a darkened stadium.

Some of the musical selections and field formations apparently held just a little more popular appeal than others. There was no doubt many persons of Irish birth or descent were present. The salute to March, during which the stadium lights were turned off and the band formed a huge shamrock with green lights attached to miners' helmets, and the accompanying selections, Killarney, Wearing of the Green, and Irish Eyes, drew applause which would have surely shattered an applause meter.

The same was true when the band depicted July Fourth celebration with bursting bombs heralding formation of a huge flag, the letters U. S. A., as the stirring notes of Grand Old Flag and Stars and Stripes Forever pierced the night.

October, with its Halloween theme, flaming torch rings and ghost dancers, and the old favorite, Harvest Moon; November, a winter wonderland festival marked by formation of a sleigh drawr by 34 spirited ponies (prancing majorettes), and the grand finale marking celebration of Christmas, were other outstanding pageantry displays. The finale, a tribute to December, was high lighted by formation by the band of a lighted Christmas tree with whirlwind lighted baton action by majorettes serving as tree trimming in varied colors, vivid in the accompanying darkness.

As the lights flashed on to mark conclusion of this part of the band's program the group made a flying wing exit while playing an appropriate salute to the Queen of Rosaria, Red Roses (for a blue lady), and Thanks for the Memories.

Following a 10-minute intermission during which distinguished guests were introduced over the stadium address system, the Butte band again took over the spotlight, this time to present its 40-minute command performance concert, and Revue in Roses.

The concert section of the program opened with Concert March Paraphrase from the operetta Sari, by Kalman, and included Caribbean Fantasy (Morrisey), and Purple Pageant (King). The selections, appealing

though difficult, gave the band vast opportunity to display its splendid instrumentation.

The band performed on an elevated stage centering the stadium while the revue portion of the program was presented on the field immediately in front of the band group.

Thematic material for the revue was built around famous rose songs easily recognized. The show itself high lighted skillful combination of precision twirling styles featuring the majorettes in ensemble routines with lightning costume changes, fast action, rhythm, and sparkle.

Varied lighting effects also added color to this portion of the program as the band and majorettes performed in the dark. Introduction of the revue was particularly entrancing as majorettes and twirlers flitted across the field with lighted batons as the young musicians softly played Bouquet of Roses and Moonlight and Roses.

Beaut from Butte, a salute from the band to the Queen of Rosaria, played as the majorettes worked wizardry with lariats and Jolly Coppersmith, a number augmented with majorettes performing with miniature pickaxes and lighted miners' helmets on a darkened field, drew the same type of spontaneous applause which has marked every appearance of the band in the Rose City.

The assembly line precision baton chorus in which the snappily attired majorettes spun batons, capes, wooden guns, and military service flags to the tunes of Yankee Rose, Rosie the Riveter, Rocket Rhythm, and other such numbers, and the grand finale, Grand Old Flag, played as the majorettes swirled into an intricate flag drill, all drew rousing cheers.

Apart from the audible applause tribute to the band was paid by Friday night's stadium assemblage in the fact that although the hour was late when the Butte organization completed its performance, few people left the stands until the last rousing demonstration of approval was given as the band and majorettes left the field. Butte residents in attendance, through courtesy of the rose-festival association, occupied a united section of seats, and their faces were beaming as they heard the band praised in glowing terms by Portland residents, and rose-festival visitors as they filed out of the spacious arena.

WITH THE BUTTE HIGH BAND, PORTLAND, June 10.—Every step taken by 139 Butte boys and girls in the grand floral parade of the rose festival here Friday morning brought added glory to the mining city.

After enjoying a huge success Thursday night in the territorial band jamboree, the Butte organization came back Friday morning as the honor band of the Melodies in Flowers parade and made a truly magnificent showing along the entire 5-mile route.

While the thundering plaudits showered on the justly famed Butte High Band couldn't be heard back home in the mining city, the people in Butte are certain to learn of the tremendous triumph scored by these all-American youngsters. It was a repetition, but in even greater measure, of some past successes scored by this great band as it added to laurels already won in Pasadena, Salt Lake City, Las Vegas, Spokane, and Seattle.

The beauty of the rose predominated in the parade as for more than 2 hours thousands of spectators marveled at the breathtaking gorgeousness of the festival's annual high light.

Weather conditions were ideal. It was cool and, except for some scattered, fleecy clouds, the skies were clear as the procession filed out of Multnomah Stadium for the long parade trek. In formation the parade units stretched for about 4 miles.

It was a day of rampant colors, bands, pretty girls, and flaming hues of millions upon millions of flowers, which made up the floats, creations of sheer beauty. It all combined to provide a blazing array of splendor, and the Butte High band, snappy in its purple and white uniforms, and the majorettes and twirlers in their brief, eye-striking white satin costumes, added no little to the grandeur of the display.

There were 27 bands in the parade and ahead of all the others marched the Montana group. It was the first musical organization to appear as the procession left the stadium. It followed a police escort and the Marine color guard and immediately preceded Gov. John W. Bonner, honorary grand marshal of the parade, who was in the leading section with other dignitaries of the parade.

This division included the queen's float, Royal Rosarians, Gov. Douglas McKay, of Oregon, grand marshal; a police drum and bugle corps and beautifully decorated cars in which Portland Mayor Dorothy Lee and Howard Holman, president of the rose festival, rode.

Governor McKay, as grand marshal and a member of Oregon's mounted posse, rode a palomino horse with a silver-trimmed saddle.

Governor McKay was first to pay tribute to the band. He said, "Butte boys and girls were outstanding. Oregon expresses gratitude to citizens of Butte for sponsoring the band's appearance in Portland. Those youngsters have done a grand job of publicizing their own city and State and providing peerless entertainment for our rose festival. If every city in the world had the spirit and progressiveness of cities such as Butte, and our rose-festival city, the world would be a much better place in which to live."

Mayor A. Roy Benedict, of Pasadena, honor guest for the festival, said, "Your band was great in its showing in Pasadena at the tournament."

There Is Probably No Man in These United States Who So Long Has Held His Finger on the Pulse of Labor and Management and Certainly None More Fitted by Education and Experience To Know the Needs, Wants, and Ambitions of the American People Than the Honorable John R. Steelman

---

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1949

Mr. BOYKIN. Mr. Speaker, last week while in attendance at a business conference in New York City, I heard the president of one of the largest, if not the largest of all American corporations, declare that "John Steelman, assistant to the President of the United States, is today one of the most able men in all the world."

That expression was prompted by a citation given to the Honorable John R. Steelman but a few days previous, and I quote:

> In recognition of his distinguished leadership in public administration in the service of the Government of the United States.

In the short discussion which followed I listened to the evaluation of Mr. Steelman's service to his country, and to mankind—and in that small, distinguished group of business executives—there was not a man present but who gave substantial endorsement to the sentiments of the speaker.

Mr. Speaker, that all may read that brief, clear, and concise direct record of the accomplishments of Mr. Steelman, I shall extend my remarks and include the citation as a part thereof.

The Honorable John Steelman comes from down in my part of the country, and he was not one to the manor born. Rather he was born on a little cotton farm of the best of all our southern ancestry, of a father and a mother who sent their son John to grade and to high school, only to have him finish his secondary education in time to join the colors of his country when but 18 years old, in World War I.

John R. Steelman had attained the maturity of years when mustered out of service and he was on his own.

He determined to inform his mind not alone on some subject that would afford him an affluent life and good income but to inform his mind fully on every subject that had to do with the peace and happiness of his fellow men in every walk and station of life.

Mr. Speaker, a true philosopher is one who loves wisdom as he does his fellow man, and John Steelman is a true philosopher.

It was because of that love of knowledge that he attended four institutions of higher learning in the next 10 years and there earned four of the degrees which he now holds.

Not alone did he earn those degrees, but he earned the money to pay for that education by working during the summer months as a logger and a sawmill hand and in the winter by waiting on tables, peddling books, and correcting papers for his professors.

Thus by 1922, and when only 22 years of age, he had a B. A. degree from Henderson-Brown College in Arkadelphia, Ark.; by 1924 he had earned his M. A.; by 1925 a Ph. B. from Vanderbilt University; by 1928, and after a year spent at Harvard in 1926, he received his Ph. D. from the University of North Carolina.

In addition to the four degrees mentioned, he has additionally thereto earned two honorary degrees of doctor of laws—one from Alfred University in New York and a doctor of laws from Redlands University, California.

It was in 1928 that I met John Steelman when he came as professor of sociology and economics to our little college in Montevello, Ala.

Mr. Speaker, John Steelman was never a pedantic professor. In the years he lived with us in Alabama he worked among our people. He broke bread at our tables and taught—not by word alone, but by deed and by action, that inasmuch as God is Father—that all men are brothers.

The great educational work which he did in Alabama so distinguished him among our people that it won him recognition in the Nation's Capital. He left us in 1934 to become a Commissioner in the United States Conciliation Service. His personal prowess in handling labor problems has left a deep and everlasting

impression upon all those concerned with management and labor throughout the great South as well as the Nation.

In the year 1937 he was named Director of the Conciliation Service. That year labor unrest was particularly rife in these United States and probably no man in America was handed a more difficult duty than that assigned to John R. Steelman by our beloved President Franklin D. Roosevelt.

Indefatigable in his labors, he spent an average of from 10 to 15 hours each day at his desk and he did so 7 days a week. He patched up coal disputes; he helped to settle the Washington, D. C., hotel strike which paralyzed the local hotels, the inconvenience of which many of us in Congress will never forget.

Mr. Speaker, not alone did John Steelman help settle strikes but he kept miners, machinists, builders, and industrial workers in hundreds of plants and other major industries from striking. Equally effective, he induced employers on every hand to refrain from lock-out and retaliatory actions. Each year the department which he directed handled several thousand cases of labor disputes involving millions of American workers, and each year the record of the settlements effected under his direction was a percentage high up in the nineties.

It is unnecessary for me to recapitulate to this House the marvelous achievements of our friend, John Steelman, in effectuating a better understanding between labor and management in these United States—and especially so in the particular congressional district which we here represent.

I remember reading of one instance when John Steelman kept a meeting between employers and employees going without a single adjournment or rest period for more than 30 consecutive hours; and of other times when he himself had not left his office in the Department of Labor building for over 60 hours at a stretch.

Mr. Speaker, I hope that you and my colleagues will indulge— a personal reference. Not alone have I been knowing John Steelman and knowing him for a long, long time but I knew Mrs. Steelman before her marriage to John.

It seems that we have always been friends—the Steelmans and the Boykins, and certainly no man has ever lived who has had a more splendid helpmate nor one more understanding or considerate of her husband's well-being and problems than Mrs. Steelman herself. Prior to her marriage, she was herself intimately connected with the labor-management problems and the Construction Trades Council.

I recall on one occasion Mrs. Steelman telling Mrs. Boykin and myself that "It seems that we even breakfast to the ringing of the telephone." "When John is on the road," she continued, "and I am privileged to be with him, we snatch our meals in our hotel rooms between conferences and this sometimes keeps up until 3 or 3:30 in the morning."

His propensities and the direct actionist that he is causes him to use the telephone and thus get in personal touch with the principals to any issue. This recourse to the telephone I recall on one occasion left him with sort of a paralytic cramp in the wrist—but his determination to get things done with precision and dispatch was solved by installing a kind of a telephone gadget that permitted him to carry on his conversations and still leave his hands free to write—at the same time.

His personal attention to duty, the rush and drive that he gives to his work does not in any manner whatever seem to affect his great physical strength.

Probably the most significant work which John Steelman has done for his Nation in the field of labor management came about as the result of him addressing himself personally to the question of industrial peace in the great crisis of labor unrest which engulfed the Nation in 1941.

This was the year of Pearl Harbor. Strikes, lock-outs, stoppages were almost daily if not hourly occurrences in the hundreds of plants, manufacturing defense materials.

Congress had long been debating compulsory legislation against these labor outbreaks. The public were daily becoming more concerned with the results of impaired production. The Conciliation Service had been working day and night to bring peace and to maintain peace between employers and employees.

As Director of that service, Mr. Steelman had spent days in conference with miners and with the soft-coal operators. He had handled the crippling strike at the Allis-Chalmers plant in Milwaukee, the strike at the International Harvester's various plants. He personally brought an end to the Vultee Aircraft Corp. strike.

Without authority and without coercive powers, when he sat down he could only reason, plead or maybe bluff his way through to a settlement, but he kept himself hopping over and about the country doing these things as a one-man unit.

He himself stated:

> The Service works on the theory that, if a dispute is settled by the parties themselves at the conference table, the resultant peace will be more enduring and leave less bitterness and rancor than if the dispute had been settled by authority of law or force. * * * There must be no pressure of the Government in the process on one side or the other. * * * The minute you make a cop of a conciliator, you have destroyed his usefulness. * * * We do not want police authority. We believe it to be the very antithesis of the spirit in which really effective conciliation is carried on. * * * Abolition of the right to strike was the entering wedge of fascism in each of the countries it conquered.

That was the complete but simple policy enunciated by this distinguished American business administrator and executive the history of whose success is supported by the records of things he accomplished.

In the single year of 1940 the Conciliation Service was * * * called in * * * on a total of 4,665 situations—strikes, threatened strikes, controversies, arbitrations, lock-outs * * * and less than 3 percent of that prodigious number were listed as unable of achievement.

The work of the Conciliation Service as administered by John Steelman has received the unqualified endorsement and support of such varying and diverse groups—Labor and Management as—the American Federation of Labor, the CIO, the United States Chambers of Commerce and the National Association of Manufacturers.

So successful was the work of settlement accomplished that decision was reached at the very start of World War II—that only where there was a dispute that John Steelman's Conciliation Service could not settle would the newly congressionally created National Defense Mediation Board be called upon for action.

Mr. Speaker, need I remind you that for the duration of the war there were relatively few instances where that was necessary.

Mr. Speaker, between the year 1937 and the year of Mr. Steelman's resignation 7 years later—he induced the embattled protagonists in 80,000 cases involving labor-management show-downs to settle their labor problems and squabbles without lay-offs or strikes. Exactly how he managed, I could never understand except that he seemingly was ever careful in schooling his every last conciliator to whom he delegated any authority.

> Frank—
>
> He once told me—
>
> I have often said that one damn fool can ruin the settlement of any labor dispute. I learned that more than 20 years ago and it is equally as true now as it was then * * * exercise patience when dealing with ornery or stubborn men. Sometimes you have to keep their feet right in the fire * * * until they come to the realization this question must be settled some day, and today is as good as any.

I remember one story that they tell of John Steelman when he spent an entire night going back and forth from one room full of the angry representatives of management to another full of restless, impetuous labor representatives, and finally how at last he got them all into one room * * * there to compose their differences.

"A meeting of the minds," he stated on one occasion, "is the general basis of ongoing civilization, and arguments will never be a substitute for good will."

Is it any wonder therefore that our new President, Harry S. Truman, wise, sagacious, and prudent, recognized that any man with such knowledge of personalities and technique in handling men would be just the kind of a personality who should sit at the right hand of the Chief Executive of these United States.

Mr. Speaker, is it any wonder that that great captain of American industry last week expressed his opinion that John Steelman was one of the ablest men in the world.

There is probably no man in these United States who has so long held his finger on the pulse of the American people or who is more able to gage their wants, their needs, hopes, and ambitions than is John R. Steelman, Assistant to the President of the United States.

The 10 years that he spent in the Labor Department in Washington have built a

niche for him not alone in the hearts of my colleagues here on Capitol Hill but in the hearts of leaders of labor and industry as well as every executive in all departments of government. They respect him for what he is, a simple, homey man who knows his fellow men, loves them, and enjoys their respect.

Is it any wonder, therefore, that the Members of Congress were so eager and quick to express their pleasure and approval when President Harry Truman appointed him the Assistant to the President of the United States. Certainly by training, education, and experience he is now in an enviable position to advise President Truman on public reaction with respect to almost all public matters.

Experienced and at home in Washington, he is equally at home in the White House, as one who knows the Capitol and how it runs.

As the Assistant to the President, much has been heard of him and much more is likely to be heard from him in the years that are to come.

His broad experience, the economic and businesslike manner in which he directed the war mobilization and reconversion found him in a position wherein he held more of the domestic policy power in his hands than anyone in the United States with the exception of President Truman himself.

Our President learned quickly to trust his judgment and, more important, his unimpeachable loyalty.

Mr. Speaker, it was no surprise to me when with the appointment of John Snyder to his position as Secretary of the Treasury, and with our own Fred Vinson's appointment to the Supreme Court of the United States, that the President should have called John Steelman to sit beside him in the White House.

Is it any wonder, therefore, that John Gunther, in his book "Inside America" wrote that John Steelman has long been one of the 50 or 60 men who have shaped the course of American history?

Is it any wonder that in diplomatic circles and in other governmental circles he is called the man behind the White House—for his capacity as the President's assistant, John Steelman is called upon—at one time or another to work—as would the President himself—with the hundred-odd executive departments and agencies of Government as well as with various committees, commissions and congressional bodies.

I know that his every friend on Capitol Hill rejoices in the accomplishments of my friend and your friend, the Honorable John R. Steelman—one man among a million.

I know of no greater expression of the accomplishments of any living man than those expressed in the citation recently given to the Assistant to the President by the University of Redlands on June 12 last.

In order that my every colleague may avail himself of the opportunity of reading that memorable document, as herein before stated, I will, with the unanimous consent of this House, include the same in the CONGRESSIONAL RECORD and as part of my remarks.

The citation reads as follows:

UNIVERSITY OF REDLANDS

CITATION TO JOHN R. STEELMAN IN RECOGNITION OF HIS DISTINGUISHED LEADERSHIP IN PUBLIC ADMINISTRATION IN THE SERVICE OF THE GOVERNMENT OF THE UNITED STATES

To John R. Steelman, alumnus of Henderson Brown College, Vanderbilt University, Harvard University, and the University of North Carolina; student of the social sciences; teacher, administrator in the service of the Government of the United States; expert in the direction of human relationships under tension; respected director of the United States Conciliation Service in the Department of Labor, whose respect for the dignity of personality, impartial interpretation of public law, and respect for and use of Christian principles earned for him the respect, confidence, and admiration of both management and labor; organizer, whose knowledge of the processes of social and economic organization have made him uniquely competent and successful in performing extremely difficult new assignments as a member of the Maritime War Emergency Board, as Director of the Office of War Mobilization and Reconversion, as Director of Economic Stabilization, and Chairman of the National Security Resources Board; educator believing in the equality of opportunity and the responsibility of government for providing education for all according to ability and unlimited by financial ability; coordinator of scientific research in his capacity as Chairman of the President's Scientific Research Board, and now liaison officer for the Interdepartmental Committee on Scientific Research and Development, an agency charged with the elimination of duplication in research and the protection of the national welfare by recommending to the President of the United States matters of importance for study; a constructive citizen, loyal, trustworthy, unselfish, and untiring in devotion to duty, with abilities so varied and great as to merit the confidence and trust of the President of the United States and the appointment to the responsible position—assistant to the President of the United States of America, the University of Redlands, upon recommendation of the faculty to the board of trustees, and by the authority given me by the board of trustees of the University of Redlands and by the laws of the State of California, I confer upon you the honorary degree, doctor of laws, with all the rights and privileges thereunto appertaining, in token of which I present you this diploma and cause you to be invested with the hood of the University of Redlands appropriate to your degree.

GEORGE H. ARMACOST,
President of the University of Redlands.
JOY JAMESON,
President of the Board of Trustees.
REDLANDS, CALIF., *June 12, 1949.*

Inscription on the Statue of Liberty

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 23, 1949

Mr. JAVITS. Mr. Speaker, the following is a summary of an interesting book about the author of the eloquent and heroic words inscribed on the Statue of Liberty:

THE WORLD OF EMMA LAZARUS

(After the book written by H. E. Jacob, 1949)

This July 22 America will celebrate the one hundredth anniversary of Emma Lazarus, poetess of Statute of Liberty fame. Brought up as the daughter of a well-to-do New York businessman, enjoying all the advantages of her social position, she first gave no sign to her contemporaries that she once would be known as a champion for the American ideal of liberty and the right of minorities.

Yet the verses of her early youth show to us already a remarkable precocity. Within 14 years she translated into English the best of Europe's literary offerings, works by Victor Hugo and Heinrich Heine. The first book of the 17-year-old authoress drew the attention of the leading men of American literature upon her, William Cullen Bryant and Ralph Waldo Emerson. It was Emerson, the septuagenarian, who started to correspond with this young girl, becoming by that a guiding influence for her whole life.

But she, herself, for a long time, remained dissatisfied with her work. Although she had produced already so perfect a poem like Heroes, dedicated to the veterans of the Civil War, she felt more and more strongly that it was the contemporary social question which demanded all her powers. Not the recreating of ancient Greek themes in modern English verse, but to speak to the American of her day about the things of her day became her goal.

In August 1881 when the first refugees from Russian pogroms arrived in New York Harbor, Emma Lazarus came to understand fully her great vocation. These people—harassed and expelled by race hatred and religious bias—taught her to fight for the inalienable rights of minorities, a fight for which there was to be no let-up during the whole of her lifetime. Not only the cause of the Jewish people, but of all the persecuted on this earth forced this gentle and frail girl into the rough arena of polemics and politics. She consumed herself in relentlessly striving to help make a decent home for those new immigrants (there would be hundreds of thousands more in the years to come) and to help make them fit for the new life they would live in this country.

When in 1883 a patriotic committee was planning to erect on Bedloe Island the French-sponsored colossal statue, Liberty Enlightening the World, Emma Lazarus was approached for a spiritual contribution by the former Secretary of State, William M. Evarts. Money was needed to build the pedestal of the statue and subsequently manuscripts of famous people had to be auctioned off for that purpose. Emma Lazarus responded immediately and wrote the 14 lines of her sonnet The New Colossus which were to become immortal:

THE NEW COLOSSUS

Not like the brazen giant of Greek fame,
With conquering limbs astride from land to land;
Here at our sea-washed, sunset gates shall stand
A mighty woman with a torch, whose flame
Is the imprisoned lightning, and her name
Mother of Exiles. From her beacon hand
Glows world-wide welcome; her mild eyes command
The air-bridged harbor that twin cities frame.
"Keep, ancient lands, your storied pomp!" cries she
With silent lips. "Give me your tired, your poor,
Your huddled masses yearning to breath free,
The wretched refuse of your teeming shore.
Send these, the homeless, tempest-tost to me.
I lift my lamp beside the golden door!"

This poem is now a part of world literature. It shows to the world that freedom carries a torch and that America is resolved to make new men and citizens out of the downtrodden and persecuted of all countries.

Emma Lazarus did not live to see the deep stir she had made with this sonnet. A victim of cancer, she died in 1887 at the age of 38 years. But in 1903 her sonnet was chiseled on the pedestal of the Statue of Liberty, linking her name forever with that symbol of the American ideal.

Military Appropriations

EXTENSION OF REMARKS
OF
HON. CHARLES W. TOBEY
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Friday, June 24 (legislative day of Thursday, June 2), 1949

Mr. TOBEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by the junior Senator from Vermont [Mr. FLANDERS] before the Committee on Appropriations on yesterday. The committee had under consideration House bill 4146, the military appropriation bill.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Congress must resolve two related problems. In the first place, we must strive for military and economic strength. Secondly, we must adopt an enlightened budget and fiscal policy to meet the needs of the times. Our decision on these questions will have far-reaching results.

We already know that military strength is impossible without a strong economy. Dr. Edwin Nourse, Chairman of the President's Council of Economic Advisers, has addressed the joint civilian orientation conference of the National Military Establishment several times recently on this subject. Business, labor, and agriculture are giving increased attention to the military budget. It is right that these groups should be concerned. The Nation and the Congress cannot rely exclusively on the desires of the military. The best illustration of this fact is the original budget request of the armed services for more than $30,000,000,000 for 1950.

This discussion of the military appropriation bill assumes that the economic strength of the Nation is our strongest bulwark against Communism. It does this without neglecting the parallel necessity for maintaining and developing our military defenses. The program suggested is a balanced one designed to apply our limited resources in the most effective manner.

Government policies on taxes and expenditures have profound effects upon our economic strength. I am of the opinion that the Appropriations Committees of Congress are in a key position at the present time. I believe the expenditure programs suggested by the President require modification. However, before discussing these, let me say one word about taxes.

Congress has been asked to increase taxes so that the budget may be balanced. Committee technicians tell us that we face a Federal deficit of $3,000,000,000 for the fiscal year 1950 on the basis of the President's budget and existing tax rates. Under normal prosperity conditions, increasing taxes would be a reasonable proposal. However, with declining production and increasing unemployment suggesting a downward trend in economic activity, it would be unwise to increase taxes now. Such action would intensify and prolong the recessionary tendencies, and the additional revenue would not be forthcoming. Federal receipts are determined by the level of our national income, and therefore suggested modifications in our fiscal programs—both taxes and expenditures—should be judged to a large extent by their effects on national income. If deflationary tendencies persist, I think we should move toward tax reduction, starting with excise taxes.

What about Federal expenditures? Can they be reduced? This is difficult, since we do not want to impair modest Federal programs for housing, health, education, and conservation which strengthen our economy and our way of life. Reclamation and other essential public works should increase our productive capacity and our economic strength. No one, of course, would suggest defaulting on our public debt. Our European aid program is geared to restoring the economies of our western allies and is essential. It represents our positive program for peace. I am confident, however, that some reductions can be made in the President's civilian budget through greater efficiency.

The Bureau of the Budget recently told the Senate Expenditures Committee that of the total $42,000,000,000 budget for 1950, only $17,500,000,000 is reducible at this time. Of the reducible total, at least one-half represents military expenditures and is authorized by the military appropriation bill before Congress. It is quite obvious, therefore, that any congressional resolution calling for the President to cut enacted appropriations would fall heavily on the military program. If this is the intent of Congress, why not attack the problem directly by effecting reductions in the military appropriation bill?

Outlays for military purposes, however necessary, are uneconomic and unproductive. Military expenditures sap the economy of goods and services and productive capacity which would otherwise build up the economy and the standard of living of the population. Their benefit to the economy is at best indirect. They represent insurance against a failure of our positive program for peace.

You are now being asked to direct 35 percent of the Federal appropriations to the military. Britain is spending less than 23 percent, and France 18 percent, of their budgets for this purpose. Even the Soviet Union is reported to be spending only about 19 percent of their annual budget on armaments. Our emphasis on military preparation is striking in comparison to other nations.

I believe that we can justify reducing the military appropriations in the interests of a strong national economy. Furthermore, I believe we can be strengthening our military position while so doing.

I would like to outline a proposal for reducing the military appropriation bill by $3,000,000,000. I realize that a reduction of the obligating authority contained in this bill will not necessarily reduce budget expenditures in fiscal 1950 by an equal amount. On the contrary, my proposal will not have an immediate effect on military expenditures because of the lag between appropriations and expenditures. Rather, it would be in the direction of leveling off military expenditures at or near their present levels. The President's budget message, on the other hand indicated that military expenditures, if requests for appropriations are granted in full for 1950, will increase in 1951 and thereafter. This is startling to me.

Without referring to specific appropriation titles, let me suggest three areas where reductions could be made in military appropriations:

1. Do not exceed the President's recommendations for the Air Force program (48 groups in fiscal 1950). The House-passed military appropriation bill increases the Air Force program over that recommended by the President's budget and calls for a 58-group force in fiscal 1950, costing an additional $851,000,000. Of this $218,000,000 are allotted in appropriations and $643,000,000 are authorized in new contracts. The latter amount would be reflected in greater expenditures after 1950. I wish to support the more modest program which was initially recommended by the Joint Chiefs of Staff. Even that may be too great. I question the wisdom of building fleets of particular types of aircraft that are admittedly obsolete before they are completed. Instead, I believe we should concentrate on the development of a wide range of prototype models. Let the improvement of our Air Force be recognized as a dynamic problem. Let us not freeze it prematurely into a static pattern, quickly obsoleted.

2. Reduce military strength to 1,300,000. I realize that significant savings in the military budget can be accomplished only by a reduction in military personnel. The President's budget and the House-passed bill call for a combined military force of just over 1,600,000 officers and men for fiscal year 1950. My proposal of a 1,300,000 force would place strength approximately at the level of 15 months ago. The President's budget estimates suggest that the direct costs of pay allowances, subsistence, travel, and the like, for each person in the armed forces are somewhat over $3,000 per year. Thus a reduction of 300,000 in projected strength would result in savings of approximately $1,000,000,000.

I believe that such a reduction could be made by more efficient use of military personnel without impairing our military strength. There has been an alarming rise in the proportion of nontactical personnel since the war. Surely, the large staffs used in public relations and administrative functions could be pared; and there is good reason to challenge the number of aides and orderlies which the military feels necessary to maintain its prestige.

For reasons which I will explain later, it seems clear to me that our program, so far as the Army is concerned, should not be directed primarily toward the development of infantry forces. We can say this while still recognizing that in past history, and presumably in history yet to come, the final decisions are won and sealed by the infantry. It will be most effective in the long run if this country specializes in the development and production of the munitions and mechanisms of warfare and focuses its personnel training most largely on the tactical use and technical instruction as relates to these mechanisms and munitions. Production and technical proficiency will be our contribution to any future military crisis of mankind.

3. Increase efficiency and reduce general military activities to conform with the proposed reduction in military force. A reduction of 300,000 in military personnel from the levels proposed in the President's budget should be accompanied by a reduction in the Military Establishment's projected maintenance, operation, construction, civilian employment, and similar activities. The President's budget calls for an outlay for these activities of roughly $5,700 for each person in the armed forces. A reduction of 300,000 in military strength should permit a reduction in activities resulting in savings of $1,700,000,000. However, I would not recommend a pro rata cut, but suggest that a reduction of over $1,000,000,000 could be applied to these items in the appropriation bill, including a sizable reduction of civilian employment in the Military Establishment.

Savings could be made if the amendments to the National Military Establishment Act of 1947 become law as provided in Senate-passed S. 1843. The Hoover Commission report indicates savings of one and a half

billion dollars as a result of such amendments. The distinguished chairman of the Committee on Armed Services, Senator TYDINGS, has estimated such savings at over one-half billion dollars. I am sure that increased efficiency, together with the decline in prices for goods that the military will have to buy for a smaller military strength, can be made to total the $1,150,000,000 required to achieve the proposed three-billion cut in military appropriations.

There is great need for viewing the military program as a whole. In addition to this military appropriation bill, Congress will be called upon to implement the North Atlantic Pact and Greece and Turkey with military assistance estimated to cost $1,450,000,000. The military also is requesting pay increases for officers and enlisted men, an increase in expenditures of $300,000,000 a year or more. And, finally, there are pending before the Armed Services Committee bills authorizing extensive construction programs which, if passed by the Congress, will result in additional requests for appropriations aggregating hundreds of millions of dollars for fiscal 1950 and more in the immediate years ahead. I am inclined to think that expenditures for these additional programs for fiscal 1950 should be absorbed in the amounts provided in this military appropriation bill.

All of the preceding is based on a definite concept of the part we can play most effectively in the defense of the civilized world against aggressive barbarism and totalitarianism. If we take Russia as an example of the direction from which such an attack might come, we may properly make the following assumptions:

We cannot start on the assumption that western Europe will be quickly overrun and that Great Britain and ourselves will be depended upon to furnish the foot soldiers for massive land operations beginning at the Pyrenees and extending for 1,500 miles into the borders of Russia. To attempt such a campaign would ruin us economically and end our cherished political institutions. It would leave western Europe completely ruined and so far as that region or ourselves is concerned, we would have lost the war in winning it. We have rather to reckon on the continued successful operation of ECA in building up the material resources and the spiritual strength of the western European nations so that they will be willing and able to play a major part in defending themselves. ECA is our first line of defense. With this assumption, and we can make no other, the functions of the three branches of the armed services fall logically into place.

To the Air Force falls the responsibility of strategic bombing and of furnishing air cover for land operations. As indicated earlier, I feel very strongly that it is better to depend on a moderate striking force at this moment rather than to be forced into the extravagant necessity of replacing an obsoleted full-sized force with completely new planes. Planes are going to improve. We must have them coming of all sorts in a continuous flow, each yearly or semiannual lot representing improvements over those previously delivered. A continuous flow of continuously improving planes should be the policy rather than a complete equipment of frozen design. Likewise the whole field of airplane activity must be recognized and not simply bombing alone.

The functions of the Navy are equally clear. It is their job to keep the seas open to transports and the merchant marine. The great enemy is the submarine. The Schnorkel must be sought and destroyed from the air, from the surface, and if necessary, by attack from beneath the surface.

As to the Army, we cannot provide the infantry forces for massive land movements, but we will again be the arsenal of democracy. We will be the developers of the latest weapons of attack and instruments of defense. We will be the operators and instructors of these weapons and instruments. We will furnish them in overwhelming quantities. We will play our part with moderate land forces, but the final defense of western civilization will lie with our techniques and productive ability rather than with our infantrymen. Here again, as well as with the Air Force, it is more important to keep coming a small but steady stream of constantly improving mechanisms than it is to prepare immediately for the equipment of a huge army and then find ourselves equipped with obsolete material.

It is not easy to find any over-all statement as to our over-all military policy such as I have just outlined. Secretary Johnson's speech at the War College the other day is the first approach to it. Such a statement is needed for the guidance of the Congress, whether in the budget for the armed forces or in the support of our foreign policy or in much else besides. The suggestions I have just made are not set forth as the final conclusions of an expert in foreign policy and in the support which can be given to that policy by military preparation. It is suggested tentatively to fill a vacuum and the vacuum needs to be filled if we are to move effectively toward the development of our political, economic, and military strength.

In conclusion let me summarize certain of the proposals made with regard to the appropriations provided for in this bill.

I have heard the argument that a cut of $3,000,000,000 in this bill under current conditions would harm the economy. It is said that a cut of $3,000,000,000 in the military program would be as deflationary as a tax increase of $3,000,000,000. I disagree completely with this idea. My proposal to cut the military appropriation bill $3,000,000,000, as I said earlier, will not immediately reduce Federal expenditures by the same amount. Rather it will have the long-run effect of leveling off the present rapid ascent of military expenditures near their present level.

It is quite possible that before long we will have to step up Federal expenditures to counteract emerging deflationary pressures. But when we do step up outlays, we should not be overly committed to military outlays as provided in the military appropriation bill now before Congress. We want to be sure that any expenditures undertaken by the Federal Government to sustain employment are productive, carefully prepared programs of useful and liquidating projects. It is true that Hitler, through military expenditures, kept everyone working and factories humming all through the 1930's, but at what cost to the standard of living of the German people? Leaf raking and unnecessary military outlays merely to give people a meal ticket should not be resorted to in fighting another depression. Therefore, I support a rather substantial reduction in the military appropriation bill, not only because I believe we can safely do so from a military standpoint, but more importantly, as a calculated step in the direction of readying our fiscal machinery for the job of fighting the current downward trend.

Address by Hon. William Langer, of North Dakota, at Hartford, Conn.

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Friday, June 24 (legislative day of Thursday, June 2), 1949

Mr. LANGER. Mr. President, I ask unanimous consent that a speech that I delivered at Hartford, Conn., on June 4, 1949, the twenty-ninth anniversary of the Carl Schurz Unit, No. 22, of the Steuben Society of America, be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a great honor for me to be invited to share with you in this celebration of the twenty-ninth anniversary of the Carl Schurz Unit No. 22, of the Steuben Society of America.

Ninety-seven years ago, Carl Schurz landed in Philadelphia. He was born on March 2, 1829, in Liblar-bei-Cologne. Carl Schurz, as we all proudly recall, was an outstanding opponent of human slavery and degradation. Throughout his life, he was a champion of the underdog, of the underprivileged and the oppressed. He served with greatest distinction as United States Ambassador to Spain under President Lincoln, as United States Senator from Missouri in 1868, and as Secretary of the Interior in 1877 under President Hayes. His integrity and defense of American principles, and his burning conviction that servants of the people were the guardians of a public trust inspired him to become the originator of what we know as our Civil Service Commission.

By joining together in this anniversary celebration, we are keeping alive a great tradition, for Carl Schurz was also a representative of the greatest single blood stream that now flows in the American body politic.

However, bound together as we are by a common ancestry and common ties, it is always as Americans that we join in these observances. It is as Americans that we view the past with pride and gratitude. It is in this spirit that we have always united to solve the problems of the present, and to lay the groundwork for the future.

Whenever this primary fact is forgotten by any group of American citizens, the ideals of decency and justice, and the innate humanitarianism of our great tradition as a free people, are the first to suffer. What could be more convincing than the conditions with which we are now confronted in central Europe. The terribly complicated and burdensome problems which we are now called upon to solve, are the direct result of the complete abandonment of our great American ideals and principles, during and since the war, by the ranking policy makers of this Government. These men blinded by hatred and vengeance, betrayed their American heritage.

The great task before us now, is to salvage America's integrity and honor, to make restitution, for the wrongs that have been suffered at our hands, and to restore to our dealings with the German-speaking people, American principles, upon which, together, we may build a just and lasting peace.

We need to keep reminding ourselves of how far we have traveled in the wrong direction, in order that we may be fully aware of the continuing demands that will be made upon our time, our efforts, and our resources, if we are to be successful in this task of restoring sanity and justice to our relations with the German-speaking people. We must remember that which has taken years to come into being cannot be changed over night.

The American people still do not know what a gigantic task this has become. Most of them do not have the slightest grasp of the way in which American principles and American interests have been bartered away by the power politicians representing the victorious powers, both during and since the war. Those of us who are gathered here have a better understanding of this problem, perhaps, than others, because we have been

fighting these very politics which could not help but produce such tragic consequences.

The American people were solemnly told that we were fighting for the principles of the Atlantic Charter, principles which at the victorious conclusion of the war would be applicable to victor and vanquished alike. Yet, no sooner had those principles been stated to the world, than they were repudiated, both in word and deed, by their authors. Indeed, it turned out to be not even "a scrap of scribbled paper."

Immediately following the signing of the Atlantic Charter, the propaganda was started in this country that the United States Senate was largely responsible for the Second World War, because it failed to ratify both the League of Nations and the Treaty of Versailles. Behind the scenes, those who started this propaganda began to talk us into the late President's great design, or what we came to know as Dumbarton Oaks, the San Francisco Charter, and the United Nations organization to enforce the peace. What happened, as a consequence? These propagandists based their strategy for getting us into the United Nations on the fact that the reason why the United States Senate would not ratify the League of Nations, was because the Versailles Treaty was attached to the League, and thus we would be committed to enforcing the impossible terms of the Versailles Treaty. This time, these strategists determined, they would not make the same mistake that Wilson made. Instead they would get us involved in the United Nations, to enforce the terms of a peace treaty that hadn't even been written. At the same time, to make sure they would have a free hand in writing that peace treaty, they threw the Atlantic Charter onto the ash heap, substituted the formula of unconditional surrender in its place, drafted the terms of the outrageous Morgenthau plan, as a basis for the final peace settlement with Germany, and incorporated article No. 107 into the United Nations Charter. This article 107 removed any jurisdiction whatever over the peace settlements from the United Nations organization. Then these power politicians asked the American people to foot the bills.

Up to the present moment, the United States Senate has not had one single word to say about any of these agreements which constitute the basis of peace settlements, although the Constitution provides that until they are ratified with the advice and consent of two-thirds of the United States Senate, they are not binding on the American people.

As a consequence, the policy makers in the executive branch of this Government violated their own oath of office, flaunted the power they had usurped in the faces of the elected representatives of the people, and trapped Congress into a position where it was compelled to continue to pour out billions of dollars in deficiency appropriations to pay for these outrages. Then in rapid order, these men refused to recognize the surrender of the Germans to the American Army; permitted a second surrender performance with the Russians acting as the great liberators in control of Berlin, withdrew American armies of occupation, in some cases over a hundred miles from territory they had conquered, and turned it over to the Russians; agreed to the insane five-power division and occupation of the German state; permitted the American occupation authorities to be trapped in a Russian prison in Berlin, and set up the most impossible, unworkable, and pro-Communist system of controls it is possible to conceive.

Behind the smoke screen of the confusion that ensued, President Truman signed the Potsdam Declaration based on the Morgenthau plan, which in the annals of American diplomatic history will remain an eternal monument of shame. Then in swift succession, at the instigation of American authorities, they took the German fishing fleet into the North Sea and sank it; they imposed a deliberate starvation diet on 50,000,000 people; they agreed to the inhuman uprooting and mass deportation of some 16,000,000 Germans of ethnic origin who were driven like cattle across the winter wastes of eastern Europe into the western zones, 5,000,000 of whom never arrived. Of these 5,000,000 no one knows how many have died or how many were sold into the slavery of Siberian concentration camps.

In spite of the loss of the food-raising areas of the east, American authorities refused to permit the manufacture of fertilizer, farm machinery equipment, and of industrial potentials necessary for export and exchange for food. All of this went on while the American Government itself refused to open the mails, refused to let the churches' representatives, or even the Red Cross, administer relief to the suffering and the dying. Then General Eisenhower signed a document imposing slave labor on the civilian population; American representatives agreed to recognize the use of slave labor by prisoners of war, and the denazification process was set in motion, which was a mockery of American concepts of justice and which played directly into the hands of the Communists who wanted to wipe out what remained of the middle class of Germans by indicting them as Nazis.

On top of all of this, 13 war-crimes trials have been conducted by American Government representatives in such a fashion as to shock the conscience of the world. And to cap this whole program has been the insane, senseless program of dismantling which has continued the madness of the destructiveness of war for 4 years on into the peace—all at the expense of the American taxpayer.

The insanity of this continued destruction which is going on at this very moment can best be revealed by the story about just one plant located in Essen, the most modern steel-fabricating plant in Europe. It was built at an original cost of 120,000,000 marks. It would now cost $120,000,000. Incredible as it may sound, this plant was given to the Russians as reparations. And the dismantlement and shipment of that factory was begun and completed during the year of the Russian-imposed blockade. But what is even more incredible is the system that was used in valuing this plant for reparations. Its value was set at 60,000,000 marks. A 15,000,000-mark reduction was made because the Russians didn't want such luxuries as the washrooms and social-recreation facilities. This brought it down to 45,000,000 marks. Then the Russians were allowed a depreciation of 36,000,000 marks because of the loss in dismantling, which left a value of 9,000,000 marks. But then the Germans also had to pay the costs of dismantling and shipping to the frontier, estimated at 30,000,000 marks, all of which left a debit of 21,000,000 marks, which the Germans had to pay to the occupation authorities to make this plant available to Russia.

The consequences of these policies became so frightening that our policy makers revised the original level of industry agreements, first in November 1946, then again in October 1947, and finally again in April 1949, until now we have some reason to believe that the light is slowly dawning on this administration. Yet, we must take nothing for granted. We who have been close to this whole problem must continue to recognize facts for what they are and deal with them accordingly.

What is the real situation with which we are called to deal as of the present moment? The economic life of Germany would go into a tailspin overnight, millions would just automatically starve to death, if we did not continue appropriations to underwrite the deficits. An independent British and American board of experts have made the findings of an independent survey available to their respective authorities in which they frankly stated that, in spite of all these revised agreements, in spite of all the aid we are continuing to pour out, including the Marshall plan, Germany's economic life cannot possibly support even a minimum standard of living, necessary to maintain its vastly overcrowded population, without at least the initial investment of $26,000,000 in the next 4 years.

We have also been confronted with a lot of propaganda about how this Government was going to turn over controls to the new German Government that is to be elected on the basis of the Bonn constitution, and the American people have been given every reason to believe that this is a genuine forward step. Yet we know that no government could possibly function, even though democratically elected by the German people, when it is shackled by the restrictions contained in the occupation statute drafted by France, England, and the United States on April 8, 1949. This occupation statute makes a mockery of the functions of a German Government by reserving to the occupation powers authority in the field of control of scientific research, industry, and civil aviation; continued controls in regard to the Ruhr, the reparations program, decartelization, and foreign interest in Germany; control of foreign affairs, including international agreements made by or on behalf of Germany; continued control over displaced persons, expellees, and the admission of refugees; continued control over taxation for occupation costs; continued control over foreign trade and exchange.

Such flagrant hypocrisy, by the occupation powers, does American concepts of democracy a criminal injustice, makes it impossible for a German government of any kind to inculcate a faith in Democratic procedures, and will leave it powerless to control its own internal development.

Such policies cannot help but continue to play directly into the hands of Stalin. Yet we can all be certain now that such an outcome would be a catastrophe. We know that this must not be allowed to happen. We also know that in continuing our fight to prevent Germany from being forced into the hands of Russia we have the wholehearted support of an ever-growing number of American admirals, generals, and statesmen who are determined to keep Germany within the framework of western civilization.

Our task, then, is to continue to fight, to change basic American policies, in such a way as to enable the German-speaking people once more to put their feet on the ground and to be granted a maximum of aid and freedom with which to work out their own salvation. We know that the final test of a German Government is whether it will be able to provide a minimum standard of living and to guarantee the protection of the life and property of its citizens. All these paper agreements by the major powers are meaningless unless they enable the Germans to set up the kind of government within the framework of sufficient economic opportunities to enable the German economy to weather the ups and downs of the world's economic life. We remember that the Weimar constitution collapsed, and the German Government along with it, because it could not weather the world depression of the late twenties and early thirties. If we are not to finance and force the repetition of such a tragedy again, we must continue to demand such changes in our own American policies as will enable the German people this time to lay a solid foundation on which their government can stand.

If this problem is to be solved, it can only be solved by the German-speaking people

themselves, with our help. We cannot lay the enduring foundation of economic stability and of democratic institutions with bayonets. We can only help these people to help themselves. Second, we must demand that Germany be forced either into the position of becoming an ally either of the East or of the West, but that she be free to develop in cooperation with the European nations as a bridge between the two. To do this, she must at the earliest practicable moment be permitted to play her role as a free people. This is why we must take the lead in demanding what this Government present a policy to the major powers providing for a unified civilian government by setting up the democratic machinery for the creation of a constitution for all of Germany; for the mutual withdrawal of all occupation troops; for the removal of all controls over peacetime industrial development, and for an allied control commission to supervise the prevention of rearmament. Then we must restore financial controls, and export-import controls to such a German civilian government, and enter into agreements to provide financial aid to finance necessary imports, together with guaranties of fair treatment in granting access to world markets until Germany gets back on her feet. Germany has to manufacture and export or die.

It is my solemn conviction that it is our duty now to try and force a change in American leadership which moves in this general direction, for failure to achieve this objective will involve America in a catastrophe from which we cannot emerge without the loss of our form of government and our way of life.

Therefore, united as Americans behind a drive for the realization of such peace aims, we must continue to be inspired by a faith in the justice of our cause and continue to make our contribution to a just and lasting peace. Again, I want to compliment those of you who together with millions of your fellow Americans have sacrificed and worked through the the darkest hours of suffering and despair in the field of relief and reconstruction. We are all proud of the humanitarian concern that has inspired these efforts. We must continue our efforts in the field of relief. We must enlarge our activities in the field of reconstruction. We must do everything we can to open the channels of trade and investment of private capital between the United States and central Europe. We must encourage the exchange of cultural, educational, labor, scientific, industrial, and religious and political representatives at every opportunity. In 1950 and 1952 we may get our last chance to correct the criminal mistake of permitting election years to go by without making our foreign relations, particularly with the German-speaking peoples, a primary political issue in major political campaigns. This is the one place where the power of the American people to exercise a voice, in the control of their own destiny, can be most strongly and effectively used. In the coming campaigns, we must use this power to force this issue finally into the open, and, putting aside all jealousies and fears, united in this common cause, we must speak with one voice.

The time has now come for the American people as a whole to recognize the dangers which are confronting us. With the Far East fast falling prey to the onrushing Communist armies; with the reconstruction of the foundations of western civilization increasingly threatened by the insanity of the anti-American policies we are continuing to finance in central Europe; with the increasing burdens which are being placed upon our shoulders now threatening to destroy the financial solvency and the freedoms of our own economic social and political life, we cannot wait longer to awaken the conscience of the American people.

We cannot stop the spread of communism; we cannot restore self-respect and confidence in democratic institutions in the hearts and minds of the German-speaking people or of any other peoples, by continuing to carry on indefinitely into the peace, the hatred, and the insanity and the destructiveness of war.

We can only win this fight by competing with Russia on the basis of American principles and practices for the confidence and allegiance of these tragic peoples who are now caught between us, both in Europe and in Asia.

Moved by the conviction that in this fight we are on the side of truth and justice, and with the magnificent traditions of America once more at stake, I am confident we shall not fail the future.

The Denazification Program

EXTENSION OF REMARKS

OF

HON. ROBERT C. HENDRICKSON

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Friday, June 24 (legislative day of Thursday, June 2), 1949

Mr. HENDRICKSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Nazis Helped, GILLETTE Says," published in the Baltimore Sun of June 20, 1949. The article comments at length, and very favorably, upon an address made by the distinguished junior Senator from Iowa [Mr. GILLETTE] on the subject of denazification.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NAZIS HELPED, GILLETTE SAYS—11,000 TEACHERS REINSTATED IN BAVARIA, SENATOR CHARGES

(By Joseph H. Short)

WASHINGTON, June 19.—Senator GILLETTE, Democrat of Iowa, charged tonight that 11,000 Nazi school teachers had been reinstated in Bavaria alone.

The Iowan's charges were made in a radio interview over Station WWDC, in connection with a bipartisan resolution for a Senate investigation of United States policy in Germany.

Responding to questions by Commentator Ed Hart, GILLETTE said also that 91 percent of all judges, prosecutors, and court officials in Schleswig-Holstein were former Nazis and that the German press was "playing up militaristic and anti-Semitic propaganda."

STUPIDITY CHARGED

"There are indications," the Senator added, "that, through short-sightedness and irresponsibility, plus a degree of stupidity, some of our people are carrying on mutual admiration societies with the old German nationalists and newer German Nazis."

GILLETTE quoted a presently unidentified American general as having advised his staff that "the time has come to invite Nazis to cooperate with us * * * to end denazification and demilitarization."

The Senator said identity of the general would be brought out in the investigation.

"It is an erroneous contention," he stated, "that we need Brown Shirts to check Reds, Storm Troopers on the side of democracy." He asked for a "judicious watch on the Rhine" to replace what we called our botch on the Rhine.

THREE SENATORS JOIN GILLETTE

"We simply must know," GILLETTE declared, "what is going on in Germany—whether or not the German mind remains the repository for the Hitler doctrine.

"Left to fester and ferment, this poison will spread and in 5 or 10 years, within our time and our children's time, we will be confronted with Nazi-fascism once again."

GILLETTE was joined in the sponsorship of the proposed investigation by Senators PEPPER, Democrat, of Florida; IVES, Republican, of New York; and HENDRICKSON, Republican, of New Jersey. The proposal now is in the hands of a Senate committee.

PURPOSE OF INQUIRY

The purpose of the inquiry, the Senator said, would be to determine:

1. The result of transferring responsibility for denazification from United States to German authorities.

2. The extent of infiltration of Nazis into denazification tribunals.

3. Whether Nazis had been eliminated from high positions in German public and economic life.

4. How many Nazis had been reinstated in the public school system.

5. The extent of the resurgence of anti-Semitism and militant nationalism.

6. The extent of the reappearance of Goebbel's-type propaganda in the German press.

7. Whether new Nazi parties were forming.

8. Whether German youth was being taught the values of democratic ideas and institutions.

GIVES PURPOSE OF INQUIRY

"It would be very prudent on our part," said the Senator, "to make sure that we are not recreating the political, social and economic climate in Germany that led ultimately to a Hitler.

"The purpose of investigation would be to determine whether Adolph Hitler really won the ideological triumph though we won the physical victory.

"There can be no peace in Europe or the world as long as the Nazi idea rides high in the hearts and minds of most Germans. * * *

"The world has invested a few hundred billion dollars and tens of millions of lives to defeat those who would ravish and plunder the planet. Would it not be wise, therefore, to take stock of our efforts to make human beings out of those people who attempted to enslave humanity and make barbarians out of all mankind."

Big Soviet: Stronger America

EXTENSION OF REMARKS

OF

HON. HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, June 24 (legislative day of Thursday, June 2), 1949

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in the June 10, 1949, edition of United States News and World Report. This article compares the United States with Russia, and it clearly reveals that the U. S. S. R. is a poor

match against the west. I believe the article to be a very informative one.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BIG SOVIET—STRONGER AMERICA

Stalin, looking things over, finds his Russia a poor match against the west. He has lots of land, people, little else.

Russian industry is weak. Transport is creaky, labor inefficient. Living standards stay low, despite 5-year plans.

Trade with the west, a shot of United States dollars are wanted to bolster Moscow. Acting tough didn't get them, so peace talk is given a trial run.

ABS's of Russia, her strength and her weaknesses, are important at this stage in order to understand why Russians are trying to deal again with the west.

Simple facts about Russia reveal that she needs things that only the outside world can supply. Russia is strong in manpower and in square miles of territory, but weak compared to the United States in nearly all else. To break the bottlenecks now limiting Russia's drive to industrial power, the Soviet Union must look west.

The idea that Russia is immensely strong as a nation has tended to dominate much United States thinking. Now, however, diplomats at Paris and officials in Washington are paying more attention to everyday facts in appraising Russia's real strength. What shows up is encouraging to the United States at this stage.

At first glance, Russia appears a formidable competitor for the United States.

People, for example, are abundant in Russia. Population is close to 200,000,000 against about 148,000,000 in the United States.

Square miles of territory in U. S. S. R. makes the United States look small. The Soviet Union has 8,708,000 square miles of territory to the 3,022,000 in the United States.

Iron ore in the ground in Russia is about twice the amount of United States reserves. Russia has plenty of high-grade manganese and bauxite ore, scarce in the United States.

Coal and petroleum reserves still underground in Russia are large, too, but only one-third as large as probable United States reserves.

Looking closer at the facts, Russia turns out to be weaker than the map and the population figures suggest—much weaker, in fact, than the United States.

Machinery to match United States machinery in quality or in quantity is lacking.

Skilled labor is short, too. Most Russians are untrained farm workers. Nonagricultural workers in Russia total only 33,600,000, as compared to a 1948 average of about 51,000,000 in the United States.

Soviet planners are out to expand Russian industry at all costs. But, to support even the existing industrial population, Russia is forced to concentrate much of its energy on the farms.

Food production in Russia is beset by troubles not evident on the surface. But a few facts tell much of the story.

Arable land in the Soviet Union, a nation almost three times as large as the United States, is about 600,000,000 acres, compared to 500,000,000 acres in the United States. Much of the Soviet area is swampy tundra, frozen wastes, and desert.

Cattle total 52,000,000 head in Russia, while the United States has 78,600,000 head.

Hog population of Russia is 13,400,000. There are 55,000,000 hogs in the United States.

Tractors now in use on Russian farms total 400,000. American farmers use 3,114,596 tractors.

Horses on Russian farms number 12,000,000, compared to 6,607,000 on American farms. A bushel of Russian wheat represents much more humar labor than a bushel of United States wheat. And distribution of food is a greater problem in Russia.

Transportation is a basic Russian weakness. To knit their great country together as a match for the United States, the Russians would need greater networks of railroads, highways, and air lines than those in the United States. These are lacking.

Railroad mileage in Russia totals 70,000 miles, less than a third of the length of United States railways. Russian railways are in poor repair; much of the equipment needs replacement.

Locomotives produced in Russia last year totaled 890, not enough for replacement of worn-out locomotives. In the same year the United States produced 1,487 locomotives.

Freight cars built in Russia in 1948 numbered 39,200, while the United States put 102,737 new freight cars in service.

Roads in Russia add up to 481,000 miles. Only about half are hard-surfaced roads, and even the best of these do not compare with the majority of the United States roads, which add up to 3,010,000 miles.

Motor vehicles in Russia, both trucks and passenger cars, total 760,000. The United States has nearly 38,000,000 trucks and passenger cars.

Air-line routes in Russia, stretching the length and breadth of a vast country, total 110,000 miles. United States air lines provide service on 95,500 miles of routes.

Air passengers carried on Russian air lines last year totaled 305,000. In the United States in the same period the air lines carried 12,749,733 passengers.

Transport, as a result, is a major bottleneck for Russian industry. In addition, Russian executives have trouble just keeping in touch with one another.

Communications in Russia are far below United States standards.

Letters are frequently lost and often delayed. Mail from Moscow to Odessa, for example, takes about 20 times as long as mail from New York to Chicago, a comparable distance.

Telegrams transmitted inside Russia in 1946 totaled 175,000,000, as compared to 220,000,000 transmitted within the United States.

Telephones, widely used in Moscow and Leningrad, are few outside the large cities of Russia. There are only 1,500,000 in the Soviet Union, while the United States has nearly 35,000,000.

Delay in communications and transport adds to the burden of an economy hard hit by war. Invasion and the destruction of war wiped out about one quarter of all property in Russia.

Industrial output in Russia, as a result still is 6 percent below the levels of 1940, while production in the United States is about 54 percent above United States levels for the same year. And Russia still has far to go to reach United States industrial power.

Steel produced in Russia last year was only 23 percent of United States output.

Coal mined in 1948 was only 31 percent of the amount mined in the United States.

Oil pumped out of the ground in Russia is only about 10 percent of the oil drawn from United States wells.

Electric-power production in Russia is about one-fifth of United States output.

Trucks and automobiles made in the United States outnumbered those made in Russia 30 to 1.

In addition, United States production is geared to consumer needs while the Russian consumer stands at the end of the distribution line, getting what is left after the planners take what they want for industrial expansion.

Standard of living in Russia, as a result, remains one of the lowest in the world. It is higher than the Chinese standard, but lower than the standards of the Balkans, lower by far than those of western Europe or of the Americas.

Housing, always bad in Russia, is a major problem. The average Russian today may have as much as 65 square feet of housing as compared to 280 square feet for each American. In Russian cities, housing space is down below 40 square feet per person. In the country, many Russians live in huts.

Bathtubs and showers are few in Russia and most of those few are shared by many families. City dwellers have access to public baths. Few country dwellers in Russia have running water.

Daily diet for the average Russian consists largely of black bread. Grain products are 80 percent of the Russian's food, but only 14 percent of the average American's food is made of grain.

Clothing is hard to get in Russia. An industrial worker in Russia must pay a sum equal to his total wages for 12 weeks to get a new suit. An American worker can get a better suit with 1 week's pay.

Radios are a luxury that few Russians can afford. In the whole of Russia there are only 130 radio stations and 5,500,000 radio sets. In the United States there are 2,713 radio stations and 75,000,000 radio sets.

Television in Russia is based on transmission of 625 lines, as against 525 in the United States, resulting in a clearer picture, postcard size, for the Russians. But there are only two television transmitters and 15,000 receivers in Russia as compared to 60 transmitters and about 800,000 receiving sets in operation in the United States.

Motion-picture theaters in Russia total 768, as compared to 18,765 in the United States. Russia also has 15,000 sound-picture projectors, but most of these are used for propaganda purposes, not for entertainment.

Medical care, though free for the Russian, does not approach United States standards. In the whole of Russia there are only 831,800 hospital beds and 130,300 doctors. The United States has 1,425,222 hospital beds and 165,000 doctors to take care of a smaller population.

Added up, the simple facts of present-day Russia are helping the diplomats at Paris to decide just what Moscow wants and how badly Moscow wants it. To attain even the production targets set for the current 5-year plan, the Soviet Government needs the kind of help that can be obtained only through increased trade with the west. This need is turning out to be a major objective of Russian tactics in negotiations with the western powers at Paris.

Dangers of Bureaucracy

EXTENSION OF REMARKS

OF

HON. JOHN W. BRICKER

OF OHIO

IN THE SENATE OF THE UNITED STATES

Friday, June 24 (legislative day of Thursday, June 2), 1949

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Real Danger," published in the Cleveland Plain Dealer of June 20, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE REAL DANGER

The great danger posed by the present day Federal bureaucracy is not that it maintains on its payrolls more employees than are necessary, or that it resists the adoption of a businesslike administrative structure for the executive branch of the Government.

The great danger lies elsewhere.

It lies in the pernicious penchant of so many bureaucrats to perpetuate the existence of their governmental agencies after the need for them has passed.

It lies in the use by bureaucrats of their official position to propagandize for the retention of all existing grovernmental controls over the people and for the acceptance of new schemes for socializing and increasing the cost of the Government of the United States.

A short time ago we had occasion to rebuke Karl M. Duldner, Cleveland area rent director, whose only legal function is to administer the rent control law enacted by Congress, for speaking up as an opponent of the passage by the Bay Village Council of an ordinance to remove rent regulations in that municipality.

Duldner contended that he was merely answering a verbal onslaught on his bureau by a spokesman for the Apartment House Owners' Association, but, whatever his motive, his words were the words of a bureaucrat opposed to the removal of Government control of rent anywhere.

Now comes a minority report by members of the Cleveland area rent advisory board charging Duldner with a breach of the proprieties of his Federal position by permitting his office to be used for the drafting of the majority report, which urges Governor Lausche to disapprove rent decontrol ordinances passed by the duly elected Councils of both Bay Village and Orange.

"To the minority of the board it seems improper that the Cleveland area rent director should place himself in a position where the office established by law to administer rent control takes action of this kind, the purpose of which can be only to retain rent control and thus create a necessity for the continuation of the office of the Cleveland area rent director. The office of Cleveland area rent director is established by law for the purpose of administering a Federal act free from any propaganda efforts to retain rent control."

So reads the report drawn by Attorney Robert H. Jamison and Howard Whipple Green, who as director of the Real Property Inventory knows more about the housing situation in Greater Cleveland than the most expensive Government survey could ever ascertain. Jamison and Green, with Roy C. Carpenter and Mrs. N. H. Boynton, voted in favor of recommending to Governor Lausche that he approve the Orange and Bay Village decontrol ordinances. Six members of the rent advisory board voted the other way around.

The vote of the six-member majority in urging the Governor to disapprove the decontrol ordinances in the two small municipalities, where there is little rental property in existence, was taken at a closed meeting, so the public could not know the basis of that action.

The minority report supplies the first enlightenment on this matter. It disclosed that the report adopted by the majority advanced as a reason for gubernatorial veto of rent decontrol in Bay Village and Orange this telltale one: "Decontrol of one or two small communities would set the stage and prepare the way for decontrol in other communities (sic), even though it is a well established fact that the general housing situation is such that rent control is still necessary."

The removal of rent control cannot take place in a municipality unless the Governor approves the decontrol ordinance. It is now up to Lausche to say whether he concurs in the view of the advisory board majority, in which the influence of Federal bureaucracy is readily discernible, or whether he concurs in the view of the elected representtives of the people of Orange and Bay Village and in the revealing report by the advisory board's minority.

We believe Governor Lausche should uphold the action of the two suburban councils. It was taken by men who know intimately the conditions prevailing in their communities. It was taken in public meeting after the opportunity for expression by proponents and opponents of rent decontrol had been advertised. It was taken in municipalities where there is but a negligible amount of rental property, where it is senseless to maintain rent regulations.

A majority of the rent advisory board was, we are now convinced, exposed to decontrol of rent in the two suburbs just because it would set a sensible precedent.

Nationalists Form Party in Germany

EXTENSION OF REMARKS
OF
HON. GUY M. GILLETTE
OF IOWA
IN THE SENATE OF THE UNITED STATES

Friday, June 24 (legislative day of Thursday, June 2), 1949

Mr. GILLETTE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very informative article on the Nationalist Party which has been formed in Germany, written by Jack Raymond, and published in the New York Times of June 23, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NATIONALISTS FORM PARTY IN GERMANY—MILITARISTS AND AGITATORS JOIN ORGANIZATION URGING PUBLIC TO SPURN LICENSED GROUPS

(By Jack Raymond)

FRANKFURT, GERMANY, June 22.—A new political movement was founded today in the Rhine River resort city of Bad Godesbuerg by reputed militarists, nationalists, and agitators.

Its manifesto appealed to all Germans to forsake the western allied-licensed parties, to fight for national unity and to protect the honor of those who did their duty for their fatherland.

Among the signers of the manifesto was Dr. Hugo Eckener, the famed Zeppelin designer. Another was former Maj. Gen. Otto Ernst Remer, who is said to have contributed to the thwarting of the July 20, 1944, bomb plot against Hitler.

The group is known as the Association of Independent Germans. About 30 persons attended the day-long closed deliberations, according to Wolfgang Koeltin, one of the organizers.

The primary appeal of the founders appears directed at former Nazis, Germans expelled from eastern territories and returned prisoners of war.

Its basic theme is national unity. According to the manifesto the existing parties, approved by the western military governments sanctioned the split in Germany.

Otto Schultze, leader of a group of expelled Germans; Fritz Geistbauer, leader of an association of prisoners of war returned from the Soviet Union; and Hans von Ostav, who has been associated with attempts of Dr. Otto Strasser, former Hitler associate, to return to political life in Germany, were prominent among those present at the organization meeting.

The new group does not seem to have any traces of Communist influence.

It is probably more accurate to describe the new group as strongly right wing, with an eye to taking advantage of the bitterness against all occupiers, but especially the anti-Soviet feeling of German refugees and former prisoners of the Russians.

Herr von Ostav said that "German policy must not be allowed to fall into hands of either the Americans or the Russians."

Justus Krause, a leader of the Christian Democratic Party in the British zone, also was among the participants. He is widely known as the lower Saxony chairman of the so-called German Union, which represents itself as a super-party movement.

The manifesto denounced the licensed parties, charging them with obstructing the right of the German people freely to decide their future in the coming (August 14) elections.

ELECTION LAW ASSAILED

The newly proclaimed electoral law, the manifesto stated, is used to prevent the people from choosing men who are fit to bring about a turn in Germany's destiny.

The denazification laws were assailed as having driven millions of decent men and women into despair.

The German people want to stand by their own history and to protect the honor of those who did their duty for their Fatherland, the manifesto declared.

It asserted that the Germans claim the rights and respect to which they are entitled as a decent and illustrious and highly civilized people in the community of nations. Then it concluded:

"Germans! Do not let yourselves be split into residents and expelled, haves and have nots, employers and employees, Catholics and Protestants, those who are affected under denazification laws and those not affected, East and West, North and South Germans. Vote for Independent Germans as the standard bearers of true German unity."

Since the session was closed it was impossible to get a complete list of those who attended. However, some idea of the character of the group may be obtained from the names of persons invited. They included Dr. Hjalmar Schacht, Lieut. Gen. Kurt Dittmar, Col. Gen. Heinz Guderian, Field Marshal Hugo Sperrle, Col. Gen. Jurgen von Arnim, and Lieut. Gen. Kurt von Manteuffel and Hans Krebs, former gauleiter in Czechoslovakia.

Dr. Schacht declined, saying he was too busy writing his memoirs, but his attorney at the Nuremberg trial before the International Military Tribunal, Rudolf Dix, was reported present.

General Guderian declined, saying he did not believe retired generals should mix in politics. A Major General Pape was said to have been present on behalf of General von Manteuffel.

General Dittmar, who was famous as a German Army radio commentator during the war, is known not to have attended.

Economic Indicators Now on Sale

EXTENSION OF REMARKS
OF
HON. JOSEPH C. O'MAHONEY
OF WYOMING
IN THE SENATE OF THE UNITED STATES

Friday, June 24 (legislative day of Thursday, June 2), 1949

Mr. O'MAHONEY. Mr. President, the President of the United States on June

23 signed Senate Joint Resolution 55, which authorizes the publication as a permanent Government document of the monthly issue of the Economic Indicators. This publication was initiated by the Joint Committee on the Economic Report during the Eightieth Congress, under the chairmanship of the distinguished Senator from Ohio [Mr. TAFT]. It has been continued throughout the present year because the committee has found that there is a great public demand for the document.

It contains charts and tables which present a precise and concise picture of current economic trends and developments. It is widely used by Members of the Congress, representatives of business, labor, agriculture, consumer organizations, and members of the press in assessing and weighing the current economic situation.

The publication presents selected economic measures in a convenient booklet of 32 pages. The information appears both in the form of numerical tables and easily read charts and covers the general areas of prices, employment, production and business activity, purchasing power, and money, banking and Federal finance. Under each of these general headings are grouped 3 to 10 important statistical series. For example, under prices are found charts and tables on consumers' prices, wholesale prices, prices received and paid by farmers, and securities' prices; under employment, charts and tables are given for the labor force, employment in business and government, average weekly hours, and work stoppages.

The committee in its publication of these materials, which are assembled for the joint committee from Government reports by the Council of Economic Advisers, hopes to broaden the common understanding and acceptance of the basic statistical measures of our economy. By virtue of the legislation just passed this publication will now be available to the general public on a subscription basis. The price will be $1.50 per year and orders should be addressed directly to the Superintendent of Documents, United States Government Printing Office, Washington 25, D. C. The price of a single monthly issue will be 15 cents.

I ask unanimous consent that the President's letter be printed in the RECORD as a part of my remarks.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE WHITE HOUSE,
Washington, June 23, 1949.

Hon. JOSEPH C. O'MAHONEY,
United States Senate,
Washington, D. C.

DEAR SENATOR O'MAHONEY: It is particularly important to our Government's efforts to promote the objectives of maximum employment, production, and purchasing power, as set forth in the Employment Act of 1946, that there be broad public knowledge concerning economic facts and developments. It is, therefore, with great pleasure that I am signing Senate Joint Resolution 55, which authorizes the publication of Economic Indicators as a regular Government document.

It will now be possible for people throughout the country to follow each month the compilation of economic charts and statistics prepared for the Joint Committee on the Economic Report by the Council of Economic Advisers, as this document will be available on a subscription basis from the Superintendent of Documents.

Please convey to each member of the Joint Committee on the Economic Report my appreciation for the constructive work your committee has done in bringing basic economic facts to the attention of the Congress and the people.

Sincerely yours,

HARRY S. TRUMAN.

Are We Afraid of Freedom?

EXTENSION OF REMARKS
OF
HON. BRIEN McMAHON
OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Friday, June 24 (legislative day of Thursday, June 2), 1949

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Are We Afraid of Freedom?" appearing in the Hartford Courant for June 19, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ARE WE AFRAID OF FREEDOM?

Over all of us hangs the threat of communism. Though the cold war with Soviet Russia is not now being fought with arms, it is a deadly war. The overwhelming proportion of the American people have been convinced by three decades of Soviet history, and especially by Soviet actions in the 4 years since the war, that the masters of Russia plot our downfall. Whatever twisted ideals may lie behind communism, its aim is to conquer the world and make it a police state ruled from Moscow. Where opposing forces are weak, the Communist threat takes the shape of military might. But most dangerous is the insidious penetration of ideas.

How are we to defend ourselves against this double attack? If we stop to think, we know it is silly to fear Russian arms. Despite Russia's vast resources, it is inconceivable that there is a present danger that the Russian Army, Navy, and Air Force—even with the atomic bomb—can conquer us. The real danger is not the armed strength of the Russian national state but the subtle, intangible penetration of ideas.

It is when it comes to defending ourselves against this attack on the mind that Americans differ among themselves. Many among us rush to embrace the seemingly natural way of seeking to stamp out Communist ideas. Hence the current wave of loyalty purges, censorship, suppression, snooping, and intimidation. Yet these are the very stuff of which the police state is made. If we resort to them, we shall fasten upon ourselves the very chains we want to keep off.

The only way to fight dangerous ideas is with ideas that are more magnetic. And we have them, if we will but trust them. They run through our history from the beginning. Take that sermon of Thomas Hooker on which the fundamental orders were based. "The foundation of authority," said Hooker, "is laid in the free consent of the people." And article I, section 5 of the Connecticut Constitution of 1818 says this: "Every citizen may freely speak, write, and publish his sentiments on all subjects, being responsible for the abuse of that liberty." Note that this freedom applies to all subjects. There is no official orthodoxy, no idea, that is to be immune from criticism or approval by any citizen who chooses to give it. The only check is the tonic one of responsibility for what one does.

Throughout our history it has been the same. Yet now many would, in the name of freedom, turn their backs on freedom. The House Committee on Un-American Activities would examine textbooks in schools and colleges. We laughed at, and scorned, Hitler's book burnings. But in what essential is this different? And so it is in all the other places, whether in the Atomic Energy Commission, elsewhere in Government, in labor, and wherever Americans look with distrust upon their neighbors.

Already this has led to tragedy. One man has died of a heart attack after being subjected to the hue and cry of the pack. Another has committed suicide. Uncounted others have lost their jobs, or are shunned by their friends, because someone has pointed the finger of suspicion at them. These blows take many forms. Consider the atomic physicist, Dr. Frank F. Oppenheimer. He has said candidly that, "seeking an answer to the problems of unemployment and want in the wealthiest and most productive country of the world," he became a Communist in 1937. When he found that communism was not the answer, he quit it. Thereafter he helped contrive the atomic bomb. In 1945 Gen. Leslie R. Groves, wartime atomic chief, praised Dr. Oppenheimer for his contribution to the bomb, even though he knew Dr. Oppenheimer had once been a Communist. Could that happen today? The University of Minnesota is reported to have betrayed the trust of free scholarship by accepting the resignation of this man who, above all others, should know the weakness of communism.

What hurts most about all this is that many of us are willing that the innocent should suffer with the guilty. This is a betrayal of the Anglo-Saxon heritage. Somehow we have suddenly become afraid of freedom. We are no longer willing, with Justice Holmes, to grant freedom to the thought we hate. Unlike John Stuart Mill, we are not willing to grant that "we can never be sure that the opinion we are endeavoring to stifle is a false opinion." We forget that we cannot kill ideas. They can only die of themselves, when they encounter an idea that is more dynamic.

Why should we fear communism? It is neither so new nor so fearsome as it seems. All that is new is the technique of fifth-column infiltration. And even that is only a new twist in the old game of conquest. The basic threat of ideas we have met before in our history. It is no defense to persecute individuals for what they think or for their motives, still less because some self-appointed patriot points an accusing finger at them.

New challenges require new responses. Perhaps the trial of the top Communists in New York, under the wartime Smith Act, will make membership in the Communist Party a crime. But even without that we have ample defenses. Acts of spying or of sedition are punishable now as they always have been. Through it all we shall be strongest if we prosecute individuals, not for what they say or think, but only for what they do. When acts of subversion are proved in court, let punishment be swift, sure, and relentless.

As the Taft-Hartley Act has shown, loyalty oaths have their place. But it is a limited place, to be used with care lest it destroy liberty. Loyalty can come only from within. To those who would betray the great trust of our universities by setting a watch over teachers, and to all who think with them, let us say that there is a better way. Rather than to fall into the old error of trying to enforce orthodoxy, is it not better to trust freedom, to bet, if you will, that the idea of freedom can conquer all others? Then we shall have no disloyal professors. And if there should still be one here or there, he would attract no following—if indeed any

does now under our inheritance of freedom. For today, just as always before, error falls of its own falsehood when it meets truth in fair and open encounter.

But what of those who would insinuate communism into our minds by wearing the mask of free inquiry? They have no place in our life, least of all in our schools and colleges. Because they do not have free minds themselves, they are not playing the game according to the rules. But let the fact that their minds are not free first be proved by their acts. Do not blaspheme the name of liberty by discharging a professor because some alumnus or trustee calls him a Communist or a fellow traveler. Do not fancy that a competent workman who has lost his job through no fault of his own, and who wants to do something about it, is necessarily a Communist. Do not hold that a Government employee who thinks atomic energy too terrible to be controlled by private hands must be a Communist. Least of all, do not suppose that, because a man has had a drink or a dinner with a Communist, he is ipso facto a Communist himself.

In this land of freedom the danger from communism is not nearly so great as the danger from suppression. To fear communism is to ascribe to it a strength it does not have. It is fantastic to suppose that Americans can be tricked into trading freedom, the hope of mankind that they hold in trust, for communism. Students in our schools and colleges, our people in Government or out of it, are not such fools and weaklings as to fall for the dark, conspiratorial philosophy of communism—unless by prohibition we indicate to them that it has a fascination we dare not face. If communism were really as strong as that, nothing we could do, no wall of defense we built, no suppression by methods as ruthless as those of Russia's own secret police could keep it out.

Communism does not have that strength. Not communism but freedom is strong. It is strong because it rests on a fierce inner conviction that every thought, every idea ought to stand up in the open and be tested. If it cannot stand that test, we would rather discard it.

Have no fear, freedom can stand that test. It is in the realm of the spirit what the atom is in the realm of energy. Release its inner power and you have a force that no other idea can conquer. Let us not turn our backs on our history. Let us not be afraid of freedom.

Editorial Comment on Extension of Reciprocal Trade Agreements Act

EXTENSION OF REMARKS
OF
HON. SCOTT W. LUCAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES

Friday, June 24 (legislative day of Thursday, June 2), 1949

Mr. LUCAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD several editorials commenting on proposed legislation to extend the Reciprocal Trade Agreements Act and the expansion of world trade.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the New York Times of May 10, 1949]

TO EXPAND WORLD TRADE

On the Senate's calendar this week is a measure which has been accurately described as "the indispensable other half of the Marshall plan." This is the bill which would extend the Hull reciprocal trade agreements program for another 2 years.

A year ago Mr. Truman called for a 3-year extension of this legislation, which had been renewed regularly at each expiration date since 1934. Instead, Congress voted to continue it for only 1 year (until June 30, next) and substantially curtailed the President's freedom of action in tariff negotiations. Under the revision the Tariff Commission was removed from the Interdepartment Committee on Trade Agreements, representing seven interested Government agencies. (It is this latter group that has served as the central operating body for working out the individual bilateral agreements with other nations.) In the 1948 revision the Tariff Commission was charged with the impossible task of subjecting every item under tariff discussion to study, and reporting independently to the President the point below which, in its opinion, no further tariff reduction would be feasible. While the President is permitted to reduce tariffs below these so-called peril points, he must notify Congress of his intention to do so. In effect this provision largely transfers primary responsibility for determining tariff reductions from the administration to the Tariff Commission.

The reciprocal trade program as it functioned before 1948 was a proven instrument of foreign-trade policy. Prior to the war the United States had concluded agreements for the mutual reduction of trade barriers with 29 countries—agreements affecting about one-half our commerce. Since 1945, under this same legislation, these activities have been renewed and expanded. In 1947, at Geneva, the United States and 22 other nations worked out the most important and comprehensive network of tariff-reduction agreements in history. In addition, the Geneva meeting resulted in commitments to curb the use of such arbitrary trade restrictions as import quotas and preferential devices which discriminated between individual countries.

If we are to maintain this same economically enlightened policy in the future, not only is it necessary that the trade agreements program be extended, as the President has asked, but that freedom of action on the part of the Executive be restored. Happily, there seems to be every reason to hope that this will be done. The House passed a measure to accomplish these objectives on February 9 by a vote of 4 to 1, and the roll call on the bill was a milestone in the 15-year history of balloting on this legislation. The proposal was supported by an actual majority of Republicans, something that had never happened previously except in the wartime year 1943, when the program had no immediate practical applicability.

The target of the Marshall plan is increased production of goods and resources; the target of the Hull program is the maximizing of international exchange of those goods and services. The program represents in its philosophy the only economic attitude that befits an intelligent creditor nation. It is not only fitting and proper, it is, as Paul Renaud accurately pointed out in an address in this city in a few days ago, the only approach by which our efforts to rehabilitate Europe can succeed "in replacing the American taxpayer with the American consumer," to the advantage of both.

[From the New York Times of June 8, 1949]

A "MUST" FOR THE SENATE

Extension of the Reciprocal Trade Agreements Act is a "must" on the legislative program for this session; but it is a disturbing report that the Senate Republican leadership plans one of the stiffest fights of the year on this essential piece of legislation. It is surprising, too, inasmuch as in the House of Representatives a majority of the Republicans who voted on the bill when it passed in February were recorded in its favor.

As approved by the House, the bill would in effect revive the Hull reciprocal trade program, which was so successful a feature of American foreign trade policy from 1934 to 1948. The hampering and restrictive terms of the act passed last year, which expires at the end of this month, would be done away with. The House bill would restore the Tariff Commission to its rightful place as one member of an interdepartmental team making recommendations to the President on tariff negotiations. Under present law, the Commission has a special status which on the one hand isolates it from the interested departments—State, War, Agriculture, Commerce, etc.—and on the other hand tends to elevate its specialized point of view above that of the other agencies.

Tariff policy is not something to be treated in a vacuum. It does not merely involve the interests of those businesses directly affected, although of course their interests must be considered. It involves also the welfare of the entire people of the United States, and it should be considered—in the spirit of the Hull program—from that broader point of view. Morever, it is clear that American tariff policy is no longer (if it ever was) a purely domestic question. It must be obvious by now that it is an integral part of our entire world policy. The Marshall plan is a magnificent effort to restore Europe's productive powers and increase the flow of multilateral trade. It would be economic folly to spend billions for this purpose and yet to ignore the necessity of easing the obstacles to trade with this country. It would not only be economic folly; it would be political folly. For the United States to fail to take positive action on its own part to smooth the flow of international trade—particularly at a time when economic clouds are gathering both in Europe and America—would be a signal to all other countries that we really do not believe in the principles we are constantly asking them to adopt. As a Nation, we cannot afford such a grave mistake.

[From the Boston Herald of May 25, 1949]

WORLD TRADE WEEK

One would hardly get the impression that foreign trade was one of the most important things in the lives of Bostonians from observing the amount of attention the community is giving to World Trade Week. Yes; this is it—a week set aside to think a bit about the importance of world trade to America, and America to world trade. It should be a subject of special attention here because ours is one of the country's leading ports and because we have many thousands of workers whose livelihood depends, at least in part, on American export trade.

Actually how many of us have given much thought to it? True, there is a booth on the Common sponsored by the Chamber of Commerce and the Joint Council for International Cooperation where one can obtain information about America's stake in world trade. No doubt some of the schools and colleges are paying some attention to it. They should if they have overlooked it—and there's still time.

Unfortunately the language of international trade and finance has been made so complicated by the experts that the subject is seldom discussed in terms which the average citizen can understand. It needs simplification, but most of all it needs to be understood. The basic fact is that the United States has long been the world's leading exporter. Everybody wants our products. And we want to sell them. Our productive plant is so gigantic that it needs every market it can get.

The second important fact to remember is that in order to buy our wonderful products the foreigners must have dollars. We will not accept the various varieties of pesos, francs, and other currencies. They have to have dollars. This fact partly explains why there is a dollar shortage in the world.

The other part of the explanation is that we do not, and maybe cannot, buy enough from our overseas customers to give them the dollars they need to continue as customers. That is the only way they can get American purchasing power unless we lend them the dollars, or unless they have gold which we will accept for dollars. The Reciprocal Trade Agreements Act is designed to lower our tariffs so that we can buy more from abroad. It is a good law and must be continued as the fundamental approach to our trade dealings with the rest of the world. Obviously American industries must not be exposed to a cutthroat foreign competition which will wipe them out. Fortunately most of our industries are so technically proficient and far ahead of their foreign competitors in industrial know-how that they can outsell them even paying the higher wages which are part of our high standard of living. It may be that we could never lower tariffs enough to create an American demand for foreign products sufficient to balance our foreign sales (exports) with our foreign purchases (imports), but we had better try.

As the world's leading creditor nation we must buy more abroad just as Great Britain did during the long period when that nation held a comparable position. Also like Great Britain, we need to invest more overseas—to build factories, farms, and transportation systems which will help raise the standard of living (purchasing power) of our potential customers.

We should take pride in what our country has done during and since the war to help create the conditions under which world trade can flourish. It took bold and ingenious steps—the United Nations Relief and Rehabilitation Administration, the World Bank and Fund of Bretton Woods, the great loan to Britain, and finally, the Marshall plan (ECA)—all in an effort to quickly overcome the chaos of war and restore healthy trading systems under mutually agreed upon rules aimed at the goal of multilateralism in both trade and currencies.

The latter terms are a mouthful, but they mean simply this: Maximum trade can only be realized if it can move freely in every direction. That is multilateralism as distinguished from bilateralism, a system of two-way trade. But trade cannot move freely everywhere unless the means of payment, currency, is just as free. In other words, you should be able to take pesos or francs or what not in payment for your goods knowing that these currencies are freely exchangeable for dollars at a fixed rate. It has been the consistent objective of the United States to achieve that kind of a system.

No one, however, was able to estimate in 1944 when the Bank and Fund were created at Bretton Woods how devastating the then-raging war would be. Tremendous as they seemed at the time, the Bank and Fund were too small for their jobs. Moreover, 5 years after the war then seemed a reasonably adequate time in which to achieve the goal. It will probably be somewhat longer. And the British problem, sidetracked at Bretton Woods to be dealt with later by the United States, should have been faced up to.

Another basic difficulty, which we have not even yet learned to deal with, is the divided ideological state of the world. Even in the west there is a sharp division between capitalistic and Socialist countries. How, then, to work out a system of freedom in trade with governments which believe in controlled trade? Most of the weaknesses of the ambitious schemes contrived during and since the war to deal with the trade problem resulted from the necessity of compromising this problem.

Such a compromise in the case of the prospective International Trade Organization caused a number of influential people, like Philip Cortney, president of Coty, Inc., for example, to strongly denounce that attempt to set up rules for the conduct of trade relations between the nations. But Mr. Cortney shows in his book, the Economic Munich, that he has such a blind spot of affection for the old gold standard that he cannot stomach any departure therefrom, or any course leading away from it. The idea of a national commitment to promote full employment makes him furious, but he surely recognizes that in the present and probable future the attitudes of the peoples who constitute nations will not tolerate governments which do not stand so committed. And it is this commitment, made or implied, that seems to assure that the old, supposedly automatic gold standard will not come back. Why? Because the people would oust governments which bound themselves to the shocks and imposed depressions which arose from the workings of that system. We don't like it any more than Mr. Cortney, but it is the reality with which we have to deal.

Bostonians, more than other Americans, should explore the world-trade picture. They should try to understand what their Government has been trying to do, and why. The problems are great and there are few perfect answers. We can't have the old international gold standard, but desiring the trade conditions it produced, we have to try to get them some other way. We don't like socialistic trade practices, but we live in the same world and, in many cases, have to trade with such countries. There is plenty of room for dispute and no frank student of the problem would fail to admit that America has made some pretty bad mistakes.

The main thing is that, as a nation, we have been trying to face up to our world economic responsibilities. It behooves us as citizens to try to do the same.

[From the Tampa Tribune of May 23, 1949]

It is easy to convince people of the vast importance of selling our goods abroad. * * * But often it is something else again to show them that foreign trade is a two-way operation, that there cannot be unlimited exports without encouragement of imports. * * * World Trade Week is an appropriate time to remember that the big foreign trade problem is not of selling goods abroad but of buying goods abroad. Our foreign trade can be on a sound basis only if we import substantially as much as we export.

[From the Richmond Times-Dispatch of May 22, 1949]

It is fitting, as World Trade Week opens, that the bill extending the power of the President to make reciprocal trade agreements with other governments is on the Senate calendar with excellent prospects for approval. * * * High tariff advocates in this country are strategically placed and determined to sabotage the whole program if they possibly can. Similarly, there are forces at work abroad which make the drastic lowering of trade barriers more difficult. * * * Passage by the Senate of the pending reciprocal trade legislation should provide an important impetus * * * for the over-all expansion of world trade, without which it is futile to hope for a reasonably sound, peaceful, and prosperous world.

[From the Dallas News of May 23, 1949]

The most prosperous countries are those which engage actively in trade with their neighbors. In our own history, the main periods of prosperity have been those in which our imports and exports were high. The enactments of tariff barriers that held back trade have been followed by business depressions. Expanding foreign trade can help to convert our postwar prosperity into a stabilized economy that will assure a continued high standard of living.

[From the Minneapolis Star of June 4, 1949]

The secret of our lead in efficiency is not our tariffs. It is the big head start we have in knowing how to use advanced forms of machinery and to arrange mass production. Give the American workingman jobs in industries which can use lots of machinery and he'll outproduce and outsell the world. Actually, we ought to lower tariffs still more so that we gradually shift workers over into efficient lines at which European and other countries do better by hand. Thus, all would gain.

Improving the Voice of America

EXTENSION OF REMARKS

OF

HON. BRIEN McMAHON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Friday, June 24 (legislative day of Thursday, June 2), 1949

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Improving the Voice of America," published in the Bridgeport Post for June 21, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IMPROVING THE VOICE OF AMERICA

In his talk before the men's communion breakfast of St. Mary's parish in Ridgefield on Sunday, Msgr. Fulton Sheen, after pointing out that world-wide communism is on the wane although the danger from it has by no means passed, gave some pointed and constructive criticism of the Voice of America—the radio propaganda barrage which is beamed at Russia from 50 short-wave stations on the European continent.

The trouble, as Monsignor Sheen sees it, is that our broadcasts are continually harping on our material superiority. We forever remind the Russians that we have so many more telephones than they, so many more automobiles, so much more luxury, etc. All this is intended to impress the hearers with the idea that our economic system is better than their own in producing the goods that people want. But the psychological effect, as Monsignor Sheen pointed out, is to create resentment rather than envy or emulation in the minds of the hearers.

Suppose we were in Russia's position and had to listen to tales about the superiority of some other nation every time we tuned in a short-wave broadcast. Add to this that such gadgets of modern civilization as the automobile, the telephone, and the television set are as far from the aspirations of most Russian peasants as a trip to the moon is from most American citizens, and the futility of this kind of propaganda becomes even more apparent.

The great point, says Monsignor Sheen, is that we are failing to understand the real soul of the Russian people. There are about 200,000,000 Russians of whom only 6,000,000

are members of the Communist Party and these exercise all the ruling power. The rest of the Russians are much as they always were—a basically simple, kindly, and innately religious people. If our broadcasts emphasized only the fact that we recognized these aspects of the Russian character and were anxious to be friendly and helpful, we might be more successful in convincing the Russian masses that we were really their friends, and not merely "those rich so-and-so's, and tools of Wall Street in capitalistic America."

Monsignor Sheen's advice, we hope, will be considered by our State Department. In the science of public relations and the art of influencing people, he is no amateur. In these respects, as the records prove, he probably has no peer in the whole field of Christian influence. But even a downright amateur in the art of public relations can appreciate the common sense of his suggestion, which is basically to propagandize unto others the way we should like them to propagandize unto us.

Development of Low-Grade Iron Ores in Minnesota

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, June 24 (legislative day of Thursday, June 2), 1949

Mr. HUMPHREY. Mr. President, one of the major provisions in the economic expansion bill of 1949, soon to be introduced by a number of other Senators and myself, provides a practical and realistic method of developing the low-grade iron ores in the Lake Superior district in Minnesota, Michigan, and Wisconsin.

In this connection, the distinguished senior Senator from Montana [Mr. MURRAY] has just made available to me an extremely important communication he has received from Mr. E. W. Davis of the University of Minnesota's Institute of Technology.

Mr. Davis points out that in order to maintain iron and steel production at present levels for any considerable period of time—10 years or more—new sources of iron ore—either domestic or foreign—must be made available to our steel industry quite soon.

Mr. Davis also makes the following pertinent observation: "If this Nation desires to make its steel industry independent of foreign ore supplies and at the same time provide additional employment for its own citizens, then making the capital available on favorable terms for taconite processing developments in the near future is essential. It is my understanding that the proposed bill will do just that."

It is my sincere hope that the iron-making companies will recognize the opportunities opened for them under the economic expansion bill and that with their support, and with whatever improvements in the bill may prove necessary, we can write the economic expansion bill on the statute books before the end of this year.

I ask unanimous consent to have printed in the Appendix of the RECORD the letter from Mr. E. W. Davis of the University of Minnesota on the development of taconite ores in the Lake Superior district.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

UNIVERSITY OF MINNESOTA,
INSTITUTE OF TECHNOLOGY,
MINES EXPERIMENT STATION,
Minneapolis, June 14, 1949.

Senator JAMES E. MURRAY,
Committee on Labor and Public Welfare, United States Senate, Washington, D. C.

DEAR SENATOR MURRAY: I have been away, so please pardon my delay in answering your letter of May 31 enclosing the Confidential Committee Print No. 6 of a bill to promote cooperation between government and business.

I can comment on this bill only as it pertains to developments in the iron-mining industry of the Lake Superior district in Minnesota, Michigan, and Wisconsin. My remarks will be in specific reference to the financing of plants to produce high-grade blast-furnace ore from the low-grade iron formation of this district, often referred to as taconite and mentioned on page 10, line 4, of the bill.

The situation can be outlined as follows:

(1) In order to maintain iron and steel production at present levels for any considerable period of time (10 years or more), new sources of iron ore—either domestic or foreign—must be made available to our steel industry quite soon.

(2) So far as is known the only source of iron ore in the United States available to our present industry and adequate for this Nation's requirements over an extended period of years is the iron formation of the Lake Superior district, referred to as taconite.

(3) Almost unlimited quantities of iron exist in this formation and iron-mining companies are now operating million-dollar-pilot plants producing high-grade iron ore on an experimental basis from this material.

(4) The plants required to produce taconite concentrate commercially will cost about $15 per ton of annual capacity, or between three and four hundred million dollars for an annual capacity of 20,000,000 tons (This is about one-fifth of the United States annual consumption).

(5) If the mining companies are to build up a taconite industry to make this Nation independent of foreign sources of iron ore, production costs must be low enough to make the operation profitable. Interest and depreciation are large items of expense.

(6) The steel industry will get its future ore from whichever source is cheapest, and if this Nation desires to make its steel industry independent of foreign ore supplies and at the same time provide additional employment for its own citizens, then making the capital available on favorable terms for taconite processing developments in the near future is essential. It is my understanding that the proposed bill will do just that.

Whether or not the provisions of this bill will be acceptable to the iron-mining industry, I am not sure. It will probably be only the larger mining companies that can handle taconite processing and several of these companies are now seriously investigating foreign ore sources.

I hope I have not left you with the impression that foreign ore can be developed and delivered to our steel industry far more cheaply than taconite. Exact costs are not known but the capital required will not be much different, whichever the source, because it will cost several hundred million dollars just to build the ocean boats to bring 20,000,000 tons of foreign ore to this country, let alone develop the foreign mining fields. However, Government funds for developments in foreign countries seem to be obtainable in some instances under very favorable terms and I believe that funds for the development of domestic resources should be made available under terms that are, at least, as favorable.

Very truly yours,
E. W. DAVIS, *Director.*

Communism in Asia

REMARKS
OF
HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1949

Mr. HALE. Mr. Speaker, I rise for the purpose of expressing the hope that our State Department, which has failed so shockingly and so disastrously in China, will do what it can to resist Communist aggression elsewhere in Asia, notably in Indochina, where apparently the cause of freedom is not yet altogether lost.

I call particular attention to an article by Joseph Alsop, entitled "The Foot Draggers," which appears in the Washington Post this morning, and to a brief article by David Sentner, of the Boston Evening American of June 20. I ask unanimous consent to incorporate both of those articles in my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Maine?

There was no objection.

The articles referred to are as follows:

[From the Washington Post]

MATTER OF FACT

(By Joseph Alsop)

THE FOOT DRAGGERS

A crucial debate is now going on within the State Department. The issue can be crudely stated as follows: Will the Far Eastern Division, having made its mess in China, at last adapt its views and actions to the foreign policy this country has been following in the rest of the world for the last 4 years? The outcome, it may be added, is still in doubt.

A symptom, a passing sputter, from this debate was the guarded statement issued by the Department on Tuesday expressing cool but not unfriendly interest in the new government being established in Indochina by the Emperor Bao Dai. This sort of thing must seem immensely remote and trivial to the average American. But the unfortunate truth is that this sort of thing may later turn out to have all the importance of war or peace.

In brief, as reports from the scene have indicated in this space, the Communist power in Asia has reached the uttermost limits of safety. If the Soviet Union can extend its sphere beyond China, into Indochina, a chain reaction will become highly probable. All of southeast Asia will be threatened. If southeast Asia goes, Japan and India will be immediately menaced. And if this situation arises, the odds on war will be far better than even. It is tiresome to rehearse this

series of grim probabilities, yet they must be daily borne in mind.

Indochina is the key, for two reasons. First, it is the state in southeast Asia most accessible to China. And second, French folly has caused the Communist-nationalist movement of Ho Chi-Minh to gain great strength among the Indochinese. The new regime of Bao Dai is the last chance to win over the Indochinese people to an independent, non-Communist government. On all sides it is acknowledged that if Bao Dai fails, Ho Chi-Minh will succeed.

Such are the bleak basic facts. The debate in the State Department concerns the extent of American support to be given to the new Bao Dai regime. As has also been reported from the scene in this space, Bao Dai is almost certain to fail if he is not actively supported by this country (since exclusive French support actually discredits him in the eyes of his people). The Far Eastern Division of the State Department is extremely reluctant, however, to support Bao Dai.

The reason for this reluctance is certainly not fear of offending the French. The French Government has actually hinted that American aid for Bao Dai, whom they have fully recognized, will now be exceedingly welcome. Furthermore, the European division of the State Department, whose staff is a trifle more aware of the Soviet problem than the far eastern division, has urged that the Bao Dai experiment be promoted and assisted in any way possible.

Yet the statement that was just issued, which could hardly be more cautious or gingerly, represents an elaborate watering down of a public avowal of sympathy for Bao Dai that was originally proposed. Equally, those who see the appalling danger now confronting us in southeast Asia have been urging the expenditure of ECA funds in Indochina. But the Far Eastern Division has succeeded in watering this project down also, to a decision to consider the matter.

The arguments that are being made for this foot-dragging approach may be superficially convincing. It is true that Bao Dai is a risky investment. But the fact remains that although supporting Bao Dai is by no means an ideal solution to the southeast Asia problem, it is the only solution available. The other approach is simply to drift with the tide, as we did in China, until we land on the rocks. And the rocks are now 10 times bigger and 10 times more sure to destroy us.

Such is the rather unpleasing choice confronting Walton Butterworth, the new Assistant Secretary of State for Far Eastern Affairs, who is not a Far Eastern Division man. His situation is further complicated by another grave fact. Although the members of the State Department Far Eastern Division have recovered from their sentimental delusion that far eastern Communists are mere reforming agrarians they still have their record in China hanging round their necks like an albatross. Their main aim now seems to be to prove that the albatross is not an albatross, after all, but a peacock or possibly a bird of paradise.

When officials have made one disastrous failure, their judgment should be suspected the second time round. This rule should now be followed. It must also be recognized that choosing the least bad alternative is preferable to drifting into the worst. Otherwise we shall have no policy at all in the deeply dangerous Asiatic situation.

[From the Boston Evening American]

CHINA AIDE SAYS REDS AIM TO DRIVE UNITED STATES OUT OF PACIFIC

(By David Sentner)

WASHINGTON, June 20.—The Chinese Communists will be on the march within the next year to drive the United States out of the Pacific.

Unless the United States acts:

The Philippines will fall.

Australia will be invaded.

Japan will be overrun.

This is the grim warning of Col. David Li, among the last nationalist officers to leave Shanghai before its fall to the Communists.

Millions of Chinese will starve under the Red regime before 1950, Colonel Li also predicted.

Colonel Li asserted that even minimum American aid—mainly economic to provide pay for the central government army—would avert a tragic turning point in global history.

WARNS OF WAR ON UNITED STATES

Li, assistant military attaché of the Chinese Embassy here, warned:

"When the Red Chinese tidal wave engulfs the Pacific, the United States will be forced to fight for survival. It may be too late, then."

Li stressed that the government army is in a stronger position now than when it withdrew to Chungking and fought the well-trained invading Japanese troops.

"Crack nationalist divisions with the Chinese aviation corps are concentrated in Formosa, eager to launch a counterinvasion of the mainland," he said.

"The truth about the fighting at Shanghai has never been recorded," Colonel Li added. "A comparative handful of poorly equipped nationalist units outfought for a time the gigantic Soviet-equipped Chinese Red army," he said.

The Chinese Communist army is supplied by Russia with artillery and trucks seized from the Japanese forces, Li revealed.

"Captured Japanese officers, trained by the Russians, are leading many Chinese Red units," he asserted.

"Outnumbered 4 to 1 at Shanghai by the Chinese Red army, a few corps of nationalist troops killed 40,000 Reds," Li said.

Nationalist planes, desperately short of fuel, successfully strafed the Red troops while havoc was spread through Communist ranks by the forays of only 70 nationalist tanks.

These tanks were cannibalized from 150 old American medium tanks which Colonel Li himself had brought from the scrap-salvage heap in the Philippines.

"Just a little more ammunition and equipment and we would have been able to hold Shanghai," he said.

"Chinese in Communist territory have found out that the glowing Red promises are false.

"They are sick unto death of the Communist people's committees. Nationalist prisoners are sent to their villages by the Red army to be judged and executed by these committees to spread fear.

Unemployment in the State of Connecticut

REMARKS

OF

HON. ANTONI N. SADLAK

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, June 24, 1949

Mr. SADLAK. Mr. Speaker, later in the session today, we shall consider H. R. 5300, the third deficiency appropriation bill for 1949. Because this measure deals in part with the growing unemployment situation in the Nation, I would like to include in the RECORD the latest facts and figures as they pertain to my district, the State of Connecticut, in accordance with the release of June 23 by the State labor department.

Because the release is the over-all State picture, I ask that this release, in its entirety, be included in my remarks:

The first paragraph is as follows:

Jobless claimants for unemployment benefits in Connecticut rose to 83,856 during the week of June 13–18, continuing an almost unbroken rise since last October when 21,485 filed jobless claims. Last week there were 81,822 claimants and during the corresponding week a year ago 27,496.

This very distinctly gives us the unfavorable picture that such a statement reveals to the reader. The over-all unemployment total in addition to the 83,856 indicated in this report includes also those who have withdrawn the total unemployment benefits to which they are entitled; also, those who are not covered by the act. This total is presently estimated at about 110,000. In order that we might retain the additional personnel that is necessary to service these claims, I shall unqualifiedly endorse the amounts that are provided in H. R. 5300 and with the added sincere hope that there shall not be a necessity for additional deficiency appropriation in this regard.

The remainder of the release is as follows:

The amount paid to the unemployed during the week was $1,512,543. Since January 1 the amount paid out has been $20,480,954.

Bridgeport continued to lead the State in the number of unemployed claimants with 16,547, followed by Waterbury, 11,017; New Haven, 9,540; Hartford, 7,987; and New Britain, 6,147. The other 14 offices were each under 5,000.

Initial claims, which denote new unemployment, rose to 9,183 from 9,048 for the previous week and 4,465 for the corresponding week a year ago. Most of the increase was from World War II veterans who completed school terms and courses and are seeking work. Initial claims have averaged 7,800 weekly since January with the lowest week 6,809 and the highest 10,115.

Lack of work lay-offs were reported in each of the following industries: Garment, 350; brass goods, 200, of which 100 were for 1 week; metal products, 130; hardware, 95, of which 75 were on a week-on, week-off schedule; rayon, 75; bearings, 60; submarines, 55, of which 35 were on a week-on, week-off schedule; steel, 50, on a staggered schedule; electrical appliances, 50 for 1 week; chucks, 50 part time; tires, 50; boxes, 50; silverware, 40; iron works, 35, on a week-on, week-off schedule; cameras, 25; and toys, 20.

The Bridgeport office reported a 1-week lay-off of 50 by an electrical appliance company and 30 by another electrical-appliance firm. A steel mill placed 50 on a week-on-week-off schedule.

In the Bristol area, a bearings plant laid off 60.

The Hartford area reported lay-offs of 100 by a metal-products company and 75 by a rayon plant.

In the Meriden area, a silverware company laid off 40, a box manufacturer 30, and a hardware concern 20.

A Middletown dress company laid off 40.

The New Britain office reported that a hardware factory placed 75 on a week-on-week-off schedule. A camera concern laid off 25 and a chuck manufacturer placed 50 on a part-time basis.

A New London garment shop rehired 40. A transportation-equipment concern laid off 20 and placed 35 on a week-on-week-off schedule.

The Norwalk office reported a lay-off of 200 by a robe shop, 50 by a tire concern, 20 by a sweater manufacturer, and 20 by a toy maker.

A Stamford garment shop laid off 90 due to seasonal conditions.

In the Waterbury area, one brass-goods company laid off 60, another 40, and another brass-goods concern 100, for 1 week. Other lay-offs reported were wire goods, 30; boxes, 20; electrical contracting, 20; and iron, 35, on a week-on-week-off schedule.

Repeal of Taft-Hartley Act

EXTENSION OF REMARKS
OF
HON. WILLIAM J. GREEN, JR.
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1949

Mr. GREEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me over Station WCAU on June 19, 1949:

WHY THE TAFT-HARTLEY ACT SHOULD BE REPEALED

If there was any one issue emphasized more than another in President Truman's election, it was repeal of the Taft-Hartley labor law. The President featured it repeatedly in his addresses as did most of the successful congressional candidates, including me. Our idea was to repeal Taft-Hartley and return to the Wagner labor-relations law. Then we would revise the Wagner Act in the light of what has been learned since its enactment.

The Wagner Act was born of the fact that the average workman could not protect himself in regards to wages, hours of work, and conditions of employment when he dealt individually with large employers.

It assumed that workingmen would find greater freedom and security in their jobs when they dealt collectively with their employers through unions of their own choosing.

In the great mass production industries, like steel, machinery, rubber, and chemicals, men and women did not refrain from joining unions because they did not believe in them. They were afraid of losing their jobs.

While industrialists joined in associations—to act upon their mutual interests—the right of union participation was denied the workers. In many an industry, men who joined unions were fired and then blacklisted throughout the industry so that they could not get a job anywhere.

"Yellow dog" contracts were imposed upon workers. A condition of such a contract was agreement upon the part of the worker not to join a union. Or so much as to hold conversation with a union organizer.

Before the Wagner Act, the courts enforced these "yellow dog" contracts—even to the point of declaring as unconstitutional, any State laws which would outlaw them.

Before 1932, of course, there were employers who knew there was no equality, or social justice, in some of industry's tactics. Leaders in religion saw their precepts and teachings flouted in some of the actions of management.

The Wagner Act was a major move toward righting some of these wrongs and establishing something of equality between management and the workers.

It declared it unfair for an employer to discharge or discriminate against a worker because he belonged to a union. When investigation disclosed such a dismissal, employers had to give the employee-victim back pay.

This liberated the worker from fear of discharge and union membership in America was greatly increased. It made collective bargaining real in name and in practice.

Also, the Wagner Act enabled a majority of the employees—voting in a free election—to choose a given union to represent them.

It became the duty of management to bargain collectively with the representatives of that union—and at least try to arrive at an agreement.

Under this plan there was no objection for the workers to bargain collectively if the majority willed it otherwise. And—of course—there was no obligation for the employers to meet union demands.

They could reject all or any of the union requests. All that was required was that they sit down with the workers' representatives and at least try to iron out differences.

Many employers welcomed the Wagner Act and have had their best employee relationship under it.

But there were also those industrialists who could not or would not see that a new era had dawned. This element greeted the election of the Eightieth Congress in 1946 elections with great anticipation.

They were not disappointed for long. Because the Taft-Hartley law was enacted over President Truman's veto.

Among its features: It forbade the so-called closed shop even where both employer and employees favored it.

It counted all votes of employees, absent through sickness or any reason, as "No" when voting for a union shop.

When Taft-Hartley was harsher than a State law, Taft-Hartley was to apply. If State law was more severe, State law was to apply.

Taft-Hartley encouraged the breaking of unions and destruction of collective bargaining. Employers were permitted to ask the Labor Relations Board for new elections upon the mere statement of an individual or an organization that they in fact were the representatives of the workers. This has enabled strikebreakers to come in and swing an election during a strike.

In Taft-Hartley's outlawing of secondary boycotts, union members are required to work on goods that will later be sold by a plant whose fellow unionists are on strike. Thus they are denied the right to view their industry as a whole and are forced to contribute toward the tearing down of their own working conditions.

While Taft-Hartley does not attempt to define them, it says it is illegal for a union on strike to use restraint or coercion. Under this loose use of phrases, even peaceful picketing could be prohibited by law.

Taft-Hartley took the Conciliation Service out of the Department of Labor and made it an independent agency. It is so independent, in fact, that it is responsible to nobody.

The Labor Department is charged with the job of viewing the entire labor picture and reporting to the President, through the Secretary of Labor.

The Conciliation Service acted as an impartial observer and umpire for the 34 years previous to Taft-Hartley. During that time, in the Department of Labor, it has settled 150,000 serious disputes without a strike.

In these days when we are about to streamline the Federal departments, the Taft-Hartley law makes an island in government of the Conciliation Service.

Instead it should have been kept in the Labor Department, where it always was and where it always belonged.

The Eightieth Congress named Cyrus Ching, former United States rubber executive and former director of the National Association of Manufacturers, as head of Conciliation Service.

For all I know he has been fair. But his background does not favor it. It seems to suggest the motion of loading the dice on the part of the man who backed the Taft-Hartley legislation.

Within the short time allotted to me you have some of the reasons why I believe that we must first unwrite the Taft-Hartley law before America can be assured of real collective bargaining and a continuing industrial peace. There is nothing more important, considering our role of world leadership. And nothing can contribute so heavily to the economic well-being of all our citizens.

Protests From Germany Against Dismantling of German Plants

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Friday, June 24 (legislative day of Thursday, June 2), 1949

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD three letters and a telegram I have received from Germany protesting against the dismantling program now being conducted in Germany.

There being no objection, the letters and the telegram were ordered to be printed in the RECORD, as follows:

CHEMISCHE WERKE
ESSENER STEINKOHLE,
AKTIENGESELLSCHAFT,
Essen, den June 20, 1949.

Hon. WILLIAM LANGER,
United States Senator from North Dakota, Washington, D. C.

DEAR SIR: We take it that you are already in receipt of our telegram of June 7, referring to our case of dismantling. You will meantime have learned from United States of America press about the regrettable fact that our works have been occupied, on June 13, 1949, by a Belgian military detachment reinforced by armored cars.

Dismantling is going on in the presence of the Belgian armored cars and executed by foreign hirelings.

We thought you might be interested in the development of our case.

Sincerely yours,

CHEMISCHE WERKE
ESSEN STEINKOHLE,
AKTIENGESELLSCHAFT,
WERNING G. REINHAUS.

RUHRCHEMIE AKTIENGESELLSCHAFT,
Oberhausen-Holten, June 17, 1949.

Hon. WILLIAM LANGER,
United States Senator from North Dakota, Washington, D. C.

DEAR SIR: We beg to confirm our wire of June 8, 1949, referring to dismantling of our Fischer-Tropsch plant and are attaching copy of this cable herewith.

As we meanwhile gather from news reports, the British Foreign Office has, on June 10, 1949, in support of the dismantling orders declared that the German industry for the

production of synthetic fuels had, above all, been established from the strategical point of view and had been one of the most important parts of German war preparations. These arguments, however, are by no means correct with regard to the Fischer-Tropsch synthesis.

Our company has been established in 1927. Its purpose is, according to its statutes, the promotion of chemical processing and refining of products from coal. After first erecting a production unit for the synthesis of ammonia and the fabrication of nitrogen fertilizers we got in touch, in pursuance of said purpose, with the Kaiser Wilhelm Institute for Coal Research at Mülheim-Ruhr. In particular we took, as early as 1928, interest in the process developed by Prof. Dr. Franz Fischer and Dr. Tropsch for the production of hydrocarbons employing gasification products of solid fuels as raw materials. This new development had at that time just become known under the name of Fischer-Tropsch process. On December 14, 1928, Fischer agreed in writing to discuss licensing of the process to our company at a later date and not to dispose of it otherwise in the meantime. By letter of September 26, 1929, we were asked for an offer in detail. In order to make this offer careful investigations were necessary requiring several years on account of a great number of details in process and design which had to be worked out. Essential progress having been made in this direction until fall of 1932 closer cooperation between the Kaiser Wilhelm Institute and our company developed. Eventually, in 1933, final negotiations were entered and brought to a close in 1934 by signing a general license contract. In the same year our pilot plant on semitechnical scale was started. Based on the results obtained from this pilot plant design of our commercial plant began in 1935 and production was started in summer of 1936.

The development described above shows clearly that the decisive steps for acquisition of the process and erection of our plant have not been taken under the Nazi regime but already before that time. Our plant, therefore, had no reference to the preparation of a later war or to any strategical reasons.

These facts may be emphasized by mentioning that we have negotiated since 1935 with a great number of foreign firms, granting licenses to them. Quite a number of contracts were entered, e. g., by France, the Union of South Africa, Japan, United States of America, and Italy. This means that we have been ready to grant licenses to foreign countries at any time. There is no doubt that this would not have been permitted under the export control of that time if the Fischer-Tropsch plants would have been considered important for war purposes. Further proof of this not having been the case is rendered by the fact that after 1938 none of the interested German firms, and there were many, has been permitted to erect a Fischer-Tropsch plant.

If, in addition, the reasons given by the British Foreign Office refer to fuel industry, it must be noted that the Fischer-Tropsch plants have been of extremely small importance for the production of fuel and, thereby, for rearmament and war purposes. Maximum production of our plant has been yearly 60,000 metric tons of Fischer-Tropsch products, production of all six Fischer-Tropsch plants 300,000 tons yearly. Only part of this production could be used as fuel, while the gasoline produced was not even knockproof. Our Fischer-Tropsch plant and the five others together furnished approximately 2½ percent of the total German mineral oil consumption or, with reference to conditions abroad, a yearly production which corresponds to the mineral oil production of the United States of America within less than 10 hours.

Already during study of the process in the years of 1930–34 it became clear that this process had a great disadvantage by furnishing a gasoline which was not knockproof and that it could become an economical success only by developing a method of producing preferably those hydrocarbons which as such or after chemical processing sell for higher prices, this means products for the soap, detergents, textile, and leather agents industries as well as solvents, softeners, and waxes. This was the goal of our development work which was carried on even during the war but could not be fully put into practice. In our country the Fischer-Tropsch synthesis has developed in a direction entirely different from the latest work in United States of America which, as well known, aims at the production of as much knockproof fuel as possible.

According to our opinion, the facts above show clearly that the Fischer-Tropsch plants cannot be classified under fuel industry, and even less it can be said that the Fischer-Tropsch plants have been erected for strategical purposes and have been part of the German war preparations.

Since the reasons for prohibition as given do not apply to our Fischer-Tropsch plants we should greatly appreciate if you would kindly take action in our favor as suggested by our cable and the above statements.

RUHRCHEMIE AKTIENGESELLSCHAFT,
TOMBERS,
Chairman of Workers Delegation.
ROHE,
PPA. SCHUFF.

KRUPP TREIBSTOFFWERK
G. M. B. H., ESSEN,
Werk Wanne-Eickel, June 13, 1949.

HON. WILLIAM LANGER,
United States Senator from North Dakota, Washington, D. C.

DEAR SIR: We hope that you received our wire of 8th instant, informing you of the intended dismantling of our work.

For a correct affirmation you will find enclosed again the text of our wire.

In between dismantling of some parts of our plant, which are out of operation at the moment, has been started today. Though the dismantling of those parts of our plant, which are on line, is not yet started, the dismantling of the whole plant is intended at the end of the year, according to newspaper reports. In the present situation we are waiting with interest for the speech of Mr. Dean Acheson, Secretary of State.

If you would like to get any other information, please let us know, so that we can let you have those.

KRUPP TREIBSTOFFWERK
G. M. B. H.,
COMBLES, *Management.*
JULI, *Workers Chairman.*

[Telegram]

Since we are informed that you concentrate your interest on recovery of western Europe by ERP we want you to know that we received order by British Government by June 4, 1949, announcing dismantling of our Fischer-Tropsch-plant in Wanne-Eickel. Start of dismantling has been fixed on June 8, 1949, to be accomplished not later than by the end of this year. Consternation amongst workmen and employees is tremendous since nobody comprehends order for further dismantlings are demanded in this town already extremely ravaged.

The plant was restored in 1946, immediately by order of British military government. For this purpose 12 million marks were invested. Mr. Heimüller, trade-union representative, Wanne-Eickel, declared quote why should building materials and iron be wasted by dismantlings, considering that these materials could instead have been used to build and to repair houses? unquote.

Unemployment in this town already twice the average of North-Rhine-Westphalia. In case of closing down this plant number of unemployed in this region would increase dangerously. Fifty percent of employees are pit-invalids, disabled men and women. No other jobs available. Political radicalism amongst population inevitable, democratic team work idea being perilled immensely.

On posters workmen proclaimed following slogan: quote Bevin, why don't you stop dismantling, don't forget: war is won, peace not yet unquote and quote: Is Vishinsky right? 10,000 more proletarians unquote.

Production of plant is serving peace market as everybody can give evidence of. Therefore nobody grasps idea of enlisting plant in war-industries category. We produce raw material for chemical industries of peacetime character, which in dismantling case must be imported via foreign exchange expenditures. This would imply increase of exports at any price. Allied control of plant would be adapted readily. Your assistance badly needed. Help us. Stop dismantling.

FISCHER-TROPSCH-ANLAGE
TREIBSTOFFWERK WANNE-EICKEL,
DIR COMBLES,
For the Management.
A. JULI,
Chairman of the Workers.

[Telegram]

JUNE 8, 1949.

We kindly ask you to direct your attention to following vital facts: Our Fischer-Tropsch plant is on the verge of destruction because of application of the Washington agreement on prohibited and limited industries in Germany. Five hundred workers of the Ruhrchemie Co. would have to quit among whom are many war victims and disabled persons.

One thousand two hundred Germans, including persons disabled by war, and female workers could find productive jobs in case of a working permit for them. Withdrawal of license means important set-back to plant and to fettered genius of invention among younger generation since Ruhrchemie developed the Fischer-Tropsch procedure from small laboratory stages into big-scale technique. Nobody catches the purpose of this measure since Fischer-Tropsch production definitely does not serve the war potential. From start on our aim of production was the output of Fischer-Tropsch products: different types of hydrocarbons serving as raw material for the chemical industries.

We anticipate political radicalization.

Jammed workers meeting unanimously okayed spontaneous statement by Johann Tombers, president of Workers Council, "Our young democracy will faint by these dismantlings."

RUHRCHEMIE AG,
OBERHAUSEN-HOLTEN,
Dr. TRAMM,
J. TOOMBERS,
Chairman of Workers Delegation.

Importation of Foreign Oil

EXTENSION OF REMARKS
OF
HON. ED GOSSETT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1949

Mr. GOSSETT. Mr. Speaker, our domestic oil industry is alarmed over the

tremendous importation into this country of foreign oil. Oil production in Texas has been reduced drastically because of this importation.

I have just received a resolution on this subject from the State Senate of Texas. This resolution follows:

Senate Resolution 21

Whereas a situation exists concerning the oil industry of this State, which directly seriously affects and threatens the economic structure of this State; and

Whereas the greatest problem that is facing the economy of this State and endangering its future revenue is the mounting importation of foreign crude oil; and

Whereas the Railroad Commission of Texas in January 1949, found it necessary to reduce the production of oil in Texas approximately 10 percent, and again for the month of February 1949, it was necessary for the commission to reduce the allowable of crude oil in Texas another 5 percent; and

Whereas this 15-percent decrease in production below Texas wells maximum efficient rate of production will cause Texas to lose $15,000,000 per year in taxes from the production of crude oil; and

Whereas there is today being brought into this country approximately 625,000 barrels of crude oil each and every day, which imported oil has replaced Texas crude in the domestic market in this Nation approximately 350,000 barrels per day; and

Whereas the imports of foreign crude oil into this country can be expected to appreciably increase in this Nation and in Texas, thereby further decreasing domestic demand; and

Whereas it is apparent that unless remedial steps are taken by the proper authorities to arrive at a fair quota for foreign imports of oil, the oil industry in Texas will be not only seriously curtailed in its operations but further developments of Texas' greatest natural resource might come to a complete halt; and

Whereas the Nation's economy, welfare, and security require a policy on petroleum imports which will encourage exploration and development efforts in the domestic industry, and which will make available a maximum supply of domestic oil to meet the needs of this Nation; and

Whereas the operation of the schools of this State, and other functions of State Government, depend largely upon the continued development of our greatest natural resource for revenue; and

Whereas the present alarming increase of importation of foreign crude oil, coupled with the sharp decline in demand for Texas crude oil, is an immediate and pressing problem of concern to every person in Texas; and

Whereas it is estimated that the present decline in demand for Texas crude will cause a drop in the Comptroller's estimate of 1949 covering expected revenue from oil production, amounting to approximately $40,000,000; and

Whereas the very structure of the economy of this State is seriously endangered; and

Whereas our national security depends largely upon the development of new domestic reserves of oil for use in order that this Nation shall have ample domestic supplies of crude oil for use in time of war: Now, therefore, be it

Resolved, That the senate of Texas call this most dangerous condition affecting the people of Texas and Texas' greatest industry to the attention of the Members of Congress; and that copies of this resolution be forwarded to the members of the Texas delegation in Congress.

ALLAN SHIVERS,
President of the Senate.

I hereby certify that the above resolution was adopted by the senate June 14, 1949, by the following vote: Yeas 28, nays 0.

[SEAL] GARLAND A. SMITH,
Secretary of the Senate.

New Threat to Israel

EXTENSION OF REMARKS
OF
HON. ISIDORE DOLLINGER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1949

Mr. DOLLINGER. Mr. Speaker, I wish to call to the attention of the Members of the House an editorial entitled "New Threat to Israel," which appeared in the New York Post Home News on June 14, 1949. Under leave to extend my remarks in the RECORD, I include the editorial which follows:

NEW THREAT TO ISRAEL

Once upon a time the wise men in Washington said that Israel's Army was doomed. They declared there was nothing they could do about it except try to fashion a gentleman's agreement; if that failed, they said, Israel would suffer untold agony and total destruction. They said all this cheerlessly, pointing out that some of their best friends were soldiers in Israel's front lines.

But the form-chart was upset. Despite all the prophecies of disaster Israel won the war. It was, in fact, an amazingly brief and bloodless conflict and the outcome was decided before many of the learned arguments could be resolved. And when Israel had demonstrated its will to fight, and had proved (as the Irish did long ago and as oppressed peoples almost invariably do when their right to existence is challenged) it did not seem likely that the meaning of the victory would be swiftly questioned. The commentators gave the decision to Israel and the Arabs, it was fondly believed, prepared to fold their tents. There were many who said that the shooting was all over and that the clock of history could never be turned back. They were wrong. For the statesmen who gambled on Israel's inability to survive in time of war refused to give up when an armistice was achieved. They proposed to accomplish through diplomacy, double-dealing and maneuver what they had failed to achieve on the battlefield.

That is the real story behind the current dispatches reporting disagreement over the fate of the Arab refugees.

It must be remembered now that at the peak of the struggle in Israel the Arab High Committee implored all Arabs to leave; the Arab chieftains promised that a new offensive against Israel was in the making. Thousands responded to this summons. And those thousands are momentarily men without a country. But Israel has not abdicated responsibility for Arab humanity. At Lausanne the Israeli Government agreed to absorb more than 200,000 refugees in the so-called Gaza strip taken over by the Egyptians. This offer at first evoked an affirmative response from the United States State Department. It provided the foundation for a reasonable agreement. Now, mysteriously, the climate has changed; behind the change, it appears, is the hand of the die-hard anti-Israel faction in the British labor government. As a result of this shift Israel's proposal has been blanketed. The impression is widely circulated that Israel has bluntly refused to discuss any plan for disposition of the Arab wanderers, which is false.

Israel has admittedly refused to assume the total burden. It has insisted that the problem is a world problem. It has refused to accept so vast a number of Arab refugees that Jewish immigration into Israel would be halted and that Israel's security would be imperiled. It has urged Arab resettlement in such areas as Syria. It has maintained that the plight of the Arab refugees must be resolved in the context of an over-all middle eastern peace settlement. But Israel has never denied the reality of the problem nor coldly disregarded the Arab victims as casualties of war.

The danger of the present deadlock is that it may either revive a "get-tough" American attitude toward Israel or create a new split in western democracy. Our world-wide alliance with the British labor government derives its true strength from our mutual respect for the dignity of man; that alliance has been repeatedly threatened by Ernest Bevin's abberation. We cannot follow Britain in a new crusade against Israel; we cannot cement our relations with Britain as long as Bevin clings to the dead dream and sordid scheme of middle eastern empire; we cannot retain our moral leadership in the contest of ideas if we sanction a new conspiracy against Israel. In the past we have blundered into this blind alley. Each error has produced a new one; and, having lost our way, we have frantically sought a scapegoat. We are inviting a similar debacle; this is the moment to reconsider, to find out where we are headed before little men and vengeful irresponsibles fix our course.

The Housing Bill

EXTENSION OF REMARKS
OF
HON. PORTER HARDY, JR.
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1949

Mr. HARDY. Mr. Speaker, the two largest newspapers in my district have expressed editorially certain pertinent comments on the pending housing legislation. I believe the Members of the House will find these editorials interesting and instructive, and I am submitting them for inclusion in the RECORD. First, is an editorial from the Norfolk Virginian-Pilot which appeared on Sunday, June 19, followed by an editorial from the Norfolk Ledger-Dispatch of June 23:

[From the Norfolk Virginian-Pilot of June 19, 1949]

THE SOUTH HOLDS THE KEY TO HOUSING

When it appeared that the House Rules Committee would keep the housing bill bottled up indefinitely, its patrons filed a discharge petition which, under rules adopted last January, would have got it to the floor by June 27. By a switch of the votes of three members, the bill was reported and will come up on the House floor Tuesday for debate. Representative COX, of Georgia, who voted for the unfavorable committee report, was one of the three members who changed his vote. He explains that he

did so because the earlier release of the bill will afford a better opportunity for resistance.

Now that the bill is through the bottleneck of the Rules Committee, the public will also be afforded an opportunity to see it debated on its merits. Last year a housing bill with substantially the same provisions passed the Senate, but by smothering it in the Rules Committee Members of the House were able to avoid going on record on the measure. That strategy has now been blocked.

The Cox declaration of war comes from the region of the country that has already profited more heavily than any other from slum-clearance programs, and also the section that will hold the balance of power in the forthcoming House vote on housing. Northern Republicans already know where they stand and will vote almost solidly against the bill. Democratic Congressmen from the Northern States are just as solidly supporting it. It is in the South where the slums are concentrated that opposition to the administration housing program is centered.

An almost identical housing bill has been approved by the Senate under joint Democratic and Republican sponsorship, including that of Senator TAFT, of Ohio, who is the congressional expert on the program. Yet a campaign of misrepresentation, under the sponsorship of a powerful lobby, is damaging the case of the House bill. Fantastic estimates are being made of its costs, and it is being described as a blow to private enterprise. Its housing program would cover a 40-year period, but in reply to a question raised by Representative SABATH, the Budget Bureau has pointed out that the present Congress cannot bind its successors. It can only make a firm commitment with respect to the future. The Bureau estimated the program would only cost $250,000,000 annually, moderate enough when compared with some of the expenditures of the present Congress.

The primary purpose of the bill is to clear the slums of American cities, but under title I it gives private capital the chance to rebuild residential areas when slums are cleared. The act authorizes $1,000,000,000 in loans and $500,000,000 in grants for locally managed slum-clearance programs over a 5-year period. Local agencies like the Norfolk Redevelopment and Housing Authority could clear a slum area, acquired through purchase or condemnation, and then make the site available for redevelopment by private enterprise. Private capital could move in, when the slum—heavily subsidized by its excessive costs to municipalities—was moved out.

[From the Norfolk Ledger-Dispatch of June 23, 1949]

PUBLIC HOUSING IN THE HOUSE

President Truman's slashing attack on the real-estate lobby for opposition to the public-housing bill reflect almost surely a combination of probabilities, including the following: (1) That the House shows signs of more opposition than the Senate did in the bill which it passed in April by 57 to 13; (2) that the extensive efforts against this program have aroused new opposition, especially when Congress is looking harder at many cost items; (3) that the President himself is anxious to gain with this program an objective for which he campaigned vigorously and needs politically at a time when his broad legislative program is not going well.

But none of these, nor all of them combined, should distract the House or the country from the essential needs for this program or the methods by which, after long labor and long delay, it proposes remedial action. The chief merit of Mr. Truman's letter to Speaker RAYBURN last week was not in the asperity of his language or the bluntness of his attack. It was in his point-by-point discussion of objections which have been raised. Back even of this detailed analysis and argument lie his statement of the need and his portrayal of the fact, which the reply of Mr. T. H. Maenner, president of the National Association of Real Estate Boards, does not seem to us to touch, that the only way the country can obtain relief in the admittedly deplorable and costly slums of the Nation is through Federal funds.

It is not enough to sweep this part of the argument away, with a wave of the hand, as being socialistic. By that definition a great many things which cities, States, and the Federal Government do, without any criticism, could be called socialistic—and in earlier years was sometimes so called. But that is straining heavily, and, in addition, ignoring the demonstrable inability to accomplish certain results by any other method than that of Federal action.

In reality the degree of local control which would be retained is important and effective. Norfolk knows much about that. Its modest achievements under the Norfolk Redevelopment and Housing Authority have felt the guiding hand of the local commissioners—Charles L. Kaufman, C. W. Grandy, David Pender, James E. Etheridge, Thomas H. Willcox—at point after point. They receive their authority from the city government under State law. No one who knows them could think of them as either creatures of the Federal Government or as protagonists of socialism. Their concern is the improvement of the blighted areas of Norfolk which are responsible for a wholly disproportionate share of the city's social problems.

There are details in the bill which the House is debating this week as in the bill which the Senate passed in April, about which the most sincere and disinterested men disagree. But there is no disagreement about the fact that (as Mr. Truman put it in a few words) "the private housing industry is not supplying, and cannot in the foreseeable future supply adequate housing for low income families." The program will certainly cost much money, although Mr. Truman's analysis of costs and his charge that they had been greatly exaggerated (100 percent more than his figures) do not seem to us to be answered by Mr. Maenner. Any supposition that the program will be light, however, is a mistake. This plan will cost a great deal. But the cost of doing nothing at all will almost surely be a great deal more. The American people can tackle this difficult responsibility only by vigorous and concerted action.

What Next?

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1949

Mr. RODINO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein an editorial which appeared in the Newark Evening News of Tuesday, June 21, 1949.

The editor expresses righteous indignation when he queries, "What next?" Surely those of us who placed confidence in the work of the present Committee on Un-American Activities by voting it a further appropriation could never have, by any stretch of the imagination, assumed that it would embark upon any program which smacks of an educational witch hunt.

Democracy will surely be struck a telling blow if we permit academic freedom to be menaced.

WHAT NEXT?

To say "It never occurred to me that anyone would object" is no excuse for the outrageous conduct of Representative JOHN S. WOOD, of Georgia, chairman of the House Un-American Activities Committee, in demanding, without even the backing of his own committee, that some 70 colleges and universities and the educational departments of all 48 States furnish a list of textbooks, authors, and supplementary reading in numerous fields.

The 70 institutions picked at random and the State school systems were given the impression that the committee had started upon an educational witch hunt, and there were instant protests from coast to coast. Five of nine members of the committee say they never heard of the plan to seek this information, and they are angry that it was put forth in their name. Three Republicans on the committee now urge that the inquiry be dropped.

But regardless of Mr. WOOD's ignoring his own committeemen, any such demand for information, if made by majority vote of the committee, would have been entirely unjustified. There is no authority vested in the Federal Government to tell privately endowed institutions and the 48 States what they shall or shall not teach in the fields of sociology, geography, economics, government, philosophy, political science, and literature.

A hasty follow-up letter, also signed by Representative WOOD, occasioned by the country-wide educational uproar, said that the letter to each individual college should not be construed as having the slightest unfavorable reflection on your school or any person connected therewith. This was a letter authorized by the committee, and asserting there was no intention to censor books or interfere with academic freedom.

The committee's letter, however, instead of repudiating Representative WOOD, did not withdraw the request for lists of textbooks and authors, but was willing to dispense with the supplementary material. At most it merely seeks to soften the impression created by the original letter. But, if, acting upon a petition submitted by the National Sons of the American Revolution that the committee investigate charges that there is subversive propaganda in some textbooks, the committee adheres to its chairman's sweeping demand for these lists, how can the educational world take at face value the assertion that academic freedom is not menaced?

Know the Facts—More Information About DP's

EXTENSION OF REMARKS
OF
HON. ED GOSSETT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1949

Mr. GOSSETT. Mr. Speaker, in my opinion, most of our people and many Members of this Congress have been misinformed concerning the so-called DP problem. I have just received a most intelligent letter from a Lithuanian student in the University of Maryland, concerning some of the so-called displaced persons. This letter is well worth reading, and is placed in the RECORD for public information.

BALTIMORE, MD., *June 16, 1949.*

Hon. ED GOSSETT,

House Office Building, Washington, D. C.

DEAR SIR: I want to express my sincere gratitude to you on your speech which you presented to the rural women's group at the University of Maryland in which you were in sympathy to a halt in immigration of the type such as we are now witnessing.

I am a student at the university and a veteran of the Second World War and I want to say that you deserve merit for bringing to the attention of the fellow-Marylanders the nature of immigrants which are now coming in to this country. No greater truth could have been stated when you declared that "many of these people have been planted in these camps to infiltrate in this country to serve alien causes."

The Baltimore Morning Sun carried a report on your address to the university group at College Park, Md., and at the same time inserted some comment from William L. Laukaitis, chairman of the Maryland Displaced Persons Committee, who charged (quote) about you and your statements:

"I think he is talking bunk when he describes the displaced persons as he does. They are liberty-loving people who have fled their homelands, fled from the Communists, because they wanted freedom."

The reason I want to bring this to your attention sir, is because Mr. Laukaitis is, as I am, of Lithuanian descent. I know the gentleman who made the remarks about your speech and wish to say that he represents the most reactionary, pro-Nazi interests in the city of Baltimore. No sooner had Mr. Laukaitis helped bring these displaced persons (especially the ones from Lithuania) over, he has allowed them to speak, almost immediately, at rallies about our need to join a crusade to help liberate "poor little Lithuania." Nothing is said against the Nazis or their methods. As an American I know allegiance to America is foremost—but do these people who are bringing these immigrants over know that? Also, what about the present unemployment situation in the United States. Already there are nearly four and a half million unemployed—where are these newly arrived displaced persons to get work? Are they to take over the jobs of the Americans and the many ex-GI's who have fought to defeat the Axis Powers?

It is these same Lithuanian dispaced persons, although I admit not all—for there probably are some sincere ones in the group, that were recruited by Dr. Rosenberg into branches of the Nazi SS. These Lithuanian SS troops carried out mass pogroms against the Jews in Lithuania and against Russian troops that were in the area. I bring to your attention the true documentary evidence as is produced in the United States Government publication Trial of German War Criminals, which is available in the Government Printing Office store.

It is these same displaced Lithuanians who cannot return to their native country, not because they are afraid of communism, but because of their war crimes which their Lithuanian neighbors so well know about.

Mr. Laukaitis is affiliated with the United Lithuanian Relief Committee which has been sending aid to such persons under the guise that they are anti-Communists. This committee no doubt has played an important part in bringing many of these undesirables over here. This committee has asked me and many other persons of Lithuanian descent to give funds and clothing to aid the war ravaged Lithuanians. But, however, in 1947 only $16 was sent to Lithuania. Upon investigation which I made to the State Department and also documentary record made in the booklet Foreign Aid Appropriation Bill for 1949, hearings of the House of Representatives, volume 2, I found these figures correct. Upon further investigation I found that the practice of sending aid to Lithuania has been discontinued and all funds running as high as several thousands of dollars were sent to camps in Germany, Austria, and so forth to aid these people who were no doubt, as you have charged, planted in those camps.

Mr. Laukaitis no doubt will say that these people will be a benefit to America because they are such good anti-Communists. No doubt. But we must remember that the Nazis and Mussolini's Fascists were also good anti-Communists. I think our present Government is doing more than well in keeping down any subversive threat in America, and I don't think we have to bring over pro-Nazis, criminals, and the scum of Europe over to do that job for us.

Thank you for your honest information to keeping America informed. If we can only make those of foreign descent who are living here willing enough to open their eyes and really see what is going on. Unless they do, they are being used by fifth-column aliens to serve alien purposes.

Sincerely yours,

ARTHUR JACOBS.

FOURTEEN MILLION EXPELLEES

Mr. Speaker, I have several times pointed out to this House that while we have been discussing the DP camps in Europe, we have wholly ignored and disregarded the problem of expellees. While we have been listening to wails of anguish concerning 500,000 so-called DP's, who are reasonably well fed and well housed in our camps, no one has pled the cause of 14,000,000 expellees who are in much worse plight than are the so-called DP's. These 14,000,000 people were uprooted from behind the iron curtain and driven to our zones in Europe. Many of them are of fine stock and of good character. Their plight is far worse than that of the so-called DP's.

Again, we have heard little of the displaced Arab problem. I was interested to read in the Washington Star on June 20, a statement by Mrs. Mark Ethridge on this subject, and I wish to place this news item in the RECORD:

MRS. MARK ETHRIDGE ATTACKS TREATMENT OF ARABS BY ISRAEL

NEW YORK, June 20. —Mrs. Mark Ethridge said today she considered it "very unfortunate" that Israel was admitted to the United Nations before it agreed to internationalize Jerusalem and take back Arab refugees.

Mrs. Ethridge, author-wife of the former United States delegate to the United Nations Palestine Conciliation Commission, arrived here today after a 3-month tour of Israel. She was a passenger aboard the liner *LaGuardia*.

Referring to Palestine problems, Mrs. Ethridge said, "I don't think we'll have peace there for generations and generations. The bitterness in the Arab refugee camps is simply terrific."

Mrs. Ethridge said there were 910,000 displaced Arabs who had fled or been "pushed out" of Israel by the Jews. These refugees, she added, now are living "in the most squalid and horrible conditions in the Valley of the Jordan."

Mrs. Ethridge's husband, who is publisher of the Louisville Courier-Journal and the Louisville Times, resigned from the Palestine Commission post June 10.

Mrs. Ethridge said the plight of the Arabs was not well known in America because "they have no publicity in this country to tell us about it."

The Jews, Mrs. Ethridge said, have refused to "take back one single Arab."

Creation of the Jewish state provided a haven for 250,000 European displaced Jews, but in so doing, the displaced Arabs have presented a "much more serious problem," Mrs. Ethridge said, adding:

"They're living under worse conditions than the Jews ever did."

The Marshall Plan at Work in Italy

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, June 24, 1949

Mr. RODINO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith the third of a series of articles on the Marshall plan at work in Italy, by W. G. Hetherington, staff correspondent of the Newark Evening News, dated June 14, 1949, from Rome, Italy:

(By William G. Hetherington)

ROME.—Italy's new-found confidence in the future takes many forms these days—one of them an almost childlike desire to show how much hardship can be endured against the day of full social and economic rehabilitation.

After 1 year of the Marshall plan Italy's millions, in the main, are convinced that this happy day approaches. For these harassed people, this is the great psychological change that has been worked by the Economic Cooperation Administration.

To many Italians, if not to the great majority, it is now a mark of national fortitude to endure miserable housing, poor wages, and high prices while ECA continues to strengthen the basic structure of the nation's industry and agriculture.

GRASPING FOR UNITED STATES LIFELINE

To other Italians—the more nationalistic, perhaps—it gives some pleasure to compare their present plight and their future with those of the people of other war-wrecked nations—notably France.

At a dinner party, and in all seriousness, a responsible Italian official offered me this analysis:

"I am sure," he said, "that your Marshall plan will have a greater success in Italy than in France. That is because the people of Italy are more like children. They are more optimistic and hopeful, where the people of France, for many generations, have been pessimistic and cynical."

"Historically," he continued, "the Italian of the working class will seize at the merest straw of hope—as he did with Mussolini—and you have thrown him a lifeline. This Italian will suffer—much so that your Marshall plan will fully succeed, and some day he can have the few simple things he wants—his job and his family and a little red wine and music."

"But in France," he concluded, "the workingman will not be so patient with your Marshall plan. He will fret and he will distrust any government you seek to help. Why? Because it is his nature to distrust any government that does not meet his every wish. Since that never happens, he is forever dissatisfied, forever voting one government out and another one in."

That is a sweeping if not unfair indictment of the French mentality. Yet it indicates a widespread recognition among Italians that no nation can hope for ultimate prosperity without continuing to suffer the pangs of rehabilitation.

The life line of ECA has indeed been seized by the masses of Italy. Before ECA showed results the Communist Party and the democratic government of Premier De Gasperi had nothing but promises to compete with for popular support.

REDS FREE WITH PROMISES

For the masses, ideology—that is, communism versus democracy—never was a major issue. It was a case of which system could offer the best future, or any future.

The Communists, holding no place or responsibility in the Government, could promise Utopia wrapped in red ribbons. But De Gasperi, with an economic yoke of government around his neck, was forced to be more realistic, thus more restrained in his promises.

Unlike De Gasperi, the Communists drove for immediate and widely flung improvements in living conditions. It meant nothing—in fact, it was their plan—that these would wreck the nation for fair.

By these richer but irresponsible promises, the Communists waxed strong and increasingly dangerous. They had a party membership of 2,500,000, backed by an underground army estimated at close to 80,000. They controlled the 5,000,000-member CGIL, the general labor confederation, and, prior to the national elections of April 1948 it looked as if they might transform Italy, legally, into another satellite of Russia.

RIGHTISTS TEAM UP

To repel the Communists at the polls required the combined, almost superhuman, efforts of every anti-Communist faction in the nation. Ignoring all other political differences, De Gasperi's Christian Democrats teamed with the right-wing Socialists, with the Republicans, with the Liberals, even with the neo-Fascist MSI—Movemento Sociale Italiani. These forces, in turn, had the spiritual and material help of the Catholic Church and the United States Government, though American aid of that period had not the organization nor planning of ECA.

The Communist-dominated Popular Democratic Front was beaten, but its 8,000,000 votes were enough to keep the nation in a constant state of jitters. For months after the election many who voted for De Gasperi were nevertheless uncertain whether he could ever make democracy stick in Italy.

At that point, following those fateful elections, ECA stepped in. This time United States aid was dispensed by economic plan, not as hand-to-mouth relief. The plan worked, and so long as it is permitted to work by the American Congress and the Italian people, Italy need no longer fear her Communists.

A Summary of H. R. 4009, the Housing Act of 1949

EXTENSION OF REMARKS

OF

HON. FRANK BUCHANAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 24, 1949

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following summary of H. R. 4009, the Housing Act of 1949:

A SUMMARY OF H. R. 4009, THE HOUSING ACT OF 1949—WHAT IT IS, HOW IT WILL OPERATE

GENERAL SUMMARY

Question. What is the purpose of H. R. 4009?

Answer. H. R. 4009 would establish a comprehensive national housing policy and objective, provide Federal financial assistance for slum clearance, low-rent public housing and farm housing, and authorize a comprehensive Federal program of housing research. Its purpose is to meet, in cooperation with local communities, housing needs which cannot be served by private enterprise, even with the Federal financing aids presently available.

Question. What is the declaration of national housing policy?

Answer. The declaration of national housing policy establishes, for the first time, a statement of national housing objectives and policies to be followed in their attainment, applicable to all Federal housing activities. The basic objective is stated as the realization as soon as feasible of a decent home in a suitable environment for every American family. In the attainment of that objective, according to the statement, primary reliance shall be placed on and maximum assistance given to private enterprise, but Federal assistance is to be extended to those needs which cannot be met by reliance on private enterprise.

Question. What will the programs authorized in H. R. 4009 cost the Federal Government?

Answer. The maximum costs authorized under the bill are the amounts made available for subsidies and grants, together with amounts which may be appropriated annually by the Congress for the research program and administrative expenses. The maximum subsidy and grant authorizations average slightly more than $400,000,000 per year over a maximum 40-year period. As explained later, the actual costs are not expected to exceed $310,000,000 per year for a maximum span of 33 years, or aggregate between $9,000,000,000 and $10,000,000,000.

The bill also authorizes loans, repayable with interest, aggregating $1,950,000,000.

TITLE I. SLUM CLEARANCE

Question. What is the purpose of the slum-clearance title?

Answer. To provide Federal financial assistance to local communities which desire to clear slums and blighted areas, in which millions of American families live under unhealthful and demoralizing conditions, and to make the land available for redevelopment in accordance with the best use of the land for the community's welfare and growth.

Question. What types of Federal assistance are made available?

Answer. Two types of Federal financial assistance are provided as follows:

1. Repayable loans, which may not aggregate more than $1,000,000,000 at any one time, to finance local costs of acquiring, clearing, and preparing the sites for redevelopment. The interest rate may be not less than the going rate for Federal bonds of 10 years or more maturity.

2. Grants, which may not aggregate more than $500,000,000, which may be used to absorb up to two-thirds of the loss, or net cost, which generally will be realized from the slum-clearance operation.

Question. Who operates the slum-clearance program?

Answer. Local public agencies, authorized under State law and directed generally by boards of citizens appointed by local governing officials, will have responsibility for operating slum-clearance programs. Subject to the approval of local governing bodies, these agencies will acquire the sites by negotiation or condemnation, clear the land, prepare the sites, and sell or lease the land for redevelopment in accordance with local plans. The Federal Government's role is limited to providing the financial assistance as authorized in the bill and to seeing that the purposes of the bill are achieved. This role is assigned to the Administrator of the Housing and Home Finance Agency.

Question. How will a typical slum-clearance project be financed under this title?

Answer. Let us assume a 50-acre project in a moderate-sized city. Let us assume further that the capital cost of acquisition, clearance and site preparation will be $2,500,000 and that the land is sold for a total price of $1,000,000. The loss, or net cost of the project, would thus be $1,500,000.

The expenditures of the local public agency, or any part required, could be financed with a temporary Federal loan. This loan would be retired on completion of the project from the proceeds of the sale of the land and from the Federal and local grants covering the loss.

The loss of $1,500,000 would be shared by the Federal and local grants. The Federal grant could cover up to two-thirds of the loss, or $1,000,000, and the local contribution would have to cover the remaining $500,000, or at least one-third of the loss. The local contribution could be in the form of cash or essential local public facilities (except public housing) and services provided in connection with the development or redevelopment of the area (such as utilities, street work, municipal labor or equipment).

If any part of the cleared land is leased instead of sold for redevelopment, the leased portion could be refinanced at reuse value with long-term Federal loan, repayable in not more than 40 years.

Federal loans (but not grants) may be used also to finance the acquisition of open land (when essential to permit dispersion of population from slum areas) and to provide temporary financing for certain public facilities essential for the development of such land.

Question. May Federal funds made available under this title be used for housing construction?

Answer. No.

Question. What is the relationship of the slum-clearance program to housing?

Answer. H. R. 4009 clearly recognizes that the primary purpose for Federal assistance is the assurance of better living conditions for slum dwellers. The slum-clearance program is therefore a part of a bill which has as one of its principal purposes the provision of decent housing for low-income families, who make up the bulk of slum dwellers. Specifically, the bill requires assurance of adequate housing for families displaced in slum-clearance projects. It also limits Federal assistance to areas which consist predominantly of residential slums (which may be redeveloped for any use or combination of uses) or to other areas if such other areas are to be redeveloped for predominately residential use.

Question. Will the cleared slum sites be redeveloped with public housing?

Answer. A bill requires that in their redevelopment plans the local agencies give maximum opportunity to private enterprise. There will undoubtedly be cases where the local communities will determine that the most feasible use of some of the land will be for low-rent public housing. In such cases the public-housing projects will be charged the reuse value of the land on the same basis as private redevelopers.

Question. What will the slum-clearance program cost the Federal Government?

Answer. Since the Federal loans are to be repaid with interest, the cost of the slum-clearance program authorized in H. R. 4009 will be limited to the capital grants, together with administrative expenses as authorized in annual appropriations by the Congress. The Federal grants may not exceed two-thirds of the losses sustained in the local slum-clearance programs undertaken under the bill and in no event may they exceed the maximum authorization of $500,000,000.

The $500,000,000 will become available for commitments in five annual installments of $100,000,000, beginning July 1, 1949, unless the rate is accelerated by the President as authorized in the bill. Since the undertaking of a typical project will be a lengthy process and since the grants are not payable until the cleared land is sold or leased for redevelopment, payments of grants are expected to extend over a considerably longer period than 5 years. No substantial payments probably will be required before July 1, 1951.

TITLE II. LOW-RENT PUBLIC HOUSING

Question. What is the purpose of the public-housing title?

Answer. To make available Federal financial assistance to urban and rural nonfarm communities desiring to provide decent housing to families who, because of their low incomes, are presently forced to live in slums and other bad housing.

Question. How much low-rent housing may be assisted under H. R. 4009?

Answer. One million fifty thousand dwelling units. These units may be started at the rate of 150,000 per year, over 7 years beginning July 1, unless the annual rate is increased or decreased by the President as authorized under the bill.

Question. Is this a new program?

Answer. No. The public housing title expands and amends the United States Housing Act of 1937. Under this and related acts, 191,700 dwellings have been provided in 268 localities, located in 37 States and in the District of Columbia, Hawaii, Puerto Rico, and the Virgin Islands.

Question. Who operates the public-housing program?

Answer. Local housing authorities, authorized and established under State laws and governed by citizen boards appointed generally by local governing officials, have responsibility for initiating, constructing, and operating the low-rent public-housing projects. The local program must be approved by local governing bodies. The Federal Government's role is limited to the provision of financial assistance and seeing that the purposes of the bill are achieved. This role is assigned to the Public Housing Administration, a constituent agency of the Housing and Home Finance Agency.

Question. What types of Federal assistance are authorized in H. R. 4009?

Answer. Two types of Federal assistance are authorized, as follows:

1. Seven hundred million dollars in repayable loans, increasing the present $800,000,000 loan authorization to $1,500,000,000 which is placed on a revolving fund basis. The interest rate may not be less than the going rate of interest on Federal bonds of 10 years or more maturity.

2. Annual contributions not in excess of $400,000,000 per year, payable for not more than 40 years.

Question. How will the capital cost of the low-rent public-housing projects be financed?

Answer. Under the perfecting amendments of H. R. 4009, it is expected that local housing authorities will be able to obtain their capital financing through the sale of securities at low-interest rates in the private bond market. Long-term bonds, amortized over not more than 40 years, may be secured by the pledge of Federal annual contributions sufficient to cover interest and payments on principal. Temporary notes financing construction may be secured by a contractual agreement of the Federal Government to refinance such notes on maturity. It is to provide adequate security for such private temporary financing that the loan authorization is increased to $1,500,000,000.

Question. In what ways are the costs of the public housing limited?

Answer. Limitations on the capital cost include the following:

(a) The requirements that the projects be of economical and unelaborate design, materials, and construction, and that the Federal Government approve construction contracts before they are awarded.

(b) The specific limitation of average construction cost, in a project, to $1,750 per room for the dwelling facilities. This limitation may be increased to not more than $2,500 per room where necessary in certain high-cost areas.

(c) The limitations on annual contributions. The commitments for annual contributions may not exceed at the current level of Federal interest rates, 4½ percent of the total cost of a project, including all construction, land, site preparation, and overhead. Thus the maximum contributions authorization of $400,000,000 per year will permit a total construction cost of not more than $8,900,000,000 ($400,000,000 capitalized at 4½ percent). For 1,050,000 units the average total cost per unit may not exceed $8,465.

Question. How will low rents be achieved?

Answer. Through the annual Federal contributions, through local tax exemption (less payments in lieu of taxes of up to 10 percent of annual shelter rents) and through low-financing costs. On a project having a total cost of $8,465 per unit, the Federal contribution could average $31.74 per unit per month. Assuming a monthly project cost of $47.45 per month, including operating costs, payments in lieu of taxes of 10 percent of shelter rents and debt service, the maximum contribution would permit an average shelter rent as low as $15.70 per month, or a gross rent, including utilities, of $22.70 per month. Since there will be a range in rents charged, the rents on some of the apartments in this typical project could be substantially below this average.

Question. Will the maximum contribution be paid every year?

Answer. No. Except in years when tenant incomes are unusually low, it is expected that the average rents will be somewhat higher than the achievable minimum. Thus, the average low-income tenant in the average community will be able to pay an average of $23 per month shelter rent, instead of $15.70 as shown in the example previously cited. This will reduce annual Federal contribution to $24.45 per unit per month, or 77 percent of the maximum.

Question. How will the rents be determined?

Answer. Rents will be based on the paying ability of tenants. The bill requires that the incomes of families on admission, less an allowance of $100 annually for each child, not exceed 5 times the gross rent, including utilities. Thus a family with three children which has an annual income of $1,800 per year would be required to pay a gross rent of at least $300 annually ($1,800 minus $300 divided by 5), or $25 per month. This rent will be adjusted upward or downward in accordance with changes in family income as shown in periodic reexaminations.

Question. How is the eligibility of tenants determined?

Answer. The United States Housing Act of 1937 limits occupancy of low-rent housing projects to families living in slums and bad housing whose incomes are so low that they may not obtain decent private housing in their communities. This limitation was modified during the war to permit the housing of essential war workers. Since the war, reconversion to a strictly low-rent purpose has been largely achieved. Families admitted to low-rent projects during the first half of 1948 had a median income of $1,481 and families residing in the projects had a median income of $1,884, despite the continued presence of over-income families whose removal had not been accomplished because of the housing shortage.

H. R. 4009 contains additional provisions to assure that occupancy will be limited to low-income families unable to find decent private housing. Rents on admission (which, as explained in the previous answer, limit incomes) must be at least 20 percent below the lowest rents at which an adequate supply of decent private housing, new or used, is available in the respective communities. Thus, if the lowest rent at which decent 2-bedroom apartments or houses are generally available in the communities is $37.50 per month, including utilities, a similar low-rent, public-housing unit could not be offered to a new tenant at more than $30 (and the family's income would be limited to $1,800 per year, plus the allowance for children).

The bill also requires that families be admitted in accordance with the urgency of their housing needs and that there be no discrimination against welfare families. This requirement is subject to stated preferences. First preference is to be given to low-income families displaced in slum-clearance projects. Among such preferred families, as well as among other low-income families, disabled veterans of World War II and other veterans and servicemen, including families of deceased veterans and servicemen, shall have preference in the order named. For a period of 5 years families of veterans and servicemen do not have to come from substandard housing, as required of other families.

Local housing authorities are required to establish maximum-income limits, approved by the Federal Government, for admission and continued occupancy (similar to those now in effect), to reexamine incomes of tenant families periodically and to obtain the removal of those families whose incomes have passed the maximum limits set for continued occupancy. Thus a family with three children, in a typical case, might be admitted if its income is less than the established limit of $2,100 for admission and continue to reside in the project until its income exceeds the established limit of $2,400 for continued occupancy.

Question. Is the low-rent public-housing program limited to large cities?

Answer. No. Of the 268 localities in which present low-rent public housing is located, 104 had a 1940 population of less than 25,000. H. R. 4009, in addition to specifying that aids be available for housing in both urban and rural nonfarm areas, specifically reserves 10 percent of the annual contributions authorization for 3 years after the amounts are made available. Enabling acts in a number of the States authorize regional housing authorities for economical operation of housing scattered in various small localities.

Question. What will be the cost of the low-rent public-housing program to the Federal Government?

Answer. The cost is limited to the annual contributions required to achieve rents which low-income tenants can afford to pay, together with administrative expenses as authorized in annual congressional appropriations. The aggregate cost of the program is not expected to exceed $10,000,000,000 over the life of the program.

This estimated cost is less than two-thirds of the maximum authorization for annual contributions over 40 years, at the rate of $400,000,000 per year. As explained in the discussion on rents, the annual contributions paid in the average year are not expected to exceed 75 to 80 percent of the maximum permitted. Annual contributions for 1,050,000 units thus would average $310,000,000. A further factor in reducing the aggregate cost would be the low-interest rate at which, on the basis of experience, local authority securities could be sold. On the basis of an average of 2½ percent interest, the debt on the average project could be retired in not more than 33 years, after which annual contributions would be terminated. Thus the aggregate cost of the program is not expected to average more than $310,000,000 per year payable over not more than 33 years.

TITLE III. HOUSING RESEARCH

Question. What is the purpose of the Federal research program contained in title III?

Answer. To provide a comprehensive Federal housing research program. This program is directed to the encouragement of better housing at lower costs through improved techniques, materials, and methods and through improved building codes, and includes the development of more adequate housing data and standards.

Question. Who will conduct the research program?

Answer. Under H. R. 4009 the Administrator of the Housing and Home Finance Agency has responsibility for the housing research program. The bill, however, directs him to utilize to the fullest extent, available facilities elsewhere in the Federal Government and authorizes him to cooperate with industry and labor, with State and local agencies and with educational institutions and other nonprofit organizations.

Question. What will be the cost of the housing research program to the Federal Government?

Answer. The cost is not expected to exceed $5,000,000 a year in the forseeable future and will be determined by funds made available through annual appropriations by the Congress.

TITLE IV. FARM HOUSING

Question. What is the purpose of the farm housing program in title IV?

Answer. To provide Federal financial assistance, in the form of loans, subsidies, and grants, for the provision and improvement of housing and other farm buildings for farm owners who are otherwise unable to finance them for themselves or their farm tenants and workers and also to provide research and adequate data on farm housing.

Question. May housing for farm workers not living on the farms be financed under this title?

Answer. No. Such farm workers of low income may be housed in low-rent public housing projects in rural areas provided under title II of this bill.

Question. Who operates the farm housing program?

Answer. The Secretary of Agriculture who shall utilize, in the case of financial aids, the Farmers Home Administration. The Secretary is authorized to utilize and to compensate local committees of farmers for the examination of applications and the submission of recommendations.

Question. What types of financial aid for farm housing will be available under title IV?

Answer. The financial aids will be available as follows:

(a) Loans for adequate farms: A farm owner whose income is considered sufficient to carry the payments but who is unable to obtain credit elsewhere may be eligible to receive a 33-year loan at 4 percent interest to finance the provision of housing for himself and his farm workers or other farm buildings. The loan will be secured by the farmer's equity in the farm, or other such security as the Secretary of Agriculture may require, and thus will not impair the security of existing mortgage indebtedness on the farm.

(b) Loans and subsidies for potentially adequate farms: A farmer whose income is insufficient to carry a loan as described above, but whose income could be sufficiently increased within 10 years through a program of farm improvement or enlargement may be eligible to receive, in addition to the previously described loan, annual subsidies for not more than 10 years covering the amount of the inadequacies but not exceeding the annual payments of interest and half the annual payments of principal on the loan.

(c) Loans and grants for inadequate farms: In such cases loans and grants will be available only to finance minimum improvements, such as a new roof, privy, or screens, which are essential to health and safety. The total amount available for any farm, house, or building would be $1,000, of which no more than $500 may be a grant. No individual may receive more than $2,000 of such assistance.

Question. What will be the cost of farm housing program to the Federal Government?—

Answer. The cost to the Federal Government will consist of the subsidies paid in connection with potentially adequate farms and the grants made for minor improvements on inadequate farms. The subsidies may reach a maximum of $5,000,000 per year and, since they are payable for only 10 years, they may not aggregate more than $50,000,000. Grants may not exceed $125,000,000 in total. Thus the maximum Federal cost of the farm program will be $62,500,000, plus administrative expenses.

The loans, which may aggregate $250,000,000, are to be repaid at 4 percent interest.

The New Crisis

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1949

Mr. RODINO. Mr. Speaker, once again, the godless seek to stifle the soul of man. Whether they be Protestant or Catholic, those who preach the word of God become more and more the victims of communistic oppressors. For the teachings of God and religious freedom have no place in a communistic regime.

And so, in an unprecedented broadcast to the Nation, Premier Antonin Zapotocky, the other day charged Roman Catholic Archbishop Joseph Beran with sabotage against the Communist regime and said law and justice must be enforced against him.

Will not this be another travesty on justice?

Under leave to extend my remarks in the RECORD, I include herein an editorial which appeared in the Newark Star-Ledger on Wednesday, June 22, 1949. I believe it foretells what can be expected from the law and justice as administered by those who live under the godless state of communism.

THE NEW CRISIS

The gathering church-state crisis in Czechoslovakia differs from the tragedy in Hungary in the important respect that the Reds are much more brazen in their controversy with Archbishop Beran.

In Hungary, the Communists felt the need for confusing the issue by dragging in the question of economic and land policy, asserting that Cardinal Mindszenty was opposed to the government's program for confiscating and dividing large estates. In Czechoslovakia, where a liberal government ruled between the time of the establishment of the republic and its overthrow by Adolf Hitler, the land issue does not exist.

REDS MORE BRAZEN

Here, the conflict is over the naked question of religious freedom. The Communist state is asserting the right to make the church its tool, while Archbishop Beran is asserting the right of the church to be independent of the state, while subject to its law.

The Mindszenty case thus appears to have been but a curtain-raiser for the tragedy of religious persecution in the satellite states behind the iron curtain. Shrewdly, the Communists chose Hungary, where the economic and land questions could confuse the main issue, as their first testing ground. In Czechoslovakia, they are attempting to regiment a church that has been closely associated with the finest aspirations of the people, and they are using as their target a man who endeared himself to the people by suffering years of imprisonment in a Nazi concentration camp.

Archbishop Beran has looked clearly ahead, advising his followers among the priesthood that they must be prepared to make their own decisions in the dark days ahead without guidance from him. He is obviously under no illusions concerning the character of those who would master him, and he is making his comprehension of their ruthlessness clear to all.

Questions and Answers on the Housing Act of 1949, H. R. 4009

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1949

Mr. BUCHANAN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following questions and answers on the Housing Act of 1949, H. R. 4009:

QUESTIONS AND ANSWERS ON THE HOUSING ACT OF 1949 (H. R. 4009)

Question. Why is this legislation necessary and desirable?

Answer. The persistence of the acute housing shortage and the disgraceful conditions under which millions of American families are forced to live have made it clear that comprehensive Federal assistance is essential if real progress is to be made toward achieving decent homes and a satisfactory home environment for the American people as a whole. Doubling up and overcrowding are still widespread. Even under the prosperous conditions of today, the prices and rents of decent housing, new or old, are beyond the financial reach of a substantial portion of our population. As a result, more than 5,000,000 low-income families are crowded into city slums or other substandard housing. Virtually no progress is being made in the clearance and redevelopment of slums. Bad housing is also widely prevalent on American farms.

The purpose of the Housing Act of 1949 is to provide the foundation for the comprehensive action needed to overcome these problems. It would do so on four fronts: (1) Through authorization of Federal financial assistance to communities for a long-delayed, but vitally needed start on the clearance of slums and blighted areas for redevelopment; (2) through continuation and expansion of Federal financial assistance to communities for low-rent public housing for families of low income; (3) through authorization of a comprehensive program of Federal research in housing aimed at relieving the many technical, social, and economic problems which beset the whole field of housing, and (4) through the authorization of Federal financial assistance for the provision of decent housing for farm families and particularly for farm families of low income. The bill also would establish, for the first time, a broad national housing objective aimed at achieving as soon as feasible the goal of a decent home and a suitable living environment for every American family, and would define the policies to be followed in attaining that objective.

Question. What is the background of this legislation?

Answer. The basic provisions of the Housing Act of 1949 are the product of exhaustive congressional investigation and consideration during the past 4 years. The bill incorporates the major unenacted provisions of previous comprehensive housing measures, with certain revisions to meet changing conditions and needs.

The subject matter in the pending bill is in accord with the recommendations of the Joint Committee on Housing in its final report on March 15, 1948, after an intensive investigation of housing conditions involving hearings in 33 cities and the receipt of more than 6,000 printed pages of testimony. Legislative hearings on similar provisions were conducted by the House Banking and Currency Committee from May 3 through June 8, 1948, after which the committee reported favorably a bill containing substantially the same subject matter. This bill, however, was tabled by the Committee on Rules.

The Banking and Currency Committee held hearings on the Housing Act of 1949 during the period from April 7 through May 9. The bill as reported is basically similar to S. 1070 which passed the Senate on April 21 by a vote of 57 to 13.

Question. Does the bill cover all phases of a comprehensive housing program?

Answer. The provisions of the Housing Act of 1949 are fundamental to any comprehensive and effective housing program. They deal with the chronic problem areas in housing—slum clearance and the redevelopment of blighted areas, low-rent public housing for families of low income, a comprehensive program of housing research, and farm housing.

These provisions are essential in order to meet the most urgent housing problems where direct Federal financial assistance is clearly required. At the same time, it is recognized that there are other important phases of the housing problem which are not covered in the pending bill. These involve in the main further improvements to financing aids for private housing. A number of additions to the existing Federal programs for the assistance of private housing were contained in the Housing Act of 1948, enacted at the special session of Congress last year. Further proposals to improve and broaden those programs are now pending, as well as proposals for substantial Federal aid to housing cooperatives.

While these proposals also merit full consideration, it was determined to proceed first with the basic programs contained in the Housing Act of 1949, which have been so long considered and on which wide agreement has been reached during the course of the past 4 years.

Question. Is it true, as sometimes charged, that this bill would give the Federal Government dictatorial powers over local communities and would threaten to nationalize or socialize the housing industry?

Answer. This is not true, on either count. Participation by communities in either the slum clearance program or the low-rent public housing program would be entirely at the option and initiative of local governments. Projects would be locally planned and locally executed. The role of the Federal Government would be restricted to the provision of financial assistance, the furnishing of technical aid and advice, and the administration of statutory requirements to assure that the intent and standards of the law are faithfully observed.

Neither is there anything in the bill that would threaten or undermine the position of private enterprise in housing. On the contrary, there is much that would strengthen it. The declaration of national housing policy stipulates that private housing enterprise shall be encouraged to serve as large a part of the total need as it can and that governmental assistance should be utilized to the extent feasible to enable private enterprise to serve more of the total need. The slum-clearance title requires that the plans for redevelopment of slums or blighted areas afford maximum opportunity for participation by private enterprise. The public-housing title requires a gap of at least 20 percent between the upper rental income limits for admission to public housing and the lowest rents at which private housing is providing an adequate supply of decent housing, new or old, for rent or sale in the locality involved, thus assuring no competition between public housing and private enterprise. Under the farm housing title, loans would be made only to those farmers who are unable to secure credit from other sources at terms within their paying ability. Finally, a primary objective of the Federal research program is to place the private housing industry in a much stronger position to serve a much broader market than today through improved methods and organization.

Question. Is there any merit to the claim that the declaration of national housing policy and objectives in this bill would violate our constitutional principles, bypass States' rights, and lead to some form of statism?

Answer. There is no merit in this claim. The philosophy of the policy declaration in the pending bill rests four-square on the well-established principle that the Federal Government can and should supplement the resources of State and local governments and of private enterprise in order to meet urgent national problems which affect the welfare of the people as a whole. There is wide agreement that housing constitutes such a problem.

This same principle underlies the existing Federal programs for social security, soil conservation, reclamation, rural electrification, aids to road building, aids to hospital construction, and similar matters.

The policy declaration in the pending bill establishes as our national housing objective the achievement as soon as feasible of a decent home in a suitable living environment for every American family. The bill also defines the basic policies to be followed in advancing toward that objective. These policies are entirely compatible with the American system for making progress. They recognize local responsibility and initiative and the primary role of private enterprise in housing. Furthermore, there is nothing in the bill which would authorize or permit Federal dictation to States, cities, or private enterprise. There is no authority in it anywhere which would permit the Federal Government to force any program on any community.

Question. What justification is there for Federal financial assistance to communities for slum clearance? Why cannot the localities and States handle this problem themselves without Federal aid?

Answer. The continued use of well over 5,000,000 slum dwellings and other substandard housing raises issues of national importance from the standpoint of the health and morals of millions of families and millions of children who will represent a substantial percentage of our citizenry in the coming generation. These slums and blighted areas have existed and have spread for generations, and experience has shown that they will continue to exist and to spread unless Federal financial aid is made available for their clearance.

The heart of the slum-clearance problem is the high price commanded by land in the central areas of cities, even when those areas are blighted or deteriorated, and the necessity for a substantial write-off of that price if slum areas are to be redeveloped on a sound basis which will prevent the recurrence of slum conditions.

States and cities are increasingly aware of the social costs of slums, of the threat to municipal solvency arising from the spread of slums and from the increasing spread of new building to the outskirts of cities, and of the heavy municipal outlays for city services in slum areas which greatly exceed the tax revenues derived from those areas. Nevertheless, they have lacked the financial resources to undertake more than a few scattered slum-clearance projects under the redevelopment legislation which is now on the statute books of half of the States. This, in turn, reflects the basic limitations on the sources of revenue for both State and local governments and the mounting costs of established public services.

Question. Are the provisions of the slum-clearance title sufficiently broad to assist comprehensive local redevelopment programs?

Answer. The basic justification for Federal assistance in slum clearance is the serious impact of slum conditions on the lives and development of millions of American families and their children. For that reason, the bill limits Federal financial assistance to the assembly and clearance of areas which either are predominantly residential slums or are blighted and commercial areas or open tracts which will be redeveloped primarily for residential use.

However, this requirement in no sense will interfere with the carrying out of local programs combining slum clearance with comprehensive plans for the development and redevelopment of communities as a whole. Most slums and blighted areas are predominantly residential in character and, in these cases, the bill would permit their redevelopment for whatever new uses are considered best by the locality. Where blighted commercial or industrial areas are isolated from residential slum areas and hence must be redeveloped separately, Federal loans and grants would still be available but with a requirement that they are to be redeveloped for predominantly residential uses. This would not preclude the inclusion of a variety of other land uses within the redeveloped area provided its predominant character was residential.

The bill also recognizes that the clearance of crowded city slums will frequently make necessary a dispersion of the families now living in those slums into new housing developed on presently open urban or suburban land. It therefore makes loans (but not grants) available for the acquisition and preparation of such sites, including temporary loans for the construction of schools or other public facilities necessary to serve the new area.

Question. What about the claim that slums can be cleared or rehabilitated simply through the enforcement of local health and safety regulations?

Answer. While the development and enforcement of sound local housing codes establishing minimum standards of health, safety and sanitation is a desirable objective, such codes in no sense can be considered as an acceptable substitute for effective slum-clearance programs. In the first place, most of the housing in slum areas is not worth permanent rehabilitation, by reason of deficiencies in design, structure and location. Second, to the extent that some slum buildings could be restored to standard condition through substantial repairs and remodeling, the rents charged for those accommodations would necessarily have to be increased sufficiently to finance those expenditures, thereby removing that housing from the supply available to the low-income families now living in slums.

Again, even if local ordinances compelled the demolition or boarding-up of unsafe and insanitary slum structures that are beyond economic repair, such demolition could not be expected to remove fully the principal barrier against sound redevelopment of slum areas, i. e., the high cost of central city land. The piecemeal character of such action also would stand in the way of redevelopment on an economic scale. Finally, reliance upon health and safety regulations as the total answer to the slum problem would completely ignore the basic problem of the low-income families now living in slums. Those families do not live there by

choice but rather from economic necessity arising out of their inability to pay even the lowest rents at which decent housing is available.

It is significant that the mayor of Baltimore, where a widely advertised local program of slum repair has been under way for some time, has testified that this program is purely a palliative measure and in no way is a substitute for a broad-scale program of slum clearance and redevelopment.

Question. Why cannot private enterprise meet the housing needs of all income groups, either through new low-cost housing or through the "trickling down" of used housing?

Answer. According to the Bureau of the Census, 19.7 percent of urban American families had money incomes in 1947 of less than $2,000 and 30.3 percent had incomes of less than $2,500. On the generally accepted basis of paying one-fifth of their incomes for housing, the average rent which the families in this lowest income group can afford to pay would be approximately $37 per month, including heat and all other utilities.

With new housing construction concentrated in price brackets above $7,000 and rental brackets above $70 a month, it is clear that new private housing is far beyond the financial reach of these families.

With respect to the supply of used private housing available to these families, experience has shown that generally only that portion of the housing supply which has deteriorated to substandard condition has declined sufficiently in economic rental value to be within the rent-paying ability of low-income families. The very existence of the slums and their predominant occupancy by low-income families is proof of that experience. It is further borne out by the fact that the average rent being charged for substandard dwellings in urban areas is $28.50 per month.

Question. Why cannot cities make a substantial capital contribution toward the cost of additional public housing?

Answer. Under the Housing Act of 1949 the contribution of local governments to the subsidized rents in public housing projects is in the form of local tax exemption. While this form of local financial participation is workable, and makes a substantial contribution to the low rents in public housing projects, the imposition of a local capital-contribution requirement would greatly diminish if not entirely destroy the workability of the program. The severely limited sources of local tax revenue and the constantly increasing cost of essential municipal services would rule out most cities from participation in such a program. In the survey of slum clearance made for the Joint Committee on Housing during the Eightieth Congress, the mayors of principal cities were asked whether their municipality was in a financial position to share in the capital cost of constructing low-rent public housing; 63 out of 69 mayors replied in the negative. The effect of a local capital-grant requirement for low-rent public housing might well be to permit a few wealthy cities to secure Federal benefits while barring less wealthy cities where the need for public housing is at least as great.

Question. Is it true, as sometimes claimed, that public housing projects do not house low-income families and discriminate against those families most in need of aid?

Answer. The best answer to this claim is the actual experience in the present Federally assisted low-rent public-housing projects. In the first half of 1948, the average income of the families admitted to those original projects was $1,481, or 17 percent below the median income of urban families in the lowest-income third in 1947. The average family income of all tenants in those projects who were eligible for continued occupancy was $1,504, or 11 percent below the median for the lowest third.

While 26 percent of the tenants were ineligible for continued occupancy because their incomes had increased above the maximum ceilings, the legal restrictions then preventing their eviction have since been removed by the Congress and the local housing authorities are now in the process of gradual removal of overincome tenants.

The claim is also sometimes made that families on relief or other welfare cases are discriminated against in public housing. This is not so—and, moreover, would be specifically prohibited in the pending bill. The policy of the public-housing program is to recognize the responsibility for housing families who are being assisted by welfare agencies along with other low-income families in equal or greater need of low-rent housing. However, the public-housing program does not and cannot set rents so low as to accommodate indigent families without the means of existence; in such cases welfare agencies are looked to provide such families with a minimum subsistence income and rents are then set in proper relation to their actual incomes regardless of its source.

Question. Would it be feasible to establish by law a fixed dollar ceiling on the incomes of families eligible for admission to and continued occupancy of low-rent public housing?

Answer. Any fixed income ceiling would be completely impractical and unworkable. The variations in levels of incomes and prices throughout this country are too wide to permit the establishment of a uniform income ceiling for tenants of public housing which would be equitable and workable in all sections of the country. An income ceiling which was adequate to meet needs in the highest-cost large metropolitan areas, where both incomes and prices are in excess of the national average, would be entirely too high for other areas where incomes and prices are below the national average. Conversely, an income ceiling adjusted to conditions in the lowest-cost area would be completely unrealistic and inequitable for the highest-cost areas. Furthermore, fixed dollar ceilings would always be open to distortions resulting from major national fluctuations in the levels of prices and incomes.

On the other hand, the formula contained in the pending bill for the determination of income ceilings is sufficiently flexible to be accurately adjusted to prevailing conditions in every community and to changes in incomes and prices in the course of the years. Under this formula, local housing authorities would fix maximum income ceilings for admission and continued occupancy of their public-housing projects (subject to review and approval by the Public Housing Administration), rents would be set at an equitable proportion of tenants' incomes, and the maximum rents would have to be at least 20 percent below the lowest rents at which private enterprise is providing an adequate supply of decent housing, new or old, in the locality involved. This formula would assure that occupancy will be limited to low-income families and that any possible competition with standard private housing will be avoided.

Question. What about the claim that the cost of public housing under this bill would greatly exceed the cost of comparable private housing and that the construction-cost ceilings for public housing are too high?

Answer. Public-housing projects assisted under this bill would be constructed by qualified private contractors under contracts let by local housing authorities after competitive bidding. The bill requires the Public Housing Administration to make certain that the projects not be of extravagant design and materials and that economy be promoted in construction and operation. The bill also requires the PHA to approve the amount of each main construction contract, after taking into account the level of construction costs prevailing in the locality involved.

These requirements provide assurance that public housing will be constructed economically and at costs no greater than for comparable private housing built under similar conditions. The average net construction cost of the dwellings built under the existing public-housing program, principally during the years 1938 to 1942, was $2,882 per dwelling and the average over-all development cost, including sites, utilities, and all other expenses, was $4,649. While these costs could not be duplicated at today's price levels, they were substantially below the maximum cost limits then established and compared favorably with the costs of comparable private construction during the same period.

The cost limits in the pending bill—$1,750 per room for dwelling facilities with authority to increase this limit by not more than $750 if local conditions require—are necessary in order to permit public housing to be built in the highest cost metropolitan areas. It is well known that there are wide regional variations in construction costs and the setting of cost limits at a level too low to permit construction in large cities would be manifestly unjust and unreasonable. It is anticipated that actual construction costs for the entire program will average substantially less than the permitted maxima.

Question. Will the public housing proposed in this bill compete with private housing?

Answer. Occupancy of the low-rent public housing to be assisted under this bill will be restricted to families with incomes too low to afford adequate new or existing private housing. In fact, the bill requires that local housing authorities, in establishing maximum income limits for admission to low-rent projects, leave a gap of at least 20 percent between the upper rental limits for admission and the lowest rents at which decent private housing, new or old, is generally available for rent or for sale in the locality involved.

The bill further requires the local authorities to set maximum income limits for continued occupancy of the projects, to reexamine the incomes of all tenant families each year, and to require those families whose incomes have increased beyond the maximum for continued occupancy to move from the project.

Under these requirements, there clearly can be no competition between low-rent public housing and decent privately owned housing, whether new or old.

Question. Since the comprehensive bills before previous Congresses would have authorized a program of only 500,000 public-housing units, what is the justification for the program of 1,050,000 units proposed in the pending bill?

Answer. The prevous bills would have authorized the construction of 500,000 public-housing units over a period of 4 or 5 years. The pending bill calls for 150,000 units a year over a period of 7 years.

The earlier bills in no way contemplated that the provision of 500,000 public-housing units would meet more than a small fraction of the need for decent shelter on the part of low-income families living in the slums. On the contrary, it was the intention of the supporters of that legislation that before the completion of those 500,000 units, Congress would reexamine the whole need for public housing, measure the results accomplished, and make provision for whatever further action was shown to be justified.

With no action taken to authorize a resumption of the low-rent public-housing program, the need for such a program has been reexamined by the Congress in studies which have shown conclusively the prevalence of bad housing for millions of low-income families. These studies include the findings of the Joint Committee on Housing in 1948, after an exhaustive investigation

of housing conditions, and the conclusions of the Banking and Currency Committee in 1948 and 1949 after extended housing hearings. In the light of those findings, the extension of the public-housing program proposed in the pending bill represents a minimum program in terms of the acute housing needs of underprivileged families, as well as an effort in some measure to make up for past delays in the resumption of the program.

Question. What about the claim that the public-housing program in this bill would increase the inflationary pressure on the supply of materials and labor?

Answer. The bill would authorize the construction of 150,000 dwelling units per year, representing less than one-eighth of the total annual housing construction which the report of the Committee on Banking and Currency estimates to be the average requirement if real progress is to be made in solving the housing problem.

Building materials production has expanded remarkably since the end of the war and the supply situation has greatly improved. Similarly, there has been steady growth in the supply of trained building labor. On the basis of this past experience, it is reasonable to anticipate that the supply of both materials and labor will continue to expand as total housing production is built up to the needed levels. In the light of the over-all level of needed housing production, the volume of public housing authorized in this bill clearly would represent a minor factor in the supply situation.

The bill also would authorize the President to increase or decrease the number of public housing starts authorized in any one fiscal year if he finds such action to be in the public interest, after advice from the Council of Economic Advisers as to the effect of such increase or decrease upon conditions in the building industry and upon the national economy.

Question. Why is it necessary or desirable for the Federal Government to undertake a comprehensive program of housing research?

Answer. There is wide agreement that the basic cause of the excessive cost of housing is the relative technical backwardness of the housing industry as compared with other mass industries. At the same time, because of the complexity of the industry and the fact that it is composed largely of a wide range of specialized small-business firms, no single firm or group of firms has either the resources or a sufficiently broad stake in the industry as a whole to undertake the comprehensive program needed to modernize the whole process of housing production and marketing.

For this reason, it is clear that leadership and assistance by the Federal Government is essential if real progress is to be made. The establishment of a comprehensive Federal program of housing research was strongly recommended by the Joint Committee on Housing in 1948.

The research program authorized in the pending bill would provide Federal leadership and assistance to bring about consistent progress in the reduction of basic housing costs through more efficient production methods, in the improvement of housing standards, and in overcoming maladjustments in housing production and distribution.

Under this program, the Housing and Home Finance Agency would coordinate the housing research now in progress both publicly and privately, cooperate with both private and public institutions and with industry in stimulating additional needed research, undertake through its own facilities the types of research which cannot otherwise be accomplished, and make widely available the results of these coordinated activities for application by the housing industry and communities.

Question. Is there any merit to the argument that the authority for research should be placed elsewhere in the Federal Government rather than in the housing agency in order to avoid distortions in information?

Answer. There would appear to be no merit in this argument. Under the same reasoning, Federal research in agricultural problems should be divorced from the Department of Agriculture, research on monetary and banking problems should be divorced from the Treasury Department and the Federal Reserve Board, and research on atomic energy should be divorced from the Atomic Energy Commission.

Clearly, the responsibility for housing research should be placed in the agency which has responsibility for the principal housing programs of the Federal Government and which is the central point of contact on housing for the Congress, industry, communities, and the general public. While important research activities affecting housing are conducted in other Federal agencies and departments, these are incidental to other programs and in no case are housing problems as such the primary concern.

Under the pending bill, the Housing Administrator would be directed to utilize to the fullest extent feasible the available research facilities of other Federal departments and agencies. But the responsibility for conducting the research activities needed to overcome many of the basic housing problems long confronting the Nation would necessarily and logically be centered in the same agency which has the primary responsibility for the other major housing programs aimed at relieving those same problems through Federal financial aid and assistance.

Question. What is the justification for a special program of Federal aid for farm housing?

Answer. While there has been improvement in farm housing conditions during recent years, nevertheless a much higher proportion of farm dwellings than urban dwellings are in bad physical condition and a large majority of farm houses lack many of the facilities considered essential in urban housing. Furthermore, nearly a third of the Nation's farm families do not receive sufficient income from their farming operations to finance the needed improvements to their homes and the other building improvements essential to successful farm operations.

At the same time, it is clear that a farm housing program must be closely related to the farm economy and that housing programs developed primarily to meet the needs of city dwellers, either through private housing or public housing, are not adaptable to the special requirements of the farmer.

The farm housing title in the pending bill recognizes, first, that Federal financial assistance for the improvement of housing conditions on farms is an indispensable part of any broad housing program, and, second, that such assistance should be closely related to the Federal Government's over-all program of aids to farmers.

The bill therefore authorizes a special program of financial assistance through the Department of Agriculture and the Farmers Home Administration. This program is designed specifically to meet the problems of farmers who cannot get credit elsewhere to finance the construction of adequate homes or other essential farm buildings. The program would also provide research and technical services, pointed toward more efficient and more economical construction of farm dwellings and buildings.

Question. What will be the cost to the Federal Government of the various programs proposed in the pending bill?

Answer. Aside from certain administrative expenses, the direct costs to the Federal Government would be through capital grants for local slum-clearance programs, annual contributions for low-rent public housing, and grants and contributions for farm housing.

The bill authorizes contracts for capital grants for slum-clearance projects at an annual rate of $100,000,000 for 5 years, or a total of $500,000,000. Contracts for annual contributions for low-rent public housing could be made for a maximum of $35,000,000 in the first year and could be increased by annual increments to an over-all maximum of $400,000,000 a year. These annual contributions could run over a 40-year period. The figure of $400,000,000 represents the maximum which could be paid in annual contributions for public housing in any one year; on the basis of past experience it is anticipated that actual payments will not average over two-thirds to three-quarters of this maximum. For farm housing, the bill authorizes an aggregate of $12,500,000 in grants over a 4-year period and commitments for annual contributions starting at $500,000 the first year and reaching a peak of $5,000,000 after the fourth year. These annual contributions could not be paid for more than 10 years.

At all stages, these direct costs would amount to only about 1 percent of the present Federal budget.

The loan authorizations in the bill for slum clearance, low-rent public housing and farm housing would all be repayable with interest. The cost of the program of housing research would be determined from year to year by the Congress through the normal appropriations procedure.

Widespread Geographic Distribution of the Low-Rent Housing Program

---

EXTENSION OF REMARKS

OF

HON. FRANK BUCHANAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 24, 1949

Mr. BUCHANAN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement showing the widespread geographic distribution of the low-rent housing program:

WIDESPREAD GEOGRAPHIC DISTRIBUTION OF THE LOW-RENT HOUSING PROGRAM

STATE LEGISLATION

Forty-two States, together with the District of Columbia, Alaska, Hawaii, Puerto Rico and the Virgin Islands, have adopted legislation authorizing low-rent public housing programs and providing for the appointment of local housing authorities.

LOCAL HOUSING AUTHORITIES

There are now 472 urban housing authorities which have had actual experience in connection with one or more of the housing programs administered by the Public Housing Administration. In addition, there are upward of 200 local authorities which have been organized but have not yet worked with PHA. The 472 authorities which

have worked with PHA serve 582 localities of the following sizes:

	Localities
Less than 2,500 population	118
2,500 to 9,999 population	125
10,000 to 24,999 population	122
25,000 to 99,999 population	138
100,000 to 249,999 population	44
250,000 to 499,999 population	21
500,000 to 999,999 population	9
1,000,000 and over	5
Total localities served	582

Sixty-three percent of these places have populations of less than 25,000 while 86 percent are below 100,000.

The program for low-rent housing in rural nonfarm areas which would be provided under H. R. 4009 will, of course, serve still smaller localities.

PRESENT LOW-RENT HOUSING PROJECTS

The present low-rent housing projects which are now being administered under the United States Housing Act of 1937 are widely dispersed. The attached table, which gives the number of low-rent units by cities and States, shows that the present program is distributed as follows: 191,700 dwelling units; 268 localities; 37 States, the District of Columbia, Hawaii, Puerto Rico, and the Virgin Islands.

LOW-RENT HOUSING PROGRAMS PROPOSED BY LOCAL AUTHORITIES

By an Executive order issued before the end of the war, the President instructed all Federal agencies to prepare estimates for a postwar shelf of projects. Pursuant to this order, local housing authorities were requested to submit estimates showing the size of low-rent housing programs which they would propose for development over a 3-year period after the war. These estimates were submitted in 1945-46, but have not been acted upon in any way by PHA.

The second column of the attached table, which gives these programs by cities and States, shows that these programs were distributed as follows: 374,840 dwelling units; 357 localities; 37 States, the District of Columbia, Hawaii, Puerto Rico, and the Virgin Islands.

It should be borne in mind that these 3-year programs, averaging approximately 125,000 units per year, were prepared before demobilization and the return of veterans, and before the housing shortage reached its present peak. State legislation was not as complete as it is today, and a large number of the present local authorities had not yet been organized. Moreover, at the time these estimates were prepared, no extension of the low-rent housing program was in sight, and many of the local authorities did not submit estimates. Finally, the rural nonfarm program to be authorized by H. R. 4009 is not represented in these figures.

On the basis of today's conditions, requests which would be made by the local authorities for low-rent housing projects would undoubtedly be several times these figures.

Low-rent urban public housing programs, by States and localities

How the Low-Rent Housing Program Under H. R. 4009 Will Work With Provision for 810,000 Dwellings

EXTENSION OF REMARKS

OF

HON. FRANK BUCHANAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 24, 1949

Mr. BUCHANAN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement on how the low-rent housing program under H. R. 4009 will work with provision for 810,000 dwellings:

HOW THE LOW-RENT HOUSING PROGRAM UNDER H. R. 4009 WILL WORK WITH PROVISION FOR 810,000 DWELLINGS

BRIEF SUMMARY OF STATEMENT

Low-rent public housing authorized by State laws. Local housing authorities created by cities, and members appointed by mayors.

Local authorities develop, own, and manage all low-rent projects. Federal role limited to making loans if necessary, paying annual contributions, and securing compliance with law.

All projects built by private contractors after open, competitive bidding. Prevailing wages are paid to all workers.

Capital cost of projects limited by requirements for (1) economy in design and construction, (2) PHA approval of amount of main construction contract, (3) limitation of dwelling cost to $1,750 per room, in specific cases may be increased by not more than $750.

Permanent financing is by sale of bonds, primarily to private investors, secured by pledge of Federal annual contributions. Financing expected at about 2 percent interest, with complete amortization in 29 to 33 years.

PHA loan authorization increased from $800,000,000 to only $1,500,000,000 in view of primary reliance on private financing. Actual borrowings of PHA will be substantially below authorized total.

Tenants eligible only (1) if of low income, and (2) if coming from slums, displaced by slum clearance, or without housing. Preference in admission given families displaced by slum clearance, veterans, and families with most urgent housing needs. Discrimination against welfare families prohibited.

Occupancy restricted to families of low income by five principal provisions, assuring that all tenants are actually in need of assistance and that there is no competition with decent privately owned housing.

Rent schedules based on needs of low-income families, costs of operating projects, and contributions available. Rent for any given family determined on basis of the family income.

All possible economies secured in operation of projects.

Federal contributions limited to actual cash deficits in operating projects; will be low in prosperous years, but may reach maximum poor years when rent-paying ability is low. Maximum in any year limited to 4½ percent of project cost, but actual amounts expected to average only three-quarters of maximum. Contributions expected to terminate in 29 to 33 years, although maximum period is 40 years.

Local contributions made through tax exemption of projects. Payments in lieu of taxes permitted up to 10 percent of shelter rent. Local contributions average about half of Federal contributions.

Total amount of Federal contributions estimated at seven to eight billion dollars over period of years. Present value of contributions about $5,000,000,000. No cost involved in loans, which are fully repaid with interest.

Annual contribution system has great advantages over any other form of Federal aid. It is economical and flexible, is self-adjusting to needs of different projects in different years, puts Federal assistance on a pay-as-you-go basis, and avoids any large increase in the national debt.

Widespread benefits of new program amply justify its adoption. Workability demonstrated by 10 years' actual experience. Will serve both large and small cities and also rural nonfarm areas. Benefits to low-income families universally recognized. Will give new life and hope over a 40-year period to some 4,000,000 families with 16,000,000 persons, half of whom will be children in their formative years. Projects continue to serve low-rent needs after end of Federal assistance.

BRIEF SUMMARY OF STATISTICS

State laws and local housing authorities

States with low-rent housing laws	42
Active local housing authorities with public-housing experience	472
Localities served by these local authorities (63 percent below 25,000 population, 86 percent below 100,000 population)	582
Localities with present low-rent projects	268
(Lists are available of localities with present projects, and of localities which some years ago requested new projects.)	

Size and capital cost of low-rent programs

Actual number of dwellings in present urban program	191,700
Capital cost per dwelling in present program	$4,649
Maximum number of units authorized in new program	810,000
Total capital cost possible in new program	$6,844,000,000
Capital cost per dwelling if maximum authorizations used	$8,450
Loan-fund authorization increased from $800,000,000 to	$1,500,000,000

Income limits and actual incomes, present program

Average maximum income limits for admission, per year	$1,947
Actual average income of families admitted, 1948	1,481
Actual average income of eligible families in projects, 1948	1,594

Estimated monthly operating costs, rents, and contributions, new program

Operating costs, including repairs, maintenance, and replacements		$13.50
Heat and all other utilities		7.00
Payments in lieu of taxes (10 percent of $23 shelter rent)		2.30
Debt service (amortization in 29 years and interest at 1⅞ percent)		31.69
Total monthly cost		54.49
Less amounts paid by tenants:		
Shelter rent	$23.00	
Utilities	7.00	
		30.00
Actual Federal contributions, estimated average per month		24.49
Maximum Federal contribution per month, average at 4.5 percent		31.69
Actual Federal contributions as estimated percent of maximum		77.3

Total cost of new program to the Federal Government

Maximum contributions per year	$308,000,000
Maximum contributions, total for maximum of 40 years	$12,320,000,000
Actual contributions, estimated average per year	$238,000,000
Actual contributions, estimated total for 29 years	$6,902,000,000
Present estimated value of such total actual contributions	$4,868,000,000
Present value as percent of maximum capital cost, percent	71

Families and persons served by new program

At any given time:	
Total families	810,000
Total persons (½ children)	3,200,000
During 40-year period:	
Total families	4,000,000
Total persons (½ children)	16,000,000

HOW THE NEW LOW-RENT HOUSING PROGRAM UNDER H. R. 4009 WILL WORK WITH PROVISION FOR 810,000 DWELLINGS

The low-rent housing program authorized by H. R. 4009 will be administered under the United States Housing Act, as amended by the pending bill. Under the present act, which was originally adopted by the Congress in 1937, a total of 191,700 simple but adequate homes have been provided in American cities at rents which low-income families can afford to pay. The new bill authorizes the development of an additional 810,000 low-rent dwellings.

The best way to understand how the low-rent housing program has worked, and how it will work under H. R. 4009, is to follow through the steps in the development and operation of a typical project.

State laws and local housing authorities

Low-rent housing can be developed in any State only if the State legislature has specifically authorized such programs and provided for the establishment of local housing authorities in the various localities. Such legislation is now in effect in 42 States, as well as in the District of Columbia, Alaska, Hawaii, Puerto Rico, and the Virgin Islands. Under these laws, local housing authorities are set up by the city governments, and members of these authorities are appointed by the respective mayors. These authorities are purely local public bodies, and are in nowise controlled or dominated by the Federal Government.

There are now 472 active local housing authorities (serving 582 localities) which have had experience in one or more of the public-housing programs of the Federal Government. Low-rent projects are now in actual operation in 268 localities. Several hundred additional authorities have been created but have not yet had experience in operating public housing, and additional new authorities will doubtless be created as soon as Federal assistance is available. These will include new authorities set up on a county basis, or on the basis of a group of counties, to administer the low-rent program authorized by H. R. 4009 for rural nonfarm areas.

Responsibilities of local authorities and of Federal Government

The need for low-rent public housing in each locality is determined by the local housing authority, and the development of every project must be approved by the local government. The local housing authorities construct the projects under contracts with private builders, own the projects, and operate them with their own management staffs. Local governments contribute to the cost of providing low-rent housing through the complete exemption of the projects from all taxation, subject to the making of small payments in lieu of taxes from project revenues.

The role of the Federal Government in the low-rent housing program is limited to the making of loans to cover part of the capital cost when necessary, the payment of annual contributions to help meet the deficits incurred in achieving low rents, and the review of local actions as to conformity with the provisions of law. These Federal functions are administered by the Public Housing Administration, a constituent of the Housing and Home Finance Agency.

Development of projects by local housing authorities

After a local housing authority has demonstrated that there is a need for low-rent housing not being met by private enterprise, the PHA will make a small preliminary loan to cover the cost of preparing plans for a proposed project. Before this loan can be made, however, the application for it must be approved by the local governing body.

The local authority then selects the site for the project and has it appraised, prepares preliminary plans through architects and engineers selected by it, and makes firm estimates of the cost of the project and of its operation. The local housing authority is required to enter into a contract with the local government for cooperation in the development and operation of the project, including a statement that tax-exemption is provided by State law and providing for any payments which are to be made in lieu of taxes.

On the basis of these submissions, the PHA, if it approves the feasibility of the project after a careful review, will enter into a defensive contract for assistance to the project, including payment of annual contributions. This contract, like the contracts for preliminary loans, must be approved by the President before it is executed.

The local authority then proceeds to acquire the project site, and prepares final plans and specifications. Bids for the construction of the project are taken on an open competitive basis, and after PHA approval the construction contract is awarded and construction proceeds.

The act specifically requires that in the development of a project, and also in its management, prevailing wages must be paid to all mechanics, laborers, and technical employees. Other usual conditions relating to labor standards are also included in the act.

Limitations on cost of projects

In order to achieve the lowest possible capital cost of projects, H. R. 4009 requires that—

1. Projects shall not be of elaborate or extravagant design or materials, and economy must be promoted both in construction and administration.

2. Award of the main construction contract must be approved by the PHA, taking into account the level of construction costs in the locality.

3. The cost of dwelling construction and equipment must not exceed $1,750 per room, except that when absolutely necessary the PHA may increase this limit in a specific case by not more than $750.

Under the original program, the average over-all cost of the low-rent projects was $4,649 per dwelling, including land and demolition of old slum buildings, construction and equipment of dwellings, nondwelling structures, architects' and engineers' fees, and local authority overhead and carrying charges. The low level of costs obtained in the present program is testimony to the diligence with which the local authorities and PHA have striven to obtain the greatest possible economies. The costs achieved are particularly significant in view of the following facts:

1. Low-rent projects are planned for hard and continuous use over a long period of years. The most durable and efficient materials and equipment have been used in order to secure savings in operating costs which accumulate to large amounts over the life of a project.

2. Nearly half of the projects were built on cleared slum sites, which involve extra costs of acquisition.

3. Utility distribution systems have usually been included in the projects, in order to permit the purchase of utilities at wholesale rates, affording large economies in operating costs.

4. Most of the projects are of fireproof construction, resulting in insurance savings of approximately $1 a month, or about $480 per dwelling over a 40-year period.

5. In order to accommodate large families with the maximum number of children, the projects built in the low-rent program have averaged half a room larger than the average size of all tenant-occupied urban dwellings in the United States.

6. Prevailing wages are paid on the construction of all projects.

Construction costs have more than doubled since the present program was developed, and this increase will naturally be reflected in the new program under H. R. 4009. For the new program the annual contributions which are authorized will suffice to cover aggregate project costs of $6,844,000,000. If the full number of new dwellings authorized by the bill (810,000) is built, the maximum possible cost of the projects, including all items, would average $8,450 per dwelling.

This is, of course, the average maximum cost. In small localities and in rural nonfarm areas where land and construction costs are relatively low, the total development cost should be well below this figure. On the other hand, in the large metropolitan centers where all cost levels are high, costs under present conditions can be expected to run above this average, and the dollar-cost limits in H. R. 4009 are set so as to permit such higher costs where necessary.

It is manifestly impossible to estimate what the average cost per dwelling will be over the next 5 or 6 years, but on the basis of expected construction costs and the use of the provisions of title I for writing down the value of slum sites (when used) to their use value, it is believed that the total cost of the new projects should average between $8,000 and $9,000 per dwelling. If construction costs decline in the future, this reduction will be fully reflected in the costs of the new program.

Financing of the capital cost of low-rent projects

After the definitive contract for a project has been entered into with the PHA, the local authority makes use of temporary loans to finance its capital costs during the first part of the development period. These loans are, in general, obtained through the sale by the local authorities of their temporary loan notes to private investors. These notes are secured by an obligation of the PHA to loan funds if necessary at the maturity of the temporary notes, sufficient to cover the principal and interest thereof. Due to this excellent security, the temporary notes of the local authorities are now being sold at interest rates averaging less than 1 percent per year. All temporary loan notes on a project are retired as soon as it is permanently financed.

When the construction of a project is partially completed and its cost known with sufficient accuracy, the local authority proceeds to permanent financing through the sale of its long-term serial bonds. These bonds are secured, under the terms of the act, by a pledge of the annual contributions which the Federal Government has contracted to pay to the local authority. Because of the excellent security which will thus be afforded under the terms of H. R. 4009, it is believed that substantially all of the permanent bonds for a project can be sold to private investors at very attractive interest rates. Under present market conditions, it is believed that interest rates of 2 percent or somewhat less should be obtained for this long-term financing.

The maximum contribution thus available for pledge as security for permanent bonds is a percentage of the total development cost, this percentage being fixed at a rate equal to the cost of long-term money to the Federal Government (going Federal rate) plus 2 percent. Under present conditions, the maximum contribution rate would be 4½ percent. In the permanent financing of projects, the maturities of the serial bonds are so arranged that the debt service (including payments on principal plus interest) will in each year be in the same level amount. In order to pay off the capital cost of a project in the shortest possible period, and thus terminate Federal contributions, this level-debt service is arranged so as to substantially equal the maximum contributions available as security for the bonds. Thus, under present conditions, the debt service per year would be set at just under 4½ percent of the capital cost. If the local authorities succeed in obtaining interest rates averaging 1⅞ percent, this debt service wil make it possible to completely amortize the capital cost in 29 years. If interest rates on local-authority bonds go as high as 2½ percent, 33 years would be required for amortization.

For a project costing $8,450 per unit (the maximum possible average cost if full contribution and construction authorizations are used), the debt service corresponding to 1⅞ percent interest would amount to $31.69 per month. The total cost of the project would in this case be amortized in 29 years, at which time Federal contributions would cease and the local authority would continue to operate the project for low-rent use without further Federal assistance.

Loan funds authorized for PHA

The present act authorizes PHA to borrow from the Treasury a total of $800,000,000 for loans to local housing authorities, which cannot exceed 90 percent of the development cost of the projects. Under H. R. 4009 this amount will be increased by $700,000,000 to a total of $1,500,000,000. The authorization to make loans to local authorities out of these funds will be used by the PHA for the following purposes:

1. To make small preliminary loans for the planning of projects.
2. To permit PHA to obligate loan funds as security for temporary loan notes sold by local authorities to private investors.
3. To make temporary loans to local authorities when conditions do not warrant the sale of temporary notes to private investors.
4. To make permanent loans for any part of the permanent financing not covered by the sale of bonds to private investors.

Because of the primary reliance upon the financing of project costs by private investors, H. R. 4009 increases the loan funds available to PHA by only $700,000,000, although the total development cost of the new program can amount to a maximum of $6,844,000,000. Since one of the principal uses of the PHA loaning power will be to provide security for temporary loan notes sold to private investors by the local authorities, it is expected that the funds actually borrowed from the Treasury at any time will be very substantially below the total authorization of $1,500,000,000.

Selection of tenants: eligibility and preferences

While a project is being constructed, the local authority will complete its plans for the management and operation of the project and will commence the selection of tenants. Applications are accepted well in advance of the opening of a project, and these applications are carefully reviewed in order to determine the eligibility of tenants and to administer the preferences prescribed by law.

In order to be eligible for admission to low-rent projects, H. R. 4009 requires that (except in the case of veterans for a 5-year period) the families must either come from slum housing, have been displaced by public slum clearance or urban redevelopment projects, or actually be without housing through no fault of their own. They must also be families whose income falls below the established maximum income limits as described in the next section.

In order to make it possible to carry out public slum clearance and urban redevelopment projects, H. R. 4009 extends a preference in admission to low-rent housing to families displaced by such clearance projects. As among such families, preference in admission is given to veterans, with a first preference to disabled veterans and a second preference to the families of deceased veterans and servicemen whose death was service-connected. A similar veterans preference is also given as among all other eligible families. Moreover, in the initial selection of tenants for a project, local authorities must, subject to the above conditions, give preference to families having the most urgent housing needs.

In the selection of tenants, the local housing authorities will be prohibited from discriminating against families, otherwise eligible for admission, because their incomes are derived in whole or in part from public welfare. As a matter of fact, local authorities have always recognized their obligation to house welfare clients, and at the present time from 10 percent to 25 percent of the tenants in most projects are welfare families.

Occupancy restricted to families of low income

The occupancy of low-rent housing projects will be strictly limited to families of low income. This is assured by the following provisions in H. R. 4009:

1. The top rent for admission to a proposed project must be at least 20 percent below the rents at which private enterprise is providing a substantial supply of available standard housing, either new or existing.
2. The net income of families at the time of admission (less an exemption of $100 for each minor member) cannot exceed five times the annual rent to be charged them, including all utilities.
3. Maximum income limits must be set by the local authorities for admission to their projects, and maximum limits must also be set for continued occupancy therein—all subject to PHA approval.
4. Local authorities must make written reports to PHA showing that incomes of families admitted did not exceed the maximum limits.
5. Local authorities must periodically reexamine the incomes of all tenant families in order to adjust rents, if necessary, and to evict families whose incomes have increased beyond the maximum limits fixed for continued occupancy.

These provisions, which will be written into law, make it abundantly certain that public housing will be restricted to families which actually need such public aid, and that there will be no competition between public housing and decent housing provided by private enterprise.

The maximum income limits for admission are set by the local authorities after a careful study of local needs, including such factors as the incomes of families forced to live in slum housing, the lowest incomes being earned by regularly employed workers, and the income levels permitted by relief agencies for their clients. Maximum income limits for continued occupancy are generally set at 20 to 25 percent above those for admission, in order to permit some increases in family income without necessitating eviction.

The maximum income limits for admission of average-sized families which are now in effect for the original program average $1,947 per year. This is an extremely low figure in view of present-day economic conditions. For an identical list of cities, the maximum income limits set by the local authorities average 36 percent less than minimum adequate budgets (as determined by the Bureau of Labor Statistics) for the essentials of life for an average city worker's family of four in the same cities.

The actual incomes of the families in low-rent housing projects are naturally well below the maximum limits. In the first half of 1948 the average income of the families admitted was only $1,481 per year, and the income of all tenants eligible to continue in occupancy was $1,594. These figures are respectively 17 percent and 11 percent below the average incomes of all urban families in the lowest income third, as shown by the 1947 figures of the Bureau of the Census. It is thus apparent that the families admitted to and living in public housing not only come from the lowest income third but from the lower segments of that income group.

Under the proposed extension of the low-rent housing program, the maximum income limits for comparable cities should not be appreciably greater than those which now prevail, and lower limits are to be expected in smaller communities and in rural nonfarm areas which participate in the new program. The actual incomes of tenant families under the new program should not be substantially greater than those which prevail in the present projects.

Rents charged in low-rent housing

In fixing the schedule of rents to be charged in a low-rent project the local authority must take into account the following factors:

1. The level of rents required to serve low-income families coming from the slums.
2. The cost of operating the project and paying debt service (including the repayment of capital costs together with interest).
3. The contributions available for the reduction of rents from the Federal Government (in the form of annual contributions), and from local governments (in the form of exemption from real and personal property taxes).

Families living in low-rent housing are required to pay all that they reasonably can in relation to their incomes. On the other hand, the pressure of food, clothing, and other necessities of life on the meager budgets of these families is so insistent that rents must not exceed a reasonable proportion of their incomes.

Local authorities, therefore, fix the rent to be charged a given family, not according to the size of the dwelling which it requires, but on the basis of its net family income. Each family is required to pay a fixed proportion of its income for rent (including all utilities), which percent may not be less than 20 percent. In order to aid large families, a deduction of $100 from the net family income is allowed under H. R. 4009 for each minor member of the family.

It is estimated that the shelter rents which will be needed to serve low-income families during the life of a new program will average about $23 per month, in addition to which utilities would cost a further $7. Under the new program, it should be possible (as explained below) to achieve this level of rents with the use of only 75 to 80 percent of the maximum Federal subsidy. In bad times, when the rent-paying ability of low-income families decreases, it will therefore be possible to reduce rents by a further $7 per month through the use of the maximum Federal contribution.

Costs of operating and managing low-rent housing projects

Low-rent projects are operated by full-time staffs employed by the local authorities. Every possible attention is given to securing the utmost economy in operation. Projects are planned so as to reduce maintenance costs, and materials and equipment are designed to withstand hard usage over a long life of operation. Utilities are generally purchased at wholesale rates, with very important savings in the cost of electricity, gas, and water. The cost of repairs, maintenance and replacement is kept to low levels by encouraging tenant cooperation, and by requiring a maximum amount of tenant maintenance, such as care of their grounds, interior painting, and minor repairs. Very low insurance rates are obtained because of the fire-proof or fire-resistant design of dwellings and by the spacing of buildings far enough apart to greatly reduce fire hazards. Vacancy and collection losses have been reduced to a minimum, in lieu of the 5 to 10 percent generally allowed by private developers for such losses, the actual amount of these losses on low-rent projects in 1948 averaged only 0.3 percent of total rents.

It is estimated the average over-all cost (including utilities and debt service) for the operation of projects under the new program would be about as follows, per dwelling per month:

Operating costs, including repairs, maintenance, and replacements	$13.50
Heat and all other utilities	7.00
Payments in lieu of taxes (10 percent of $23 shelter rent)	2.30
Debt service (amortization in 29 years, 1⅞ percent interest)	31.69
Total monthly cost	54.49

Federal contributions to secure low rents

In order to secure rents within the means of families of low income coming from the slums, contributions are required both from the Federal Government and from local governments.

The Federal contribution is in the form of an annual cash contribution. The actual amount paid in any year is limited to the actual cash deficit in such year incurred by the local authority in the low-rent operation of the project.

The maximum contribution which can be paid in any year, as explained earlier, is equal to a percentage of the capital cost of the project. This percentage, under contracts entered into at present rates, would be 4½ percent. On a project costing $8,450 per dwelling (the maximum possible average cost if the full contribution and construction authorizations are used), the maximum Federal contribution would thus be $31.69 per dwelling per month.

Although less than the maximum contribution will be required for most projects and in most years, the contracts entered with local authorities permit the payment of maximum contributions, when needed, for two principal reasons:

1. In bad years, the maximum contribution will be available, if required, in order to achieve rents within the means of low-income families.

2. Maximum annual contributions will be available, if needed, for the payment of interest and amortization on the bonds sold to private investors. This pledge of maximum contributions provides security for the largest possible debt service and thus accelerates amortization and saves interest.

On the basis of the expected average operating costs and rents, the average actual Federal contributions are estimated as follows:

Operating cost, including utilities and debt service		$54.49
Less amounts paid by tenants:		
Shelter rent	$23.00	
Utilities	7.00	
		30.00
Actual average Federal contributions, per month		24.49

This is an estimate of average Federal contributions over the full period during which they will be paid. Experience with the present program has shown that in good years, when the rent-paying ability of low-income families is somewhat increased, less than this amount will actually be required. In bad years, on the other hand, higher amounts may be required, running up in the case of some projects to the full maximum amount contracted for.

The estimated actual amount of $24.49 is only 77.3 percent of the possible average maximum of $31.69 per month. That this estimate of the amounts actually required is a conservative estimate is shown by the fact that for the projects on which contributions have been paid under the present program, the contributions actually paid have averaged only 58.5 percent of the maximum amounts authorized for such projects.

The maximum period over which Federal contributions may be paid under H. R. 4009 is 40 years. However, as explained earlier, the expected interest rates which will be obtained on permanent financing will permit amortization of the whole project cost in a substantially shorter period. If actual interest rates average 1⅞ percent amortization can be completed in 29 years; if the average interest rates go as high as 2.5 percent, amortization can be completed in 33 years. The Federal contributions will terminate when amortization is completed, and will thus be actually limited to periods substantially less than the full 40 years.

Local contributions to secure low rents

Contributions by the localities are also required in order to assist in securing rents within the means of low-income families coming from the slums. For this purpose H. R. 4009 requires that low-rent projects be exempted from all real and personal property taxes. Such exemption is now granted pursuant to all State low-rent housing laws except in the case of Ohio, and corrective legislation is now before the legislature of that State. In the event that any State does not provide tax exemption for its low-rent projects, H. R. 4009 permits the localities, in lieu thereof, to make cash contributions equal to 20 percent of the actual Federal contributions.

In order that public housing projects shall bear a share of the cost of municipal services, such as schools, streets, and so on, H. R. 4009 will permit the local authorities to make payments in lieu of taxes not greater than 10 percent of the shelter rents charged in their projects. This is the amount formerly authorized by PHA, and represents an amount which is both fair to the cities and at the same time assures an adequate local contribution through tax exemption.

Experience has demonstrated the practicability of these arrangements for securing local contributions. Indeed, tax exemption is the only feasible and available means through which local communities can bear their fair share in the costs of the low-rent program. Under the provisions of H. R. 4009 it is expected that the contributions thus made by the localities will, over the life of the projects, average approximately 50 percent of the actual Federal contributions.

Total cost of the program to the Federal Government

The total cost to the Federal Government of the new low-rent-housing program, with the exception of administrative expenses, is represented by the annual contributions paid to achieve low rents. The increase in loan authorization of $700,000,000 does not represent a cost to the Federal Government, since all loans made to local authorities (including also all loans made out of the original $800,000,000 authorization) will be repaid in full, together with interest equal to the cost of long-term money to the Federal Government.

The total contribution authorization under H. R. 4009 is a maximum of $308,000,000 per year for a maximum period of 40 years. Although it is necessary to have maximum contributions available in the event they are needed in specific cases, both experience and logic prove that the contributions actually paid will neither be in the maximum amount nor for the maximum term of years. As shown above, it is conservatively estimated that the contributions will average only 77.3 percent of the maximum yearly authorization, and they may well be substantially less than this amount. On this basis, the average of the annual contribution over the years during which they will be paid would amount to approximately $238,000,000 per year.

If expected interest rates averaging 1⅞ percent are obtained in permanent financing, the contributions will cease after 29 years, and in this case would aggregate approximately $6,902,000,000. If, because of higher interest rates on permament financing, contributions extended over a 33-year period, they would aggregate $7,854,000,000.

This estimate of aggregate contributions of between seven and eight billion dollars does not, however, represent the present value of the contributions to be made by the Federal Government. This can be illustrated by an example of a privately owned house purchased subject to a $10,000 mortgage to be paid off over 25 years under conventional FHA-insured financing with 4½-percent interest, plus one-half percent for mortgage insurance. The mortgage payments (on an annual basis) would amount to $709.52 per year, and over a 25-year period would aggregate $17,738. However, a purchaser would never think of adding to his down payment this amount of $17,738 in order to determine what he is paying for his home, but would add only the original mortgage amount of $10,000. In other words, it is common knowledge that such future payments of $17,738 when computed at 5 percent have a present value of only $10,000.

Obviously, the annual contributions to be made for low-rent housing over a period of years should be similarly computed in order to determine their present value. In such a computation of the present value of Federal contributions, it is appropriate to use the interest rate which the Federal Government is now paying for long-term money, namely, 2½ percent per annum. On this basis, the present value of annual contributions totaling $6,902,000,000 ($238,000,000 per year for 29 years) would be $4,868,000,000 while if these contributions extended over 33 years their present value would be $5,305,000,000.

In determining what proportion of the capital cost of the low-rent projects will eventually be borne by the Federal Government, it is appropriate to use these figures of the present value of the aggregate contributions. It is obviously unfair to compare present capital cost with the aggregate of future contributions, as is so often done by opponents of the program. On a proper basis of a comparison, the present value of actual contributions over a 29-year period would amount to 71 percent of the maximum capital cost ($6,844,000,000) which is possible in the new program. If the contributions have to be extended over 33 years, their present value would be 77 percent of the aggregate development cost. It is thus utterly fantastic to claim, as is done by some opponents of the program, that its cost to the Federal Government will greatly exceed the total cost of the low-rent projects themselves. The truth is that a safe estimate of the ultimate cost of the program to the Federal Government, when properly computed, will be only about three-fourths of the present cost of developing the projects.

Advantages of the annual contribution system

It is apparent that the annual contribution system embodied in H. R. 4009 is an efficient, flexible, and economical system, for the following reasons:

1. Contributions are limited in each year to the actual cash deficits made necessary by the operation of the projects for low-income families.

2. Maximum contributions may be paid in any given year if bad times necessitate such payments, while in good years contributions are reduced to the amounts actually required.

3. Annual contributions, when pledged as security for permanent financing, will make these bonds extremely attractive to investors, and serve to secure very advantageous interest rates. These low interest rates will very materially reduce the cost of Federal contributions.

4. The low interest rates obtained through the pledge of annual contributions will make it possible to amortize project costs and terminate Federal contributions within a period estimated from 29 to 33 years.

5. The present value of the total annual contributions required will approximate only three-fourths of what it would cost the Federal Government to make capital grants covering the full cost of the low-rent projects.

6. The cost of the benefits provided by annual contributions are spread over future years, rather than burdening present taxpayers with the ultimate cost of the whole program. The annual contribution system thus puts low-rent housing on a pay-as-you-go basis, similar to other programs of social betterment.

7. Under the annual contributions system, local authorities are enabled to raise substantially the entire cost of their projects through the sale of their bonds to private investors. It is thus possible to finance the entire capital cost of low-rent housing with a very lim-

ited recourse to Federal borrowing and with a correspondingly limited increase in the national debt.

Widespread benefits of the new program amply justify its adoption

Ten years' experience under the present United States Housing Act of 1937 has clearly demonstrated the workability and practicability of the low-rent housing program. Simple but adequate homes have been provided within the means of families of low income coming from the slums, at costs to the Federal and local governments which are reasonable in relation to the great benefits secured.

The new low-rent housing program will have a wide geographic distribution. The bill provides that not more than 10 percent of the contributions can be expended in any one State. The program will serve cities ranging in size from the smallest hamlets up to the great metropolitan areas. Of the places now served by active local housing authorities, 63 percent have populations of less than 25,000, and 86 percent are below 100,000. New authorities will be formed for many more small places as soon as Federal aid is available. Moreover, the program under H. R. 4009 is to be extended into rural nonfarm areas where housing needs are equally as urgent and desperate as in the cities.

The regenerative effects of public housing in improving the health, character, and morale of low-income families is universally recognized. After a period of residence in low-rent housing, experience has shown that the incomes of tenants generally increase, and that when they leave public housing because their incomes exceed the permissible limits, 20 percent of them purchase homes of their own.

The 810,000 new dwellings authorized under H. R. 4009 will accommodate some 3,200,000 persons. Because of the turn-over in tenancy in public housing, the number of families served over a 40-year period will be approximately five times the number in residence at any one time. It is thus conservative to assert that the new low-rent program will eventually bring new life and hope to 4,000,000 families, comprising some 16,000,000 persons. The majority of these will be children in the impressionable ages of youth when the benefits of living in decent housing rather than in the squalor of the slums will have a lasting effect in molding their characters as future American citizens.

Although the Federal contributions for low-rent projects will terminate as soon as their capital costs are amortized, their usefulness will not then be ended. They will continue to be operated by the local authorities as low-rent housing and will continue to serve low-income families as long as their useful life permits and as long as they are needed in the locality.

Economy in the Cost of Public Housing Is Assured by Provisions of H. R. 4009

EXTENSION OF REMARKS

OF

HON. FRANK BUCHANAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 24, 1949

Mr. BUCHANAN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement entitled "Economy in the Cost of Public Housing Is Assured by Provisions of H. R. 4009":

ECONOMY IN THE COST OF PUBLIC HOUSING IS ASSURED BY PROVISIONS OF H. R. 4009

The cost of public housing must, in the public interest, be held down to the lowest possible limits consistent with producing adequate dwellings of long-term usefulness. The United States Housing Act as amended by H. R. 4009 will have three principal provisions limiting project costs:

1. Congressional directive to secure economy.

2. Federal approval of amount of main construction contract.

3. Specific dollar cost limits on dwelling construction and equipment.

CONGRESSIONAL DIRECTIVE TO SECURE ECONOMY

The act as amended will specifically require that every contract entered into must provide that the project shall be undertaken in such a manner that it will not be of elaborate or extravagant design or materials, and economy will be promoted both in construction and administration."

A similar provision in the present act has been the most important and the most effective of the three provisions dealing with project costs. The local authorities, almost without a single exception, have followed this provision literally and seriously. The PHA and its predecessors not only have seen to it that the local authorities conform to this provision but have provided much technical advice and assistance in this connection. The projects which were built under the United States Housing Act are of the simplest design consistent with providing homes of decent minimum standards of livability. They are planned for hard and continuous use over a long period of years, and great attention was given to selecting durable materials and equipment, and facilitating efficient operation. Since small savings in monthly operating costs accumulate to large amounts over the life of a project, special emphasis was laid on securing such future economies even though this involved some increase in capital costs.

The effectiveness of the congressional directive to secure economy is demonstrated by the actual cost record of the present low-rent projects. The average cost per dwelling, including every item of cost, is as follows:

Site:		
Acquisition	$631	
Improvements and utility distribution systems	459	
		$1,090
Dwelling construction and equipment:		
Net construction cost	$2,882	
Movable equipment	116	
		2,998
Nondwelling structures		126
Architectural, engineering and superintendence		243
Local authority overhead		84
Carrying charges, interest, etc.		108
Total development cost		4,649

The average total development cost per room amounted to $1,083.

The low level of these costs obtained by the local housing authorities is particularly significant in view of the following facts:

1. Nearly half of the projects were built on the sites of cleared slums which are more expensive than vacant sites, and involve costs not generally incurred by private builders who do not generally build on sites of this character.

2. Low-rent projects generally install their own utility distribution systems for electricity, gas, and water, rather than relying on installations provided by the utility companies, as in private practice. As a result, low-rent projects can purchase their utilities at wholesale, making savings over the life of the projects sufficient to pay the added capital costs several times over.

3. Most of the projects are of fireproof construction, resulting in insurance savings of approximately $1 a month, or about $480 per dwelling over a 40-year period.

4. The dwelling space provided has been cut down to a minimum for decent living, dining rooms have been abandoned, and eating space has been incorporated in the living room or kitchen. However, public housing has provided as many bedrooms as possible in order to accommodate families with substantial numbers of children, since public housing pays greater dividends in respect to these future citizens than in respect to any other age group. The average number of rooms in the present public housing projects is 4.4 and should be somewhat larger in a new program. This figure of 4.4 rooms is one-half a room larger than the average size of all tenant-occupied urban dwellings in the United States as shown by the census of 1947, and is seven-tenths per room larger than the average size of rental projects insured by FHA during the period when the present projects were being built. The larger number of rooms provided in public housing, of course, involved an increase in capital costs, but greatly increased the usefulness of the projects and the number of people who could be accommodated.

5. In the low-rent program, Congress has required that prevailing wages be paid to all laborers, mechanics, and technicians employed in the development or administration of the projects. This is a very proper requirement in connection with any program of public construction, but it does, however, result in a somewhat higher cost for public housing than for private housing produced by builders who do not pay prevailing wages.

In view of these factors, the average cost of $4,649 is testimony to the diligence with which local authorities and the PHA have striven to carry out the congressional mandate to secure the greatest possible economies. The same provision will be equally effective in securing low costs under any extension of the low-rent housing program.

REQUIREMENT FOR FEDERAL APPROVAL OF MAIN CONSTRUCTION CONTRACT

The act as amended by H. R. 4009 requires that no award of the main construction contract for any project shall be made unless the PHA "taking into account the level of construction costs prevailing in the locality where such project is to be located, shall have specifically approved the amount of such main construction contract."

The PHA requires local authorities to construct their projects under lump-sum contracts awarded to private contractors after competitive bidding. Before a construction contract can be let by a local authority, the act will require the specific approval of the amount of the contract by PHA.

This approval will be given only after a thorough review as to the suitability and economy of the proposed design and as to the durability and usefulness of the proposed materials and equipment. The PHA would also be required to make a thorough review of the current levels of construction costs prevailing in the locality to make sure that the amount of the proposed contract is in line with these cost levels.

This provision of the act gives the PHA an effective control against the construction of any uneconomical project and against any inflation of construction costs.

SPECIFIC DOLLAR COST LIMITS ON DWELLING CONSTRUCTION AND EQUIPMENT

The original cost limits on dwelling construction in the United States Housing Act have not been revised since its passage in

1937. The level of construction costs has more than doubled since that date, and the original cost limits are utterly unrealistic today.

In lieu of the original cost limits on dwelling facilities of $1,000 or $1,250 per room (depending on city size), H. R. 4009 provides a uniform cost limitation on dwelling construction and equipment of $1,750 per room. In order to meet expected higher costs in some areas and to permit a reasonable degree of latitude in the event of any future rise in prices, PHA would be authorized, if necessary, to increase the cost limit per room by not more than $750. This increase in the authorized cost limit would be available only if the PHA finds that in a given geographical area it is not otherwise feasible to construct a proposed project without sacrifice of sound standards of design, construction, and livability, and only if there is an acute need for such housing in the locality.

The dollar cost limits proposed in H. R. 4009 been the subject of careful scrutiny both by the PHA and by a number of local housing authorities. They are as low as it is feasible to set them without defeating the purposes of the program, at least in some localities.

This does not mean that actual project costs are expected to equal or even to approach these limits in the great majority of cases. Under the original program, the average cost per room of projects in larger cities was only 66 percent of the applicable cost limit, while in smaller cities it was only 71 percent of the limit. In the new low-rent housing program similar experience would be had in respect to the cost limits proposed in H. R. 4009.

In this connection, a study has been made of the costs which might be expected if a number of typical existing low-rent projects were being built under present conditions. The local housing authorities asked their contractors to reestimate these projects on the basis of the cost levels prevailing at the end of 1948. The expected average costs per room of dwelling construction and equipment were as follows:

Cost per room:	*Number of projects*
$1,000–$1,249	8
$1,250–$1,499	7
$1,500–$1,749	8
$1,750–$1,900	7
$2,000–$2,249	5

These figures indicate the great diversity in the costs which are to be expected in different parts of the country, ranging from Northern States where extensive heating equipment is required to southern areas where little or no heating is necessary. The projects represented in these estimates range from very simple projects in small communities to the great multifamily projects which are necessary in New York and other metropolitan centers.

On the basis of these figures, costs would go over the proposed normal limit of $1,750 in only about one-third of the cases, and even then it would not be necessary to make full use of the additional authorized amount. The authorization to exceed the normal limit by $750 per room is, however, necessary unless we are to risk depriving great metropolitan areas, such as New York, Newark, Chicago, Detroit, Philadelphia, and Boston, of their rightful chance to participate in the program. Price levels in these areas are high, not only for housing but for all the necessities of life, and the income taxes paid in such municipalities to the Federal Government are also high. Slum conditions in these cities are fully as bad as elsewhere, and low-income families living in these cities should not be deprived, because of higher price levels, of the same right to look forward to decent homes as is accorded citizens in smaller communities.

Moreover, any reduction in the proposed cost limits which would result in reducing the size of the dwellings in public housing or the sturdiness of their construction would be a very false economy. Public housing is built for a long life of hard wear, and the use of durable materials and of well-built equipment pays for itself many times over in reduced operating costs over a long period of years. Other special features of public housing projects, which are not usually found in private residential construction, serve to keep annual costs down and reduce Federal contributions. Such economies, which, over the life of a project far exceed the additional capital costs involved, might well be made impossible if cost limits were set too low.

NO STATUTORY LIMITATION SHOULD BE SET IN TERMS OF PRIVATE CONSTRUCTION COSTS

The three requirements limiting the cost of public housing in H. R. 4009, together with the record of economy achieved by the local authorities and PHA on the present program, are amply sufficient to guarantee that the lowest possible costs will be reached on a new public housing program.

The Banking and Currency Committee of the House, however, noted that contentions have sometimes been advanced that the cost of public housing should be limited by law to the lowest levels at which private housing is being produced. The committee stated that it did not believe that these contentions are realistic or well founded.

In the first place the fact that some private housing is being produced in some sections of the country at prices of $6,000 or $7,000 does not establish that even in those sections housing of this type would be suitable for the intensive, long-term use required in public housing or for the wide range of family sizes which clearly should be accommodated in publicly assisted projects.

In the second place, these arguments ignore the fact that the public housing program is a national program which must be workable in all sections of the country where there is a demonstrable need for such housing. The committee called attention to the fact that isolated examples of low costs cannot be accepted as a valid basis for a maximum cost limitation to cover all conditions everywhere in a country as vast and as varied as ours. It is well known that building conditions and costs vary greatly in this country. In some areas, climatic conditions permit lighter construction than in other areas. In some sections, the entire level of prices and incomes is lower than in others. It follows that while the costs of both private and public construction will be relatively low in some localities, any over-all limitation that would have the practical effect of barring construction except in those areas would be manifestly unjust and unreasonable.

EXPECTED COSTS UNDER NEW PROGRAM

H. R. 4009 authorizes maximum annual contributions which would suffice to cover projects with a total development cost of $8,889,000,000. If the full 1,050,000 units authorized by the bill are provided, the average total cost, including land, dwelling construction and equipment, nondwelling structures, architects' and engineers' fees, and local authority overhead and carrying charges would average $8,465 per dwelling.

It is, of course, impossible to estimate what the average development cost of low-rent dwellings will be over the next 5 or 6 years. On the basis of expected construction costs, and assuming that slum lands when used are written down to use-value with the aid of the slum-clearance provisions of title I, it is believed that the total development cost per dwelling of low-rent projects should average between $8,000 and $9,000.

These expected costs, taking into consideration the fact that building costs have more than doubled since the original program was developed, are well in line with the low costs actually achieved on the present projects. If there are reductions in the level of building costs in the next few years, these will, of course, be fully reflected in the costs of public housing built under the new program.

CONCLUSION

The present provisions of H. R. 4009 are amply sufficient to assure that maximum economy and efficiency will be obtained in the new low-rent housing program. It is strongly urged that these provisions be accepted as recommended by the Banking and Currency Committee of the House, and that no reduction be made in the dollar-cost limitations now embodied in H. R. 4009.

Statement Against Proposal To Limit the Costs of Public-Housing Projects to the Average Cost of FHA-Insured Dwellings

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Friday, June 24, 1949

Mr. BUCHANAN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement against the proposal to limit the costs of public-housing projects to the average cost of FHA-insured dwellings:

STATEMENT AGAINST PROPOSAL TO LIMIT THE COSTS OF PUBLIC-HOUSING PROJECTS TO THE AVERAGE COST OF FHA-INSURED DWELLINGS

Prior to the Senate debate on the proposed Housing Act of 1949 (S. 1070), Mr. CAIN and Mr. BRICKER submitted an amendment (No. 4–13–49–B) to limit the cost of public-housing projects to the average cost of FHA-insured dwellings. This amendment was rejected by the Senate by a vote of 46 to 28.

The proposed amendment was objectionable and unnecessary, and no similar amendment to H. R. 4009 should be agreed to by the House.

The proposed amendment would have stricken out the present requirement in the pending bill that public-housing projects be so built that "economy will be promoted both in construction and administration." The amendment would further require that the cost of the dwellings in public-housing projects be not more than the costs of new privately built dwelling accommodations currently being insured in the area by the Federal Housing Administration.

ADEQUATE PROVISIONS ALREADY IN BILL

S. 1070 and H. R. 4009 already contain restrictions on the cost of low-rent public housing which are amply sufficient to assure that the greatest possible economy will be achieved consistent with the provision of housing meeting minimum living standards and suitable for a long life of hard usage. In the first place, there is a revision of the dollar-cost limits per room which increases the original cost limits set in 1937 in keeping with the increases in building costs since that date. In the second place, there is a provision that no award of the main construction contract for any project shall be made unless the PHA has specifically approved the amount of such contract. This approval would include a review as to the suitability and economy of the proposed design, and would also be based upon the level

of construction costs prevailing in the locality. In the third place, there is a firm declaration of policy by the Congress that low-rent projects shall "not be of elaborate or extravagant design or materials, and economy will be promoted both in construction and administration." In practice, it is this statement of policy which in the original act was most efficacious in securing low costs.

The costs secured in the original program amounted to only $4,649 per dwelling, including land and any old buildings on the land, all site improvements, construction, equipment, and fees and overhead costs. In relation to the dollar-cost limits set in the original act, the actual costs averaged about one-third below the statutory limit. It is apparent that the low costs achieved were due to the unremitting efforts both of the local authorities and the PHA to achieve the lowest possible costs and safeguard the use of public funds.

The proposed amendment would have repealed an essential part of the congressional mandate to secure low costs through the deletion of the requirement that economy will be promoted both in construction and in administration. The present language of S. 1070 and H. R. 4009 in this respect should most certainly be retained.

PROPOSED AMENDMENT UNFAIR TO PUBLIC HOUSING

The requirement that the cost of low-rent public housing be not more than the cost of new privately built dwellings insured by FHA is unfair and objectionable on a number of counts.

1. It is unfair in that the size of the individual dwellings in public-housing projects is larger than the average size of dwellings now being built under FHA. Public housing emphasizes, and properly emphasizes, provision for larger families. These are the ones who are most in need of decent housing and they are the ones for which private enterprise makes the least provision. It is certainly wise public policy to make the greatest possible provision for decent homes for our future citizens rather than allow them to grow up in the slums. In accordance with this policy, the original low-rent projects average 4.4 rooms per dwelling. Under a new program it is intended that this average be substantially increased. In contrast, the FHA large-scale projects built at the same time as the original low-rent projects averaged only 3.7 rooms per dwelling and the ones being built today are even smaller. To require that public housing projects meet the cost of FHA projects would make it almost impossible to provide the larger units which public housing could and should provide.

2. Low-rent propects are built for a long life of very hard usage. Exceptionally durable materials and well-built equipment are insisted upon and the extra capital costs involved in their use is paid for many times over through reduced operating costs during the long life of the projects. FHA projects, on the other hand, do not place the same emphasis on long-term life and low operating costs. In this connection it is, therefore, manifestly unfair to require that public housing meet FHA costs. Such a provision, if enacted, would make it far more difficult to build low-rent housing projects which would achieve economies of operation over a long period, and because of increased annual costs and resulting Federal contributions would be a measure of very false economy.

3. Public-housing projects have in general been built of fireproof or fire-resistant construction. As a result, the cost of fire insurance, together with all other coverages, has been reduced to a very low average figure of only 26 cents per dwelling per month or $3.12 per year. This is believed to be at least $1 a month less than the comparable cost to private owners, and over a 40-year period would result in a saving in Federal annual contributions of $480, a very substantial fraction of the entire capital cost. In contrast, FHA projects are generally not of fireproof construction. Therefore, it would be unfair to make low-rent projects meet the FHA costs, and such a provision if insisted upon would result in increased costs of operation—another measure of false economy.

4. The low-rent projects embody many other special features designed to insure low annual costs of operation with subsequent savings in Federal contributions. For example, most low-rent projects have included utility-distribution systems which permit the purchase of utilities such as water, electricity, and gas at wholesale rates. The savings over a 40-year period pay for the additional capital costs of such installations several times over. Such features are not embodied in most FHA-insured dwellings. Here again the insistence on meeting FHA cost levels would be a measure of false economy indeed.

5. Under the terms of the United States Housing Act prevailing wages or fees must be paid to all architects, technical engineers, draftsmen, technicians, laborers, and mechanics employed in the development and administration of low-rent housing projects. This is a very proper requirement in connection with a program of public construction. On the other hand, the wages paid on much of the FHA-insured construction, particularly single houses, fall substantially below the level of wages paid pursuant to statute in the construction of low-rent projects. It would, under these conditions, be manifestly unfair to require that the low-rent projects meet the FHA average cost.

For the above reasons no amendment of this nature should be made to H. R. 4009. The provisions of the present bill are amply sufficient to insure the greatest possible economy in the development of low-rent housing projects. The past record of the local authorities and the PHA guarantee that the lowest possible costs will be achieved in any new program which Congress now authorizes.

Statement Against Proposal of Fixed Dollar Income Limits for Admission to Low-Rent Housing

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Friday, June 24, 1949

Mr. BUCHANAN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement:

STATEMENT AGAINST PROPOSAL OF FIXED DOLLAR INCOME LIMITS FOR ADMISSION TO LOW-RENT HOUSING

Prior to the Senate debate on the proposed "Housing Act of 1949" (S. 1070), Mr. BRICKER submitted an amendment (No. 4–12–49 B) to provide fixed dollar income limits of $1,200 and $1,500 for admission to low-rent housing. This amendment was not called up by its sponsor during the debate in the Senate, and accordingly no action was taken on the proposal.

The proposed amendment was objectionable and unnecessary, and no similar amendment to H. R. 4009 to provide any fixed dollar income limits should be agreed to by the House.

The proposed amendment would have prohibited the admisison of any person or family into public housing with an income in excess of $1,500 per annum if the project is located in a county or parish with a population of more than 100,000 persons or with an income in excess of $1,200 in smaller counties or parishes. Income limits for continued occupancy would be 10 percent higher. No Federal contributions could be made for the operation of public housing if any unit were occupied by a person or family with an income in excess of the specified limits, except in the case of a tenant's misrepresentation of his income or during the period while an over-income tenant is being evicted. Any citizen, association or corporation could sue for the recovery of any Federal contributions paid in violation of this section, and could also recover a penalty equal to the amount of the Federal contribution.

It is impossible in our country with its wide diversity of economic conditions to set any Nation-wide dollar limit for admission to public housing projects. Any limit which, in New York, Chicago, and other great metropolitan centers, would permit the admission of families who are in desperate need of decent housing, would be so high as to be meaningless in smaller communities. Conversely, if a limit were set that was realistic for smaller communities, particularly in the South, it would be utterly unrealistic in larger cities. The fact that two limits ($1,200 and $1,500) were specified in the proposed amendment does not provide a sufficient range, nor does the relating of these limits to county populations provide a realistic base for differential.

Under the present act, the setting of income limits is left to the various local authorities, who have an intimate knowledge of local conditions. The income limits set by them are determined after careful study of local needs and are subject to approval by the Public Housing Administration. The income limits which have actually been set for families of average size run from $1,300 to about $2,700. In almost 50 percent of the localities, the income limits fall between $1,600 and $2,000, with another 25 percent falling between $2,000 and $2,200. The average maximum income for admission is $1,947. This average of maximum income limits, of course, is far higher than the average income of the tenants who are admitted. For example, in the first half of 1948, the average income of families admitted to low-rent projects was only $1,461, or 24 percent below the average of the maximum limits.

The present method of setting income limits has worked well in practice, and the limits set by the local authorities have met with the approval of their respective communities.

The proposed amendment is objectionable on the further ground that it does not provide for any adjustment of income limits with changing economic conditions. Within the past 8 years, the cost of living has increased by 70 percent, and income limits set on a realistic base before the war have had to be increased by somewhat similar amounts today. Conversely, in an era of falling prices, downward revisions to income limits would be in order. Such revisions in line with changing economic conditions are possible (and under H. R. 4009 are required) when income limits are determined from time to time by local authorities, but they would not be possible—at least rapidly enough—if embodied in long-term permanent legislation.

Finally, the administrative provisions of the proposed amendment are burdensome and restrictive, and the proposed penalties are altogether out of keeping with the magnitude of the offenses. For the mere admission of one over-income family, a whole project would be penalized by the denial of an entire year's Federal contribution. A

penalty of like amount would be given to an informer who brought suit. These administrative provisions and penalties in themselves reveal the fact that the intent of the sponsor of this amendment was not a bona fide intent to properly restrict the income of tenants in public housing, but is rather an intent to undermine and, if possible, destroy the whole low-rent housing program.

Any amendment which attempts to set specific dollar limits for admission to low-rent housing projects is open to similar objection, and any such proposed amendment to H. R. 4009 should be rejected by the House.

Statement Against Proposal To Require Equivalent Elimination of Slum Dwelling as a Part of the Low-Rent Housing Program

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1949

Mr. BUCHANAN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement against the proposal to require equivalent elimination of slum dwellings as a part of the low-rent housing program:

STATEMENT AGAINST PROPOSAL TO REQUIRE EQUIVALENT ELIMINATION OF SLUM DWELLINGS AS A PART OF THE LOW-RENT HOUSING PROGRAM

Prior to the Senate debate on the proposed Housing Act of 1949 (S. 1070), Mr. CAIN and Mr. BRICKER submitted an amendment (No. 4-21-49 A) to restore the provisions in the original United States Housing Act of 1937 requiring the equivalent elimination of slum dwellings on a one-to-one basis as a part of the low-rent housing program. (This original provision is repealed by S. 1070 and H. R. 4009, and the proposed amendment would strike out this repeal.) The proposed amendment would also require that such equivalent elimination be carried out under local police powers and be accomplished within 1 year after the low-rent housing is available for occupancy. This amendment was rejected by the Senate by a vote of 50 to 22.

Although everyone heartily endorses the objective of eliminating slums as rapidly as possible, the proposed amendment is not a sound or feasible method for securing this objective and is contrary to the entire philosophy of H. R. 4009. Any such amendment is unwise and unworkable and should be rejected by the House.

The present provisions in H. R. 4009 are the result of the most careful deliberations by the Congress and its committees over a 5-year period. These studies have shown that slum clearance and low-rent housing, although closely interrelated, are in reality two separate matters. These two programs are therefore dealt with separately in H. R. 4009. The responsibility for removing slums is embodied in title I. The responsibility for rehousing slum families of low income is embodied in title II. The bill clearly recognizes that although a large low-rent housing program is necessary to facilitate slum clearance, slum clearance is not a part of low-rent housing.

Slum elimination should properly be undertaken under the provisions of title I. To include it as part of the low-rent program would not accomplish the purposes which are sought and would only serve to hinder and impede the carrying out of the low-rent housing program, for the following reasons:

1. Low-rent dwellings must be provided before slums can be torn down, and equivalent elimination, if required as a part of the low-rent housing program, would have to be deferred until this is done. (Incidentally, the proposed amendment includes no provision for deferment and is doubly unworkable on this account.) When such elimination had been accomplished, additional low-rent housing would have to be provided before further slum clearance could go forward. There would thus, of necessity, be a perpetual deferment of at least one installment of equivalent elimination which could never be caught up with.

2. Housing shortages are more desperately acute for families of low income than for families in any other income group. The overcrowding of the slums today is one of the most vicious aspects of the whole slum-housing problem. In many cases two, three, and even four families are crowded into dwelling units which would be inadequate for even one family. A sound housing program must therefore provide for very substantial increases in the supply of housing available to families of low income. A statutory requirement that one slum dwelling be eliminated for every new low-rent dwelling, would make it absolutely impossible to achieve this necessary increase in the supply of decent low-rent housing.

3. Present acute housing shortages will force most cities in the immediate future to locate the bulk of their low-rent projects on vacant sites. Equivalent elimination, if insisted on as part of the low-rent program, would of necessity, in such cases, have to be accomplished by off-site elimination. Congressional investigations over a period of years have repeatedly demonstrated how impossible it is, under present conditions, to secure this sort of slum elimination through an exercise of police power. Additional funds for off-site elimination and additional machinery would therefore be required as part of the low-rent housing program if equivalent elimination were insisted upon. This would, of course, conflict with the slum-clearance program of title I, and lead to administrative waste and duplication.

4. If equivalent elimination were made part of the low-rent program, substandard dwellings would be eliminated wherever this could most easily and economically be done under existing conditions. The dwellings eliminated would, of necessity, be scattered sporadically through all of the slums and blighted areas of the various cities. Anyone who has visited slums where scattered units have been removed will testify as to the utter ineffectiveness of such a procedure. Where a few old dwellings are removed from a slum block, the abandoned sites accumulate rubbish and become new eyesores and new hazards to health and decency. The unified and final elimination of slum areas, with provision for proper reuse of the reclaimed sites, can be achieved only through a unified slum clearance program such as that in title I of H. R. 4009; it cannot be achieved through an equivalent elimination provision added to the low-rent housing title.

A very real and substantial start on the ultimate removal of slums from our American cities can be made with the funds provided under title I. If the Congress desires to step up the slum-clearance program, this can be done now or at some future date through an increase in the funds made available for this purpose. It would, however, be unsound to seek such an increase in the slum-clearance program through inserting an equivalent elimination requirement in the low-rent housing title.

The various localities, under the terms of H. R. 4009, will themselves determine the manner in which to proceed with their local programs of slum clearance and low-rent housing. This is as it should be, for the conditions in the cities of this country are too diverse to warrant the imposition of iron-clad procedures by the Federal Government. In some cities slum clearance may go forward in the near future with the aid given in title I. Other cities may find it more in keeping with local needs to first provide a considerable amount of low-rent housing, and then, when conditions permit, proceed with slum clearance under title I, supplementing this with a more extensive use of the police power to require the closing and demolition of slum dwellings.

If the Federal Government provides adequate financial assistance for slum clearance and low-rent housing, the local governments and their public agencies can be trusted to carry out these programs in the manner best suited to the needs of their respective communities. The testimony of mayor after mayor indicates the willingness and overwhelming desire of their cities to eliminate their slums as rapidly as possible. The Congress does not need to tell them exactly how this should be done, and should not, therefore, insist on a one-for-one requirement for equivalent elimination.

Both experience and logic have proved that an equivalent elimination requirement as part of the low-rent housing program is neither feasible nor in keeping with sound public policy. Any amendment of this nature should, therefore, be rejected by the House.

Answer to Congressman Herter's Statement in Congressional Record of June 15, 1949

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1949

Mr. BUCHANAN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following answer to Congressman HERTER's statement in the CONGRESSIONAL RECORD of June 15, 1949:

ANSWER TO CONGRESSMAN HERTER'S STATEMENT IN CONGRESSIONAL RECORD OF JUNE 15, 1949

The Director of the Budget, in his letter to Mr. SABATH of June 6, in respect to the low-rent housing program, stated that "the maximum cost under the proposed program could not exceed the actual cost which would be involved in direct construction." Mr. HERTER, in a statement in the Appendix of the CONGRESSIONAL RECORD, page A3719, questioned the correctness of this conclusion.

The statement made by the Director of the Budget is in accord with the facts, and his conclusion is fully justified, as shown in this memorandum. The figures used in the body of this memorandum relate to the program of 1,050,000 units, but figures for the reduced program of 810,000 are shown in the last two paragraphs.

It is correct, as Mr. HERTER points out in his statement, that the maximum contribution rate authorized under H. R. 4009 is

4¼ percent upon total development cost. Such maximum contributions could be paid over a maximum period of 40 years.

The maximum contribution authorization amounts to $400,000,000 per year for a program of 1,050,000 units. The maximum amount of development cost on which 4½ percent contributions could be paid out of the $400,000,000 contribution authorization would be $8,889,000,000. This is the effective upper limit on the total development cost for 1,050,000 units.

WHY MAXIMUM CONTRIBUTIONS ARE CONTRACTED FOR

If maximum contributions were paid in every year for every project, and if such maximum contributions extended for the maximum of 40 years on every project, the aggregate of the contributions would exceed the total development cost of the projects. But the payment of such maximum contributions for all projects for the maximum period could never happen in actual practice.

As a matter of fact, the actual contribution paid for a project in any year is limited to the actual cash deficit incurred in such year by the local authority in the low-rent operation of the project. Contributions which are substantially less than the maximum contribution will be required for most projects in most years. However, the payment of maximum contributions, when needed, is permitted under contracts entered into with local authorities for two principal reasons:

1. In bad years the maximum contribution will be available, if required, in order to achieve rents within the means of low-income families.

2. Maximum annual contributions will be available, if needed, for the payment of interest and amortization on the bonds sold to private investors. This pledge of maximum contributions provides security for the largest possible debt service and thus accelerates amortization and saves interest.

ANNUAL CONTRIBUTIONS ACTUALLY REQUIRED FOR 1,050,000 UNITS

Although on these contracts running over a long term of years it is necessary to have contributions available to meet the maximum needs which may occur in some few years, this does not imply that the maximum will be paid in every year. Quite the contrary is the case. Under the present program the annual contributions paid have amounted to only 58.5 percent of the maximum amount. It has been very conservatively estimated that on the new program the annual contributions will not exceed 77.3 percent of the authorized maximum. This would result, under H. R. 4009 as reported, in actual contributions averaging $309,000,000 for 1,050,000 units over the period during which contributions are actually paid.

The contributions would also, in general, terminate substantially before the expiration of the maximum 40-year period. How soon they will terminate depends upon the interest rates which are secured when permanent bonds on the project are sold. If interest rates averaging 1⅞ percent are obtained, as is now expected, total amortization would be completed in 29 years, and contributions would cease at that time. If the average interest rates are as high as 2½ percent, amortization can be completed and Federal contributions terminated in 33 years.

It is for these reasons that the actual contributions to be paid over the life of a program for 1,050,000 units will not exceed nine to ten billion dollars, as stated in the reply to the Director of the Bureau of the Budget.

PRESENT VALUE OF CONTRIBUTIONS IN RELATION TO CAPITAL COST OF 1,050,000 UNITS

As was pointed out in Mr. SABATH'S original inquiry of June 1, the present value of these future payments should be discounted to obtain their present value if a comparison is to be made between them and the capital cost of the projects. Since the cost of long-term money to the Federal Government is 2½ percent, it is appropriate to discount these payments at that rate of interest. The present value of the actual contributions would thus be approximately $6,500,000,000. When this present value of actual contributions is compared with the present maximum capital cost of 1,050,000 units ($8,889,000,000), it will be seen that the value of contributions to be paid will actually be somewhat less than 75 percent of the capital cost of the projects. It is inconceivable that the present value of contributions could ever amount to as much as the full cost of the projects.

CONTRIBUTIONS FOR PROGRAM OF 810,000 UNITS

The Democratic Members of the House in their caucus of June 21 proposed a reduction in the program to 810,000 units with maximum contributions of $308,000,000 per year. Under such a program, the above figures would be correspondingly reduced. The actual expected contributions would average just under $240,000,000 per year, and their aggregate over 29 years would be approximately $6,900,000,000. The present value of such contributions discounted at 2½ percent would be just under $4,900,000,000 or somewhat less than three-fourths of the actual cost ($6,844,000,000) of the 810,000 units which could be built under the revised program.

Thus, for both the original program in H. R. 4009 and for the reduced program, it is apparent that, when properly computed, the cost of the contributions which the Federal Government will actually be called on to pay will not exceed, but will in fact be substantially less than the capital cost of the projects.

Brief Explanation of Annual Contributions System Under H. R. 4009 With Provision for 810,000 Dwellings

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Friday, June 24, 1949

Mr. BUCHANAN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following brief explanation of the annual contributions system under H. R. 4009 with provision for 810,000 dwellings:

BRIEF EXPLANATION OF ANNUAL CONTRIBUTIONS SYSTEM UNDER H. R. 4009 WITH PROVISION FOR 810,000 DWELLINGS

H. R. 4009 continues the system of Federal annual contributions which have proved so successful in the present low-rent housing program. These Federal annual contributions, together with local contributions (made through the exemption of projects from taxation) are necessary in order to achieve low rents within the means of families coming from the slums.

The maximum annual contribution which can be paid in any one year on a given project is limited under H. R. 4009 to a percentage of the total development cost of the project, the percentage being 2 percent greater than the applicable going Federal rate of interest. Since the going Federal rate of interest is now 2½ percent, the annual contribution rate would be 4½ percent on contracts entered into under present conditions.

The maximum annual contributions which could be contracted for H. R. 4009 as reduced are $308,000,000 per year. On the basis of the present maximum annual contribution rate this would be sufficient to provide contributions on projects with a total development cost of $6,844,000,000. On a project costing $1,000,000 the maximum annual contribution would be $45,000 per year.

The annual contribution thus determined is the maximum amount which can be paid in any one year. The amount actually paid is limited to the cash deficit incurred by the project during the year, that is, to the total annual cost including debt service, less the amount of rent actually collected. In practice, annual contributions are rarely, if ever, paid in the maximum amount. For example, on the low-rent projects developed under the original United States Housing Act, the annual contributions actually paid have averaged only 58.5 percent of the maximum amount which could have been paid. Under the new program it is anticipated that not more than about three-quarters of the maximum amount will be paid on the average.

The annual contributions under H. R. 4009 may be paid over a period not exceeding 40 years. Since they are not needed after the payment of debt service on capital cost is terminated, the PHA contracts provide that contributions cease at an earlier date if capital costs are liquidated earlier. With the interest rates which can reasonably be expected in today's market, it is estimated that capital costs can be liquidated in 29 to 33 years instead of running on to the full 40 years permitted.

USE OF ANNUAL CONTRIBUTIONS AS SECURITY IN CAPITAL FINANCING

As used in the low-rent housing program, the annual contributions serve not only for the reduction of rents, but also serve as security for the bonds issued by the local housing authorities to cover the capital costs of their projects. Under the terms of the present act, and under H. R. 4009 the annual contributions are pledged to the bondholders. The financing is so arranged that the annual debt service (including interest and amortization) does not exceed the maximum contribution which may be paid if necessary. The faith of the United States is solemnly pledged to the payment of the annual contributions contracted for, and under the provisions of H. R. 4009 the bonds of the local authorities will thus be an almost riskless security.

The exceptional quality of this security will make it possible for local authorities to borrow at substantially lower interest rates than they would otherwise be able to achieve, and to secure private financing for virtually the entire capital cost of their projects. It is believed that in the present market interest rates of somewhat less than 2 percent should be obtained.

ADVANTAGES OF THE ANNUAL CONTRIBUTIONS SYSTEM

The annual contributions system has proved to be an efficient, flexible, and economical method for administering Federal aid to low-rent housing. This system has a distinct advantage over a system of capital grants.

Capital grants would have to be paid in full as soon as a low-rent project is built, despite the fact that these grants would serve to provide a continuing benefit to low-income families over a long period of years. Under the annual contributions system, on the other hand, the cost of these benefits is spread over future years rather than burdening today's taxpayer with the full cost of subsidy for a long term of years. The annual contributions system thus puts low-rent housing on a pay-as-you-go basis similar to other programs of social betterment.

The annual contributions system makes it possible to limit the assistance given in any year to the exact amount required in such year. In good times, the annual contributions needed are only a fraction of the maximum amount, while the full amount can be paid in less prosperous periods if this is necessary. Capital grants, on the other hand, would have to be made in advance and the reduction in rent secured by them would be the same in every year. Once given, no reduction in the amount of a capital grant would be possible in respect to future years which require less than maximum subsidy.

Moreover, under the annual contributions system, it is expected that it will be possible to limit the annual contributions payments to substantially less than the 40 years permitted under H. R. 4009. No corresponding reduction would be possible in respect to a project assisted by a capital grant.

Finally, if capital grants were made they would either have to be met by immediate large appropriations substantially equal to the cost of the projects or else the Federal Treasury would be called upon to raise the necessary funds through an increase in the national debt. Under the annual contributions system, on the other hand, local authorities are enabled to raise substantially the entire cost of their projects from the sale of bonds to private investors. The annual contributions system has thus made it possible to finance the capital cost of low-rent housing at very low rates of interest, with little or no recourse to Federal borrowing and with little or no increase in the national debt.

Benefits to Rural Nonfarm Areas Under H. R. 4009 Through Low-Rent Housing Program Totaling 810,000 Units

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1949

Mr. BUCHANAN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement showing the benefits to rural nonfarm areas under H. R. 4009 through low-rent housing program totaling 810,000 units:

BENEFITS TO RURAL NONFARM AREAS UNDER H. R. 4009 THROUGH LOW-RENT HOUSING PROGRAM TOTALING 810,000 UNITS

A rural housing program was initiated under the provisions of the present United States Housing Act. Because of the war, this program did not get beyond an experimental stage. Contracts were entered into for 8,381 dwelling units although only 515 were actually built before such construction was stopped by order of the War Production Board.

H. R. 4009 will require that at least 10 percent of the annual contribution funds made available must be reserved for 3 years for projects to be located in rural nonfarm areas. Because of the lower capital cost of construction in rural areas, it is estimated that this amount of annual contributions would provide at least 100,000 dwellings in rural nonfarm areas out of the total program of 810,000 units, or about one-eighth.

This reservation required for rural nonfarm housing is the minimum which will be provided. Because of the desperate and deplorable housing conditions in many rural villages and communities throughout the Nation the number of dwellings which will be provided out of H. R. 4009 should undoubtedly exceed the minimum estimate of 100,000 units.

The rural nonfarm dwellings will be built in the main by housing authorities operating on a countywide basis, or by regional authorities covering groups of counties. Rural housing authorities have been already established in 11 States for operations under the present United States Housing Act. In these 11 States there are 62 rural housing authorities, most of which cover a group of counties. For example, in the following States the number of rural housing authorities and the number of counties they cover are as follows:

State	Number of authorities	Counties covered
Arkansas	5	72 out of 75 counties.
Alabama	31	31 out of 67 counties.
Florida	2	38 out of 67 counties.
Georgia	3	42 out of 159 counties.
Louisiana	4	15 out of 64 counties.
Mississippi	8	60 out of 82 counties.
North Carolina	1	11 out of 100 counties.
South Carolina	4	Entire State.

It is expected, as soon as new Federal assistance is available for low-rent housing in rural nonfarm areas, that throughout the Nation many new authorities will be formed to take advantage of this assistance.

Low-Rent Public Housing Actually Serves Families of Low Income

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1949

Mr. BUCHANAN Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement showing how low-rent public housing actually serves families of low income:

LOW-RENT PUBLIC HOUSING ACTUALLY SERVES FAMILIES OF LOW INCOME

The objective of the low-rent public housing program is to serve families in the lowest income group who cannot afford the rents which private enterprise must charge for adequate housing.

The original United States Housing Act of 1937 expressed this policy clearly and unmistakably. The amendments to this act proposed in H. R. 4009 add administrative provisions designed to make doubly sure that low-rent housing is restricted to families of low income who actually need public aid in order to secure decent living quarters.

STATUTORY PROVISIONS ASSURING OCCUPANCY BY FAMILIES OF LOW INCOME

Under the United States Housing Act of 1937, as amended by H. R. 4009, the following provisions will assure that occupancy in low-rent housing is restricted to families of low income:

1. Before a contributions contract is entered into between a local housing authority and PHA, the local authority must show that a gap of at least 20 percent has been left between the upper rental limits for admission to the project, and the lowest rents at which private enterprise is providing (through new construction and available existing structures) a substantial supply of decent, safe, and sanitary housing toward meeting the need of an adequate volume thereof. This provision is in accordance with the basic national policy of encouraging private enterprise to move downward in the income scale as far as possible and provide housing for families which it is not now serving. It makes doubly sure that there will be no competition between public housing and decent housing provided by private enterprise.

2. Low-rent dwellings shall be available solely for families whose net annual income at the time of admission (less an exemption of $100, for each minor member) does not exceed five times the annual rent, including all utilities.

3. Explicit provisions of the act require the local housing authorities to set maximum income limits for admission to their projects and also to set maximum income limits for continued occupancy therein. If conditions change the local housing authorities must set new income limits. All maximum income limits must be approved by PHA.

4. The local housing authority must make written reports to PHA showing that families admitted did not have incomes exceeding the maximum income limits.

5. The local authority must periodically reexamine the incomes of all tenant families. If it finds that the incomes of any families have increased beyond the maximum limits fixed for continued occupancy, such families must be required to move from the projects.

INCOME LIMITS UNDER THE PRESENT PROGRAM

The various requirements which would be in effect after the passage of H. R. 4009 will be similar to those under which the present low-rent housing program has been operating. The results of the present program, therefore, afford a clear indication of what may be expected under the newly authorized program.

The income limits which have been set by local authority, subject to PHA approval, have been based on a careful study of the needs of low-income families in their respective localities. The following table shows the percentage distribution of the maximum income limits for admission of families of average size. Somewhat lower income limits are generally set for families of less than average size, and somewhat higher income limits are set for larger families with three or more minor dependents.

Percentage distribution by local authorities

Income limits for admission of families of average size:	
$1,200–$1,399	1.3
$1,400–$1,599	7.6
$1,600–$1,799	18.3
$1,800–$1,999	31.3
$2,000–$2,199	25.0
$2,200–$2,399	8.9
$2,400–$2,599	5.6
$2,600–$2,799	1.8
	100.0

Median, $1,947.

The wide diversity in these income limits which have been set by the various local authorities is responsive to the wide diversity of economic conditions in a country as large as ours. This diversity of appropriate income limits illustrates how impossible it would be to set any dollar-income limit on a Nation-wide basis which would be both effective and at the same time in keeping with local needs.

The median of the income limits set by the various localities for families of average

size amounted to $1,947 per year. This is an extremely low figure in view of present-day economic conditions. To appreciate how low it actually is, it should be compared with the cost (as recently determined by the Bureau of Labor Statistics) of a minimum adequate budget covering the essentials of life for an average city worker's family of four. These minimum average budgets in June 1947 ranged from a low of $3,004 in Houston, Tex., to a high of $3,458 per year in Washington, D. C. The average of these minimum budgets was $3,244 per year; in comparison with this, the maximum income limits for admission to public housing in the same list of cities averaged $2,062. In other words, the maximum income limits set by the local housing authorities averaged 36 percent less than minimum adequate budgets covering the essentials of life in the same cities for families of the same size.

In view of these figures there can be no doubt that the income limits set by the local housing authorities (with the approval of FHA) effectively restrict the admission of tenants to public housing to families who are in very low-income brackets and who cannot possibly afford to pay the rents which are necessary to secure decent private housing.

ACTUAL FAMILY INCOMES UNDER THE PRESENT PROGRAM

The actual annual incomes of families in the original low-rent housing projects for the first 6 months of 1948 are shown in the following table:

Annual incomes of families in low-rent housing projects, percent distribution and median

[Public Law 412 and PWA projects, first 6 months of 1948]

Annual income	New admissions	Reexamination for continued occupancy		
		All tenants reexamined	Eligible to continue	Ineligible to continue
	Percent	*Percent*	*Percent*	*Percent*
Under $500	0.9	1.3	1.3	----------
$500-$999	11.5	10.4	10.4	----------
$1,000-$1,499	39.7	21.0	21.0	----------
$1,500-$1,999	38.6	22.6	21.6	1.0
$2,000-$2,499	8.2	18.6	14.1	4.5
$2,500-$2,999	1.1	11.9	5.3	6.6
$3,000-$3,499	----------	6.0	.3	5.7
$3,500-$3,999	----------	3.4	----------	3.4
$4,000 and over	----------	4.8	----------	4.8
Total	100.0	100.0	74.6	26.0
Median income	$1,481	$1,884	$1,594	$3,047

The incomes of the families admitted to the projects during the first half of 1948 are shown in the first column of this table. Over 52 percent of the families admitted had incomes of less than $1,500, while only 9.3 percent had incomes in excess of $2,000. The income of the families actually admitted averaged $1,481, a figure which naturally fell far below the average of the maximum income limits ($1,947) set for admission to low-rent projects.

The incomes of all the families living in the projects in the first half of 1948 (as shown by reexaminations of income) averaged $1,884 per year. This average covers a substantial number of ineligible families then living in the projects whom it had been impossible to remove because of acute housing shortages, and because of a congressional prohibition against eviction where hardship was involved. The incomes of the families who were eligible for continued occupancy averaged $1,594, while those of the ineligible tenants averaged $3,047. These ineligible families include families of higher income who had been admitted as war workers, and other families whose incomes since admission had increased beyond the maximum income limits for continued occupancy. All ineligible tenants are being required to move from low-rent housing projects under a plan for gradual removal, pursuant to which they will all have received notice to vacate by the end of the current year.

In order to realize how far down in the income scale public housing is actually reaching, the average incomes of tenants should be compared with figures as to the incomes of all urban families recently released by the Bureau of the Census. In 1947, a figure of $2,630 per year marked the top of the lowest income third of city families, while the average income of these families in the lowest third was $1,789. The average income of $1,481 of families admitted to low-rent projects at about the same time was 17 percent below the average income of all families in the lowest income third, while the income of eligible families living in the projects averaged 11 percent below the same figure. In other words, it is clearly apparent that, as a result of the income limits established by the local housing authorities, the families admitted to, and the families living in, public housing not only come from the lowest income third, but from the lower segments of that income group.

EXPECTED INCOMES UNDER A NEW LOW-RENT HOUSING PROGRAM

Under the extension of the low-rent housing program proposed by H. R. 4009, the maximum income limits for comparable cities should not be appreciably greater than those which now prevail. However, many smaller cities which did not take part in the original program are expected to participate in the new program, and somewhat lower income limits are to be expected in such places. Moreover, a program of low-rent housing in rural nonfarm areas is also provided under H. R. 4009, and the income limits suitable for such areas should, in general, be below the limits which have been found appropriate in urban communities.

In view of these facts, it is safe to assume that income limits and the actual incomes of tenant families under the new program will not be appreciably greater than, and may well be somewhat less than, those which prevail in the present low-rent projects.

Annual Contributions Required for Low-Rent Housing Under H. R. 4009 With Provision for 810,000 Dwellings

EXTENSION OF REMARKS

OF

HON. FRANK BUCHANAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 24, 1949

Mr. BUCHANAN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement showing the annual contributions required for low-rent housing under H. R. 4009 with provision for 810,000 dwellings:

ANNUAL CONTRIBUTIONS REQUIRED FOR LOW-RENT HOUSING UNDER H. R. 4009 WITH PROVISION FOR 810,000 DWELLINGS

The contracts of the Public Housing Administration with the local housing authorities make available for each project, if needed, the maximum annual contributions authorized by law. The amounts actually paid in each year, however, are limited to the cash deficits of the projects in such year, that is, to the difference between the actual costs of operating the projects (including the payment of interest and amortization on capital costs) and the rents paid by low-income families.

WHY MAXIMUM CONTRIBUTIONS ARE CONTRACTED FOR

Although it is expected that the contributions actually paid will average substantially less than the maximum amounts, the contracts permit the payment of maximum contributions, when needed, for two principal reasons:

1. In bad years when the rent paying ability of low-income families is decreased, the maximum contribution will be available, if needed, in order to achieve rents within the means of low-income families in such years.

2. The annual contributions (under the terms of the statute) are pledged by the local authorities as security for the payment of interest and amortization on the bonds sold by them to private investors for financing the capital costs of the projects. Contracts providing for maximum contributions, when needed, thus provide security for debt service payments which are large enough, in actual practice, to amortize project costs in substantially less than the 40 years permitted under H. R. 4009. As shown in the typical example below, it is believed that the amortization period can be reduced to between 29 and 33 years. Shortening of the amortization period through the pledge of maximum contributions thus results in very substantial economies, since lower average interest rates can be obtained for shorter maturities and since the period over which interest must be paid is also reduced. These economies are, of course, directly reflected in a reduction in the amount of contributions paid by the Federal Government, since these contributions cease as soon as project costs are amortized.

SIZE OF PROGRAM AND CAPITAL COST PER DWELLING

The maximum contributions which could be contracted for under H. R. 4009 amount to 4½ percent of development cost (the going Federal rate of 2½ percent plus 2 percent). Since the contribution authorization under H. R. 4009, as reduced, will be limited to $308,000,000 per year, the total development cost in respect to which maximum contributions can be contracted will amount to $6,844,000,000. This is the maximum development cost of all projects for which full contributions would be available under H. R. 4009.

The bill will also limit the number of new dwellings to 810,000 units. If the maximum available development cost were used for this number of units, the average cost of unit would be $8,450, including construction, land, site improvements, and all other development costs. It is believed that if building costs can be somewhat reduced from the present level, it will be possible to obtain this average development cost. If, however, the actual development costs run somewhat above this average, a lesser number of units could be provided with the annual contribution authorization. If, on the other hand, the average costs were somewhat less, the number of units would be restricted to 810,000, and some of the annual contribution authorization would remain unused.

EXPECTED OPERATING COSTS AND CONTRIBUTIONS REQUIRED

The following table shows the anticipated operating costs and rents of the new program and the annual contributions which would be required (averaged over the life of the

contracts), based on the best possible present estimates:

	Bonds sold at 1⅞ percent interest, 29-year maturity	Bonds sold at 2½ percent interest, 33-year maturity
Typical low-rent housing unit:		
Total development cost per dwelling	$8,450	$8,450
Maximum Federal contribution, per month	$31.69	$31.69
Monthly project costs:		
Operating costs	$13.50	$13.50
Heat and all other utilities	7.00	7.00
Payments in lieu of taxes (10 percent of $23 shelter rent)	2.30	2.30
Interest and amortization (level debt service)	31.69	31.59
Total monthly cost	$54.49	$54.39
Less average shelter rent of $23 needed to serve low-income families, plus $7 utility charge	$30.00	$30.00
Actual Federal contributions, estimated average over 29 and 33 years, respectively	$24.49	$24.39
Percent of maximum Federal contribution	77.3	77.0
Total program of 810,000 units:		
Total development cost	$6,844,000,000	$6,844,000,000
Maximum Federal contributions per year	$308,000,000	$308,000,000
Actual contributions, estimated average per year	$238,000,000	$238,000,000
Actual contributions, estimated totals over 29 and 33 years, respectively	$6,902,000,000	$7,854,000,000
Present value of total actual contributions discounted at 2½ percent (cost of long-term money to Federal Government)	$4,868,000,000	$5,305,000,000

CONTRIBUTIONS ACTUALLY REQUIRED PER UNIT

The above table shows two different assumptions as to local authority financing. The first column assumes that the local authorities will be able to obtain an average interest rate on their bonds of 1⅞ percent over a 29-year period. With the aid of the improved financing provisions in H. R. 4009, it is believed that it will be possible to obtain such an average interest rate. The second column of the table, however, shows the results if an average interest rate of 2½ percent has to be paid, in which event the period of amortization would be increased to 33 years.

On the two assumptions in the above table, the Federal contributions actually required are estimated at $24.49 and $24.39 per month, respectively; in the first case the contributions would be payable over 29 years, and in the second case over 33 years. These actual contributions amount to about 77 percent of the maximum which could be paid. This would appear to be a very conservative estimate in view of the fact that under the present program the actual contributions paid have amounted to only 58.5 percent of the amounts authorized.

CONTRIBUTIONS ACTUALLY REQUIRED FOR ENTIRE PROGRAM

The table also shows the contributions in respect to a total program of 810,000 units. Based on the best available estimates, the actual contributions paid would be about $238,000,000 per year out of the $308,000,000 authorized. If the local authority financing permits amortization of project costs in 29 years, the aggregate of contributions for the whole period would be about $6,900,000,000. If 33 years is required for amortization, the aggregate actual contributions would amount to $7,800,000,000.

These contributions are payable over a long period of years and their aggregate amount cannot fairly be compared with the amount of a capital grant payable in one lump sum at the present time. In other words, future payments should be discounted to allow for interest up to the time the payments are made. When discounted at 2½ percent, the cost of long-term money to the Federal Government, the present value of the actual contributions is estimated at $4,900,000,000 in the case of 29-year financing, and $5,300,000,000 in the case of 33-year financing. It should be noted that these present values of the actual Federal contributions are equal to only 71 percent and 77 percent, respectively, of the total capital cost of the projects.

CONTRIBUTIONS ACTUALLY REQUIRED IN NEXT FEW YEARS

Annual contributions are not paid until a project is substantially completed. For this reason, it is expected that no annual contributions will be payable in fiscal year 1950. The contributions which will probably be required in the next few years are as follows:

Fiscal year:	*Actual contributions*
1951	$28,000,000
1952	61,000,000
1953	114,000,000
1954	162,000,000
1955	206,000,000

Thereafter contributions will level off at about $238,000,000 per year.

ADVANTAGES OF THE ANNUAL CONTRIBUTIONS SYSTEM

The annual contributions system has proved to be an efficient, flexible, and economical method for administering Federal aid to low-rent housing. This system has a distinct advantage over a system of capital grants.

Capital grants would have to be paid in full as soon as a low-rent project is built, despite the fact that these grants would serve to provide a continuing benefit to low-income families over a long period of years. Under the annual contributions system, on the other hand, the cost of these benefits is spread over future years rather than burdening today's taxpayer with the full cost of subsidy for a long term of years. The annual contributions system thus puts low-rent housing on a pay-as-you-go basis similar to other programs of social betterment.

The annual contributions system makes it possible to limit the assistance given in any year to the exact amount required in such year. In good times, the annual contributions needed are only a fraction of the maximum amount, while the full amount can be paid in less prosperous periods if this is necessary. Capital grants, on the other hand, would have to be made in advance and the reduction in rent secured by them would be the same in every year. Once given, no reduction in the amount of a capital grant would be possible in respect to future years which require less than maximum subsidy.

Moreover, under the annual contributions system it is expected that it will be possible to limit the annual contributions payments to substantially less than the 40 years permitted under H. R. 4009. No corresponding reduction would be possible in respect to a project assisted by a capital grant.

Finally, if capital grants were made they would either have to be met by immediate, large appropriations substantially equal to the cost of the projects or else the Federal Treasury would be called upon to raise the necessary funds through an increase in the national debt. Under the annual contributions system, on the other hand, local authorities are enabled to raise substantially the entire cost of their projects from the sale of bonds to private investors. The annual contributions system has thus made it possible to finance the capital cost of low-rent housing at very low rates of interest, with little or no recourse to Federal borrowing and with little or no increase in the national debt.

Communists Stir Race Trouble

REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1949

Mr. RANKIN. Mr. Speaker, I thoroughly agree with the distinguished gentleman from Alabama [Mr. BATTLE] that the less the gentleman from New York [Mr. CELLER] sticks his nose into the affairs of the Southern States, the better off we are going to be.

The people of Alabama, and of all the other Southern States, are capable of looking after their own affairs without any advice from the gentlemen from New York.

This Communistic program of attempting to outlaw segregation in the District of Columbia, and forcing Negroes into the white schools, white playgrounds, and white swimming pools, here and throughout the country, is now bearing fruit.

According to the press reports, on the 21st of this month an order was issued by the director of public welfare in St. Louis, Mo., to wipe out segregation in the swimming pools of that city.

The result was that it brought on a race riot before the sun went down, and the mayor of the city was compelled to revoke the order.

According to an Associated Press report, a similar incident occurred in Youngstown, Ohio, yesterday.

The Communists' program is now, and always has been, to stir race trouble throughout the United States; and this antisegregation movement is one of their weapons.

Right after the First World War they stirred a race riot here in the city of Washington that cost the lives of untold numbers of Negroes.

They stirred a race riot in Chicago in which, at that time, more than 2,200 Negroes were killed—to say nothing of the whites who lost their lives in the fray.

They stirred a race riot in Springfield, Ill., the old home town of Abraham Lincoln, and also one in East St. Louis, both of which resulted in disaster for the Negroes as well as the white people in those two localities.

But these Reds do not give a tinker's dam about the Negroes. They are trying to use them as a smoke screen for their infamous designs of wrecking this Republic, destroying the American way of life, and wiping Christianity from the face of the earth.

Just a few years ago they stirred a race riot in Detroit, Mich., which resulted in the killing of hundreds of people, most of whom were Negroes.

They are trying in every way they can to stir race trouble all over this country today, and especially here in the District of Columbia.

If these communistic elements continue to interfere with the racial relation throughout this country, and especially here in the District, and throughout the Southern States, they will not only stir up race riots, but they will finally provoke the better elements of both races to turn against them and drive the last one of them from American soil.

They have been run out of practically every other civilized country in the world except this one at some time or other, and if they just keep up the agitation they are carrying on now, they may suffer the same fate here.

The Communist Trials

EXTENSION OF REMARKS
OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 24, 1949

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following analysis by Charles Collingwood:

ANALYSIS

It has been a long time since a story has so completely dominated American press and radio as is the continuing story of the Communist trials, investigations, and broadsides now underway. The New York times estimates that last week New York papers devoted 32 percent of their front pages to the Communist spy theme, and that figure probably isn't far wrong for the whole of the country—might even be larger. I would like to dwell on the colorful and dramatic aspects of these cases—the FBI gossip that came out of Judith Coplon's handbag, the bravura performance of Lloyd Paul Stryker in the Hiss trial, the rapier play between judge and counsel in the trial of the 11 Communist leaders—but it seems to me that there is an aspect to these and the other cases, even more basic, though not half as much fun.

We are approaching in these cases a difficult and basic problem of democracy: How far can we tolerate what most Americans firmly believe to be error of opinion. Thomas Jefferson once said we can tolerate it as long as reason is left free to combat it—on the principle that like good money, good ideas drive out bad. But a good many people today fear that the risks of allowing people with bad ideas to go around like anyone else are too great, and that we should take special action against them. It's not an easy problem and I should like to talk about it today without calling anyone a spy or a traitor or a red-baiter or a witch hunter, because the only way in which we can ever get a clear slant on these things is to think about them as objectively and calmly as we can.

It would all be a lot simpler if there wasn't a line in the Constitution which says "Congress shall make no laws abridging the freedom of speech." This is what complicates the matter. If it wasn't for that, we could put a Communist in jail, or a suspected Communist, or anyone else whose political ideas seem designed to upset the existing order. But we have this basic law of the land which guarantees freedom of speech and that makes it difficult to deal with people who say and believe things which the bulk of our people firmly believe to be dangerous.

Of course, at first glance it doesn't seem that free speech is really an issue in these cases. Judith Coplon isn't being tried for anything she said. The young men who lost their atomic-energy fellowships because they are Communists didn't lose them because of what they said. Even the Communist leaders on trial in New York aren't there because of the speeches they made. But free speech is a broad term which is taken to include the right of anyone to hold and express, without fear of retaliation, ideas with which the Government does not agree. The real issue in all these cases is how far can we tolerate people who are suspected, on better or worse grounds, of putting loyalty to their political beliefs ahead of loyalty to the duly constituted Government of their country. As the law stands now we have to tolerate such people until they can be shown to have performed a specific unlawful act. But that's a pretty difficult thing to do. The people who are conducting these prosecutions of Communists and suspected Communists want to take a short cut. Look, they say, we all know that a Communist is against the Government of the United States. We don't want those kind of people in places where they can do harm. Why then, can't we just put out of harm's way anyone who is a Communist or who helps Communists? After all, they ask, what more should you have to prove? That's an argument which sounds reasonable to a great many people. The only trouble is this thing in the Constitution which seems to mean that you can say and believe pretty nearly anything you want as long as you don't do anything about it—or as long as you don't get caught doing anything about it. And this is where the long roll of distinguished anti-Communists who object to the current anti-Communist procedures, part company from those who want to take the short cut. They say the best rule is the one in the Constitution. You have to prove that a man has done something, they say. It isn't enough to say that his ideas are bad, or his friends are bad, or that he belongs to a party that wants to overthrow the Government. You must show that he has done something wrong; that he's actually had a try at overthrowing the Government beyond simply believing that it would be a good idea. If you don't do that, they say, then no man is safe from prosecution and you open the way to a police state where all opposition can be outlawed ruthlessly and unfairly.

Of course, those who take this stand wind up with some pretty strange bedfellows. They find themselves taking the part of the men with the hard eyes and the weak mouths who belong to the Communist Party and the men with the soft eyes and the weak heads who follow their line. But that's the way it always is when you defend a principle. You're always defending borderline cases, because they're the ones where the principle is tested. It's always the unpopular and the unlovely who get in trouble. After all, no one is going to charge a man with being a Communist when he obviously isn't. Ordinary citizens don't get mixed up in these things. As Mark Twain once said, "We have three unspeakably precious things in this country: freedom of speech, freedom of conscience, and the prudence never to practice either." So it's the imprudent, the borderline cases who get into trouble and who, throughout our history, have been protected by people like Justice Oliver Wendell Holmes who once wrote: "The principle of free thought (is) not free thought for those who agree with us, but freedom for the thought that we hate."

For many years this has been a jealously guarded principle of American law—too jealously guarded some people think today. For this is not a theoretical question as we can see by looking around us. One thing all these Communist investigations has shown us is that subversive activity, particularly espionage, has gone a good deal deeper than most of us thought. The question is whether our traditional insistence on freedom of speech doesn't weaken disastrously our defenses. The current issue of the magazine the Reporter has an editorial which puts this point clearly. It says, "In every country that has fallen under totalitarianism, freedom has been killed by the reckless use of one liberty. Invariably the one liberty that can cripple all the others is freedom of speech." Now that is doubtless true, but it is also true that the first thing every totalitarian country has done is to revoke freedom of speech and that eventually has brought about its downfall. The men who founded our democracy were very sure that if it were to survive freedom of speech and freedom of thought would have to be guaranteed. Remember that our Nation was born in revolution. It came about because a subversive group was able to overthrow the government. And when that group became the Government they were very anxious to preserve in constitutional form those liberties they had fought so hard to establish, and one of those liberties was the freedom to hold unpopular ideas. Thus came about the freedom of speech amendment which, to this day, protects the borderline cases as well as all of those of us who never have to seek its protection.

The controversy over how much freedom of speech we can afford has plagued our country since it was born. The first great political altercation of the new Republic came over the Alien and Sedition Acts which the Federalists passed in 1798. The times were very much like these. The French Revolution had sent a shiver of shock and fear through the established world. The United States broke its treaty with France, embarked on a great defense program—laid down ships, increased the Army, raised a Marine Corps, signed a contract with Eli Whitney, the Yankee inventor, for 10,000 muskets. We were in a state of undeclared war with France. Complicating matters was the presence of thousands of French-born exiles, refugees, and agitators in this country. Wild stories of intrigue and espionage spread. Witch hunting and intolerance were rife. In the middle, Congress passed the Alien and Sedition Acts, which provided penalties against anyone who could be suspected on reasonable grounds of any treasonable or secret machinations against the Government—stirring up sedition or exciting the people against the Government. Very much the kind of laws some people want to pass today. There followed a period which Thomas Jefferson called a reign of terror. Opponents of President Adams were jailed, fined, their newspapers suppressed. A Member of Congress from Vermont was convicted. But the Alien and Sedition Acts backfired. Led by Thomas Jefferson, the more liberal elements in the country rose on their hind legs. The acts were repealed, Jefferson was elected President, and the Federalist Party never fully recovered.

A similar controversy arose after the First World War. Once more the target was radicalism, and Communists and Socialists were in the bull's-eye. There were investigations, laws passed, trials, Attorney General Palmer's famous raids, and once more there were Americans who rose up to protest. Chief among them was Charles Evans Hughes, the Republican candidate for President against

Woodrow Wilson. Hughes, later to become Chief Justice of the Supreme Court, fought against the expulsion of five Socialist members of the New York Legislature. In a powerful declaration, he said, "Let every resource of inquiry, of pursuit, of prosecution be employed to ferret out and punish the guilty according to our laws. But," said Hughes, the Republican, "I count it a most serious mistake to proceed, not against individuals charged with violation of the law, but against masses of our citizens combined for political action." That's the issue which has come up again in our own time: Whether to proceed against individuals for the acts which they have done against the law, or whether to move against people for what they think and what their party stands for on the grounds that this must inevitably lead to dangerous acts. As I have tried to show, it is not an easy problem to solve. Its roots go very deep in our history and in our American traditions of fair play. We can see today how, if you start discriminating against people because of their ideas instead of what they have actually done, you run into all sorts of inequities: innocent men and women get hurt, other innocent people are plagued by fear and insecurity, the realm of inquiry and speculation is narrowed, the whole field of political activity is embittered. On the other hand, we have also seen cases where the legal safeguards of our ancient tradition have allowed people to put our democracy in serious jeopardy. It is not easy to know what to do or what to think about it all. There is no simple solution. Whatever we do, whether we limit freedom of speech, or allow it to continue unhampered, we hazard some of our most precious liberties. But in reaching a decision it doesn't help any to give way to fear, hysteria, or prejudice. We must make out decision as thoughtfully, as honestly, as judiciously as we can. For this is something we cannot, as a Nation, afford to go wrong on.

Force and Freedom

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, June 24, 1949

Mr. MULTER. Mr. Speaker, no truly freedom-loving American can neglect to read the following address of the Honorable Selden Chapin, former Minister to Hungary, before the Catholic War Veterans, Houston, Tex., Friday, June 17, 1949:

FORCE AND FREEDOM

When I first arrived in Hungary in July 1947, I made it my publicly declared business to call on all leaders of Hungarian thought and opinion beginning with the president and the prime minister. Among those leaders upon whom I called was Josef Cardinal Mindszenty. He returned my call. Following custom I again made calls on the principal men of Hungary after New Year's Day in 1948. Cardinal Mindszenty again returned my call. The fifth and last time I met the cardinal was at his request in November of that year.

Now in the standard assortment of scurrilous charges raised against the cardinal at his trial, the Communists had to find something really impressive with which to nail him. They knew that the cardinal had talked on several occasions with the American minister. Now, it is said that when two Communists get together you have a conspiracy. What would be more reasonable, then, to a Communist than to assume that the cardinal and the minister were fomenting a plot? So they worked out this plan in which we were trying to restore the monarchy in Hungary.

I hope it will not be a disappointment when I say that there was no conspiracy. I talked with the cardinal on five occasions, a total of 5 hours, and that was through an interpreter, so you can cut it in half. We were two people talking together, but we weren't Communists—we were a Catholic prelate and a Protestant layman, in other words, two Christians.

I am very pleased to have this opportunity to speak before the Catholic War Veterans. From what I know of your organization, I believe I can work on the assumption that we are all pretty much in agreement as to the objectives the United States is seeking and should seek in world affairs.

In the first place, we all want peace and security in the world. We all want to promote democratic principles and institutions throughout the world, because we believe these are conducive to peace. We want to create throughout the world an atmosphere of economic well-being for all, as a basic condition for peace and democracy. We know that the greatest obstacle to peace and security lies in the relentless drive of Communist totalitarianism for world domination and we are determined to stop that drive.

I suggest again that most of us are in basic agreement with the policies and actions of the Government designed to achieve the general foreign political and economic objectives, and to stem the advance of Communist aggression. These policies represent a realistic and hard-headed approach to world conditions as they exist today. They reflect the will and temper of the vast majority of Americans.

The success of our policies is not, of course, assured. There are certain dangers, but the greatest lies primarily with ourselves. The task we have cut out for ourselves is a long, difficult, and expensive one. There is, and will continue to be, a corresponding temptation to slacken in our various programs whenever there is a real or seeming improvement in world tensions or, particularly, if we run into economic problems at home. This temptation is the main thing we shall have to guard against for many years to come. That is one place where alert people such as you can be a valuable source of strength and vigilance.

We are not likely to yield to this temptation so long as we keep the basic situation clearly in mind. We must constantly remind ourselves that we are dealing with a ruthless and patient force that will take advantage of our slightest lapse of purpose. If we remember this, we shall not be caught napping.

As a sort of refresher course in international communism and its techniques, I would like to talk for a moment about the Communist domination of Hungary. I had some personal experience with that matter and besides the case of Hungary gives a test-tube example of how domination and control over a freedom-loving people has been progressively achieved. It happened to all of the satellite countries, one by one, and by now it probably would have spread much farther had we not taken effective countermeasures.

We might begin the story at Yalta in February 1945, when Stalin, Roosevelt, and Churchill pledged that the liberated peoples of Europe should be allowed to create their own democratic institutions. While the ink was drying at Yalta the Communist Party of Hungary was hard at work undermining the foundations of freedom and democracy in their country. In its work the party had the wholehearted intervention and support of the Red army—numbering several hundred thousand at the time—and with Soviet Marshal Voroshilov as chairman of the Allied Control Commission, they were assured that any efforts by the British or by ourselves to back genuine democratic elements in Hungary would be nullified.

The first postwar elections in Hungary, which were held in November 1945, made it clear that the people had little use for the Communists. The party polled only 17 percent of the vote. A clear majority—57 percent of all votes cast—went to the Smallholders Party, a progressive and democratic farmers party.

In the face of this rebuff, the Communists resolved to force their will upon the people of Hungary. In order to do this, they had to break the power of the political opposition and weaken the hold of the churches upon the people. The way they went about it follows the typical Communist pattern of step-by-step internal conquest by force and subversion. I will summarize it here, because I think that the ease with which a small but ruthless totalitarian minority can impose its will on the majority is one of the things we all should keep in mind as we face up to the problems resulting from the clash of force and freedom.

First the Communists went after control of the police and communications. That is the standard opening move. Having extracted a preelection agreement from all major parties to form a coalition government, regardless of how the election turned out, they demanded the most important cabinet posts for themselves and their puppets, and in this demand they were backed up by curt orders from the Soviet chairman of the Allied Control Commission. They then began to purge key officials in the government and the army.

Second, they increased their strength in the government by forming an extreme leftist bloc within the coalition, to work in opposition to the Smallholders.

Third, they undertook an all-out effort to promote civil, economic, and political disorder and so shake the confidence of the people in the ability of the Smallholder's Party to govern.

Fourth, they resorted to open terror against their opponents, including star-chamber trials on trumped-up charges, kidnaping, and all the usual paraphernalia of totalitarian discipline and justice.

In May–June 1947 the Communist leaders, aided by the intervention of the Soviet occupation forces, forced the resignation of the Smallholder Prime Minister and seized effective control of the Government. This coup was followed by a rigged election designed to cast a cloak of respectability over the seizure of power. It is interesting that this election, held in August 1947 with the Communists very much in command, returned them only 22 percent of the vote.

With the political opposition well in hand, they went after the religious groups. Now I should like to make it very clear that attack on religion is not so much a matter of conflict between church and state as between the secular religion of Marxist materialism and the traditional religion of the churches based on moral and spiritual values. It is an attack on Protestant, Catholic, Jew, and Moslem alike, and it isn't just an attack on the churches, but on all free institutions and human freedoms. It is materialism versus morality. It is violence and treachery versus order and humanity. Communist morality has been expressed in these words of Lenin, "Everything is moral which is necessary for the annihilation of the old exploiting social order, and for uniting the proletariat."

When the Communists went after the churches in Hungary here is what confronted them. Catholics numbered two-thirds and Protestants most of the remainder of the population. Both churches traditionally played a very active part in public life. In 1940, for example, about 17

percent of the Hungarian Parliament consisted of members of the Catholic clergy. All of the churches were wealthy in land, the income of which before the war substantially supported about three-fifths of all educational institutions—Catholic, Lutheran, Calvinist, Jewish, and so on.

In these denominational schools, religious instruction was obligatory, but Protestant and Jewish children in Catholic schools freely received such instruction from their own teachers and vice versa. These schools unavoidably came into political as well as ideological conflict with the Communists who have long since recognized that to consolidate control over the people one must bring up the youth in complete Leninist-Marxist philosophy. Today to be admitted to a high school, technical school, or university, one has to pass a satisfactory examination in Communist philosophy, both theoretical in knowledge and practical in action.

While the land reform had severely hurt the churches economically, the real attack opened in March 1947 with the introduction of measures designed to nationalize and communize the schools. Here the Communists ran into sharp opposition from leaders of the churches. The Catholic primate, Cardinal Mindszenty, went so far as to excommunicate all Catholics assisting the state in its effort to nationalize the schools. The Communists then proceeded to purge all of the resistant church leaders in a very methodical manner.

Taking things progressively, they went first after the Protestant minority. The Calvinists, largest of the Protestant churches, were brought into line by the disgrace of the President of the Republic, Teddie himself a pastor, and by securing the resignation of Bishop Ravasz—this by threatening the livelihood of 3,000 ministerial families if he did not resign—and replacing him with a collaborationist pastor. They then asked for the resignation of Lutheran Bishop Ordass. He replied that he would "rather burn in hell" than desert his flock, and proved very hard-headed, so they tried and convicted him on the usual charges of black marketing and embezzling.

By mid-1948 Cardinal Mindszenty was left as the sole fighting symbol of resistance to communism.

Mindszenty then had to be eliminated. As a symbol, he had, if possible, to be totally discredited in the minds of the people. Now, as you know, the Communists always tried to avoid religious issues in these purges of religious leaders. Both in the press and in the courts they tried to brand the leaders of the opposition as black marketeers, petty crooks, or traitors.

Now, in my few talks with Cardinal Mindszenty I did learn a number of things about him. He was a bold and uncompromising man of Spartan temperament. On one occasion he is said to have told emissaries of Soviet Marshal Voroshilov, who had asked him to pay a call and then had kept him waiting for an hour, that if the marshal wished to see him, the distance from the marshal's headquarters to the primate's palace was the same as the distance from the primate's palace to the marshal's headquarters. He was, I am convinced, quite prepared to become a martyr. But it is one thing to be a martyr yourself and another to bring thousands into martyrdom with you. He was deeply concerned, in our last talk last November, with the fate of the lower clergy. That concern must be kept in mind in any evaluation of the cardinal and his later actions.

On the 26th of December 1948 the cardinal was arrested and charged with being a criminal, a traitor, and a conspirator against the "democratic" form of life. Anticipating his arrest, the cardinal earlier that day had sent to all members of the Bench of Bishops the following message:

"I have participated in no conspiracy whatever; I will not resign my episcopal see; I will make no confession. If, after this, you should hear that I have confessed or resigned and that this is authenticated with my own signature, consider that to be only the consequence of human frailty, and in advance I declare it null and void."

Some 40 days later, during the trial, the cardinal is said to have retracted this statement on the grounds that his viewpoint had altered meanwhile. However, the prosecution did not question the existence of that statement, made while the cardinal was still not under duress. After only 3 days on the stand he was found guilty on all charges and sentenced to life imprisonment. The prosecutor had demanded the death penalty. Compare this speed with the patience being displayed at a certain trial now taking place in New York City.

There has been a great deal of conjecture as to the precise methods used to extract the confession from the cardinal. We do not know exactly what they did. There are, of course, a great many ways of getting at a man, through his family and friends as well as through the various forms of physical and mental torture, and the Communists have a legendary skill at picking the right approach. What is important is that no one, to my knowledge, who was at all familiar with the cardinal and his life, has the slightest doubt that extremely severe pressure was brought to bear on him. Although I have had recent reports that the cardinal's mother has visited him, so far as I know, no unbiased person has been permitted to see him since his sentence.

Now I should like to say just a word about the life of the average Hungarian under Communist rule. I had personal experience with various forms of restraint and got a pretty good picture of what things are like.

As I have said, the Communists are highly skilled at the techniques of keeping themselves in power, and they are willing in many cases—and perhaps prefer—to use measures other than naked force to gain acquiescence from the people. Terror enters in, of course. Everybody knows of someone who has mysteriously disappeared from the scene, but the terror lies in the background, so to speak, and you don't see it happening all around you. The real restraining force is economic pressure.

In the first place, the Hungarians are kept under close surveillance. There are the usual block leaders; all apartment houses and even most private houses are required by law to have a houseman, or sort of superjanitor, who reports on the comings and goings of his people. If a Hungarian's behavior is reported to be out of line, economic pressure is applied. He finds himself out of a job, and after a time he finds that no one else will hire him. Incidentally, despite all the ballyhoo about Communist labor unions, labor in Hungary has lost the right to strike and the few instances of workers protesting against the speed-up piece rate were never even mentioned in the Communist press, even though blood was shed. A citizen in political disfavor may also lose the privilege of buying at state stores and restaurants, where prices are low. He may not renew his driving license. He has to go into the black market, and eventually a time comes when there is nothing left to sell, and no source of income. Then he and his family starve. He may not buy penicillin or other essential drugs in case he or his family fall ill. His children may even be denied entry to the now nationalized schools. All this is a very effective way of assuring compliance with the authorities. I have seen it and it works.

Now I have discussed the Hungarian picture in some detail because to me it portrays clearly the nature of the force we are up against. We believe in fair play. We tend to credit the next man with the basic ideals and beliefs that we ourselves hold sacred, even though they may outwardly take different forms. But we must not forget that the sworn Communist is the sworn enemy of all that we hold to be good and decent. Believe me, if I thought that anything the Communists did in Hungary was really done with the good of the people in mind, I should be the first to give them credit. They are out for power and mastery, and that is that.

What then, can we do? The President in his inaugural address, summarized four lines of policy designed to achieve the kind of world we want to live in.

First, is support of the United Nations system. The UN represents the democratic, friendly, cooperative approach to world peace. It sets the pattern for the kind of world in which nations behave toward each other the way that we like to think Christian individuals do. In practical terms, the UN provides a vast mechanism for negotiation, without which international action today would be greatly hampered. It also provides a forum in which the moral force of world opinion acts as a sharp restraint against overt acts of dictatorial governments.

Second, we must continue our programs for improving the economic conditions of peoples throughout the world. As long as vast masses of people are ill-fed, ill-clothed, and ill-housed the siren song of communism will have great effect.

We must, therefore, continue vigorously the European recovery program, which has already proved its worth in resurrecting hope and confidence among the peoples of western Europe. Although recent news from Europe is encouraging, we must not underestimate the extensive job that still has to be done.

Third, we must support the point-4 program to bring to other areas the benefits of the technological knowledge of the modern world, and encourage the investment of capital in those areas. The possibilities of this program are unlimited in terms of the economic benefits it can eventually bring to all nations. At the least, it can bring to the underdeveloped areas increasing material benefits favorable to the growth of democracy.

We must pursue this same goal through participation in the International Trade Organization in order to promote a broad exchange of the benefits of world industry and agriculture for the betterment of all. That means also that we must continue the reciprocal-trade-agreement program, so that we can function in the ITO.

Finally, we must help friendly nations protect themselves against domination by direct or indirect aggression. That means joining with like-minded nations in collective security arrangements like the Rio Treaty and the North Atlantic Pact, which have been designed in complete accord with the principles and purposes of the United Nations. It means providing military equipment and advice, as in the case of the Greek-Turkish-aid program and the proposed military-assistance program.

Now, I should like to add a point on the military-assistance program. This program is a particularly vital counterpart of the North Atlantic Treaty. It provides concrete evidence of our serious intent, and provides the best way to fulfill our commitment to contribute to the common defense through self-help and mutual aid. This aid, supplementing the productive effort of the treaty countries, and applied within the framework of a cohesive joint military-defense plan under the pact, can buy more security for all the countries concerned than a like amount spent any other way.

These policies all depend on each other. Undercut one and you jeopardize the others. They are the vital parts of the mechanism of our foreign policy. Take out a vital part, and you know what happens to the mechanism.

Now, looking back over what I have said this morning, I imagine one question may be bothering all of you, and that is what the future holds for our oppressed friends in the satellite countries. That calls for the kind of conjecture that people in the State Department are notoriously reluctant to attempt.

Actually, in my personal opinion, the situation does not appear promising. It is hard to see at the present time what might happen to alter the Communist control. Of course, there is always the unpredictable. I do not think many of us would have foreseen Tito's successful defiance of Moscow.

But you can look at the situation that would logically exist if the policies we are now following are successful. If you have a confident western Europe, economically, and defensively strong, and you get a peace settlement in Germany and Austria—which means that the Red Army goes back home—then you obviously have altered the situation affecting eastern Europe. You have for one thing, a strong economic magnetism working on the satellites.

Incidentally, the Voice of America also exercises a strong pull on freedom-loving peoples behind the curtain. It is particularly effective in Hungary.

The main hope for these countries, in other words, lies in the success of our present policies. That is one reason why I personally hope that each of us will become as familiar as possible with the nature of the problems that we face and with what we are trying to do about those problems; and that each of us will give his best effort to support the policies which he thinks are wise, in the difficult and challenging years ahead.

To conclude, the so-called peace offensive is a deadly weapon of propaganda, employed to weaken the resolve of the free nations. We must not be taken in by any such measures. We can relax our vigilance only when we have undeniable proof that the Communists have undergone a basic change of heart and of policy, and that they are making an honest effort by continuous concrete actions to live in peace and friendship with the rest of us.

I suggest that until then we have a set of policies and programs which are proving their worth at the present time. When you are a little ahead of the race, that is the time to make the greatest effort. Now that we are gaining a certain advantage, we must push with renewed vigor the actions which are gaining that advantage.

Coming back to the United States from a country behind the iron curtain, I can assure you that the most welcome sight I have ever seen was the torch uplifted in the hand of Bartholdi's Statue of Liberty—with all the promise and assurance that it extends.

But—and it is a very big "but"—that promise and assurance can only be maintained if we remember and act according to the warning of Daniel Webster to the Senate some hundred years ago, which is just as valid today: "God grants liberty only to those who love it, and are always ready to guard and defend it."

Real-Estate Lobby

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 24, 1949

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter by William Reinhardt of the Philadelphia Housing Authority:

THE PHILADELPHIA HOUSING AUTHORITY,
Philadelphia, Pa., June 13, 1949.

Mr. HERBERT U. NELSON,
Executive Vice President, National Association of Real Estate Boards, Washington, D. C.

DEAR MR. NELSON: You have noted, I trust, that I stick solely to public housing for the low-income groups, slum clearance, and the redevelopment of and rehabilitation of blighted areas, when I take issue with statements which appear in Headlines.

In your editorial, Let the Eagle Scream (issue of June 6, 1949) I think you are putting all realtors in the embarrassing position of charging that all Members of the Congress who are for these desirable objectives, which can be attained in no other way than by Federal aid, are afflicted with blindness by hypocrisy. You say they "chant the words of freedom and vote to close the gates of opportunity for millions of our people who only seek to stand without crutches."

The realtor who is asked if he today is standing without crutches would have to admit that he isn't and that he can't. This, of course, is true also of lending institutions, savings and loan associations, home builders, home buyers, farmers, and all others who lean heavily on the crutches provided by the Government in the form of mortgage loan guarantys, deposit guarantys, direct business loans from RFC, and all other subsidies.

To make the charge of "hypocrisy" stick to the Congressmen we would have to "come into court with clean hands," and this we could do only by foregoing for ourselves the governmental aids which have enabled us realtors and many others to stay in business and make money for lo, these many years. Headlines, and also the publications of the other associations which are part of the anti-public housing lobby, fight bitterly against the curtailment of any of these governmental aids for us and fight very hard for more and better "crutches." An instance is the comment on Senate bill 721 in the same issue of Headlines as Let the Eagle Scream.

"If we enter the stockade called security, the gates will close. All hope of finding new paths for spirit or talent will be gone." This is a quote from your editorial. If it means what it says then it means that we realtors and all the others accepting governmental aid have been in that deplorable state for lo, these many years, for most assuredly we have entered the stockade called security and are fighting to have the stockade made as impregnable as we can persuade our United States Senators and Congressmen to make it.

Are we not hypocrites to call our national lawmakers hypocrites when we ask them to do for us the very things which we claim constitutes their hypocrisy?

In my contacts with my fellow realtors I have seen no evidence that any of them see anything but a much brighter hope of "finding new paths for spirit and talent" the more and better aids our Congress will provide for us.

This hopeful outlook, in direct contrast with your Cassandra-like Jeremiad, matches the actual results produced by public housing for the low-income groups during more than 10 years of experience with it here in the United States. New paths for spirit and talent have been opened not only to the tenants, but to the residents of all communities in which these low-rent projects are located.

The governmental aid provided for us realtors, as well as for builders, lending institutions, farmers, and others is exactly of the same nature, and has the same purpose as the governmental aid which makes possible low-rent public housing.

To condemn one is to condemn all.

Senator TOBEY, in his speech printed in the CONGRESSIONAL RECORD, May 19, 1949, commenting on the half-truths, omissions, and distortions had this to say: "It is small wonder that the members of the organization cannot form independent judgments on issues of this kind, when its own people in Washington fail to give them the most elementary information."

I sincerely believe all realtors would realize this if they were given the opportunity, through their own publications, of learning what the other side thinks.

While he did not mention NAREB by name he did say, "This real-estate organization."

If he meant our realtor publications, I agree with him. The publications of the other associations in the anti-public-housing lobby are equally silent on very much their members should know.

Senator TOBEY's speech is a good example of what they should be able to read in their own publications.

Should anybody know better than we realtors what the slums cost—what they cost our own clients who own good real estate but must pay extra taxes to maintain the slums?

Do our realtors know, for example, through their own publications, that, for the Nation as a whole, it costs $614,000,000 annually to maintain these slums and that all that $614,000,000 must come out of local taxes?

Do they know that for public housing, slum clearance and everything else in H. R. 4009 the maximum annual Federal contribution, according to the Director of the Budget, would be only $310,000,000 a year although $400,000,000 annually would be available? Balance that against the cost of slums alone. Realtors should know all about it. Based on experience the Director of the Budget estimates the loans will be paid off in from 29 to 33 years and that the 40 years' term mentioned in the bill would be needed only in the event of unforeseen change. Do realtors know through their own publications that Federal contributions to maintain the low-rent character of public housing for the low-income groups, have been only from 25 percent to 30 percent of the amount available under the law over all the years America has had such housing?

It was because I do certainly know that I have not seen these and a host of other facts every realtor should know on this matter in the realtor publications which come to my desk, that I suggested the National Real Estate Journal as the ideal medium in which you and I should debate our opposing viewpoints.

I sincerely hope you will arrange this debate.

Sincerely yours,
WILLIAM REINHARDT, *Chairman.*

Welfare State

EXTENSION OF REMARKS

OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, June 24, 1949

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Mount Vernon (Ohio) News:

WELFARE STATE

Warning has been sounded by former Secretary of State James F. Byrnes that some of the suggested new Federal programs "point inevitably to a welfare state."

The warning was made during a speech Mr. Byrnes made at the concluding ceremony of Washington and Lee University's celebration of its two hundredth anniversary.

"We are going down the road to statelsm," Mr. Byrnes said. "Where we will wind up no one can tell. But if some of the new programs previously proposed should be adopted, there is danger that the individual—whether farmer, worker, manufacturer, lawyer, or doctor—will soon be an economic slave pulling an oar in the galley of the state."

"Too many people," he said, "are trying to transfer power to the Government * * * we are not only transferring too much power from the individual to the Government, but we are transferring too many powers of State governments to the Federal Government. We should not have the Federal Government regimenting our lives from the cradle to the grave."

Mr. Byrnes placed much of the blame on the people themselves, saying that every segment of society is demanding special privileges. "The farmer," he said, "wants higher prices, the wage earner wants increased wages, pensions, and hospitalization. Too many people want more pay for less work," he added.

After sounding his warning, and giving his opinion of the forces moving the country in the direction it has taken, Mr. Byrnes suggested a remedy.

"Our first line of defense is a sound, solvent American economy," he said.

He then called for a reduction in Federal spending and Federal powers. "The only wise course," he declared, "is to reduce expenditures and live within our income."

Mr. Byrnes did not say anything particularly new. It has been apparent for a long time that the United States is rapidly moving in the direction of a welfare state, that one of the main reasons is the clamor for Government hand-outs in one form or another, and that the only solution of the problem is a reduction of Government spending and power.

But the warning bears frequent repetition, as does the review of the cause of our trouble and the solution thereof.

Efforts to stem the drift toward statism through the methods Mr. Byrnes mentioned have met with little success so far.

It will take a persistent attack to bring the American people and their officeholders to a realization of the dangers contained in the course which we are blindly following.

Voices of men like Byrnes, who have served in high office and hold the confidence of the people, can do much toward returning the country to an even keel.

Military Pay Bill Was Badly Needed

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Friday, June 24, 1949

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I would like to include a very pertinent editorial, which appeared in the Worchester, (Mass.) Evening Gazette, of June 17, 1949.

The editorial follows:

MILITARY PAY BILL WAS BADLY NEEDED

A thorough revision of pay scales in the armed services was needed, and, even if the bill passed this week by the House is not perfect, it is a distinct improvement over what we have had.

The bill is as important in its changes in methods and policies of pay as it is in the specific pay increases authorized. For example, the old longevity pay has been revised to provide for automatic increases within the various grades depending on length of service. This would work much the same as in other Government jobs, in which the employee receives periodic raises even though he does not change his civil service classification. The new bill also cuts out the flight pay percentage bonus and substitutes a flat extra payment for this duty.

As for the pay raises, they wound up as a compromise between the military's original position and the position of a strong group in the House which included those who fear excessive Government spending and those who thought the original bill gave too large an increase to the high officers. It is impossible for anyone to say whether a pay scale is just, but it was obvious that military pay had to be increased—particularly that of the officers who had not been raised in years and who were finding living difficult in a period of inflation. This new law should help to eliminate the resignations from the service of many capable officers who found that the lure of private industry was too strong to resist.

Though the bill adds $300,000,000 a year to defense costs, it has to be viewed as another aspect of the increase of the cost of Government because of inflation. Its adjustment of inequalities has long been needed. If there are any major bugs they can be eliminated in the Senate but, basically, the bill looks like a good one.

Views of an Able and Forthright News Commentator on the Welfare State

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 16, 1949

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mark Sullivan, which appeared in the June 24, 1949, issue of the New York Herald Tribune:

TRUMAN CALLED UNWILLING TO LET READJUSTMENT ADJUST ITSELF—MARK SULLIVAN SAYS PLANS TO HALT RECESSION MAY, BY EXPENDITURES, CAUSE RECORD INFLATION

(By Mark Sullivan)

This recession, or disinflation, or readjustment, by whatever name it is called, is undeniably one thing. It is the interruption of a period of rise. That description can be applied to it without encountering argument. That no rise can go on forever is about as safe from dispute as any rule can be.

The rise in this case lasted about 9 years and went so far as to amount to inflation. Five of the early years were war years. That part of the inflation was hardly avoidable practicably. Then at the end of the war, in 1945, the Truman administration adopted policies which resulted in more inflation. Raises in wage rates, as an administration policy, were officially urged upon industry, new raises on top of wartime ones. At the same time, prices of farm crops (which are food) were made higher by statutory Government practice of price support. Rising prices of food and rising wage rates, acting reciprocally and automatically, made a dynamic spiral of inflation.

In late 1948, inflation came to an end (or a pause, whichever it is to be). The ceasing of inflation came mainly through natural forces; an important one was unwillingness or inability of the public to buy some kinds of goods at the current high prices.

FACTOR OF EXPECTATION

The slowing down of buying by the public had a spreading effect. In any period of rising prices, a factor in the current prices is expectation of still higher ones. Merchants buy goods with the expectation of selling them later at a higher price. Manufacturers buy raw materials with the expectation of fabricating them and selling the product at a profit. Once this factor of expectation goes out of a current price, the price tends to fall. This is accompanied by some contraction of business and industry, including some unemployment.

That is where we now are. Whether it is to be a recession only, or something different, depends much on what attitude we take about it. One course is to endure the recession until it works itself out naturally. This comes about through a readjustment to each other of prices, and of the various parts of the entire economy.

The other alternative is to try to stop the recession quickly, by artificial methods, including measures by the Government. One refusal to endure recession, or even admit the existence of it, is in the field of labor. There, unions and leaders demand, and strike to get what is called a "fourth round" of wage raises, the fourth since 1945.

As to the Truman administration, its attitude is strangely bifurcated. Persons in the administration like to call the present condition merely a period of "readjustment." That word and equivalents of it are frequent in administration sources. If the administration regards the condition as a readjustment, it should let the readjustment take place and work itself out naturally.

READJUSTMENT UNPOPULAR

But here enters a complex sector of administration thought and motive. Even the comparatively mild hardship of a readjustment is politically unpopular, particularly to groups the administration especially relies upon. So, from sources within the administration or close to it, come proposals of measures to end the recession, a program of public works and the like.

Yet another bedeviling factor is that the Truman administration, before the recession came, had proposed a number of measures which were to be permanent additions to the so-called welfare state. It is difficult for the administration now to recede from these measures, and they continue to be pressed in Congress.

Both groups of measures, the permanent welfare ones and the emergency ones to end recession, have a common characteristic. All call for money from the Federal Treasury, large quantities of it. The additional expenditures cannot be produced by increased taxation; the very fact of the recession makes that impossible. The expenditures must become an increase of the Government debt.

Increase of the Government debt, at a time when it is already dangerously high, would introduce a wholly new condition. Senator BYRD, of Virginia, says an increase of the debt would be unthinkable, having in mind possible effect on Government credit and public faith in it. Impairment of the Government credit would have effects much more terrifying than any recession. Whatever the initial effect, the second or third stage of it would probably be an inflation going much farther than what we have so far experienced.

Cardinal Spellman's Attack on the Barden Bill

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1949

Mr. HAYS of Arkansas. Mr. Speaker, Cardinal Spellman, whose influence and authority in a great church we all recognize, has by his intemperate statement regarding the gentleman from North Carolina [Mr. BARDEN] made very difficult the further consideration of Federal aid for education without emotion. It behooves all of us in making our defense of our colleague and his views which many share to exert ourselves to avoid even the appearance of prejudice or personal feeling. My primary purpose in making this comment is to express my confidence in the integrity and good faith of the gentleman from North Carolina and his complete freedom from religious prejudice in executing his duties as chairman of the subcommittee considering Federal aid for education. Anyone who has served in the House very long with the gentleman knows that with the vigorous espousal of his own views is a sincere determination to be fair to those who differ with him.

I have carefully examined the statement of Cardinal Spellman and quote the following from his address on June 19:

> For Congressman BARDEN, claiming to be a loyal American, holding a key position in our democratic Government, is in truth violating, and inciting others to violate the very rights and freedoms upon which our democratic Government was founded.

He also said:

> And now in America new apostles of bigotry brazenly come forward from out the halls of our own Congress and, either through ignorance or malice, father the Barden bill, a bill that urges and tries to justify unjust discrimination against our parochial school children. Advocates of the Barden bill, pitting class against class, seeking votes to enforce and sustain it are today conducting a craven crusade of religious prejudice against Catholic children and their inalienable rights.

Mr. Speaker, none of us questions for a moment the right of Cardinal Spellman to urge in all proper ways an acceptance of his views on the subject to Federal aid. Cardinal Spellman believes that funds made available under a Federal statute should be used for health service, bus transportation and related services for private schools in those States which permit such services to be financed at public expense. This in substance is what the bill recently passed by the Senate provides and the cardinal's views are shared by some of the Members of the House. On the other hand, some of us do not agree with this view and it is our right to differ without being accused of bigotry. We cannot afford to do less than our duty, however, merely because of the painful charge to which we are subjected. I cannot refrain from saying therefore that the cardinal has done the cause of interfaith good will a great disservice.

I have observed for a long time the actions of the gentleman from North Carolina [Mr. BARDEN], who has worked diligently to contribute to the devising of a sound and workable policy by the Federal Government in equalizing educational opportunities. He has devoted years of study to the problem. He has adhered to the basic principles of this Government as he interprets them. He may be wrong in some of his conclusions about this difficult and complicated problem but one thing we can be sure of is that there is no venom in his system and no desire to withhold from any child, whatever his religious background, the privileges and rights of American citizenship. Mr. BARDEN opposes the allocation of funds for health and transportation services for public as well as private schools. His conviction bears no relation whatever to religious affiliation.

As indicated, Mr. Speaker, I regret that the pressure of conviction forces this statement and I trust it will be accepted in the spirit in which I offer it. My first participation in politics was against a hate movement that broke out in my State in the early twenties. I take great pride in my participation with outstanding Catholics in the Brotherhood Week activities sponsored by the National Conference of Christians and Jews and other enterprises which have to do with cooperation between the great faiths of our country. We must maintain the cooperative spirit in spite of legislative differences.

The Christian Science Monitor of June 23 contains an excellent editorial on this subject and under leave to extend my remarks I include this statement:

IF THIS BE BIGOTRY

Francis Cardinal Spellman, addressing a large gathering of Roman Catholics in New York, is quoted as requesting prayers for Representative GRAHAM A. BARDEN, Democrat, of North Carolina, whom he designates a "new apostle of bigotry." Mr. BARDEN'S "sin," to use the cardinal's term, consists of proposing an amendment to the Federal aid to education bill which would limit its financial benefits to public schools.

Twice in his argument the cardinal takes sound premises but uses them to prove more than they prove. He says accurately that the Catholic school has been accorded an equal right to exist alongside the American public school—at the expense of those who wish it and profit by it. This does not mean, however, that any denominational school has an affirmative right to be supported even in part at public expense by the taxes of those who disagree as well as those who agree with its creed.

The eminent churchman also says correctly that the Barden amendment forbids the use of Federal money to supply health benefits and transportation services for pupils of nonpublic schools. This he decries as shameful discrimination. But he could have added with accuracy that the Barden amendment proposes the Federal money shall not be used for incidental services to any children, whether of parochial or public schools, but shall be used for direct operational expenses of public schools where they will serve the maximum educational purpose.

Is it being a bigot to stand on one's convictions that this is the soundest public policy and to resist the demands of an organization which claims exclusive religious privileges for itself in countries where it can obtain them? If so, many will risk the epithet.

Federal Housing Legislation

EXTENSION OF REMARKS
OF
HON. THURMAN C. CROOK
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1949

Mr. CROOK. Mr. Speaker, the Federal housing legislation before this Congress has my unqualified endorsement.

If we are to preserve a strong democracy and guard against communism, we we must preserve the integrity of the family home, the greatest of our American institutions.

There is absolutely no excuse in these United States for the existence of slums and shacks. Such environments for domiciles afford us hotbeds of crime, disease and juvenile delinquency at an annual cost of billions of dollars.

To design a housing program that will permit the poor, the low-wage earner and the farmer to build or buy within their ability to pay over a reasonable number of years is a sound investment that will pay incalulable dividends in many ways; greatest of all is a strong and healthy America.

Yes, there are many in our land that have grown obsessed with selfishness, exploitation and greed for the almighty dollar. Naturally, they oppose any kind of a housing program. They still want the green light to drive onward to reap their harvest at the expense of the many, notwithstanding the inestimable damage they do to the Nation.

Whenever any effort is launched to adequately provide conditions conducive to the general welfare of the veteran, labor, farmer and the common man, certain interests classify such action as "socialism." When the Federal Government in 1932 came to the rescue of banks that had fallen in the chasm of bankruptcy, was that socialism? When Federal insurance on bank deposits was given inception and put into practice to safeguard the savings of millions of people, was that socialism?

When the Home Owners' Loan Corporation was established to save countless thousands of farms being sold on the auction block, was that socialism? When provisions were made for flood control and soil conservation to protect the breadbasket of our country and the world, was that socialism? When labor laws were placed on our statute books to protect the working conditions and health of our laboring people, was that socialism? When the Federal Government provided United States highways to improve travel and mediums of safe transportation, was that socialism?

This cry of socialism has grown to be an atrocious vehicle of deception and a sordid Vanity Fair. If we are ever to build our Nation stately and strong we must now grow vitally interested in the

cradle of democracy, the esteemed American home, the greatest of our institutions.

It is deplorable to think how sadly we have neglected the institution which plays such an indelible part in building for citizenship, morale, and spiritual values so necessary in the preservation of our cherished American way of life. Occasionally, we hear the question, Where do you expect to get the money? I have heard that old refrain for 35 years, ever since I started teaching school at $2 per day. We get the money for everything else, so why not use some for the protection of American homes and good family life?

When we learn to provide conditions conducive to a good education and adequate homes for all our people, our standards of living will be tremendously enhanced, resulting in great demands for farm produce and manufactured goods which will bring continuous prosperity to our people and economy for our Nation for many years to come.

Living in the richest country on the face of the earth we cannot longer afford slums and bad housing. The two world wars have reminded us of our gross folly. We are determined to stamp out a great amount of our ignorance, disease, crime, and juvenile delinquency, and in so doing, we strike at the deplorable housing situation which is the hotbed of numerous factors so injurious to an enlightened commonwealth.

So, in this deliberation on a great humanitarian enterprise, may a spark of brotherly love temper our actions in such a manner that others will be privileged to live, grow, and exemplify the great principles on which our Government was given inception.

Academic Freedom

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1949

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Mount Vernon (Ohio) News:

ACADEMIC FREEDOM

When the House Un-American Activities Committee, spurred on by a petition of the Sons of the American Revolution, asked a number of schools and colleges for a list of textbooks they are using, it set off an uproar.

Academic freedom was threatened, according to a large number of educators and editorial writers.

Academic freedom is something we must safeguard, of course. It is as important as any of our freedoms.

However, at the same time, educators of the country are almost unanimously in favor of Federal aid to education.

In doing so they ignore the fact that the acceptance of Federal money for support of the schools also is a very definite threat to academic freedom.

Experience has shown that our Federal Government bureaucrats insist upon controlling anything upon which Federal money is spent. The school system would be no exception.

And, at the same time, academic freedom would be destroyed completely were the Communists to gain control of the country and our educational system. There would be no freedom of any kind if the Communists were to prevail in America.

It is to prevent just such a disaster that the Un-American Activities Committee is pushing its far-flung investigation activities in our country.

One of the functions which must be kept out of the hands of the Communists at all costs, is our educational system, to assure that our youth will be brought up with a proper appreciation of American principles and traditions.

It would seem that the educators, to be consistent, should oppose Federal aid and at the same time welcome measures designed to keep our schools safe from Communist infiltration.

The Church and International Relations

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1949

Mr. MULTER. Mr. Speaker, I commend to the attention of my colleagues the following address by the Honorable Willard L. Thorp, Assistant Secretary of State for Economic Affairs, at the Sixth International Congregational Council, Wellesley College, Wellesley, Mass., on Thursday, June 23, 1949:

THE CHURCH AND INTERNATIONAL RELATIONS

We are heading into a period of increasing difficulty in our international economic relations. So long as the dominant condition in most countries was one of shortages and all peoples were exerting themselves in the same direction, there was little actual policy conflict among nations. To be sure, there were difficult problems which had to be solved such as the satisfactory determination of a fair and equitable allocation of goods in short supply among claiming countries, and the continuing question of how much the more fortunate countries could make available to their less fortunate brothers without weakening their own economies. But the simplicity of the basic economic facts greatly encouraged and facilitated international economic cooperation.

The postwar honeymoon period in international economic relations is now drawing to a close, and the future will apply a much more rigorous test to the capacity and willingness of nations to cooperate with each other in the economic field. It will be a test for the United States and it will be a test of other nations as well. In the immediate postwar period, many countries had no opportunity to make policy choices. But one result of the general improvement in economic conditions has been the appearance of alternative courses of action. The fact is that rivalries and conflicts are now beginning to emerge. Competition is beginning to reappear in foreign markets. Nationalistic tendencies are taking on new force, and bilateral channeling of trade threatens to be not so much a method of getting trade started, as of preempting particular markets. Our efforts to reduce the burden on our budget of economic support to Germany and Japan, conflict with the hopes of those who wish to prevent the return of those two countries to the foreign trade field. Particular interest groups are beginning to be concerned over any improvement in efficiency on the part of their competitors in other lands. So long as expansion was the keynote, solutions were fairly readily reached by agreement, and it was recognized that improvement in economic health was clearly mutual. But balance has not yet been achieved and further substantial adjustments in the flow of trade and capital will be necessary if the countries of western Europe are to become self-supporting and the underdeveloped areas are to make a real measure of progress. The later stage of economic recovery promises to be much more threatening to international good will than the earlier period.

Once more, each country will be faced with the problem of the extent of its concern and interest in what lies beyond its national boundaries. For many centuries isolation was the inescapable condition, for the horizon established a real limit to the actual knowledge of most men. Today in a geographical sense one could argue that the horizon no longer exists. There are no enormous white spaces on our maps where the lines of known seashores or riverbeds come to a stop. Bit by bit and area by area we have pushed out the extent of our knowledge of land and water until the whole could be put together in one unending sphere.

Although it may be true that the horizon has been extended around the world in a geographical sense, it still remains true that within the world total, there are vast unknowns and little knowns. Our geographic maps are perhaps more complete than our social, economic and political maps. We know and yet we don't know. There are probably more Americans living today who have crossed the boundary lines of the United States and seen other lands than at any time in our past history. Thousands of Americans in their uniforms have been in North Africa, Burma, India, Australia, China, Japan, and most of the countries of Europe. Although military groups do not usually see an area in its normal social and economic life, at least the differences in the manner of living cannot help but be observed. Our geographic horizons have been lifted, but perception and international understanding are certainly not yet complete.

It is important to remember that the citizens of any one country are not the only persons with horizons. So far as the United States is concerned, people in other countries are looking at us and wondering about us. We are the dots on their horizons. We are more aware than ever before of the differences which exist among various peoples, and yet we do not fully understand them, and even less accept them. And people in other countries are in the same quandary about us. Nevertheless, mutual understanding is a necessary basis of any substantial degree of cooperation.

One of the basic differences is, of course, that of age. In the United States our civilization and culture are relatively new. The great development of our country as well as a number of other so-called new areas, came largely contemporaneously with the industrial and social revolutions, with the rise of the concepts of individualism and political democracy. Many other civilizations go back thousands of years. Over that long period of time, when there were few forces leading to change, these earlier societies developed rigidities and social patterns built upon entirely different bases of knowledge and with entirely different attitudes toward nature and natural forces. They developed a society oriented toward the preservation of the status quo, itself often strongly resistant to any change.

These different behavior patterns in different countries have meant that unequal advantages have been taken of the great new discoveries in the scientific field, and wide

variations have developed therefore in the ability to take advantage of nature and to reduce natural resources to forms which permit higher and higher standards of living.

In addition, it must be remembered that contacts between areas and people in different areas were exceedingly limited. The locomotive and the steamship are little more than 100 years old. Even today, there are many areas which can be reached by the curious, equipped with color film and medicine kit, but which have no regular contact with the outside world. Language difficulties have been and are another bar. At United Nations meetings, I have never been able to speak in any common language to the representatives of Yemen, even to tell him how much I admire the beautiful dagger which he wears in his belt.

As long as there were these barriers, as long as a real physical isolation existed, the differences which had developed had no disturbing effect. But the new methods of transportation, the increased extent of modern communication, the demonstration both by pictures and by persons like our military travelers with all their equipment, have all called attention to the differences among the nations. The horizon in these other countries has been extended.

In comparison with most other areas, the standard of living in the United States is fabulous, often far exceeding the fact as the story is passed on from one to another. But the fact of the difference is now increasingly known throughout the world, and the less developed areas are seeking ways and means of making similar progress. They naturally look to and at the United States and the other more-advanced countries to see whether or not our society and culture can be taken as an example of the way in which their basic objectives can be achieved.

What does this mean for the United States? Are we concerned about these other areas? Of course the answer is "Yes." The world is too small for us to be able to forget or disregard other nations and other peoples. Our international economic ties are strong, with our dependence upon foreign sources for many raw materials, and our own capacity to produce having been developed with various export markets in view. Our political relationships are now formalized in the United Nations, where, except for the Security Council, the largest and the smallest country cast votes of equal weight. Our culture has been and is being continuously enriched by art and artists from abroad. Just as we were involved not long ago in global war, so today we are involved in global peace.

Even beyond the important international elements of our economic, political, and cultural life, we have a profound interest in what sort of notions become accepted as the basis for the new development of these countries, these people who are eager for change but are by no means clear as to what form the change should take. We ourselves are dedicated to the principle of human freedom, that is freedom from totalitarian governmental powers, and freedom for individual discussion and thought. We believe that this concept of individual freedom and dignity leads to the maximum of human progress and the minimum of that arbitrary and selfish national behavior which leads dangerously in the direction of war.

There is no way in which we can impose our notions about democracy on other countries. One can impose totalitarianism, at least for the time being. By definition, the police state can create obedience to the state. The police state can be quickly created, although it is unstable in life because it depends for its life upon force and violence. But the concept of human freedom and human dignity is more difficult to translate and transfer. Freedom is free and it cannot be imposed, or it is not freedom. It must spring from personal conviction and respect for others. We believe in these things, but how can we get the idea across to others? This is a most difficult problem. You cannot wrap up the notion of freedom or of human dignity in a neat package and export it through any known trade channels. Fundamentally, it must be done by demonstration. We can be effective only as we practice what we preach, both in our foreign and our domestic behavior. The notion of democracy cannot be for home consumption only.

Our foreign policy must be one which seeks to assist the peoples of other countries. This can be in our own interest as well, but it must not be only in our own interest. I was once told by a Lebanese, that after the American University was established in Beirut, for 20 years the native citizens kept wondering what its ulterior motive was, what were these Americans really up to. But they finally decided that this was really an act of good will and accepted it as such. From that time on it has been of incalculable value, just because its basis was clearly one of friendship.

The European recovery program can be justified on grounds of our own economic and political interest, but its greatest justification is that it has helped millions of people in western Europe back on their feet. In spite of the need of the western European countries and the tremendous amount of the assistance given, we have not used the program as a means of pressure for our own selfish ends, and we rejoice that these politically independent countries are becoming economically more independent every day. We can use our economic strength exclusively for our own benefit in such a way as to become feared and hated, or we can use it on a level of decency and fairness, a moral level, which creates respect and voluntary cooperation.

The same spirit must provide the basis for the new program to assist to a much greater degree than heretofore in the development of backward areas. With our technical skills, we can give help to many peoples in their efforts to overcome disease and poverty. With modern techniques, malaria can be eliminated from the face of the globe. Improved agricultural methods are in use by only a tiny fraction of the world's farmers. Half the world's farms today use wooden plows. And there are countries in which 95 percent of the population cannot read and write.

Through the United Nations, and by direct bilateral arrangements, the more advanced countries can do much to help these underdeveloped countries to solve their own basic problems. We can do this on a careful bargaining basis, getting a quid for every quo, or we can do it on the assumption that we, and all other countries, are benefited by higher standards of living, of health, and of literacy in every country. It is not enough to talk about these problems. Here is a great opportunity for us to demonstrate our interest and concern. "By their deeds, ye shall know them" can well be applied to international affairs.

It is most important that we carry on our various foreign projects on a basis which combines our interest with that of the other country. However, to those on whose horizon we are, their greatest curiosity is as to our own accomplishment. Here we must be honest and humble.

I need not take time to describe our own country. It has never really had a status quo, but has always been actively in the process of change and development. We all recognize that the United States has been built in considerable part with foreign material. True, there are many residues still surviving from the Indians, among them a collection of troublesome polysyllabic geographic names, some unusual designs and patterns, and some good literary and football material. However, on the whole, we owe far more to European civilization. Our railroads were built in large part by foreign capital and immigrant labor. Our basic concepts of law and government trace back to foreign sources. And even in the twentieth century, our own great research laboratories and scientific studies have utilized and added to many major discoveries made in other lands. Foreign artists, foreign musicians, foreign authors, and foreign motion pictures are all familiar elements in our cultural life. We have attracted and absorbed immigrants, skills, and technology, equipment and capital, and ideas from many other countries, and we continually acknowledge that indebtedness.

We have of course contributed our own full and original share to the course of American progress. Our progress, such as it is, has been possible in very large part because of the wide acceptance of the notion of the intellectual and economic open door and the resultant cumulative interplay of many contributing sources, domestic and foreign.

We can all be proud of our country, yet we must recognize that it is not yet perfect. We have achieved the highest level of productivity ever reached by any civilization, yet we are not too sure of our ability to maintain full employment. We have a great record for office-boy-to-president opportunity, yet we must admit to racial and class discrimination within our boundaries. We spend billions on education yet we don't quite trust the intellectual or even the college professor. We talk about free elections, yet too small a percentage of our citizens bother to visit our polls, even for national elections. You can make your own list, and when you do, remember that foreign countries are watching. The small world requires us all to be rather more self-conscious than ever before. In the long run, our influence over other countries will stem from our convictions and our actual performance.

What I have been really saying is that foreign policy is limited by domestic policy. We cannot tell other countries that they should balance their budgets if our own budget is out of balance. We cannot argue that they should reduce trade barriers if we ourselves maintain a high tariff. We cannot talk about freedom and democracy unless we give these terms real meaning at home.

I have been talking in terms of national and international policy, and that may seem very far removed from the lives of individuals. But every individual will by his own acts play his part in the unfolding of the future. For example, you cannot help but meet visitors from other lands from time to time, and you can demonstrate then and there whether Americans are a friendly people, or merely the degenerate profiteers some people call us. You will all play some part in creating the United States of the future. Will the American society be an appealing demonstration of how splendid life can be, or will the shadows grow and deepen? What America is, is expressed by human beings and made up of human attitudes.

Our own behavior might be less important if we did not practice freedom of information and the press—if complete censorship controlled the picture which is painted. But American life is fully exposed to view, probably with undue emphasis on its less charming aspects. Every step in the direction of strengthening our democracy and our freedoms within our own boundaries is important not merely for its own sake, but because of its impact on the international scene.

I have been talking in terms of American policy because I can speak of it with some authority. However, it is obvious that what I have been saying, at least in terms of principle and moral implications, is equally significant for other countries.

International relations do not raise moral problems which are strange and new. As a matter of fact, in many ways national life and individual life have their parallels. I have discussed the problems in terms of national and international life. But also as individuals, we all have our difficulties in both foreign and internal relations. We must live with people, and we must live with ourselves. Two individuals cannot be friends unless both are friendly. The basic requirement for living with others happily is good will and understanding. The basic requirement for living with one's self is to satisfy one's own standards.

These same basic requirements apply to international life. They are the fundamentals which the church has always taught and must teach with increasing vigor. Not limited by national boundaries, the concept of human brotherhood can be a tremendous force upon the policies of governments. The test does not come in the easy periods. Families, communities, nations, and the international sphere all have their periods of stress and strain. What happens under these conditions can be destructive of relationships or it can provide the integrating force of common trial and common experience.

You may feel that I have discussed international relations much more than the church, though both are in the title of my speech. I will insist, however, that my comments have all been related to the church. If I have stressed any one thing, it is the basic importance of human attitudes and human understanding. And every point which I have made might have had as its last sentence—this is a matter for action by the church. I am not arguing that the church should take a direct part in the solution of each problem, though often it has done and can do much to improve international relations by carrying on its work across national boundaries. I do mean that its great task is to create that human climate, that level of human sympathy and understanding, without which we can never achieve that great goal, "Peace on earth, good will to men."

The Brannan Plan

EXTENSION OF REMARKS
OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 24, 1949

Mr. BURDICK. Mr. Speaker, in the frequent discussions of the Brannan plan, or other proposed farm plans, too often the consumers viewpoint is overlooked entirely. The following article from the June issue of Consumer Reports, published by the Consumers Union of the United States, Inc., a nonprofit organization of consumers, is a well written analysis of Secretary Brannan's plan as seen from the consumer's side of the picture.

THE BRANNAN FARM PLAN

While they are far from flawless, the recent proposals of Secretary of Agriculture Charles F. Brannan for modernization of our farm price support program are a major improvement over the Aiken Act of the Eightieth Congress. The Brannan plan was presented to a full-dress joint meeting of the Senate and House Agriculture Committees in April, and has been the subject of further hearings and discussions ever since. It recognizes the consumer interest in reasonable food prices to a much greater degree than most competing proposals. It tends to favor the two groups primarily concerned—dirt farmers and ordinary consumers—with a minimum of bonanzas and windfalls for the food processors, middlemen, and absentee owners of vast farm acreages who are frequently the ones who benefit most from farm programs.

The plan as a whole, CU believes, warrants the support of consumers despite its shortcomings. Though it is intended primarily to benefit the farm population, the plan could help to stabilize our entire economy.

WHY PRICE SUPPORTS

That some sort of farm plan is essential has by now become a fixed principle of the American economic system. Secretary Brannan makes this point simply. "Price supports," he says, "are the farmer's equivalent of the laboring man's minimum-wage, social-security, and collective-bargaining arrangements."

The reasons why supports are needed stem from the fact that the farmer lives in an economy where the prices of most of the products he buys are set by monopolies by open or tacit agreement among producers, or by simple restriction of production to hold prices up. The prices of the products he sells, on the other hand, are elastic. Within the lifetime of farmers not yet middle-aged, wheat has fluctuated between 44 cents and $3.33 per bushel, corn between 22 cents and $2.88, rye between 30 cents and $4.08, cotton between 5 and 40 cents a pound. The techniques which other segments of our economy use to stabilize prices are not open to the individual farmer acting alone. As a result, the cash income of ordinary farmers on ordinary farms has often, in the past, fallen below the level which would maintain a decent standard of living. Federal aid is needed to stabilize farm prices in conformity with those of the rest of the economy.

This is peculiarly true because, inevitably, farmers acting by themselves will tend to turn even minor farm surpluses into catastrophic gluts. The cycle is simple. If supply exceeds demand, the price falls. The individual farmer finds his income cut while his taxes, mortgage interest, and other charges remain high. And he is in no position, by himself, to adjust to this situation as many manufacturers do, by restricting production. Thus surpluses accumulate.

In classical economic theory, the corrective for this type of overproduction is the elimination of enough producing units to bring supply back into line with demand. In human terms, this means the bankruptcy of farm families, foreclosures on their mortgages, and untold human suffering. Certainly no American Government in the foreseeable future will permit a recurrence of such conditions.

Furthermore, farm price supports are warranted by the need to keep the farm segment of our population in sufficiently prosperous condition to continue to consume the products of our cities. The rest of the country simply cannot remain prosperous while the farm population is depressed. And any substantial reduction in farm income would be almost certain to usher in a depression.

COMMODITY PURCHASES VERSUS PRODUCTION PAYMENTS

The most significant feature of the Brannan proposals, from the point of view of consumers, is the shift in emphasis from commodity purchases to production payments. The change should benefit consumers as well as farmers.

At present the prices of potatoes, milk products, eggs, and some other commodities are being held by up Government purchases of these commodities in the open market. A less efficient means of stabilizing farm prices could hardly be imagined, short of having the Government make its purchases at corner grocery stores. It means, in effect, that everybody along the line takes a cut out of the Government hand-out before the residue, if any, reaches the farmer. Speculator, processor, warehouseman, middleman—each shares in the Government dollar supposedly spent to benefit the farmer.

The consumer is doubly penalized by the commodity-purchase program. First, he pays the cost of the purchases in higher taxes. Second, he pays higher prices for his food as a result of the Government's running up of the price.

The commodity purchase program is self-defeating in another respect. When the price of potatoes, for example, is pegged at a relatively high level two things happen. The high price causes consumers to buy fewer potatoes, while simultaneously it stimulates farmers to raise more. Thus commodity purchases may intensify the very supply-demand imbalance they were intended to remedy.

The production payment program is designed to avoid these difficulties. With respect to products subject to production payments, no attempt would be made to raise or maintain food prices. The price of potatoes, for example, might fall from the pegged level of $1.75 a bushel to $1, or even lower. However, if the price received by the farmer fell, on the average, below the support level, a production payment would be made directly to the farmer to raise the average farm price to the support level.

The immediate advantage to the consumer is readily apparent. Prices in retail stores would fall to their natural levels. As a result, consumption would tend to rise. The farmer, too, would benefit in a number of ways. He would get, directly and in full, the Federal payment, instead of getting indirectly what was left of Federal funds after speculators and middlemen had taken their profits. And he would benefit also from the larger market for his products stimulated by lower retail prices.

SIZE OF FARM LIMITATIONS

A second noteworthy feature of the Brannan proposals is the limitation on the size of the farms which will benefit from production payments. In theory, farm price support plans are justified by the need to maintain a decent standard of living for ordinary farm families. In practice, large corporations operating vast acreages on a semi-factory basis have received tens and even hundreds of thousands of dollars in benefit payments from farm appropriations. The Brannan proposals would limit the extent of participation in production payments. Each farm could participate to the extent of some 1,800 units of production, a crop worth about $20,000 at present prices. (A unit is 10 bushels of corn or the cash equivalent in other crops.) Farms producing more than this would get production payments only on the first 1,800 units. Some 2 percent of the farms, producing 25 percent of the total dollar volume of farm products, would be affected by this limitation.

Some critics of the Brannan plan have argued that the participation limit is too high for channeling benefits to the family farms which most need them. On the other hand, the 1,800-unit limitation is better than none.

PRODUCTION CONTROLS

Any price support plan tends to increase the production of those commodities which are already being heavily produced. If t he price support system is not to be swamped by disastrous gluts, it must exact a ceiling on production as the condition for participation in benefit payments.

The Brannan proposals have been attacked as a "regimentation" of the farmer because of such provisions. Expressing deep sympathy for the regimented farmer, the Wall Street Journal complains that the Brannan

plan "would put tight controls over what a farmer could plant and how he could sell." Brannan's answer is this:

"Farmers fought for the legal rights they now have to impose marketing limits upon themselves. In the view of those who did so, these rights represent an extension, not an infringement, of their freedom. I adhere to this principle."

The major type of control called for—marketing quotas—cannot be imposed unless approved by two-thirds of the farmers concerned, voting in a referendum. Consumers, however, have no voice whatever in the determination of production-control policy. A considerable improvement in the entire farm program, and one likely to win it added popular support, would be provision for consumer representation when basic policy determinations under the program are being made.

LEVEL OF SUPPORT

As important as how farm prices are to be supported is the question of the level at which support should come in. At present, the level of support is set in terms of farm prices for the years 1909–14—an archaic scheme which long since outlived its usefulness. One result of using 1909–14 prices is that some products are pegged at prices far out of line with current cost and market factors, while other crops are left wholly unsupported. Secretary Brannan proposes to eliminate these relative inequities by using a recent decade as the base period. For the 1950 crop year, the period 1939–48 would be used as a base, and this base would be moved up from year to year.

As for absolute level, the Brannan proposal would base supports on the purchasing power of the farmer's dollar today, compared with its purchasing power over the 10-year test period. At present, Brannan calculates, the farmer needs $1.25 to purchase as much as he could get on the average, for $1 during the decade 1939 to 1948. Accordingly, the support level of a crop today would be 25 percent above its average price during the test decade.

There is room for argument whether this level is too high or too low. From one point of view, it would appear to continue the abnormally high price level of the war years for a considerable period into the future. Brannan's reply is that the proposed farm price level would still leave farm purchasing power at a lower level than it has been for the past 6 years. The formula, in short, is a compromise.

MILK PRICES

A particularly interesting and urgent application of the "production payment" plan is suggested for milk. Brannan calls attention to the fact that while retail fresh milk prices have risen more or less steadily since 1947, consumption has been falling. He continues:

"We should be producing and consuming 150,000,000 pounds of milk by now instead of something less than 120,000,000. If it is necessary to get milk down to the area of 15 cents a quart at retail in order to have maximum consumption, and use production payments to assure farmers of fair returns, I think both farmers and consumers will want to do it."

Brannan has proposed that this milk plan, and a similar provision with respect to hogs, be made effective immediately. A slogan on which farmers, consumers and the country at large might well unite would call for 15-cent milk by Thanksgiving—with production payments sufficient to make 15-cent milk feasible for the farmer.

THE BRANNAN PLAN'S SHORTCOMINGS

Much of the recent criticism of the Brannan plan is actually applicable to any plan at all which aims at preventing catastrophic declines in farm prices. For example, it is charged that full operation of the plan would cost the taxpayers billions of dollars a year. This might be true, depending on the future trend of urban employment, prices generally, and other incalculables. On the other hand, given general prosperity, the plan might well exact little or no cost. Large sums are being spent this year to hold up the price of such products as milk, butter, potatoes, and eggs in a wholly unreasonable manner. The same sums, rationally expended, could bring benefits to the farmer without pricing consumers out of the market.

A more significant criticism of the Brannan proposals is that they do not go nearly far enough. For example, Brannan makes a most convincing case for production payments as a means of supporting prices. But with respect to the staple farm crops—especially corn, wheat, and cotton—he proposes to continue the older techniques of loans, purchase agreements, and spot purchases, all of which have the effect of raising consumer prices unduly. Similarly, the limitation of benefit participation to the first 1,800 units of a farm's production is not applicable to the major crops.

Brannan-plan legislation has been introduced into the Senate by Senator THOMAS and into the House by Congressman COOLEY. The process of emasculating the proposals has already begun; the Cooley version eliminates all reference to the 1,800-unit ceiling on the amount of production payments which a single farmer or farm corporation can receive. Hearings have been held by the Pace Subcommittee of the House Agriculture Committee. So far, only one of the major farm organizations—the National Farmers' Union—has come out in favor of the Brannan plan. Food processors, and other middlemen, as well as the corporate proprietors of large-scale "factories on the farm" are of course against it. As this issue goes to press, it is far from certain that the meritorious portions of the Brannan plan which make it worthy of consumer support will survive even the committee stage.

Town of Ludlow, Mass.

EXTENSION OF REMARKS

OF

HON. FOSTER FURCOLO

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 24, 1949

Mr. FURCOLO. Mr. Speaker, in a section of New England known as western Massachusetts is located a town, the area of which was included in the original grant of land to William Pynchon in 1636 and then formed into a separate district by an act passed by the legislature and signed by the Governor of the Massachusetts Bay Colony on February 28, 1774. Thus was established the district of Ludlow which became the town of Ludlow at the very beginning of the Revolutionary War, August 23, 1775, by an act of the General Court of Massachusetts.

The first district meeting was held on March 16, 1774. Democracy was at work in this small struggling community. These hardy adventurers had come into this area from other towns in the Colony, had fought the wilderness and founded their community.

Almost immediately one in seven of the inhabitants of Ludlow joined in the Revolutionary War and wrote the first pages in the town's history of contribution to American freedom. They were followed by young men of other generations in Shay's Rebellion, the War of 1812, and every succeeding conflict in which America was called upon to defend herself culminating in the splendid record established by the sons and daughters of Ludlow in World War II.

I had the great honor of addressing the people of Ludlow on the occasion of the town's observance of Memorial Day last month. Never have I been more impressed with the basic strength that is America. A thriving community peopled by believers in democracy with a long record of struggle to preserve it in the American way.

But while the challenge to preserve liberty was met, these people continued to work for the improvement of their community and their Nation. The approximately 200 original settlers were gradually joined by others. New Americans from foreign lands continued the effort, and as time went on, many of the nations of the world had contributed strength to the cause. Their children and their children's children continue these efforts always seeking the guidance of God. With love of God and will to succeed the residents of Ludlow to this day have proved their worth.

You may say this is a typical story of the founding and progress of American communities. Perhaps so, but it is well to remember our great heritage in order that we not fail to carry on the work handed down to us.

As I observe the over 8,000 residents of the town of Ludlow preparing to celebrate during the week of June 27, 175 years of progress; as I note the growth of this urban community in many ways over the years—widely known manufacturing concerns, principal State highways, excellent schools, and fine places of recreation; as I think of her beautiful churches representing many denominations without thought of bigotry; as I review in my mind the Americans who descended from those who migrated from the far-flung nations of the world and contributed immeasurably to the community's success, I say, "Yes; perhaps typical of many American communities but worthy of attention at this time so we may recall to mind our continuing responsibility."

I ask my colleagues, therefore, to join with me in extending to the town of Ludlow, located in beautiful western Massachusetts, heartiest congratulations on 175 years of progress and every wish for continuance of this progress in the true American tradition.

Alice in Trumanland

EXTENSION OF REMARKS

OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, June 24, 1949

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the

RECORD, I include the following editorial from the Cleveland Plain Dealer of June 19, 1949:

ALICE IN TRUMANLAND

At his press conference Thursday President Truman described the current spy trials and loyalty investigations as a form of typical postwar hysteria which, he said, eventually will die down. The President gave the impression that he strongly disapproved of these goings on. In fact, if there should be any manifestations of this sort of hysteria in the executive departments of the Government he would root it out, he said.

This is the kind of stuff that gives an Alice in Wonderland touch to the Washington scene.

Unless the Mad Hatter and the Dormouse have gotten us so confused that we don't know what is going on, it is our impression that it is the Department of Justice which is conducting the spy trials about which the President spoke so disdainfully. That is one of the executive departments, provided the Red Queen hasn't ordered it abolished.

In one of these trials, the Department of Justice is attempting to prove that the Communist Party is engaged in a conspiracy to advocate the violent overthrow of the United States Government. This trial has been going on for 5 months. The only signs of hysteria we have detected in it have been the actions of the 11 defendants and their lawyers.

In another trial the Department of Justice is trying to prove that Alger Hiss, a former State Department official and one of President Roosevelt's advisers at Yalta, committed perjury when he testified under oath that he did not give confidential Government documents to Whittaker Chambers, an admitted former Communist.

Hiss may be acquitted of the perjury charge, but if he is acquitted the fact will remain that there was a leak somewhere in the State Department which enabled Chambers to obtain these documents and make microfilm copies of them. Another former State Department official, Henry Julian Wadleigh, has admitted that he supplied Government documents to Communists.

Is the Hiss trial the result of hysteria, Mr. President, and if it is, are you going to reprimand Attorney General Tom Clark for allowing the trial to proceed? Off with his head, we seem to hear the Red Queen saying.

Then there is the case of Miss Judith Coplon, who is accused of stealing documents from the Department of Justice, no less. The jury might find, just as she said, that the notes she had in her handbag when FBI agents seized her in New York in company with a Russian were the basis for a novel she was writing and that she never had any intention of delivering them to a Communist spy. But was the Department of Justice hysterical for prosecuting her, Mr. President?

If there has been any hysteria connected with this case, it resulted from the judge's ruling that the defense had a right to read to the jury the confidential files of the FBI on which the notes found in Miss Coplon's handbag were based. At this point the Department of Justice had a choice of dismissing the charges against Miss Coplon or of allowing the files to be made public. The Department decided to go ahead with the case. It has been reported in Washington and not denied that Attorney General Clark made this decision, overruling FBI Director J. Edgar Hoover. But the President has created the impression he is displeased with Hoover's conduct in the affair.

Then there is the case of Harry Bridges, west coast labor czar, whom the Department of Justice has indicted for perjury, claiming he swore falsely he was not a Communist when he was granted the privilege of American citizenship. Was this indictment the result of hysteria, Mr. President?

Perhaps the President had in mind the congressional investigation of the Atomic Energy Commission. Is it hysteria when the American taxpayers are shocked by the revelation that they are paying for the education of Communists? Or that security regulations were so lax that two bars of uranium could be taken out of an atomic energy plant without anyone discovering their removal?

During last year's campaign the President referred to the Communist spy investigation as a "red herring." Last week it was "headline hunting." Now it is "hysteria." That's the way the Communists talk when they are investigated. Whose side are you on, Mr. President?

The Housing Bill

EXTENSION OF REMARKS
OF
HON. RALPH E. CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1949

Mr. CHURCH. Mr. Speaker, under leave to revise and extend my remarks, I am inserting in the CONGRESSIONAL RECORD the following transcript of a radio interview broadcast over Station WIND, Chicago, Ill., on Thursday evening, June 23:

ANNOUNCER. Tonight we have the privilege of interviewing Congressman RALPH E. CHURCH, of Evanston, Ill. He is considered one of the hardest working Members of Congress.

Mr. CHURCH. Well, now, I appreciate the compliment, but I think most Members of Congress are hard working. I don't think I am any exception in that regard.

ANNOUNCER. Yes, but you are on the Appropriations Committee which probably has a heavier work load than any other committee. And I understand that during your entire service in Congress you haven't missed a session of the House or a single vote. How many years have you been in Congress, Mr. CHURCH?

Mr. CHURCH. This is my thirteenth year.

ANNOUNCER. Well, perfect attendance over a period of 13 years seems to me to be quite a record. I think you are to be congratulated.

Mr. CHURCH. Thanks. I am only trying to do the job the people elected me to do.

ANNOUNCER. You are doing that all right, and more.

Being a member of the Appropriations Committee and knowing your efforts to cut Government spending, I probably should ask you some questions on present budget outlook. But inasmuch as the House has been working on the public housing bill this week, I think the people would be interested in your views on that subject.

Mr. CHURCH. I shall try to answer any questions you may wish to ask. Inasmuch as there are certain differences between the Senate public housing bill and the House bill, to avoid possible confusion it would be well to confine our discussion to the House bill as reported by the Committee on Banking and Currency.

ANNOUNCER. I agree, Congressman CHURCH. My questions will be directed solely to the bill before the House this week.

Mr. CHURCH. Of course, the stated objectives and the underlying philosophy of both bills are the same. The differences between the two are largely matters of detail.

ANNOUNCER. We will try to avoid the details in the limited time we have and deal only with the basic issues.

When you were on this program last month, Congressman CHURCH, you stated that you were opposed to the public housing bill. I don't suppose you have changed your mind.

Mr. CHURCH. I certainly have not. I consider it to be one of the most dangerous proposals to come before Congress. The more I learn about the program the more dangerous I think it is.

ANNOUNCER. In what respects do you think the bill is dangerous? The sponsors of it claim that it is the solution to the housing shortage problem, or do you believe there is no existing housing shortage?

Mr. CHURCH. That there is a housing shortage in various sections of the country, particularly the cities, no one can deny. It is not due to any fault or failure on the part of private enterprise. It is one of those problems that arose out of the war when, because of the lack of men and materials, there was very little building construction.

ANNOUNCER. If there is this existing housing shortage, Mr. CHURCH, which you—with your usual honesty and frankness—readily admit, why isn't this public housing bill necessary as a solution to the problem?

Mr. CHURCH. For many reasons—you don't want me to launch into a speech, do you? I feel so strongly about this.

ANNOUNCER. Oh, no. No speeches. Briefly, why isn't the public-housing bill a solution to the housing shortage problem?

Mr. CHURCH. The existing housing shortage is merely the excuse which the socialistic planners use to put their nationalization plans into effect. Some good, well-meaning people have been led to believe that the passage of this legislation will almost overnight provide homes for their relatives, or friends, or neighbors. Insofar as the present housing shortage is concerned, the bill can do nothing in less than 2 years or possibly 18 months toward alleviating the shortage. And so, all this talk about relieving the existing housing shortage by this proposed legislation is just nonsense.

In the meantime, private enterprise is itself licking the housing problem. Last year almost one million new permanent dwelling units were built. That is a larger number than ever constructed in the entire history of the United States. This building boom was generated by the removal of the wartime restrictions and controls on the building industry by the Republican Eightieth Congress.

In a word, the solution to the housing shortage is the continuation of the record home-building program now under way. Private enterprise, free from Government controls and restrictions, free from the deadening hand of bureaucracy, is doing this job.

But if our Federal Government enters upon a public housing program, in competition with private enterprise, the number of housing units built by private enterprise will slowly but surely decrease. The experience of Great Britain with socialized housing attests to drying up of private building. The experience of Great Britain proves that bureaucracy cannot build homes, and the administration is asking the American people to drink from the same bitter cup.

ANNOUNCER. So you believe that the proposed public housing program will ultimately result in fewer homes being built.

Mr. CHURCH. That has been the experience of Great Britain. Private enterprise certainly cannot compete with Government subsidized houses. Government-built houses, owned by the Government, managed by the Government with part of the rent paid by the Government from taxes inevitably discourages people making the sacrifices necessary to own their own home. A

program of this character strikes dangerously at the American tradition of home ownership, thrift and individual incentives.

ANNOUNCER. What about the cost of this proposed public housing program, Mr. CHURCH?

Mr. CHURCH. That is a very important point. Every one is concerned, or at least professes concern, about our present fiscal situation. We have the largest public debt in history, and we have the heaviest taxes in history. And the country is faced with an unbalanced budget, which means deficit financing or an increase in taxes.

Notwithstanding our precarious financial situation, the administration proposes by this public housing program to commit the Federal Government to an expenditure of almost $20,000,000,000 over a period of 40 years. Even if we were to agree that the program is meritorious, we should not undertake it. We simply cannot afford it.

Do you know that 32 percent of our national income now goes into taxes and that history shows that capitalistic systems of government, such as we have in the United States, break down when taxes reach 40 percent of the national income? We are thus within 7½ to 8 percent of national insolvency. We are rapidly approaching the breaking point.

ANNOUNCER. How do they propose to raise the money to finance this program which you say will cost almost $20,000,000,000 in 40 years?

Mr. CHURCH. That's a very good question. It touches on a feature of this program that is generally overlooked. I do not think many of our people realize that once the program is authorized the Congress will have no control over the expenditures.

ANNOUNCER. Do you mean to say that your Committee on Appropriations will not each year review the expenditures and proposed expenditures, as you do with the other agencies, and appropriate such funds as you believe necessary?

Mr. CHURCH. No, sir. It is a believe-it-or-not. Under the terms of the bill the Committee on Appropriations is completely bypassed. We will have no supervision whatever over the obligations incurred to carry out the program.

ANNOUNCER. That strikes me as rather novel. I know that each year your Committee on Appropriations examines the various programs of the Government and makes appropriations for them accordingly, for public roads or for harbors or dams, and so forth. But, if I understand you correctly, under the proposed public-housing program you will not have this control over the money spent by the housing agency. I wonder if you would explain, Mr. CHURCH, how the Administration proposes to finance the program without the Congress making the appropriations for it from time to time.

Mr. CHURCH. I shall try to make it as clear as I can without getting too technical. As you know, the usual procedure is for the Congress to pass a bill authorizing some particular program and then each year the Committee on Appropriations makes the appropriation for the program. It may refuse to make any appropriation, or it may appropriate less than recommended by the budget, or it may appropriate more.

In the pending public housing bill, however, that procedure is discarded. The bill authorizes the Housing Administrator to issue notes or other obligations in such forms and denominations as he decides. The Secretary of the Treasury is authorized and directed to purchase these notes and other obligations. In making the purchases the Secretary of the Treasury is authorized to use the proceeds from the sale of any securities under the Second Liberty Bond Act.

ANNOUNCER. In other words, the money for this $20,000,000,000 program for a period of 40 years is to be raised by debt transactions rather than by appropriations.

Mr. CHURCH. Exactly. By the terms of the bill the Congress would be granting the Housing Administrator the right to incur this huge debt with the full faith and credit of the United States behind it.

Control over the Nation's purse is one of the fundamental prerogatives of Congress. To protect the people in the taxes they must pay it is the very, very important job of Congress to supervise Government expenditures and obligations. But it is proposed by this public housing bill that Congress give up that right.

ANNOUNCER. Congressman CHURCH, I wonder if we can reduce the cost or subsidy figure to simpler terms. When we speak in terms of billions—$20,000,000,000, in this instance—it is difficult for any of us to grasp.

Let me ask you, is there any limitation on the cost of housing units to be constructed by the Government?

Mr. CHURCH. The bill provides that the cost shall not exceed $1,750 per room, plus $750 the Administrator has discretion to add. The cost can be $2,500 per room.

ANNOUNCER. That seems high.

Mr. CHURCH. High is not the word for it. It is extravagant. In other words, each 5-room unit can cost $12,500. As a substidy for that unit the annual amount will be $562.50, or $46.88 a month. In other words, the American taxpayers can be called upon to pay as much as $46.88 a month as part of the rent of the person who is given a 5-room unit costing $12,500. If one can get a house costing that price, with the Goverment paying a large part of the rent, what incentive is there for anyone to try to save for a home of his own? How can private enterprise possibly compete?

And let me point this out: The proponents of the bill, which provides for 1,050,000 units, frankly state that this program is only the beginning. They believe that once it gets under way it will gain such political momentum that it will automatically be enlarged. We are on the road to socialism. I fear for our future if programs of this character are adopted.

ANNOUNCER. One more question, Congressman CHURCH. What other issue, aside from the labor bill being debated in the Senate and the public housing bill in the House, do you think of foremost importance in the minds of the people.

Mr. CHURCH. I think the people are keenly interested in seeing the Hoover Commission recommendations for reorganization carried into effect at the earliest possible date. That is one of the things on which I have been vigorously working. I have urged the need for reorganization for many years. It is long overdue, and we must not let this opportunity to go by, without some definite results.

Postal Pay Legislation

EXTENSION OF REMARKS
OF
HON. JOHN R. WALSH
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1949

Mr. WALSH. Mr. Speaker, on Monday, June 20, I made a statement on this floor in which I expressed the hope that hearings would be scheduled by the House Committee on Post Office and Civil Service relative to postal pay bills pending before that committee. At the same time, I announced that if public hearings were not scheduled, I was prepared to file a discharge petition in favor of H. R. 4495—the postal reclassification bill.

I am very happy to learn that yesterday the Post Office and Civil Service Committee voted to begin hearings on postal pay bills on next Tuesday, June 28. Accordingly, I shall withhold the discharge petition.

There are many Members of the House, I am sure, who feel as I do in the matter of adequate compensation and fair conditions of employment for the men and women in the Post Office Department. It is my sincere hope that the committee will expedite the scheduled hearings, and that an early opportunity will be given the Members of the House to vote on the committee recommendations?

The Law—As It Is Writ

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1949

Mr. HARRISON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Star of June 23, 1949:

THE LAW—AS IT IS WRIT

The District citizen may now sue in the Federal courts, or be sued by, his fellow citizen in the States. That is what Congress, in 1940, said he might do. And on Monday, as explained here yesterday, the Supreme Court agreed that what Congress said in 1940 was valid under the Constitution.

To reach that decision a Supreme Court majority had to find that the act of Congress was in conformity either with article I or article III of the Constitution or both of them.

In reaching such agreement on the law the Supreme Court established what must be a record in failure to agree. Here is the way it happened.

Six of the Justices—Chief Justice Vinson, and Justices Reed, Frankfurter, Douglas, Murphy, and Rutledge—held that the act of Congress was not supported by article I.

Seven of the Justices—Chief Justice Vinson and Justices Black, Reed, Frankfurter, Douglas, Jackson, and Burton—held that the act of Congress was not supported by article III.

Three Justices—Jackson, Black, and Burton—held that the act of Congress was supported by article I, but not by article III.

Two of the Justices—Rutledge and Murphy—held that the act of Congress was supported by article III, but not by article I.

There were four separate opinions. Three was the greatest number of justices who could persuade themselves to agree on any one of them. A minority opinion of two Justices—opposed by seven of their brethren—combined with a minority opinion of three Justices—opposed by six of their brethren, made an act of Congress valid under the Constitution.

The layman, struggling through the maze of language of these opinions, may have reason to pause and reflect upon the marvelous achievements of a Court of rugged individualists.

The lawyers, well, let the lawyers stew in their own juice. It may do them good. As for the Solicitor General of the United States, who intervened with the appellants and presented a very logical and clear brief

to the Court and argued its points with becoming eloquence, he may content himself with the comforting thought that while overruled by the Court on practically every point he made, he won his case.

Closer Ties Throughout the Free World

EXTENSION OF REMARKS
OF

HON. CHARLES A. EATON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, June 24, 1949

Mr. EATON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Gov. Thomas E. Dewey, of New York, at the Williams College commencement exercises as carried in the New York Times of June 20, 1949:

It is a pleasure to be here under the benign sponsorship of the distinguished president of Williams College, Dr. Baxter, and I am deeply grateful for the honor conferred upon me today. It is also a pleasure to be here in the company of Mr. Hoffman, who has turned with such skill from building automobiles to building the foundations of peace in the largest scale rescue operation the world has ever seen.

Many of you in this graduating class know a great deal about that job. You had a stern part in the war which made it necessary—which brought to an end one effort to conquer the world by fascism and served as the curtain raiser to another effort to conquer the world—by communism.

When I came home from Europe last Thursday I was asked by a newspaper man whether I thought there was going to be a war soon. I said that most of the responsible people I had talked with did not think so, but that tension existed in every capital.

Perhaps a better answer to that question would have been to say: There is a war on now. It is being waged against every free country in the world by every device of propaganda, sabotage, threats, and in some areas, physical violence.

POINTS TO SOVIET GAINS

The question remains: "Will there be a general shooting war?" We know that no free nation wants a war, so the question will be decided by the 13 men of the Politburo in the Kremlin.

But why should these 13 men be stupid enough to change from a cold war to a shooting war? They have won more in the last 4 years of uneasy peace than any nation ever won by war. They have conquered 200,000,000 people in middle Europe and nearly 400,000,000 in China. They believe that by the continued use of native traitors they will gain Indochina, Siam, Malaya and, ultimately, all Asia.

They would then have more than half the people of the world and they obviously believe that the infinite riches of Africa would fall into their hands next. That would leave a pretty skinny free world with a very slim chance of survival against either a cold war or a hot war.

How shall we prevent these dire consequences? No one knows all the answers and certainly I don't. Some things do seem obvious.

At this moment the immediate task is European recovery. Without a free western Europe, we in the Americas would probably soon be a lonesome little island of freedom with little chance of survival. It is high time we stopped thinking of our economic aid to Europe as American charity or as a hand-out to old friends who have fallen on evil days. Europe is just as important to us as we are to Europe and our program is one of personal and mutual interest.

SAYS MUCH REMAINS TO BE DONE

Great progress has been made in 4 years on a continent where devastation still exists and paralysis and starvation existed not very long ago.

But we are not out of the woods by any means. Whether he admits it or not, every statesman in western Europe is looking with grim foreboding to 1952 when American aid is scheduled to come to an end. Every nation has grave dollar deficits and many have budgets which only remain in a precarious balance by reason of American aid.

The first relief stage of the operation is over. Construction is going forward, but it has a long way to go. The living standard generally is still so low that every day brings to the average western European a struggle for the minimum necessities of life. Many millions are living on wages of a dollar to a dollar and a quarter a day. The average wages are one-fourth to one-sixth of those in the United States, while the prices of food and clothing are very little below ours. In most countries in Europe a family must spend nearly three-quarters of its income to get not quite enough food, leaving very little for other essentials. The middle-income groups, whose vigor is so essential, are in danger of disappearing.

But there is a real spirit moving in Europe which no one who looks can fail to see. After 10 years of great hardships the people are still meeting the future with firm determination and on the whole, from England to Italy, they are working hard, with courage and optimism.

But Europe is not the whole answer. Assuming we get every break and Europe wins through, we have just started.

It is time we lifted our sights and viewed the world in the round. As a nation we have concentrated on Europe while Asia has been going under and the Communists are working busily in Africa. We have thought too long that if we could keep Europe free we could keep a free world. That is not true. If we fail to keep a free Europe, we will probably fail to keep our own freedom. But if we do save Europe, the struggle is not won by any means. The fact is that North America and Europe combined have less than one-fourth of the world's population. This is a world struggle. It is time that we thought of it in its true perspective.

A close race is being run between the forces of economic recovery and freedom on the one hand and of economic stagnation and slavery on the other. It is a long race. No one should hold the slightest delusion that it will end soon. The race will not be run and ended in a few weeks or in a few months or even in a few years.

SAYS STRUGGLE IS EPOCHAL

It is an epochal struggle—perhaps the greatest of all history—in which every human being on earth is involved for the first time in history. It is a struggle by communism to take the world. It is a struggle by us to keep a large enough area both free and strong enough to resist that relentless attack from without as well as from within. It is a struggle for table stakes representing the whole world.

If we are successful in saving Europe—as we must be—we may succeed in avoiding a war. That alone would be a tremendous victory. War, even if we won it, would probably destroy everything we believe in. To avoid that war we must, of course, maintain a strong military establishment. It seems obvious to me that we must also provide the European countries with military equipment to be strong enough to defend themselves. Our treaties of mutual defense with the nations of the North Atlantic and of the Western Hemisphere are essential parts of that program to keep the peace.

But I think it would be most unfortunate if our people were led to believe that even when we have succeeeded in all these steps, they alone will keep the peace and our freedom.

NOTES RISING POPULATION

The population of Europe is greater today than it was before the war. Europeans feel that they are locked in a vise between a constantly rising population and limited land and resources insufficient to provide for the needs of the people. Many say emigration of millions to other lands is the only answer to their problems. They look hopefully to South America. They look hopefully to Africa.

Keeping Africa free from Communist domination is an essential part of any program. But that, too, is only the beginning. Enormous investments of capital are essential for the development of Africa and its unexplored resources. Great investments of capital are needed in South America. Almost all of Europe needs great sums of capital if its industrial plants and farms are to be modernized, and the living standard of the people is to reach a tolerable level.

Where is all this capital going to come from and how will it be administered? These questions dominate all others. Some of it must come from government, of course, but if government takes it all from the people by taxation, they will have no money left for investments. The very instruments of enterprise would be smothered.

Moreover, if all capital were to be invested in some form of state socialism, then we would defeat our purpose of building a free world by borrowing the very techniques of the ideology which would enslave us. There is no evidence in either our country or abroad that government operation of industrial or agricultural production can do anything but drag down the living standard of the people.

If we are going to save freedom we can only do it by the methods of freedom and I hope that will be our course.

The same is true in the other essential task of building a United States of Europe. We desperately need a new political unity in the free world. I have urged European unity for a long time and I believe we are making progress toward it. Leaders of Europe are both publicly and privately committed to it and most of them are brave and honest men struggling against great handicaps to achieve such an end.

Everyone is for European union but it drags with leaden feet. It seems that the very steps which seem necessary to rebuild European countries stand in the way of ultimate success. The larger nations all have rigid economic controls or rationing of one kind or another, increasing nationalization of industry, subsidies, wage fixing, and price fixing. Moreover, there is an obvious attempt to achieve what I believe to be a dangerous degree of national self-sufficiency.

Each of these factors is another barrier against the free flow of commerce over borders, another hindrance to balanced budgets, another injury to stable currencies, each of which is essential to European union. There are enough handicaps in ancient rivalries and technical problems without increasing them artificially as is too often being done.

The living standards of the people can only be raised finally by creating larger areas of trade and larger markets for goods, together with the efficiencies of large-scale production of the goods to which each country is best adapted. The people desperately need the rising living standard this would represent. They need also the sense of security which can come only through unity.

Separate nations ranging in population from 4,000,000 to 45,000,000 cannot successfully meet modern economic conditions. For

the same reasons they cannot meet the external threat of a colossus which stretches from the Elbe to the Pacific Ocean for the first time since Genghis Khan.

HOLDS TASKS WILL TAKE YEARS

The United States of Europe could bring about the great free area which is an essential cornerstone to progress. A united western Europe with its 270,000,000 people, with free access to the immense resources of Africa, combined with the strength of the Americas, could become the mightiest force the world has ever seen to build a permanent peace.

As I see it, these are some of the tasks ahead. They will take years and probably decades. They involve an ever closer relationship, a greater give-and-take, a greater interdependence between the people of the five still-free continents—western Europe, Africa, the Americas and Australia. It is imperative that we think in terms of a total world, and not in terms of one corner or one segment of it.

Together with a full understanding we must sustain ourselves and our fellows with a reaffirmed consciousness of our spiritual destiny and our birthright of individual dignity and integrity.

SECURE PEACE DECLARED POSSIBLE

Then, with a vision large enough and consistent, unyielding, unwavering action over however many years it takes, a secure peace can be built. Then and only then can we be sure that the cause of freedom will again capture the imagination of the people of the world and the curtains of darkness begin to lift.

One more thing is essential. That is a consistent devotion to the settlement of all international disputes by peaceful means through such an organization as the United Nations. If we are willing to sacrifice enough, to work hard enough and to be wise enough in our own self-interest, we can succeed.

I doubt if the issue will be settled before your generation has taken over our affairs and I suspect you are going to do a very much better job of it than your elders. Your generation has been exposed to the catastrophe which follows totalitarianism in any form of government domination of the lives of the people.

You have a keen appreciation of the dreadful alternatives which failure in the program for peace would bring. You have a sense of hard-headed idealism from which I believe will spring a new faith in a liberal society guaranteed by a bill of rights and founded upon freedom of conscience and of enterprise.

I congratulate you on your graduation and upon the immense opportunities that lie ahead of you.

A Force for Peace

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Friday, June 24, 1949

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I should like to include a well-deserved editorial tribute to our Rotary Clubs, which appeared in the Framingham (Mass.) News under date of June 18, 1949.

The editorial follows:

A FORCE FOR PEACE

Meeting in New York several days ago were 10,000 business and professional men from 50 countries. They were delegates from thousands of Rotary Clubs scattered around the world. They attended the fortieth annual convention of the oldest of service organizations.

The cynical smile at the more enthusiastic Rotarians and their somewhat determined efforts to be men of good will, but Rotary's faith in friendliness is not superficial. Few have joined its fellowship without taking inspiration from its precepts, which emphasize high ethical standards, the worthiness of all useful occupations, and the importance of service to society.

At the local level Rotary Clubs put preaching into practice by numerous good works and at the international level by earnest efforts to promote peace through world fellowship.

Rev. Dr. Norman Vincent Peale, speaking at a session in Madison Square Garden, put Rotary's international ideals into these words:

"Rotary repudiates the dismal pessimism that there needs to be a deterioration of world affairs. It does not share the negative attitude acquiesed in by many that it is not possible to create a world of good will among men. If the politicians cannot attain it, such organizations as Rotary can. An organization that can so effectively get men together at the community level can weld them together at the international level as well."

That Rotary's professions are both sincere and full of promise is indicated by the fact that it embraces men of all colors, creeds, and nationalities. Because it personifies democratic principles, its suppression is one of the first acts of dictators, as was shown in Germany and Japan, where it is now reviving its clubs, and in Russia and the satellite countries, where it continues under ban.

The Rotary approach to international amity may be regarded by some as excessively optimistic, but its basic assumptions cannot be successfully assailed.

Federal Aid to Public Education But Not Federal Control

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Friday, June 24, 1949

Mr. BRYSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me before the House Committee on Education and Labor, May 26, 1949, in support of Federal aid to public education but not Federal control:

Mr. Chairman, I appreciate the privilege of appearing before your committee in support of this legislation. I am in full accord with the objective of the measure, which is to assist in reducing the inequalities of educational opportunities of school children throughout the Nation.

During the sessions of the Eightieth Congress a similar bill was passed by the Senate. Unfortunately, that bill did not pass the House. We have now a new opportunity to deal with the mounting crisis in education, and I am heartened by the degree of bipartisan support which is in evidence.

Unquestionably our American public-school system is the greatest bulwark of our democratic way of life. The progress that our Nation has made in every field has been in direct proportion to the educational level of its citizens. There is in every nation a definite relationship between educational standards and cultural and economic standards. I might cite the example of the Scandinavian countries, Norway, Denmark, and Sweden. These countries are relatively poor in natural resources, yet they maintain high standards of education and as a consequence their standard of living compares favorably with that of any nation on earth. On the other hand, I might cite the example of our South American neighbor Colombia. In spite of the fact that this is one of the richest lands in the world in terms of natural wealth per square mile, its educational standards are low and consequently its people are among the poorest in the world.

Among the large nations, Russia and China possess tremendous material resources and their culture antedates our own by many centuries. But living standards in those two countries are low because educational levels have been held at a minimum. The Soviet Union is reported to be correcting this deficiency by spending as much as 20 percent of its national income for education.

We can find further examples in our own boundaries. I represent a section of the country in which educational opportunities are considerably less than those of more fortunate States. As a result, the economic status of my home State is below that of other sections. Many of the problems of the South can be traced directly to the vicious circle through which lack of educational opportunity causes low economic levels, which in turn render it impossible for the Southern States to provide adequate educational opportunity.

Yet the paradox is that the Southern States spend a disproportionate share of their income on education. The States of Virginia, North Carolina, South Carolina, Georgia, Florida, Tennessee, Alabama, Mississippi, Arkansas, and Louisiana educate 24.41 percent of the Nation's children while they receive only 10 percent of the Nation's income. This means that a State such as South Carolina can spend only one-fifth as much per school child as the State of New York.

We see the results reflected in innumerable ways. There is serious economic dislocation in the Southern States, inasmuch as the people of those States must bear relatively greater economic burdens. Recent studies have shown that for every productive worker in South Carolina there is one dependent who must be supported, whereas in New York the ratio is two productive workers for each dependent.

Migration has been another serious problem which may be traced indirectly to lower educational opportunity in the South. During the past 50 years there have been strong interregional population shifts. Up to the latter part of the nineteenth century, internal migration in the United States was toward the western States, but since the turn of the century migration in America has been principally rural-to-urban and from Southern States to Northern or Western States.

The tragic fact is that two-thirds of those who migrate are young people. Their home State carriers the burden of educating them through childhood and adolescence, and at the very time when they reach their period of maturity and productivity, they leave their homes for sections offering greater economic opportunity.

Then again, the efforts of the South to bring about a solution to its complex racial problem have been hampered by its low educational and economic levels. Since the days of the War between the States, the South has been held in virtual economic bondage, and only during recent years have the industrial potentialities of the South found an outlet. As the South is enabled to become stronger economically, and in a position to provide a full measure of oppor-

tunity for all its citizens, its racial problems will diminish and vanish. But as long as the educational systems of the Southern States are forced to operate on totally inadequate budgets, the plight of both races will remain acute.

Thus, we see the imperative necessity for augmenting the expenditures for education in the less productive States, whether they are found in the South or in any other section of our country. The only issue here is the extent and nature of Federal responsibility. There are those who hold that education is traditionally a function of the individual States and localities, a function in which the Federal Government has no concern and no authority. I feel that this is no longer a tenable view. The growing integration of our country and its people makes education a national as well as a local issue. It is a national issue because education is the most powerful single factor in developing the human resources of our democratic society. It is a national issue because every American citizen has a right to equal opportunity in education, whether he lives in New York, California, Mississippi, or South Carolina. It is manifestly unjust when States which depend primarily upon an agricultural economy are forced to compete educationally with States in which industrial and commercial development is at a high level. It should not be said of America that the penalty for living in an agricultural region is an inferior education.

The wastage of human resources fostered by such a situation is incalculable. More than 3,000,000 American youngsters attend classes in primitive school buildings, with inadequate educational supplies, staffed by underpaid and poorly trained teachers. The penalty we pay for our inequitable educational system is a vast army of unproductive human beings whose potential usefulness to their Nation has been choked off at the roots.

We have learned that our national economy functions as a unit, that dislocations in one section have repercussions in every section. Where there is a deficiency as a result of inadequate education, that deficiency is felt over the entire Nation. The handicaps—yes, even the civic menaces—imposed upon an individual in one section soon flow through our fluid economy to every section. This was dramatically demonstrated during the days of the war, when we found that 5,000,000 young men were educationally or physically unfit for military service. Last year, in a hearing before a Senate committee, military authorities stated that good schools everywhere, with compulsory attendance, would have placed at least 250 additional divisions between us and the enemy. In thousands of war plants poorly educated citizens became aware that they had been denied one of their most priceless rights, when they found themselves incapable of performing vital war work and were required to undergo prolonged training. We must not again deny patriotic citizens the educational equipment which will enable them to serve their country in time of crisis.

Mrs. Agnes Meyer has stated the issue clearly. "We speak constantly and proudly," she said, "of the high promise of American life. We do not speak of the high promise of life in New York or Illinois or California. When we think of American life we refuse to admit that its privileges and high hopes are reserved for certain geographical areas."

It is for these compelling reasons that I view education as a matter involving a measure of Federal responsibility. I have always tenaciously upheld the rights of the individual States to manage their internal affairs with an absolute minimum of interference or assistance from the Federal Government. But we must acknowledge that there are certain areas in which the Federal Government has a primary or at least a secondary right and responsibility. The common defense is one of those areas. That is why we have one national military establishment rather than 48 separate establishments. There are certain things that all the States, acting in concert, can and must do for themselves which no one of them can accomplish separately. Education is now one of those areas in which the Federal Government has a strong right and responsibility.

It is unrealistic to assert that education is a matter which must be left entirely to the States and the local communities. For the blunt truth is that many of our States are incapable of doing the job, now or in the foreseeable future. To deny them Federal assistance is to doom those States to continued and prolonged economic servitude. Certainly it is true that some States will receive less of the $300,000,000 than they would pay on the basis of internal revenue receipts. But Federal aid is in complete accord with the fundamental taxing system of our country—in which those who have are taxed to provide essential services for all.

Our country is today engaged in an ideological war with the tyrannical forces of communism. In that war, ideas are the principal weapons. We cannot, in this crucial period, afford the luxury of ignorance or illiteracy among any substantial element of our population. We cannot, at the peril of our own survival, permit brutal inequalities in educational opportunity to exist in our free America. As Dr. Conant has said, "We cannot hold our own against the challenge of the Soviet philosophy unless there is a determined improvement in our system of public education."

That improvement can come about only through Federal assistance to the States.

While I am convinced of the constitutionality of the general principle of Federal aid, I feel that there are certain features in the proposed legislation which may operate to violate the letter and spirit of the Constitution. I cannot subscribe, for example, to the view that sectarian schools are entitled to share in the benefits of the Federal aid program. It is clearly unconstitutional to use Federal funds to support the educational activities of religious denominations. We have already gone too far in this respect by permitting transportation for parochial-school children at public expense. I urge that this committee provide in this legislation effective safeguards against the possibility that any State may divert public funds for the support of schools which are operated and maintained by religious denominations. I feel that such a diversion is too easily made under a system of payment in which the funds paid become the funds of the State, to expend according to State law. I feel that the act must specify clearly that sectarian schools shall not benefit from Federal assistance and it should provide a method of payment which would render such a procedure impossible.

I believe that this measure, with proper safeguards such as I have just outlined, will be an incomparable boon to the welfare of all citizens of all of our United States. I therefore urge its prompt approval by this committee.

The Basing-Point Decision—Ghost Towns Are in the Making if It Stands

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 24, 1949

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by William Schoenberg on the basing-point decision:

THE BASING-POINT DECISION—GHOST TOWNS ARE IN THE MAKING IF IT STANDS

(By William Schoenberg, president, United Cement, Lime and Gypsum Workers)

(The author of this article heads a union directly affected by last year's far-reaching decision of the United States Supreme Court in what is popularly referred to as the Cement case. While Mr. Schoenberg is speaking for his own organization, the stand taken on pricing by the Federal Trade Commission, backed by the sanction of the Supreme Court, has serious implications, as the author points out, for other unions and other industries.)

It was lately demonstrated that the power to select and to elect is not the exclusive prerogative of big business or of big politics—that it belongs to, and may be powerfully used by, the working people of this country.

We, the people, have resumed the responsibility to see to it that the United States shall have its Government administered by able, efficient men who are responsive to the will of the people and who will act under laws made by Congress. It will be our own fault if the Government is not what it should be.

Today labor is at the crossroads. Labor may choose the hard, narrow path of self-government, the democratic way, where, guided by the laws made by a congress that we elect, we shall go on to the satisfactions of proud and glorious freedom. On the other hand, we may choose the broad, easy, low road of bureaucracy, under which we will work and live subservient to interpretations, regulations and orders capriciously dictated from day to day by mere appointees who are never directly responsible to the voters. The second way leads to the frustrations of ignominious slavery and to the tyranny of government by force—and the end of American free enterprise.

Is this not the time for our international unions solemnly to reaffirm belief and trust in the long-honored fundamental principle that the legislative, executive, and judicial branches of the Government shall be independent?

The Constitution, in article I, provides that the legislative powers granted by the people to our Federal Government are vested in Congress. Those powers are to be exercised only by Congress. They must not be relinquished. They cannot be delegated.

By article II the executive power is vested in the President. He is to give information to Congress and to recommend such measures as he shall judge necessary and expedient. Also the duty is assigned to him to take care that the laws made by Congress are faithfully executed. He needs the assistance of administrative agencies, such as the Department of Justice headed by the Attorney General, the Department of Labor headed by the Secretary of Labor, and the various other departments of Cabinet rank.

Subordinate to these there are many minor agencies designed and created to serve as aids to major Departments. The Federal Trade Commission is one of the scores of such minor boards and bureaus.

By article III the judicial power of the United States is vested in a Supreme Court and such inferior courts as Congress may establish. It is the duty of the courts, thus created, to determine controverted issues of law and fact and to apply the laws that have been made by Congress.

It is necessary and proper that subordinate administrative agencies should act in aid of the various Departments of the Government, but that any such agency should attempt to exercise the legislative powers of Congress, the executive powers of the President, and the judicial powers of the courts is unthinkable under our Constitution.

Yet that is the very thing which the Federal Trade Commission has done and which

the Supreme Court appears to have approved. It is intolerable to expect that Congress will supinely acquiesce in such behavior by any governmental agency which Congress has the power to curb.

In our consideration of the Federal Trade Commission's long efforts to destroy delivered pricing and to prohibit free competition under the mask of eliminating what it calls the waste of cross hauling by our railroads, we are not concerned with trying to defend collusion or conspiracy, or to fix prices or to eliminate competition.

Nor are we interested in securing legislation to legalize any so-called basing-point system or any other system of pricing.

We are interested—vitally interested—in having our duly elected Representatives in Congress, at the earliest opportunity, take whatever action is necessary to curb and to prevent the repetition of acts of the Federal Trade Commission, the courts or any other agency of the Government which has trespassed upon the legislative power of Congress or which sets itself up as the over-all policy maker for free enterprise upon which our whole people depend.

The freedoms which are characteristic of delivered pricing are among those which were guaranteed by the Constitution, under which American business and the American standard of living developed and flourished. Should those freedoms be destroyed, what will happen to the American standard of living, to the future of American business, to the republican form of government created under the American Constitution and to the wage earners?

Although section 8 of article I of the Constitution enumerates powers specifically granted to the Congress, including the power "to regulate commerce * * * among the several States," the Federal Trade Commission has presumed to exercise that power. In so doing, it has created confusion approaching chaos throughout American industry and it has adversely affected the welfare of the working people. That is an example of bureaucracy in action.

Labor's stake in industry should be beyond the power of any such subordinate Government bureau to interfere with it.

Thousands upon thousands of workers and their families are deeply concerned with actions of the Federal Trade Commission to outlaw and destroy delivered pricing, and to forbid a seller to make lower prices to some customers to meet in good faith the lower prices—or delivered cost—offered by a competitor.

Delivered pricing means the freedom of every man who has something to sell to take that something to any place that he chooses and there put a price upon it and offer it for sale, coupled with the freedom of every buyer to request delivered prices and to buy at the competitive prices, which include delivery at his (the buyer's) location.

That is delivered pricing, an expression of a basic freedom, an attribute of free enterprise. Any attempt to restrain such a basic freedom is a threat to a free society and an approach to despotism. Nevertheless, the Trade Commission has sought to compel industry to sell only at uniform f. o. b.-plant prices. Moreover, it has seized the power to carry its intentions into effect.

If American industries are to give up the freedom to compete for business wherever a market is found and compelled to abandon delivered pricing, and to sell their products at uniform prices at the original shipping point or place of manufacture, so that those industries will be confined to selling only in the nearby areas where they have a freight-cost advantage, hundreds of thousands of workers will lose their jobs and become displaced persons who must leave their homes in rural communities and seek jobs in the already overcrowded great centers of population.

Many long-established business enterprises will be compelled to close down or to move from their present locations closer to sources of supply. Disruption in present overstrained production will be inevitable. All of this will have very bad effects upon the general cost of living and the level of living standards.

In reality, those who will be most irreparably hurt are the thousands of workers who have established, built, and put their savings into modest homes, in the small communities where they have brought up their children, established schools for their education and churches for their religious worship, and where the small-town merchants and, in fact, the whole life of these little communities depend upon the pay rolls of one or a few manufacturing plants or business enterprises long established there.

These small American towns will be made into ghost towns, and their inhabitants will be compelled to become displaced persons.

How serious is this situation? How real and immediate is the danger?

This is not intended as a complete survey of what will happen to industry and to workers as a result of the Federal Trade Commission's rulings and interpretations, and arbitrary definitions which go beyond the laws made by Congress. In this brief article we must be confined to a few examples.

Dr. Alfred C. Neal, vice president and director of research, Federal Reserve Bank of Boston, reported in Washington on December 10 upon a survey made in New England as to the effect of the Trade Commission's orders and the decisions of the courts thereon. The survey sought to ascertain the effects of requiring a universal f. o. b.-mill price system and * * * outlawing the practice of freight equalization." He said:

"Our best estimate," said Dr. Neal, "was that requiring uniform f. o. b.-mill pricing would result in a loss of approximately 33,000 jobs in the region. This figure * * * takes into account only the direct short-term losses and does not take into account the loss involved in the secondary effects which are concentrated on the transportation, service, trade, and professional lines.

Itemizing the effects on 10 specific industries, Dr. Neal reported that the direct loss of jobs was estimated as follows:

Estimated job loss

Industry:	
Fabrication of iron and steel	8,800
Paper and allied products	6,350
Nonferrous metals and their products	6,000
Nonspecialized industrial machinery	3,800
Electrical machinery	3,000
Chemicals	1,800
Stone, clay, and glass	1,700
Food processing	1,650
Rubber and rubber products	450
Textiles	300
Total job loss (estimated)	33,850

New England is only one section of America. This is but an example of what will happen across the country.

H. W. Fraser, president of the Order of Railway Conductors, made a statement before the Trade Policies Committee on December 7. In this statement he told of the plight of the Penick & Ford corn-products plant at Cedar Rapids, Iowa.

"This plant," asserted Mr. Fraser, "is faced either with outright economic death or, at best, a difficult and perhaps hopeless struggle for survival." This would involve the closing of a plant that employs 3,500 workers, because it was estimated it would lose 90 percent of its present business to concerns having a freight-cost advantage in delivering to eastern markets.

The bad situation of the western farmers who raise sugar beets and the evidence that, if beet sugar cannot compete in the East with the lower prices made there by cane sugar from Cuba, the beet farmers will have to turn to some other crop were also referred to.

Mr. Fraser said:

"I work in the railroad train service in Colorado. My family residence is there and I know the importance of the sugar-beet industry to the families on the land as well as to the workers in the sugar plants.

"It seems to me that, if we have to live with the idea set down in the Federal Trade Commission order, we will create our own uprooted or displaced persons problem.

"What of these workers, for instance, who have given their lives to the industries threatened by the order? They have made their homes, reared their families, or are doing so, in their various areas, and all of their family ties and friendships are there established.

"The workers in the railroad industry, as well as workers in other important established industries, should not be the victims of a highly experimental change which promises to produce confusion, dislocation, and economic upset that we can ill afford at this time, or any time, if our national economic unity is to be served.

"I urge upon this committee the logic of recommending congressional action legalizing the continuance of absorption of freight charges by all producers in the same voluntary manner that this has been done throughout our industrial history."

Incidentally, the Interstate Commerce Commission, which administers railroad rates, unlike the Federal Trade Commission, encourages the equalization or absorption of cost advantages which one railroad may have over another by permitting competing railroads with the higher costs to lower their rates to meet the competition of roads having lower costs.

Telegrams were sent by the executive office of the Cement Workers International Union to 62 local cement unions in towns of 5,000 population or less. Replies from 60 of these unions showed a total of 15,674 employees in cement plants in these small towns. Dependent upon wages paid to these cement workers were 62,423 people.

Many of the replies revealed that additional workers and various small business in the community would be most adversely affected by a shut-down of the local cement plant.

It was estimated that of the total of 15,674 workers, only 1,406 would be able to get other jobs in or near their home communities. Most of the local unions reported in their replies that no other employment was available. Some stated that possibilities of getting other employment were nominal. Many pointed to the long years of seniority enjoyed by the union men and the skills developed which would be lost. Also mentioned were the adverse effects upon the local school districts, local churches, small local businesses. Many added that their towns were one-industry towns, that the men owned their own homes in these towns and that the whole community would be drastically affected.

The investigation clearly showed the danger of creating many ghost towns where cement plants are now located. Several unions representing workers in paper plants, though not solicited, also sent in telegrams telling of some 1,700 employees whose jobs were in jeopardy. Many similar towns throughout the country, dependent upon other industries, face the same fate.

Since then a large number of local unions of other industries, entirely separated from the cement workers, on their own initiative, have sent letters and telegrams to the cement workers' international office setting forth the difficulties they will experience if the rulings of the Federal Trade Commission remain permanently in effect.

Article VI of the Constitution of the United States declares:

"This Constitution and the laws of the United States which shall be made in pursuance thereof (by Congress) shall be the supreme law of the land" and "the judges shall be bound thereby."

Should this basic command be now discarded in favor of bureaucratic interpretations, regulations and orders?

"The only way to enforce the law is the way prescribed by law," said William J. Gaynor.[1] "That which cannot be done lawfully must not be done at all, by the police or any other public officials, from the President of the United States down. This is a government of laws and not of men.

"We must be vigilant of every little approach to despotism, however little it may be. We must see to it that those whom we elect to office do not go outside of the laws, or set themselves up above the laws, and do as they please.

"It has always been the case throughout the world that the officials who did this did it on the plea that the laws were not good enough: that they could do better than the laws prescribed.

"Beware of all such officials. We do not want officials who have any lust for power. We want officials who are very careful about exercising power. We want officials who are careful to exercise no power except that given to them by the people by their laws.

"There is no more dangerous man than an official who thinks he is better than the laws. The good man in office should be most careful not to set a bad example or precedent for his bad successor, who will come along sooner or later."

We are not interested in legalizing a so-called basing-point system of pricing or any other pricing system. Certainly, we are not interested in weakening the enforcement of the antitrust laws. We are interested only in stanchly defending the basic freedoms upon which the American Government and American enterprise system and the well-being of our people depend.

If these rights are destroyed or invaded, then very soon some Government bureau will undertake to tell the wage earners of this country where they may and where they may not work—and for what wages. The freedom of self-government secured to labor through development of trade-unionism will thus be destroyed.

Since the workers in the mills and plants are an integral part of the industries involved, is it not incumbent upon our international unions to exert every reasonable and practical effort to bring about equitable relief from impending ill effects created by the acts and orders of any governmental commission or bureau?

[1] Quoted in American Federationist, October 1948.

Homes for Decency or Streets for Delinquency?

EXTENSION OF REMARKS

OF

HON. CECIL F. WHITE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 24, 1949

Mr. WHITE of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an excerpt from an important letter from a constituent dealing with the housing situation. This excerpt reads as follows:

Do you know, Mr. WHITE, the land rent for many of these people who find it necessary to live in tents is $10 per 13 square feet per month? These people pay $1.25 extra for electricity. There is one water faucet for at least 25 tents and no modern sanitary facilities. That rent is greater than I pay considering I have a roof and wall provided. Many of these people are on the waiting list for the housing projects. They are people who would like to live in a place they could call a home. The parents worry because the children do not like to stay home in the evenings.

Please support the bill on Federal housing and slum clearance. American youth should have homes with which they are satisfied enough to stay off the streets, where delinquency breeds.

Society for the Preservation and Encouragement of Barbershop Quartet Singing in America, Inc.

EXTENSION OF REMARKS

OF

HON. LESLIE C. ARENDS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 24, 1949

Mr. ARENDS. Mr. Speaker, Chicago holds the international barber-shop quartet championship for the fourth time in the 11-year history of the Society for the Preservation and Encouragement of Barbershop Quartet Singing in America, Inc. The Mid-States Four captured the 1949 crown in competition at Buffalo, N. Y., to join the Misfits, Four Harmonizers, and Elastic Four, all of Chicago, in the championship class.

Finalists at Detroit in 1945 and at Cleveland in 1946, the Mid-States Four kept on battling for top honors. They earned third place in the medalist competition at Milwaukee in 1947, and last year at Oklahoma City were runner-up. The songs they sang to clinch the crown were Carolina Sunshine and Fingerprints Along the Window pane.

Tenor Bob Mack, Lead Marty Mendro, Baritone Forrest Haynes, and Bass Art Gracey won their gold medals from a field of 40 top quartets from 17 States, the District of Columbia, and Canada. Their principal competition came from the Clef Dwellers, Oakland County, Mich., second; the Antlers, Flint, Mich., third; the Songmasters, Lansing, Mich., fourth; and Varsity Four, of Lafayette, Ind., comprising three Purdue alumni and an undergraduate of the same university, fifth. The Antlers are well-known in the Nation's Capital, and were guests of the Congressional Secretaries Club here several months ago. Washington will have an opportunity to welcome the Mid-States and other medalist quartets next October 28 at Constitution Hall in the Washington chapter's third annual Harvest of Harmony. Later in January 1950 the Washington chapter will be host for the annual mid-winter convention of SPEBSQSA, which has selected Omaha for its convention city in June 1950, and Toledo for its convention of 1951.

District of Columbia was in the limelight at Buffalo when the Potomac Clippers became finalists, and the Columbians semifinalists. Jean M. Boardman, founder of the local chapter, was elected to be a vice president of the society, while Ed Place, also of Washington, was awarded a Treasury Department citation for his work as national savings bond chairman of the society. Other Treasury citations, presented by Hal Master representing Vernon L. Clark, assistant to the Secretary of the Treasury, went to Past International President Frank H. Thorne, of Chicago, for his prize-winning bond song, Keep America Saving, and O. H. King Cole, of Manitowoc, Wis., re-elected international president, in recognition of SPEBSQSA's singing salesmanship in the opportunity drive for savings bonds.

To Chicago's personable champions of an organization composed of 600 chapters and 30,000 members, I extend the congratulations of a fellow barbershopper from another Illinois chapter, Bloomington. The Mid-States are a shining example of the adage, "If at first you don't succeed, try, try again."

Atomic Energy Commission

EXTENSION OF REMARKS

OF

HON. CHARLES H. ELSTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, June 24, 1949

Mr. ELSTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article by Lt. Gen. Leslie R. Groves, which appeared in the Washington Times-Herald on Sunday, June 19, 1949:

DUTY OF CONGRESS TO CHECK AEC, GROVES DECLARES

(The man who knows the atom bomb best—Lieutenant General Groves—in the following article calls on all Americans to spur Congress into a minute and exhaustive study of the Atomic Energy Commission.)

(By Lt. Gen. Leslie R. Groves, retired)

The propriety and even the legality of the current congressional inquiry into the Atomic Energy Commission and its Chairman, David E. Lilienthal, has been questioned by a number of citizens.

There has been aroused a bitter controversy which has clouded the true issues. This militates against the public interest.

It is even held in some quarters that the Commission occupies a position which, because of the secret nature of its work, makes congressional investigations impertinent if not downright dangerous to the public welfare.

RIGHT AND DUTY TO PROBE

Many Commission supporters insist that politics is behind the current examination—which has revealed, among other things, that Communists were given AEC fellowships at Government expense.

I believe that if Senator HICKENLOOPER or any other member of the Joint Congressional Committee on Atomic Energy is even faintly doubtful as to the efficiency with which the AEC is being run he has both the right and duty to make known his fears.

One of the graver and tougher problems the country had to face after the war was the

creation of a Government civilian agency to handle the enormous questions of atomic energy.

In the face of Russia's apparent determination not to cooperate in any sensible plan for international control, we had to establish this vital atomic unit and operate it in secrecy.

AEC GRANTED PRIVILEGES

The Atomic Energy Commission was born and blessed—a doubtful blessing, perhaps, but essential—with privileges never before granted to a Government agency.

But what assurances could be given to the people that the AEC was being soundly and properly managed; that it was achieving its goal; that it was spending its enormous appropriations efficiently and within the law?

The congressional act of 1946 which created this unique Government department placed upon it only three real checks.

One was placed in the hands of the President, who obviously cannot devote the time necessary to assure himself that the work of the AEC is being wisely managed.

The second was inherent in the constitutional power of Congress to grant or withhold public moneys.

And the third, and most important, was the establishment by law of the Joint Congressional Committee on Atomic Energy.

It is the responsibility of this joint committee and of every one of its members to pass judgment upon any or all of the actions of the Atomic Energy Commission and to report their judgment to Congress, and through Congress to the people. This is democracy at work.

Anyone who objects to this is out of step with our system of government.

HAS POWER TO CHECK

Conversely, he is at heart in sympathy with the Communist-Fascist viewpoint that men who legally or otherwise achieve positions of power are above the people, and that their actions are not subject to the approval or even the review of the electorate.

In the atomic-energy field the joint committee of Congress has the power and duty to check the detailed operations of the Atomic Energy Commission. The safety of the United States now and in the future depends upon the committee's doing it and doing it well.

It is the people's responsibility to ensure that this committee does fulfill its obligations. The Atomic Energy Commission, like any other agency of the executive branch of our Government, falls under the investigative scope of Congress.

California Mayor Urges Enactment of Housing Legislation

EXTENSION OF REMARKS
OF
HON. CECIL F. WHITE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1949

Mr. WHITE of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein a telegram from the Honorable Gordon G. Dunn, mayor of the city of Fresno, Calif., in which he urges the early enactment of housing legislation. The wire reads as follows:

Your presence on House floor Tuesday and favorable support on housing bill without crippling amendments urgently requested.

GORDON G. DUNN,
Mayor of Fresno.

South's Low Income Held Big Problem

EXTENSION OF REMARKS
OF
HON. PRINCE H. PRESTON, JR.
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1949

Mr. PRESTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by John T. Carlton, from the Atlanta Journal:

SOUTH'S LOW INCOME HELD BIG PROBLEM—PRESIDENT'S GROUP CITES NEED FOR NEW INDUSTRIES, CAPITAL AND FARM FORMULA

(By John T. Carlton)

WASHINGTON, June 20.—Substantial economic advancement has occurred in the South during the past 20 years, the National Planning Association Committee of the South reported Monday.

But the new industries, backed by investments of at least $3,000,000,000, and a new farming formula must come before the section's lag in per capita income and living standards can be overcome.

"Fortunately," said the committee in a voluminous report based on exhaustive studies over a 3-year period, "these trends in industry and agriculture already exist. Through their operation the per capita income in the South has increased more rapidly than for the country as a whole during the last 15 years."

But even so, the per capita income below the Mason and Dixon's line remains below that of the Nation as a whole.

The NPA report was made to the President's Council of Economic Advisers who released it to the public at a press conference attended by all three—Dr. Edwin G. Nourse, Leon Keyserling and John D. Clark.

GEORGIANS IN GROUP

The report was prepared by Dr. Calvin B. Hoover, and Dr. B. U. Batchford, of the staff of the department of economics of Duke University.

But participating in its preparation were other members of the committee of the South, including D. W. Brooks, of the Cotton Producers Association, Atlanta; Cherry L. Emerson, vice-president of the Georgia Institute of Technology, Atlanta; Charles H. Gillman, State CIO director, Atlanta; Dean Paul W. Chapman, of the State College of Agriculture, Athens; Raymond R. Paty, director of the Rich Foundation, Atlanta, and Ralph E. McGill, editor of the Atlanta Constitution.

Dr. Nourse and his colleagues expressed satisfaction with the report and predicted that its analyses and findings will be of great value to those concerned with economic developments in the South as an important segment in the national economy.

MORE INDUSTRY NEEDED

The essence of the South's economic problem, the report said, is in the low per capita income which stems from a low ratio of developed natural and capital resources to population.

"The South must have more industry," the report continued, "and the kind of industry in which the value of output per worker is higher.

"It means an agriculture of fewer uneconomically small farms and of more medium-sized farms employing fewer people with larger output per capita and with greater diversification in crops."

The policies of the Federal Government have helped the trends which are diminishing the South's economic lag, the authors believe. They added:

"The Federal Government can continue to be of the greatest possible service to the area in maintaining conditions such that these trends can develop further and in accelerating the rate of change. * * * The Federal Government itself cannot carry out operations which will produce greater income in industry and agriculture. This must be done by private individuals and corporations."

OF MINOR IMPORTANCE

Popular excuses for the South's economic lag—the high protective tariff imposed by the North, higher freight rates, absentee ownership, wage differentials, and lingering effects of the War Between the States—are actually of minor importance or not truly casual, according to the committee findings.

In some cases, freight rates actually have been advantageous to southern producers and even where differences unfavorable to the South have existed, they have not been as great as popularly claimed, and no real obstacle, according to the committee.

Higher rates have existed primarily on class rates, on which very little traffic moves.

"A reduction in the number of persons engaged in farm work is necessary to raise per capita farm income," the report said, "but employment opportunities in manufacturing must come to provide jobs for those no longer needed on the farm."

Red Tyrants in Czechoslovakia in New Conflict Over Freedom

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1949

Mr. MULTER. Mr. Speaker, I commend to the attention of my colleagues the following editorial which appeared in the Brooklyn Eagle of June 23, 1949:

RED TYRANTS IN CZECHOSLOVAKIA IN NEW CONFLICT OVER FREEDOM

The new crisis in Czechoslovakia is a tragic reminder of the extent to which that nation has departed under Communist control from those democratic principles of government that gave it unique distinctions in the years between the two world wars.

Czechoslovakia was a product of the first war. Its people had the good fortune to choose as their leaders two of the really great men of their time—Masaryk and Benes. These men were idealists with a great reverence for human freedom. They also were practical leaders and able advocates of enlightened and progressive government.

It was this sort of government that they established and consistently maintained. It was a major factor in bringing material prosperity and contentment to the people. Until the Nazis bore down upon Czechoslovakia with their overwhelming military power, seizing the long-coveted munitions plants and other industries, the nation served as a model of good government.

Now, under the Communist rule imposed by the Kremlin, the moral deterioration of the nation is progressing swiftly and there are increasing signs that it is reaching the depths in its emulation of both the Nazis and the masters of Moscow.

Extermination of religion is the current objective in Czechoslovakia, as it has been in Russia and in the other satellites. Events are leading to a familiar drama in Prague and it seems only a matter of time when Archbishop Beran will follow along in the path of Archbishop Stepinac and Cardinal Mindszenty.

Archbishop Beran is a troublesome factor in the Communist-controlled national life. He refuses to submit to oppression and to interference with the practice of religion by his people. He is committing the great sin, unpardonable in a dictatorship, of exercising freedom of conscience.

Tyrants have only one means of meeting these challenges to their authority—death or imprisonment. They do not realize, of course, that in these conflicts with free spirits they can never win.

The Real Danger

EXTENSION OF REMARKS
OF
HON. WILLIAM M. McCULLOCH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1949

Mr. McCULLOCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Cleveland Plain Dealer of June 20, 1949:

THE REAL DANGER

The great danger posed by the present day Federal bureaucracy is not that it maintains on its pay rolls more employees than are necessary, or that it resists the adoption of a businesslike administrative structure for the executive branch of the Government.

The great danger lies elsewhere.

It lies in the pernicious penchant of so many bureaucrats to perpetuate the existence of their governmental agencies after the need for them has passed.

It lies in the use by bureaucrats of their official position to propagandize for the retention of all existing governmental controls over the people and for the acceptance of new schemes for socializing and increasing the cost of the Government of the United States.

A short time ago we had occasion to rebuke Karl M. Duldner, Cleveland area rent director, whose only legal function is to administer the rent control law enacted by Congress, for speaking up as an opponent of the passage by the Bay Village Council of an ordinance to remove rent regulations in that municipality.

Duldner contended that he was merely answering a verbal onslaught on his bureau by a spokesman for the Apartment House Owners' Association, but, whatever his motive, his words were the words of a bureaucrat opposed to the removal of Government control of rent anywhere.

Now comes a minority report by members of the Cleveland area rent advisory board charging Duldner with a breach of the proprieties of his Federal position by permitting his office to be used for the drafting of the majority report, which urges Governor Lausche to disapprove rent decontrol ordinances passed by the duly elected councils of both Bay Village and Orange.

"To the minority of the board it seems improper that the Cleveland area rent director should place himself in a position where the office established by law to administer rent control takes action of this kind, the purpose of which can be only to retain rent control and thus create a necessity for the continuation of the office of the Cleveland area rent director. The office of Cleveland area rent director is established by law for the purpose of administering a Federal act free from any propaganda efforts to retain rent control."

So reads the report drawn by Attorney Robert H. Jamison and Howard Whipple Green, who as director of the Real Property Inventory knows more about the housing situation in Greater Cleveland than the most expensive Government survey could ever ascertain. Jamison and Green, with Roy C. Carpenter and Mrs. N. H. Boynton, voted in favor of recommending to Governor Lausche that he approve the Orange and Bay Village decontrol ordinances. Six members of the rent advisory board voted the other way around.

The vote of the six-member majority in urging the governor to disapprove the decontrol ordinances in the two small municipalities, where there is little rental property in existence, was taken at a closed meeting, so the public could not know the basis of that action.

The minority report supplies the first enlightenment on this matter. It disclosed that the report adopted by the majority advanced as a reason for gubernatorial veto of rent decontrol in Bay Village and Orange this telltale one: "Decontrol of one or two small communities would set the stage and prepare the way for decontrol in other communities (sic), even though it is a well established fact that the general housing situation is such that rent control is still necessary."

The removal of rent control cannot take place in a municipality unless the governor approves the decontrol ordinance. It is now up to Lausche to say whether he concurs in the view of the advisory board majority, in which the influence of Federal bureaucracy is readily discernible, or whether he concurs in the view of the elected representatives of the people of Orange and Bay Village and in the revealing report by the advisory board's minority.

We believe Governor Lausche should uphold the action of the two suburban councils. It was taken by men who know intimately the conditions prevailing in their communities. It was taken in public meeting after the opportunity for expression by proponents and opponents of rent decontrol had been advertised. It was taken in municipalities where there is but a negligible amount of rental property, where it is senseless to maintain rent regulations.

A majority of the rent advisory board was, we are now convinced, opposed to decontrol of rent in the two suburbs just because it would set a sensible precedent.

Compulsory Health Insurance

EXTENSION OF REMARKS
OF
HON. EDGAR A. JONAS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1949

Mr. JONAS. Mr. Speaker, under leave to extend my remarks I desire to include a resolution adopted by the Senate of the Sixty-sixth General Assembly of the State of Illinois. The subject of this resolution is one of particular interest to every Member of Congress inasmuch as it represents one of the leading issues in the legislative program which has been presented to the Eighty-first Congress by the President of the United States. I refer to the President's insistence on legislation to establish a national system of compulsory health insurance.

I wish to call this resolution to the attention of the Members because I feel that it reflects the attitude and thinking of a great section of the people of the country inasmuch as it is formal action taken by a duly elected legislative body of one of the great States of the Middle West. It definitely places the Senate of the State of Illinois on record as opposed to enactment by the Congress of the United States of any program of socialized medicine.

The resolution follows:

Senate Resolution 32

Whereas stimulated by freedom and competitive effort, American medicine has become the envy of the world, and has brought to the people of the United States the advantages of medical education, research and health care of matchless quality; and

Whereas various proposals have been made to the Congress of the United States for the establishment of a national system of compulsory health insurance; and

Whereas history has demonstrated many times that systems of compulsory health insurance lead, sooner or later, to the socialization and deterioration of all medical, hospital, dental and related health services, and that the socialization of medicine has often been the forerunner of complete state socialism; and

Whereas continued improvement in the health and well being of our people can best be served by preserving our traditional freedom and individual responsibility in the fields of medicine and science: Therefore be it

Resolved, That the Senate of the Sixty-sixth General Assembly of the State of Illinois go on record as opposing the enactment by the Congress of the United States of any program of national compulsory health insurance; and be it further

Resolved, That copies of this resolution be transmitted, by the secretary of state, to the President of the United States and to the United States Senators and Representatives from Illinois, and that said Senators and Representatives be and they are hereby respectfully requested to oppose and vote against any such proposed legislation.

Adopted by the senate June 15, 1949.

SHERWOOD DENIS,
President of the Senate.
EDWARD H. ALEXANDER,
Secretary of the Senate.

A Republican Repents in Sackcloth and Ashes and Castigates "Me-Tooers" and New Dealers Who Masquerade as Republicans

EXTENSION OF REMARKS
OF
HON. JOHN SANBORN
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1949

Mr. SANBORN. Mr. Speaker, I am appending a letter from a disgusted and disillusioned Republican. He has lots of company, because a surprisingly large number of those elected as Republicans are New Dealers and one-worlders inoculated with foreign "isms" and ideologies who would have us surrender our national sovereignty and become a satellite in a federal world government in which we would be outnumbered and outvoted 15 to 1.

CONTROL OF OUR MONEY TURNED OVER TO INTERNATIONAL BANKERS

They have stood complacently by while control over our money and the value of our money was taken from the Congress where it was placed by the Constitution and delivered to the International Monetary Fund which has so manipulated our currency that foreign currencies are overvalued 60 percent. This has the effect of forcing us to pay subsidies of 60 percent on imports and sell our exports at a 37½-percent discount. It also permits foreigners and international bankers to buy our choicest stocks and bonds at a discount of 37½ percent and sell at a premium over our market of 60 percent, and evade paying United States taxes. How can American industry and American labor meet that kind of competition?

NO WONDER THERE IS A SLUMP IN THE MARKET

Small wonder then that the stock market is no longer a barometer of American business; that our choicest industrial stocks are selling for half their real value; that industry after industry is curtailing employment, and that 4,000,000 are unemployed.

MORE MARXIST JARGON

The only solution offered by the administration's economic brain-trusters is to rob Peter to pay Paul by subsidizing everybody. When this mad course throws us into an economic tailspin, just who is going to pay the taxes to pay these subsidies?

A PRACTICAL SOLUTION OF OUR PROBLEMS

The solution is so simple, so practical, so readily applied that it is criminal to longer delay. All we have to do is replace our debauched, manipulated, irredeemable currency with a sound monetary system in strict accordance with article I, section 8, clause 5 of the Constitution of the United States, and section 311, United States Code, Annotated, chapters 8, 28, statute, volume 4; and restore the protective tariff which is the keystone in the arch that supports our domestic economy.

Until we do this all our present frenzied efforts to achieve world peace, economic stability, and national security are just so much futility.

The letter of Mr. Alfred Kohlberg, 1 West Thirty-seventh Street, New York 18, N. Y., referred to above, is hereto appended. You will have a better appreciation of this letter if you will read the article by Edward R. Stettinius, Jr., titled "What F. D. R. and Stalin Really Did at Yalta," in the June 21, 1949, issue of Look magazine, which tells how two dying men, a couple of dummies, and at least one suspected of being a traitor delivered China, Korea, Poland, and the Balkans to the Communist wolves.

After this came the Marshall plan that taxes free enterprise in the United States to build up socialism in Europe which is committed to the destruction of free enterprise everywhere. And now we have the North Atlantic Pact which is similar to Hitler anti-Comintern Pact of November 25, 1936. It will not work any better for the United States than it did for German nationalism; but of course it will drain away more of our wealth to speed the day of that economic collapse for which Stalin and our domestic traitors are waiting.

KOHLBERG'S LETTER TO REPUBLICAN CHAIRMAN

JUNE 7, 1949.

Hon. WILLIAM L. PFEIFFER,
Chairman, New York State Republican Committee, Roosevelt Hotel, New York, N. Y.

MY DEAR MR. PFEIFFER: I am honored to receive from you an invitation to attend the dinner at the Waldorf on June 14 at $100 per plate.

Although a life-long member and contributor to the Republican Party since I cast my first vote for William Howard Taft in 1908, I regret to advise you that I am not going to take advantage of your kind invitation.

My reason is that I feel the Republican Party has failed in its duty to the Republic.

I have always thought that the Republican Party should offer more to the electorate than promises of better administration. There has been much criticism of the Republican Party for failure to properly criticize the New Deal on domestic issues. Because domestic issues, the New Deal, the welfare state, and creeping socialism are now being argued in the party, I shall limit my criticism to the party's platform on foreign policy.

"ME TOOING" NEW DEAL BETRAYAL OF AMERICA

For 5 years we have "me tooed" Democratic betrayal of America's traditional foreign policies; of American principles; of America's wartime pledges; and of the cause of freedom everywhere in the world. Our record is such that Prime Minister Nehru recently told an American reporter that India wondered whether she dared line up with the United States of America.

In June 1944 I wrote the Republican National Chairman that there was evidence that President Roosevelt was engaged in betraying China and Poland to the Soviet Union. The Republican Party refused to raise the issue. Instead, John Foster Dulles conferred with Secretary Hull and Candidate Dewey approved the meaningless statement of bipartisan support for a secret and unstated foreign policy to be determined by the Democratic fourth-term candidate. The excuse that we Republicans should not weaken the hand of our President abroad was spurious. Republican objection to the slightest hint at appeasement would have strengthened his hand.

PRESIDENT ROOSEVELT WENT TO YALTA

Immediately after his fourth election President Roosevelt went to Yalta without Republican advisers. The election had been won, so he didn't need us in his business any longer. There he sold out the Kurile Islands, half of Korea, the rest of Poland, all eastern Europe, and agreed to repatriate by force nearly a million Soviet citizens who had fled the slavery of the red dictatorship.

ONE OF THE BLOODIEST ACTS IN ALL HISTORY

Our 150-year record of haven for political exiles was broken by one of the bloodiest forced movements of men, women, and children in all history. The Republicans took it all lying down, and a Republican Senate confirmed the treaties that turned over Hungary and the Balkans. Hundreds of thousands of German and Austrian POW's captured by us were turned over to the Russians as forced laborers, contrary to all rules of civilized warfare. We Republicans apparently approved.

Likewise, at Yalta, the "veto" deal was made and a hamstrung UN was arranged to replace the real UN, set up in Washington January 1, 1942, which won the war and in which the United States held the balance of power. The Republicans in the Senate approved this monstrosity.

SELLING CHINA DOWN THE RIVER

Also, at Yalta, the open-door policy in China was completely sold out. The Russians were given Manchuria and Mongolia; and it is believed that there are still secret clauses in which we recognized Russia's special interest in China. How otherwise explain our continuing betrayal of that country to the Reds?

On November 20, 1941, in a formal "draft" proposal, the Japanese agreed to move no farther south in Asia and to withdraw from Indo-China. In a formal "draft" agreement in reply on November 26, 1941, Secretary Hull demanded that they withdraw from both Indo-China and China. On December 7, 1941, the Japanese refused these terms in a formal note handed Secretary Hull almost at the moment that the bombs fell on Pearl Harbor.

Thus, we went to war for the preservation of an independent China. If it was not essential to our security, President Roosevelt sacrificed 350,000 young American lives frivolously. If it was essential to our security then, as I believe it was, it still is now. Where does the Republican Party stand on this issue of our security in the Pacific Ocean and the security of Alaska and our west coast?

SELLING OUT THE BALTIC REPUBLICS

The Democratic administration has sold out the three Baltic Republics, our allies and fellow-members of the United Nations. The Republican Party has made no effective protest.

The Democratic administration sold out the free government of King Peter of Yugoslavia to the Communist Tito. Last year we gave Peter's gold to Tito. The Republicans made no effective protest.

At Chapultepec we signed a pact providing for consultation with 21 other nations in case of threat. Such consultation had been specifically refused by President Monroe when he proclaimed his doctrine in 1823. Against this emasculation of the Monroe Doctrine, the Republicans have not protested.

THE NORTH ATLANTIC PACT

Now the administration proposes a 20-year alliance with certain western European nations. Maybe this will prove an alliance of real force though without quid pro quo; maybe only a paper pact at ruinous cost to us. The future will tell. What is not questionable is that it is a violation of our 150 year policy of no permanent European alliances as recommended by President George Washington in his Farewell Address. The Republican Party in Congress is preparing to vote confirmation of this 20-year alliance, without forcing the administration to reveal the facts that either justify, or do not justify, this reversal of policy.

For 3½ years the Democratic administration has stumbled from one foreign emergency to another, with no discernible policy. The least informed American today recognizes that the greatest military victory in our history has been turned into defeat; that the man who signed the Stalin-Hitler pact of 1939, and the Stalin-Matsuoka pact of 1941 is the only victor.

TRAITORS RESPONSIBLE FOR DIPLOMATIC DEFEATS

Furthermore, we know our diplomatic defeat is due to traitors in advisory positions; that the secret testimony of Igor Gouzenko named a man close to the Secretary of State as head of the A-bomb spies; yet we acquiesce in concealing this treachery from the American people.

Today four close personal friends of Alger Hiss sit as our representatives to Vishinsky in Paris. Senate Republicans confirmed their appointments. They are Secretary

Acheson, Assistant Secretary Rusk, Ambassador Jessup and John Foster Dulles.

Because there is nowhere else to go, I shall have to remain a Republican. I cannot, however, support the present timid leadership of the Party, subservient as it is to democratic initiative in foreign affairs.

I AM ASHAMED OF MY PARTY

Because—

1. It has been too callous to protest the turning over of hundreds of millions of human beings to the Red secret police and the Red slave-labor camps; because

2. It has been too timid to protest the betrayal of our Polish, Latvian, Lithuanian, Estonian, Yugoslav, and Chinese Allies;

3. Because it has been too ill-informed to protest the destruction of tens of billions of dollars of American military equipment in Europe, in the Pacific, and in India—the very arms that we will now have to manufacture all over again for the Atlantic alliance; and

4. Too inert to realize that there will be no peace on earth until the Red dictatorship in the Kremlin is overthrown and its 650,000,000 unwilling slaves are freed.

Aren't you ashamed, too?

Sincerely,

ALFRED KOHLBERG.

Trends of International Affairs

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1949

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a resolution adopted by the Knights of Lithuania with reference to international affairs:

AMERICAN-BORN LITHUANIAN YOUTH WORLD WAR II VETS ASKS UNITED STATES GOVERNMENT TO INTERCEDE FOR THE LIBERATION OF THE BALTIC NATIONS UNDER RED RULE

The Knights of Lithuania, an organization of Lithuanian American Catholic youth, including large numbers of veterans of World War II, voice their regret over the trend of international affairs. Peace has not been won and the principles of the Atlantic Charter and the "four freedoms" are disregarded by the very governments which had urged our American youths of Lithuanian descent to fight for them. A number of countries lie abandoned behind the iron curtain, and no effort is being made to bring them back into the fold of civilized Christian nations under a system of peace based on justice and legal order of the democratic form of government responsive to the will of the people.

The following resolution adopted by the Knights of Lithuania, for the preservation of the nation of Lithuania, calling for immediate United States aid to remove Russia out of the Baltics. Therefore, the Supreme Council of the Knights of Lithuania through the mandate of its last convention adopted the resolution to be distributed to every important agency of the United States Government for immediate consideration of the plight of Lithuania and the other nations in the Baltic:

"*Resolved*, That the American Youth of the Knights of Lithuania respectfully urge the Government of the United States to reaffirm the Christian Moral Foundation upon which democratic way of life is established, to continue strongly to affirm the God-given rights of all people to live in freedom, peace and harmony, to initiate active measures directed at defending these divinely given rights and establishing a peace based upon the high concepts of justice as concretely embodied in the principles of the Atlantic Charter and the "four freedoms." The Knights of Lithuania further respectfully urge the United States Government to employ all just means of establishing a true, just, and lasting peace including, as circumstances might demand, the use of arms in defense of these principles.

"The Knights of Lithuania likewise respectfully requests the Government of the United States to demand that the armed forces and totalitarian Communist apparatus of the Soviet Union evacuate the territories of the sovereign republics of Lithuania, Latvia, and Estonia, thus permitting the people of these enslaved countries to resume their self-government without interference by the Soviet ally of Hitler.

"The Knights of Lithuania Supreme Council, authorized by the mandate of the national convention, a large percentage of whom fought in defense of our rights and justice in World War II, pledge their wholehearted support to any measures the United States Government may take in achieving these objectives of its American youth of Lithuanian descent to liberate the Baltic nations.

"Copies of this resolution to be sent to President Harry S. Truman, Secretary of State Dean Acheson, Mrs. Eleanor Roosevelt of the United Nations, to all Senators of the United States, to all Illinois Congressmen, to the Lithuanian consulate, and to Senator John C. Kluczynski of the fourth senatorial district of Chicago.

"To support this resolution the Chicago youth of Lithuanian descent is staging a demonstration for the Fourth of July at Vytautas Grove, One Hundred and Fifteenth Street and Pulaski Road; a declaration program will take place at 3 p. m. Prominent public officials are invited to attend and speak."

A Warning to the Spendthrifts

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1949

Mr. DAGUE. Mr. Speaker, to those of us who have been viewing with increasing apprehension the tendency of this Congress to appropriate beyond the ability of the people to pay, the article by Mr. Gould Lincoln entitled "Opposition Seen Rising to Heavy United States Spending" can only be considered as another word of warning to those who are pushing us down the treacherous pathway which leads to national insolvency.

Mr. Lincoln emphasizes the overwhelming odds by which the citizens of Detroit have expressed themselves on the subject of Federal spending and Federal taxes. Of particular interest to me is the emphatic manner in which they have rejected the fantastic Brannan plan, which in additional to shackling the farmer with the tightest of controls, makes his security the pawn of each succeeding Congress and for the first time puts him squarely on the dole. It can only be hoped that the Eighty-first Congress will throw off the lethargy which has thus far attended this session and, thus aroused, will discard all of these spending schemes which are to be financed out of borrowed money. Mr. Lincoln's splendid article follows:

OPPOSITION SEEN RISING TO HEAVY UNITED STATES SPENDING

(By Gould Lincoln)

An ominous ground swell among the common, everyday run of Americans against continued heavy spending by the Federal Government, particularly for new paternalistic and socialistic projects, appears to be rolling up. If it is so, it may still be in time to do some good before Congress closes. And should the administration's lack of interest in economy—evidenced by its continued proposal of new and costly programs—meet such a ground swell head-on, there may be something new in the political field. The campaign for the Senate and the House is coming up.

Notwithstanding the millions of people who are drawing money from the Federal Treasury, either directly or through subsidies of one kind or another, there are still more millions who are not. And the whole mass of the people are feeling the increasing pinch of Federal taxes and the ever-growing State and local taxes.

STRAW IN THE WIND

A straw in the wind is an unusual kind of poll, conducted by the Detroit News in the heart of a great industrial center, where the CIO claims tremendous strength. The newspaper published on two successive days ballots containing questionnaires on a proposal to cut Federal appropriations for the next fiscal year by 10 percent, and on Federal aid to education, public housing, the Brannan farm plan, the appropriations for aid to western Europe to rearm, the ECA appropriations, and the President's national health insurance program (socialized medicine to many).

Instead of urging the people of Detroit to send their answers to the Detroit News, the newspaper asked them to cut out the ballots and send them to Michigan's two United States Senators and to the Members of the House from the Detroit area. The results, as tabulated by these Members of Congress, were remarkable. The opposition to spending was overwhelming—and to the new projects also. Only in the matter of continued ECA aid and of aid in arming the North Atlantic Pact countries was there anything like a close division, and that was not too close.

The vote, in the poll, stood about 6 to 1 against Federal housing, 3 to 1 against Federal aid to education, 12 to 1 against national health insurance, and 16 to 1 against the Brannan farm bill. The poll stood 5,293 to 3,982 against spending to arm the western European nations, and 5,553 to 3,832 against large ECA appropriations. The Federal housing bill was defeated in the poll by 6,265 to 1,265; the Federal aid to education measure, 6,959 to 2,293; the Brannan farm bill, 8,870 to 528. On the other hand, the proposal to cut appropriations by 10 percent was voted up by 8,941 to 559, and the Hoover Commission plan to reorganize the executive branch of the Government was supported 9,251 to 245.

LETTERS ARE CRITICAL

Members of the Michigan delegation who receive the ballots say they appeared to come from the ordinary run-of-the-mine citizens. One of the Senators received 200 letters along with the ballots and they, too, were mostly critical of the spending program—half of them coming from persons of small means and half from business people.

There are two ways of capitalizing on this economy sentiment. The first is by having

the Congress itself cut drastically the appropriation bills which are still to be finally acted on—carrying an estimated $30,000,000,000—and by having Congress turn down the new projects. The second is by putting through Congress a resolution authorizing and directing the President to make the proposed over-all 10-percent cut. The first is the direct and courageous way of doing the economy job. The second is a confession of weakness on the part of Congress—passing the buck to the President. It is urged in support of the 10-percent over-all cut, or 5 percent, as the case may be, that the head of the Government can do the cutting job more scientifically than can Congress. The truth of the matter, however, is that many Members hesitate to vote to cut appropriations that affect particularly their own districts and States.

A poll similar to that conducted by the Detroit News was recently taken by the Omaha World-Herald and it showed, too, an overwhelming sentiment for economy and against the proposed administration program.

Housing Bill—A Citizen Speaks Out Against Public Housing

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1949

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks, I take this opportunity to insert in the RECORD a letter from a taxpayer at Muncie, Ind. This gentleman, in accounting for his opposition to public housing, has ably reflected the conscientious thinking of thousands of citizens of Indiana's Tenth Congressional District:

MUNCIE CREDIT BUREAU, INC.,
Muncie, Ind., June 21, 1949.

Hon. RALPH HARVEY,
Member of Congress, House of Representatives, House Office Building, Washington, D. C.

DEAR REPRESENTATIVE HARVEY: As an American who loves his country, as a parent, as a taxpayer, and as a businessman, I am alarmed at the possibility of the administration's gigantic housing bill being passed by this session of Congress. I do not belong to any labor group, farm group, veteran's group, welfare group, big business group, or school teacher's lobby. I am one of the unorganized millions who will pay for the privileges given to these special groups. I own a small business, the home in which I live, a car, and a dog. All these I have acquired through my own efforts. And I have been grateful to America because I believe that in no other country in the world could I have accomplished so much with so little.

Taxes have been heavy but I have willingly paid them with a minimum of grumbling, because I believe that high taxes are necessary to reduce the national debt. Instead of reducing the national debt, this administration has evolved one scheme after another for pouring our precious tax dollars down a tremendous rat hole. The Hoover Commission on Government Reorganization has stated that $1 out of every $5 of the national income is now used by the Federal Government on its various spending programs. The Commission says that the national debt alone has a mortgage of about $7,000 on every family in America. And yet, the Administration proposes public housing bill which will cost taxpayers approximately $18,500,000,000, or an additional $500 to be contributed by every American family. Inasmuch as 47,000,000 Americans do not pay any Federal tax, except hidden taxes, the group to which I belong will bear the burden of this tax load.

Aside from the enormous tax load, and the tremendous squandering of the taxpayers' hard-earned money by inefficient bureaucrats, why should the thrifty, the efficient, and the industrious Americans be penalized? Why should we be compelled to work harder, practice greater thrift, and then be deprived of the fruits of our labor so that others might have better housing through no efforts of their own?

I am fully aware of the Christian philosophy which teaches that those who are fortunate should give aid to the unfortunate. Very few Americans will take exception to that philosophy. I am not talking about the class of Americans that actually needs charity, I am talking about the growing class of Americans that believes that it can have the good things that America offers without working for them. As a credit bureau manager, I am in constant contact with all kinds of people and it is my firm conviction that those who benefit most from public housing are the shiftless, lazy ones who will not lift a finger to improve their lot. There are exceptions, of course. But I do not suppose there is enough tax money left in the pockets of taxpaying Americans to buy all the low-cost public housing needed to house the millions of Americans who have been taught to believe that the Government owes them a good living. It never occurs to these people that the way to get ahead is to work long hours and to save something back from each dollar they earn.

In Muncie, which is certainly a typical American small town, any man with courage, initiative, and a willingness to work can own his own home. I know of many areas in and around the city in which lots can be purchased for a dollar down and a dollar a week. There are millions of dollars in our banks, insurance companies, and savings and loan associations available to those who want low-cost housing and are willing to put their time and their sweat to the task of obtaining a home. And it might surprise Washington to know that thousands of Americans are doing just that. You won't hear from these people, because they neither need nor seek Federal help.

Private capital can and is providing low-cost housing to those who deserve it. But private capital cannot give away its money. It can help only those who help themselves. As you know, the money which is loaned by banks and savings and loan associations belongs to depositors. Loans are made to those whose record of thrift and achievement indicates an ability to repay. To the average American this is sound business and good living. But to the "gimme groups" this is too American. They profess not to understand why a person should be paid only what he's worth, receive only what he earns, and have only what he accumulates.

Those of us who do not belong to one of the "gimme groups" do not understand why our Congressmen cannot see this condition when it is so obvious to those of us who live close to the people. We realize that slum clearance is a problem. But isn't it a local problem? Can't sensible laws be passed that would require landlords to keep their buildings habitable? Millions of dollars are taken from slum tenements each month by landlords. Do you think landlords would allow their buildings to stand idle rather than fix them up to meet reasonable requirements?

Why can't something like this be tried before we spend billions of dollars at a time when the people as well as the Nation needs to practice economy? Are votes so necessary that a Congressman must jeopardize the future of all Americans in order that a few may receive charity?

Respectfully yours,

M. F. FISHER,
Manager, Muncie Credit Bureau, Inc.

A Challenging Report on South's Economy

EXTENSION OF REMARKS
OF
HON. PRINCE H. PRESTON, JR.
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1949

Mr. PRESTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Atlanta Journal of June 20, 1949:

A CHALLENGE REPORT ON SOUTH'S ECONOMY

It is an exceedingly significant report that the National Planning Association Committee of the South has transmitted to President Truman's Council of Economic Advisers. The committee has analyzed in detail the effects of existing policies of the Federal Government on the South and, on the basis of its findings, recommends specific changes in those policies to promote Southern employment and production. It is a report which merits careful study not only by the Council of Economic Advisers but by all thinking citizens concerned with the South's economic future.

First study of its kind, this comprehensive report points out that the essence of the South's economic problem with which Federal policy must deal, is that of how per capita wealth and income in this region can be raised effectively. The South's low per capita income stems from a low ratio of developed natural and capital resources to population. It is this meager ratio, the authors say, which is responsible for the relatively low level of physical production in the South, but not wholly responsible for the low value productivity of the Southern economy.

"The fundamental means by which the economic lag of the South can be overcome," the authors assert, "is through the increase of productivity and value of output of southern industry and agriculture. This means that the South must have more industry and the kind of industry in which the value of output per worker is higher. It means an agriculture of fewer uneconomically small farms and of more medium-sized farms employing fewer people with larger output per capita and with greater diversification in crops."

These trends, it is noted, already exist and have enabled the South during the last 15 years to increase its per capita income more rapidly than has the Nation as a whole. Yet, the fact to be borne in mind is that the per capita income in this region still remains well below that of the Nation as a whole.

As a means of expanding physical output per capita on southern farms, the report recommends extension of such Federal activities as support of research carried on in agricultural colleges and experiment stations, erosion control and soil conservation and the Federal-State extension system; more general granting of loans for soil improvement and similar purposes by local banks at reasonable rates; and continuation of the role of the Farmers' Home Administration in making loans available to farmers for improving productive efficiency. The authors

further propose a new farm income-support program, featuring "compensatory payments" to farmers which would have the effect of supporting incomes but would allow prices of farm products themselves to move freely. They believe their program would be less costly than the Brannan plan and would require less administrative apparatus and control of production. Their plan deserves detailed study.

The report proposes two direct ways to help the region's industrialization: (1) The influence, an even authority, of the Federal Government should be exerted to insure appropriate allocation of defense industries in the South, and (2) the Federal Government should provide financial aid for regional research centers and graduate technical schools and for fellowships for study in industrial engineering, industrial management, chemistry and physics. Such support would not be limited, however, to the South alone.

The committee believes that main reliance for capital funds for industrialization will have to be placed in investments by large national companies outside the region, and points out that this source will be affected by Federal tax policy in regard to profits and reserves. A second method of raising needed funds would be for Southern companies to buy or sell securities outside the region. The great mass of small and medium-sized Southern companies will have to depend upon local financing. They suggest, and we think wisely, a South-wide survey to determine the legitimate need for business capital funds and resources to meet those needs.

The study suggests the extension of deposit insurance to cover 100 percent of all deposits and the instruction of the Treasury to watch the regional flow of funds in any period of financial tension and, if there is a pronounced tendency for funds to leave any one region, to move Treasury deposits to counteract that trend.

The report is far too detailed for any concise analysis. It makes specific recommendations for the development of natural resources, for fiscal policy and for foreign trade.

Authors chiefly responsible for this significant study are Dr. Calvin B. Hoover and Dr. B. U. Ratchford, both of whom are on the staff of the department of economics at Duke University. Their findings during the past year were presented regularly to members of the National Planning Association Committee of the South for suggestion and analysis. (Charlton Ogburn, a native Georgian and nationally distinguished lawyer, is general counsel for the NPA.) The report, therefore, is seasoned with the judgment and experience of a cross section of outstanding southern leaders. Altogether, it comprises a stimulating and challenging mass of data. It is a start toward correcting conditions which have retarded the South's progress. Further studies and concerted action should go far toward helping this region to overcome its economic lag and to make the most of its abundant natural and human resources.

Socialist Snowball

EXTENSION OF REMARKS
OF
HON. EARL C. MICHENER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1949

Mr. MICHENER. Mr. Speaker, the American people are much interested in the progress of the British Socialist movement under the present political party in power. My attention has been called to an editorial appearing in the Monroe, Mich., Evening News of June 16, 1949, which is most interesting and informative.

Pursuant to permission given to me by the House, I include herewith that editorial, which is as follows:

SOCIALIST SNOWBALL

The British people are somewhat phlegmatic. They are anything but emotional. But they are dogged and determined. These national traits always have characterized the British Socialist movement. In fact, among international left-wingers, English Socialists long have been known by the ideological term of gradualists.

Early in the British Socialist endeavor a group of Britons first, Socialists afterward, formed what were called the Fabians after a Roman general who let the enemy wear itself out before walking into its camp. The idea was that British socialism wasn't really radical or revolutionary, but just a calm, gentlemanly progress toward gradual state ownership of everything. Little by little was the British Socialists' motto.

Twice before the British Labor Party, which was captured long ago by the glacier-like Socialists, has been in power. But at no time has it controlled a sufficient parliamentary majority to nationalize industry up to its present term. In the 4 years it has held a big majority, it has socialized mines, railroads, utilities, truck transport, the Bank of England, and more recently, the basic steel industry.

Gradualism has given way, under the temptation of power, to something quite different. Fabianism has been forgotten by the British Socialists now that they have the votes. The blunt truth is that even in Britan socialism, as any form of totalitarianism, can survive only by seizing more and more power. The little by little doctrine is incompatible with socialism.

Now the Socialist British Labor Party is preparing for its general election campaign in 1950. Leaders are working on its platform. Inevitably that platform is more socialism.

For socialism is like the drug or liquor habit; once started, it can't be checked. The first thing the Socialists want, if they are reelected, is a permanent rationing and controls law, which would give the Government power to say what and how much the British people eat and wear and consume, and how much they pay for it. The present law is "temporary," renewed each year.

The pay-off on the lengths to which the British Socialists are prepared to go came when Herbert Morrison, second in command to Prime Minister Clement Attlee and one of the most radical Socialists, defined what the platform should be at a recent party conclave. That platform, he asserted, should be "an effort to set up the collectivist state—a cooperative commonwealth of Great Britain—consistent with civil liberty and individual freedom."

Collectivism, of course, is totalitarianism, whether it is under a Socialist, Fascist, or Communist regime. So Morrison's platform is a self-contradiction; you can't have civil liberty and individual freedom in a collectivist or totalitarian state.

Then Morrison listed as the next targets for nationalization industrial insurance, water supply and cement production. Private industry, he added, not mentioning any particular industries, must watch its step.

The British people, he went on, "must be ready to change their jobs and management must be ready to change its line of production when the need arises."

The need he mentions, of course, is the need of the Socialist government to keep on nationalizing more and more business and industry in order to keep going. For socialism must constantly become more socialistic and more radical until the whole economy is under its control. The British are fast learning that socialism is a never-ending grab for more and more political and economic power, which is exactly the same process through which a dictatorship moves. The British people have their last chance to choose that course or freedom in the 1950 elections.

Commencement Exercises, LaSalle Military Academy

EXTENSION OF REMARKS
OF
HON. L. GARY CLEMENTE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Friday, June 24, 1949

Mr. CLEMENTE. Mr. Speaker, on June 16, 1949, I had occasion to address the graduates of the class of 1949 at the LaSalle Military Academy, Oakdale, Long Island, N. Y., at the sixty-sixth annual commencement exercises. LaSalle Military Academy is conducted by the Brothers of the Christian Schools; founded in 1883, it is a senior ROTC unit in the national Reserve Officers' Training Corps program. This year it was selected by the Army as one of the outstanding schools in the country.

As part of the commencement exercises the Valedictory—"Past Memories, Present Parting, and Future Doubt"—was delivered by Cadet Maj. Thomas Francis Field, who was named the outstanding graduating student. Major Field, executive officer of the cadet battalion, entered LaSalle in September 1944 as an eighth-grade student. His accomplishments there include appointment to the rank of cadet major in August 1948, and award of the Fathers' Club trophy for the outstanding speaking and scholastic honors. Major Field, whose home is in Rockville Centre, N. Y., expects to enter the University of Notre Dame in September 1949, where he will work for a bachelor of arts degree.

I wish to include as part of my remarks the excellent talk given by Major Field:

Brother John, auxiliary provincial; Brother Amian, headmaster; distinguished guests, mothers, fathers, relatives, and fellow cadets, today we come to the end of one of the paved, all-weather sections in the road of life. Before most of us lie yet another 4 years of travel on a smooth, concrete highway; then the road ends and we blaze our own trails.

For 4 years we have looked forward to the day of graduation—a day which always seemed nebulous and removed from us by an interminable period of time. Generally, graduation was looked upon as an end to all sorrow, a time of complete bliss; as the beginning of a sort of modern-day utopia, filled with flame-red convertibles and lazy days at the beach, and containing not the slightest hint of officers, shoe brushes, and brass, or history texts. For years we have heard minute descriptions of 3-day Roman holidays immediately to succeed these ceremonies this afternoon. As the senior classes of the past 3 years have promenaded happily up and down these steps, most of us have at least vaguely wondered what the feelings of the graduates were. Now we know, and those feelings aren't exactly what we had expected.

Now that we have run the course and finished the task at hand, the 4 years which once seemed to be eternity have slipped away a little faster than we wanted them to. Of course, we are very glad to be rid of military drill and morning inspections and raucous bells jangling at every hour of the day and night, but nevertheless, today is not a time of unalloyed joy. There is a note of quiet nostalgia because we have past memories.

This concept certainly cannot be understood by the underclassmen who, no doubt, look upon graduation as we once did. But the waters of time have a curious ability to lave away from one's mind and heart all bitter memories; at the same time leaving intact the recollections of joyful days. In us they have worked long enough so that the past years in high school can already be regarded with nostalgia. In yet another decade, these waters will have done their work so completely, and the world of business will have proven so thoroughly trying, that we will long for high-school days once more. The idea may seem ludicrous now, but mark the words, and see if at length they will not ring true.

This feeling of nostalgia is due then to pleasant memories—memories of friends primarily. Nothing is so delicate as friendship—not the finest jewel or the most delicate glasswork—and yet nothing is so durable, so necessary, so pleasant, so inspiring, or as productive of lasting memories as is friendship. There are the ties which we feel toward our fellow graduates. Among the faculty too there are those of whom we will always cherish memories.

There are events which are a part of our past memories; tea dances, or plays, or drills, or varsity games. But there's one happening which will undoubtedly bring smiles for years to come: we won't soon forget the night in the mess hall that Doc announced that a left-handed baseball bat had been lost.

Today our present parting induces in most of us a feeling almost of sorrow, a sorrow which stems largely from the fact that we realized that we are soon to finally bid adieu to those who are sitting beside us today. There are some few here today whom we are seeing for the last time—this side of heaven. By the end of next week, that number will have swelled considerably. The uniform which we wear today we wear for the last time. And for that we may, in some respects, modestly thank God. There is a sense of finality in our hearts—of finality so great that we are as yet unable to comprehend it. When, in a few months, we find it impossible to easily recall the names of those pictured in our yearbook, that feeling will, perhaps, be with us in its entirety.

Above all, there is a sense of parting today from the habits and customs of military life which we knew so well. This is no better exemplified than by the discouraging ease with which the juniors have taken the places which we once held in the battalion. And, oddly enough, those same juniors only a few months ago were almost universally regarded by the senior class as "a bunch'a wise guys."

But today is not so much a day for looking back—we have not traversed enough of life's path for that—it is much more a day for looking ahead. For many of us the future holds grave doubt—doubt as to whether the society of which we are a part, will long survive, or whether it should survive. But this is not the time for an involved discussion of international politics. Rather, it might be better if we sought for fundamental ideas; for ideas which will answer the questions which occur more pointedly today: Questions such as: What do I want in life? and, What reason have I for being? Some will answer: I want happiness in life; others, I want fame; still others, I am determined to do God's will.

Let's take a look at the fellow whose reason for being is "happiness." He is not an unusual person. It is surprising how many of our own actions are dedicated to the achievement of that one goal.

We all want happiness, but, surprisingly enough, true happiness will not come through material things, since happiness in the material order is merely relative. That is, if we have more material things now than we had a few days ago we are materially happy; if we have the same number or less, we are materially unhappy. Any material happiness soon fades, and we are forced to procure more material things in order to be relatively better off, and thus relatively happier than we were a short time previously. Thus the person who seeks purely material happiness as an end in life, involves himself in a mad race to constantly better his material position relative to what it was a short time before. Since such constant betterment is generally impossible, modern man in search of happiness finds continual frustration and despair.

Just to apply this idea to actual life: There is a definite thrill as one steps into a new, canary yellow, leather lined, Buick, dynaflow, convertible. But since this happiness is a material thing, it fades, probably even before we have changed the oil. Soon, in order to improve our relative position in the automotive field, we begin to ogle the Cadillac line. If we have the resources to effect such a purchase, we soon are racing hither and yon behind 160 Cadillac horsepower. After this, comes a similar let-down, and still another attempt to better our relative happiness quotient, perhaps, this time, by importing a Rolls-Royce. The point is, though, that at some time the cycle must end and frustration begin.

No better proof of this idea of the relative nature of material happiness can be had than the fact that the rich, at any one time, are in general no happier than the poor. Again we may cite the fact that, in general, the Clason Military Academy graduates of 1887 were no less happy than the class graduating today, despite the tremendous material progress since that time. Indeed, the very emphasis which our age places on progress is simply a manifestation of the constant struggle of modern man, living in a material world, to secure material happiness by bettering his position in relation to what it previously was. There is even a law of compensation in material life stipulating that each new article, bought or procured, brings less pleasure than the one immediately preceding it.

Fame, too, if sought as a primary end in life, is a subtle poison and a transient thing, for fame has a heavy price, and it too can, if wrongly sought, lead to despair. As Milton has it—

"Fame is the spur which the clear spirit doth raise
To scorn delight, and live laborious days."

Indeed, fame is a goal which, if sought for its own sake, seems to recede ever faster the more sedulously we pursue it.

It should be emphasized, of course, that we here speak only of those who seek fame or happiness as sole and primary ends in life; not of those who find happiness or fame as a result of other laudable activities. A lust for happiness should be distinguished from a legitimate acquirement of it. No one wants long faces or men without ambition.

But if material happiness and an avidity for fame cannot bring true satisfaction into our lives, what goal should we have in mind? The answer is simple—we should devote ourselves to a cause, even if it be a lost cause. If the cause is good, this is a sure way to temporal and eternal satisfaction because such a consecration to an ideal is innate within the human soul. We are already twice consecrated to causes—once to our church and then to our Nation. A devotion to God and Nation fulfills our reason for being, and brings a foretaste of heaven to earth. A life devoted to these two ideals avoids an insane race for material happiness as a primary end in life, and sidesteps the pitfalls of a lust for fame, which overpowering common sense exacts from man a heavy toll. Such a life devoted primarily to the furtherance of two great ideals will merit the appellation "great" both on earth and on heaven's heights.

Lastly, we have the words of our Saviour regarding what men should seek in life. He said "Seek first the kingdom of heaven, and all things shall be added unto you." If we remember nothing else of today's proceedings we should retain that phrase, for it serves as a reassurance for those who fear to lose the things of the world by devotion to God.

Thus, in spite of the doubt, error, and cynicism which our age has bequeathed to us, we are supremely confident for the future, because we are secure in the knowledge that we shall end our lives, in the words of the poet, trailing clouds of glory. Thus we shall attain not dominion over the sky or the stars, but a place in God's eternal heaven.

Statement of Hon. Melvin Price, of Illinois, Before Subcommittee of the House Committee on Education and Labor

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1949

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith my statement I made before the Kelley subcommittee, House Committee on Education and Labor in behalf of H. R. 3023:

Mr. Chairman, and members of the committee, I appear before you this afternoon, not as an expert on mine safety—I have never worked a day in a mine in my life, nor have I ever been associated in any way with any organization, State, Federal, or private that have related activities in this field. I know that the able chairman of this subcommittee, Mr. KELLEY, has a career of 30 years from a laborer in the mines to that of operator and owner on which to qualify as an expert. Other members of the committee have far more experience on this subject than I. That is why I am happy this measure is before this group this afternoon. For all of you know, as I, even without a background as an expert in the field, know the urgent need for the legislation proposed in H. R. 3023.

The Nation was shocked by the disaster of March 25, 1947, when 111 men lost their lives in Centralia coal mine No. 5 at Wamac, Ill. That disaster was close enough to home that I have never forgotten it and I hope my colleagues in Congress will never forget it. Too often men in public life are stirred to a point of action immediately in the wake of a national disaster, only to have their enthusiasm wane as the headlines which aroused them fade into small captions on the inside pages.

It is too bad our legislative processes are so slow on such occasions for I am certain that while the memory of Centralia was still alive legislation such as I propose in H. R.

3023 would have been enacted into law by very close to an unanimous vote.

But it has been 2 years since Centralia mine No. 5, so our task in placing this urgent legislation upon the statute books may be a bit more difficult. Yet I remain confident that it will be enacted into law.

I will leave to the experts who will follow me the task of discussing the technical features that would be involved because of the passage of this legislation. I prefer to discuss briefly my reasons for supporting and offering for consideration of this committee and Congress H. R. 3023, a measure designed to put teeth into the Federal Mine Inspection Law.

At this point I would like to state that 39 of my colleagues in the House, who represent the principal coal producing States in the Nation, have by letter assured me of their support of H. R. 3023 and I ask that their names be inserted in the record of this hearing.

I introduced this bill because I felt that the Federal Government owes every ounce of protection it can possibly give to the coal miners of this Nation. I concede that the 1941 Federal Mine Inspection Act gives a good measure of protection, but it fails of its objective because with too many operators, recommendations on safety mean nothing unless power to enforce these recommendations go with them.

Existing Federal laws go only half way in providing the safety precautions this essential national industry demands. Without the authority it needs to enforce its recommendations the Bureau of Mines has no reason to expect any better cooperation from mine operators in the future than it has received in the past—and that cooperation hasn't been a matter to which the coal industry can point with pride.

In the first 5 years of operations under inspection provisions of the 1941 act, from December 1, 1941, to May 31, 1946, the management's record of compliance was 25 percent. For the next year, June 1, 1946, to March 24, 1947, it continued at the low rate of 25 percent. It took the Centralia disaster to make the rate jump to 45 percent from March 25, 1947, to June 30, 1947. But even with the Federal Mine Safety Code, Public Law 328, Eightieth Congress, in effect from July 1, 1947, to June 30, 1948, compliance started to decline and for the period was 41 percent.

Proof enough that the only way in which compliance with recommendations of the Federal mine inspectors can be obtained is through adequate enforcement provisions in the Federal law. In my opinion we can expect compliance to continue to go down unless we act now to put teeth into the law.

I urge the members of this committee to study carefully the reports from the United States Bureau of Mines on casualties in the coal industry over the past 10 years. They are the best arguments in favor of this bill.

It was a death toll of 1,500 coal miners in 1940 that led to the enactment of the existing inspection legislation. But that wasn't an unusually heavy toll. I have a feeling that if the majority of the Members of Congress understood that it is not unusual for the annual death rate in mines of the Nation to exceed 1,000, and that the annual accident rate is well over 50,000 they would demand an opportunity to enact this legislation.

The record of mine fatalities year after year clearly reflects the laxity of State enforcement and the inadequacies of State safety laws.

Fatalities in coal mines rank next to highest in the major industries, only lumber having a higher rate.

I hope this Congress will give its attention to this most important problem and that it will take the action necessary to make the Federal mine-inspection laws meaningful. H. R. 3023 proposes that a Federal inspector who finds imminent danger in a mine can order immediate shut-down. And I propose that failure to obey a close order would be punishable by a substantial penalty. In my bill I suggest a fine of $500 or imprisonment up to 60 days, or both, but I am inclined to agree with Bureau of Mines' officials who have testified on a companion bill in the Senate that this is too mild a penalty for such a serious offense. I agree to their suggestion stepping up the penalty to a fine of $2,000 or imprisonment of not more than 6 months, or both.

The life of a coal miner is constantly in danger. This measure is designed to preserve his health and safety—to save him from recurrence of the disasters which annually cost the lives of hundreds. It is a humane measure and certainly merits approval of this Congress.

We need this tightening of mine-inspection laws to save the lives of the men who mine the Nation's coal. The record of lives lost, the crippled and maimed men, are the evidence of the inadequacies in present laws. I hope the mine owners themselves and officials in charge of State mine-regulating agencies will look upon this legislation as an aid in their own efforts to solve the problem of mine safety. I feel that they should.

Public Law 49, Seventy-seventh Congress, gave to the mine operators and the miners a vast fund of scientific and engineering information held by the Bureau of Mines. It may have accomplished much in the field of mine safety but it could have prevented a few of the disasters which have occurred in the past 7 years had the Seventy-seventh Congress given the inspectors the power to enforce their recommendations. We know that now.

I do not suggest that giving the power of enforcement to the inspectors is a cure-all for coal-mine accidents, but it will strengthen the hand of the Federal inspectors in their efforts to eliminate hazards in coal mines. It will end obstinate operators' disregard for safety recommendations.

Federal inspection and investigation of mines, even after putting the teeth into the act to enforce the inspectors' recommendations, cannot or will not bring about elimination of all accidents, but as time goes by and the activities of the Bureau continue to become more effective with the scientific experimental work, gradual reduction in the accident rate will be apparent.

This is a long step forward and it must be taken. It is long past time for action on the part of Congress, lest the blood of future fatalities be on our hands.

Decent Homes for All

EXTENSION OF REMARKS

OF

HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 24, 1949

Mr. GOODWIN. Mr. Speaker, an editorial from the Boston Herald of June 21, 1949, is one of the most valuable contributions to the discussion of the housing problem which I have seen and I include it herewith under leave to extend my remarks:

DECENT HOMES FOR ALL

The House next Wednesday begins debate on a crucial social issue: Is the Government to commit itself to an unlimited guarantee of a decent home for every American? The specific subject will be the Senate-passed National Housing Act of 1949. The immediate material problem will be the expenditure of between ten and sixteen billion dollars in Federal grants and loans over the next 40 years, plus expenditures by local governments. But the implication is much vaster than that. It is a choice between free enterprise and the welfare state.

A limited public housing project, designed to fill an immediate shortage, is a reasonable undertaking of a free economy government. But we have here a spacious program, frankly based on the assumption that the Government owes a good home to everyone. What does it entail?

The replacement of slums with habitable units and the construction and repair of comfortable farmhouses are not assured simply by taxing the people, or borrowing from them under deficit financing, and transferring the money. There is no Orphan Annie's cave from which billions can be retrieved. The lack of sufficient good housing has not been simply a lack of cash.

To build substantially more homes than we are now building (we spent $7,000,000,000 in private housing last year), we must have lumber, metals, synthetics, paint, transportation and labor. These must be diverted from other products, meaning that there will be less for private housing, less for automobiles, less for capital goods, less for the things that make up our material wealth. We shall all be a little poorer.

Perhaps it is worth being poorer for the sake of a better housed America. But we must not forget that as we make all a little poorer, we add more families to those who must look to government for their homes. Government subsidized housing inevitably increases the numbers who must be subsidized. The more productivity that is channeled into public housing, the more must be sent there. The billions in the National Housing Act of 1949 will require still more billions in the years to come.

The United States people have already voted on housing. Under a relatively free economy, they have spent their money for automobiles, for liquor and tobacco, for education, for travel, for countless things beside housing. If the Government adopts the philosophy of the National Housing Act of 1949, it will override the people's vote and will say the people must spend less on these other things and more on housing.

We do not have an unlimited national productivity to consume. If we build 1,050,000 nonfarm dwellings, plus an undetermined number of farm homes, as the bill provides, in addition to our present private housing construction, there is no bank to draw on but what we can produce. Do we, as a people, wish to adopt the principle that the Government, even a democratically elected government, shall decide how that account is to be drawn on?

Senator TAFT has said that if the cost of home construction could be cut in half, there would be no slums. That means we could have a well-housed America if our productive capacity in respect to home building could be doubled with the raw materials, capital and labor now devoted to it. Surely this is the challenge we can most nobly undertake, rather than a system of national charity. And we have hardly touched the problem of out-moded practices in the industry.

This is why Senator TAFT, who supported the Housing Act, insisted on the title providing for Government-supported research in housing construction. It is the one feature of the bill that gives hope.

It will take years to achieve results, however. In the meantime the Government can, as we have said, adopt a stop-gap plan of strictly temporary slum clearance and public housing. The House can serve well by so approaching the measure. We do not want Congress to rebudget our national wealth.

Housing Under H. R. 4009

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1949

Mr. MULTER. Mr. Speaker, at the risk of bringing down upon his head a heap of abuse calling him a Communist, emanating, of course, from the opponents of slum clearance and public housing for the lowest income groups, I call the attention of the Congress to the following letter which appears in today's New York Times, written by William L. C. Wheaton, associate professor of regional planning for Harvard University:

LETTER TO THE TIMES

HOUSING UNDER H. R. 4009—MEASURE IS SUPPORTED AS OFFERING SOUND BUILDING PROGRAM

To the EDITOR OF THE NEW YORK TIMES:

The Times of June 17 carries a letter to the editor by Emerson P. Schmidt, of the United States Chamber of Commerce, opposing the housing bill. The arguments raised by Mr. Schmidt are fallacious.

Mr. Schmidt's objections to the housing bill are that it involves subsidies for "only * * * some persons," that it might involve "complete socialization of the house-construction industry," that it will adversely affect the market for private housing, and by implication that public housing will cost more than private housing.

All of these arguments have been answered repeatedly in hearings before seven congressional committees, each of which, after prolonged hearings, recommended the passage of the legislation.

The subsidies proposed in the housing bill will serve the needs of families whose income is so low that they cannot afford decent, safe, and sanitary housing. Over any period of time the million housing units built will serve many millions of families, providing them with decent shelter when their incomes are low, and remaining to serve other needy families after the original occupants' incomes rise sufficiently to permit them to move elsewhere. Surely this group deserves the assistance of a subsidy as much as ship owners, air lines, or highways, or their users, which subsidies appear to have the support of the chamber of commerce.

The housing bill would make possible the construction of 150,000 units a year of low-rent housing. The houses would be financed through bonds sold by private banking houses to private investors, they would be designed by private architects and built by private contractors, of materials produced by private industry. After completion they would be owned and operated by local municipal governments.

Number of units

The number of units built annually would rarely exceed 10 percent of the number of privately built houses needed each year, and the total, after completion of the program, would not comprise more than 3 percent of the housing supply of the country. We clearly stand in much greater danger of socialism from our public highways, water works, and similar enterprises, substantially all of which are municipally owned to the great benefit of our private economy.

The contention that the public-housing program will adversely affect the market for private housing is equally erroneous. The hearings of the congressional committees are full of evidence that public housing creates a demand for better private housing.

Mr. Schmidt fears that public housing will deter investment in private rental housing. But slum dwellers are not potential customers for $90-a-month apartments and never have been.

What little rental housing has been built in this country in the last generation—and it has been far less than a third of the proportion needed—has been built and will continue to be built for those who desire and can afford a higher class of accommodation, those in the highest-income group.

As to the cost of public housing, the record of the committee shows that the prewar public-housing projects were built at substantially lower cost than comparable private units.

In addition to these questions regarding the public-housing program Mr. Schmidt makes several suggestions. He wishes an attack on "obsolete building codes, restrictive practices, and the * * * essentially handicraft character of the building industry." He urges that public funds be appropriated for a program of technical research to achieve these objectives.

Opposition of industry

The sponsors and supporters of the housing bill have long urged such a program. A comprehensive research program was included in the original Wagner-Ellender-Taft bill in 1945, in every subsequent modification, and in the present bill. Yet strangely, the building industry has fought against this provision almost as vigorously as it has opposed public housing. Representatives of the United States Chamber of Commerce, which Mr. Schmidt represents, have repeatedly testified against these provisions, now belatedly recognized as necessary and desirable.

Perhaps the most naive argument in Mr. Schmidt's letter is his closing question: "Would you be willing to support a subsidized press for these people (who cannot afford newspapers)?" Is Mr. Schmidt unaware of the Hoover Committee's revelation that the Federal Government already subsidizes the press of this country through below-cost postal rates which ultimately cost the taxpayer millions of dollars annually?

The housing bill now before the House of Representatives represents a sound, conservative proposal. The bill offers a comprehensive program to widen the market and expand the capacity of the private house-building industry through research. There are enough progressive elements and promising accomplishments in the building industry to suggest that with better leadership and Government aid this goal can be achieved in time.

This legislation was drafted and sponsored from the start by a bipartisan group of Senators. It has been supported by citizen, veteran, civic, and religious organizations representing 60,000,000 Americans of every class, creed, race, and both political parties.

It has been fought by a small group representing by their own admission less than 100,000 people, who believe, incorrectly, that their interests are jeopardized by it. They have thus far failed to convince a single congressional committee that this is the case, but they have succeeded in preventing the Members of the House of Representatives from voting on the bill for 4 years.

When H. R. 4009 comes before the House this week it deserves the enthusiastic support of every Member of Congress.

WILLIAM L. C. WHEATON,
Associate Professor of Regional Planning, Harvard University.
CAMBRIDGE, MASS., *June 18, 1949.*

Address of Gen. Alexander A. Vandegrift

EXTENSION OF REMARKS
OF
HON. J. VAUGHAN GARY
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1949

Mr. GARY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Gen. Alexander A. Vandegrift, formerly Commandant of the United States Marine Corps, on the occasion of the Flag Day observance ceremonies held in Richmond, Va., June 12, 1949:

Today, on our annual observance of Flag Day, we pay tribute to the emblem of our national strength and unity—the Stars and Stripes. The historical significance of this day lies in the fact that on June 14, 1777, the Continental Congress adopted a resolution "that the flag of the 13 United States be 13 stripes, alternate red and white; that the union be 13 stars, white in a blue field, representing a new constellation."

The Star-Spangled Banner was designed in the days of the Revolutionary War, and was first flown at the head of the Continental Army. From its birth, 172 years ago until today, our flag has witnessed a great history. It symbolizes a great national ideal which we mean to preserve no matter what the cost.

Our flag has been handed down to us from our forefathers, those stanch and rugged individualists of colonial days, men and women of simple and abiding faith. They came to America full of hope, and for them and their children's children their faith and their hopes have been justified.

It is against their background and heritage of faith, hope, courage, optimism, and enthusiasm that we pause amidst our celebration today and contemplate the international problems that beset the people of the United States.

We know full well that without a just and enduring peace the horizons and boundaries of the human spirit will shrink ever inward, and that neither America nor any other nation will achieve its destiny. We are convinced that peace is not an accident that just happens, but rather an objective requiring and deserving the same effort and unity that is required to win a war. We know, too, that there is a price for peace.

In this modern world no land can ever again be an island entire of itself. Henceforth, whenever forces of aggression seek to abridge liberty and disrupt the peace, in however remote corner of the globe, no one will need ask for whom the bells toll. We will know they toll for all of us, unless America, acting in concert with the other peace and liberty loving members of the United Nations, exerts its full influence at once to halt that aggression.

I detest alarmists and I hope I never become one. However, it would take a very optimistic man indeed to survey the world of today and find that all is well. I believe it is possible for us to work out our differences. But only a fool could fail to recognize the potential dangers of today's international tension.

Ever since 1914 we have wondered if we would ever see a return to those conditions we usually describe as normal. While addressing a high school forum in New York recently, the Reverened Robert I. Gannon, former president of Fordham University, said to the young men in his audience: "Your

generation has a different point of view. You were born into chaos. It is part of the providence of God that you, who have to pick up the pieces of this modern age, should look on disorder and uncertainty as a normal condition to be faced without surprise or fear."

I am inclined to agree with Father Gannon that the world is, and for some time has been, in a rather chaotic condition. I fear he is right when he says that we must look on disorder and uncertainty as a normal condition to be faced without surprise or fear. But I feel that despite our lack of surprise or fear we must in the years to come, as never before, stay alert and on guard. We must all broaden our interests and our perception. We must all learn to appreciate just what is at stake in this world today and the methods and techniques that may be used to deprive us of our birthright.

Three and one-half years ago we settled down to enjoy the fruits of victory in a world liberated from aggression, from the dread scepter of future war, and from the bestiality and oppression that brought war to Europe in 1939.

With record-breaking speed this country demobilized the world's greatest Army, Navy, Marine Corps, and Air Force and left America with a skeletonized military organization. To our amazement we saw our international influence disintegrate in proportion to the demobilization of our military power.

Already we have seen Latvia, Estonia, and Lithuania gobbled up. We witness now the death of democratic processes in Poland. We watched Yugoslavia, Hungary, Bulgaria, and Rumania fall victim to as ruthless an aggression as any country had suffered at the hands of Hitler. Then we watched Czechoslovakia die. For the second time in 10 years there was imposed upon the free people of that country a way of life to which they preferred death, even as Jan Masaryk.

Then it was that we experienced something of the same apprehension that paralyzed us in the late thirties and early forties. But today there is one conspicuous difference. We know now that salvation cannot be found in appeasement. We know now that wisdom and vision and military strength that command respect can help to preserve the peace, just as stupidity, blindness, and weakness can invite the very conflict that we seek to avoid. The cold war in which we were so recently engaged was tragic, but it was immeasurably better than the hot war into which we might have been mouse-trapped by a policy of inaction.

I realize that the $15,000,000,000 budget set by President Truman for military expenditures during the coming fiscal year is a very large sum of money. But I ask you to remember that it is still less than 5 percent of the $350,000,000,000 it cost us to win World War II, a war in which 400,000 fine young Americans gave their lives.

Until this world achieves a far greater stability than is apparent today, we cannot afford the luxury of reducing the premiums we pay to insure world peace.

Since our national decision to wage peace with the same vigor with which we waged war, the situation in Europe has improved substantially. In western Europe there has been a gradual and noticeable improvement which encourages us to believe that the Marshall plan is one of the most important paths to peaceful settlement of the problems of the postwar world. All of this, though expensive, has been well worth the price.

Since the German surrender and including the first year's installment of the European recovery program, the people of America have given to the impoverished peoples of the devastated countries of the world, assistance totalling $21,000,000,000, more than 10 times the cost of developing the atomic bomb. As Bernard Baruch has wisely observed: "One could search vainly mankind's whole history for comparable generosity."

Were it not for these saving contributions made by the people of the United States, the condition and future of Europe and many other parts of the world today would be indescribably chaotic.

We are now in the process of considering for ratification an Atlantic Pact to give further assurance to the western European democracies that we do not intend again to stand idly by while they are engulfed by totalitarianism. We do not intend again to see a fortress Europe in hostile hands. For ourselves and for the friendly people of Europe, an ounce of true liberty now may be worth many pounds of liberation later.

Make no mistake about it. All of these acts and every move your Government is making is devised to protect and preserve the peace, and not to prepare for war.

This Flag Day celebration here in Richmond today is typical of the countless such ceremonies taking place throughout the world honoring the glorious Stars and Stripes. These celebrations give tangible evidence of our allegiance to our flag. And allegiance to our flag indicates love of country. We love America and the ideals for which she stands. We love her for what she has given us in opportunity to enrich our lives, to enjoy the freedoms we cherish. We love her for the place she holds in the affection of all mankind, as the land of enlightened liberty, and the champion of human dignity.

Our devotion, however, must be something more than an affectionate optimism that somehow everything will work out all right. We must face present problems with a realistic approach and with full consciousness that we must all continue to devote our best efforts to these ideals if they are to survive and prosper. We cannot close our eyes to the fact that our survival will always be threatened so long as there are destructive ideologies with aggressive tendencies abroad in the world.

We must always remember that the price of the inaction may ultimately be many times greater than the cost of all the steps we can take to preserve our heritage.

The events of the past 3 years of uneasy peace and the reaction of the American people to these events hearten my confidence that all of us are ready to work as hard, as unitedly and untiringly for peace as we did for victory in war.

Our experiences in the last two great wars have taught us a lesson which we are prepared to heed. We are resolved to make every effort while the time remains to weld the strongest possible chains to keep in leash the dogs of war. We believe that a strong America can help to prevent war. As a nation we will continue to take every possible practical step to preserve the peace of the world.

We freely acknowledge that the problems our generation will face in the next 20 years may be as great or greater than those we face today. We must acknowledge that the sacrifices we shall be called upon to make may be greater than those we are now making. Whatever the problems, whatever the sacrifices asked in our remaining years, we gladly accept as the challenges of our destiny. We know that everything we are, that everything we hope our children to become is at stake. We dare not fail, lest civilization suffer its worst retrogression in all recorded history.

Here on this continent our forefathers established a system of government and a way of life which has proved to be the world's greatest contribution to human freedom and the dignity of man. It represents today civilization's brightest promise and strongest hope. It must not perish.

May God give us the wisdom, the courage, and the determination to do all things that must be done to protect and preserve this America, and to help keep the world at peace.

National Service Life Insurance Refunds Should Be Paid to Veterans Without Further Delay

EXTENSION OF REMARKS

OF

HON. J. CALEB BOGGS

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Friday, June 24, 1949

Mr. BOGGS of Delaware. Mr. Speaker, I want to direct the attention of all the Members of this House to the interminable delay by the Veterans' Administration in paying the refunds to which veterans are entitled by reason of having paid premiums in excess of the sums required on their national service life insurance. I also want to direct the attention of the Members to the confusing explanations and flimsy excuses advanced by the Veterans' Administration for their failure to pay to the veterans a sum of approximately $2,800,000,000 which belongs to no one except those veterans.

To the best of my recollection, Mr. Speaker, it was about 2 years ago, in 1947, when the Veterans' Administration first disclosed the fact that tremendous sums were available for distribution in the form of refunds to those veterans who are or were for a period of at least 3 months insured through national service life insurance. Shortly after that initial announcement, it was stated that actual payment would have to be postponed until after the Supreme Court had rendered its decision in the Zazove case. This, it was stated, was so because the total amount available for refund distribution could not be determined until that decision was rendered. The Supreme Court passed down its decision in the Zazove case on June 14, 1948. Not very long thereafter the Veterans' Administration announced that the refund payments would be made in the calendar year 1949, and that the mechanism for doing so was being placed in operation. Now, Mr. Speaker, the veterans of America are told that there will be further delay, but that it is hoped that their money will be refunded to them in 1950.

It must be pointed out, Mr. Speaker, that it was known by the Veterans' Administration throughout all the period prior to the rendering of a decision in the Zazove case, that some amount would be available for refund purposes irrespective of the outcome of the Zazove case. That being the case, I consider it pertinent to ask why there was any need or justification for delay by the Veterans' Administration in proceeding with the mechanical work necessary in preparation for such a payment. If that had been done as it should have been, it would then have been necessary only to apply the formula determined upon to the sum available for refund after the Supreme Court decision had been rendered. Why, Mr. Speaker, was this not done? And why, Mr. Speaker, is there reason to believe that it has not yet been done?

During the past several weeks our attention has repeatedly been directed to the fact that unemployment is increasing and that individual incomes are, therefore, declining. At the same time the administration has repeatedly insisted that this recession will be of only short duration. Such being the case, it appears that there could be no more appropriate time from the point of view of our national economy than that these life insurance refunds should be paid during this very period when they are most needed. Why then are we told that there will be more and more delay?

My friend and colleague the gentleman from New York [Mr. KEATING], who is a veteran himself, has introduced a resolution stating that it is the expressed desire of the Congress that these funds shall in fact be repaid not later than October 15, 1949. I sincerely urge all the Members of this House who believe in justice and fair play for our veterans to support this resolution. After the resolution has been adopted, I further urge the Members to assume the responsibility for seeing that there is full compliance with the provisions of that resolution. And, Mr. Speaker, if there is any effort to avoid compliance, then I believe that the Congress and the veterans' organizations of this Nation should demand a full accounting and a complete report on the existing situation to ascertain whether there are reasons which have not yet been disclosed for this continuing and unjustified procrastination in refunding to our veterans this tremendous sum which is in fact theirs.

Mr. Speaker, under permission to extend my remarks, I include a very excellent editorial on this subject which appeared in the June 21, 1949, issue of the Wilmington Journal-Every Evening:

THEY HAVE WAITED LONG ENOUGH

Although the Supreme Court ruled more than a year ago that refunds on GI life insurance were lawful, it is only now that the Veterans' Administration is getting down seriously to the business of preparing to pay them. Perhaps we should not be surprised. That's the way that bureaucracy customarily operates.

The veterans, however, have a legitimate complaint and the Republicans in Congress are within their rights in voicing it. The money belongs to the soldiers, not the Government, and it ought to be distributed at the earliest possible moment. Such considerations as political advantage or impact on the economy have no place in the picture.

It has been charged on more than one occasion that the administration, mindful of next year's congressional elections, would like to withhold payment of refunds until some time in the spring. That course would give it what amounts to a $2,800,000,000 campaign fund and the opportunity to address itself directly to the 16,000,000 voters who would be receiving checks from the Government. And such is the nature of many people that they would think they were getting something for nothing and that they ought to be correspondingly grateful to the party in power in Washington.

For the sake of honesty and integrity in politics we hope that the Republicans in Congress will continue, first, to insist on the payment of refunds now and, second, to keep hammering home the point that what the veterans will be receiving is due them not out of charity but as a matter of simple justice and fair financial dealing.

The Republican Party's Responsibility to the Farmer

EXTENSION OF REMARKS
OF
HON. NORRIS COTTON
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES

Friday, June 24, 1949

Mr. COTTON. Mr. Speaker, under leave to extend my remarks in today's RECORD, I wish to include a very able and informative address delivered today by my colleague, the Honorable WALT HORAN, of Washington, before the national convention of the Young Republican National Federation at Salt Lake City, Utah, dealing with American farm policy:

THE REPUBLICAN PARTY'S RESPONSIBILITY TO THE FARMER

(Speech of the Honorable WALT HORAN, Member of House Subcommittee on Agriculture Appropriations, before the annual convention of the Young Republican National Federation at Salt Lake City, Utah, June 24, 1949)

Here in the Promised Valley of Utah, hallowed by the history of a valiant band of pioneers to whom farming was more a matter of life and death than one of national political policy, it should be a far more simple task to sort out our ideas regarding modern agriculture than it seems to be back in the fuss and furore of the Nation's Capital. It is good for all of us, and Young Republicans in particular, to meet in such a place as this for our deliberations on matters of this kind.

It should certainly not be sensational for me to say that the Republican Party's responsibility to the farmer—or the responsibility of any political party or administration, for that matter—is not in the slightest degree different from our responsibility to any other group of Americans caught in the bight between the tax spenders and the tax collectors. I know of a political party which tries to promise different things to different groups of people—and right now is in a terrible stew trying to find a way of carrying out the promises made to one without welshing on the promises made to another.

The first responsibility which any group owes to those whom it would lead is simple, straightforward honesty—the kind of honesty displayed by Brigham Young when he told his fellow-pilgrims their promised valley was to be no Garden of Eden laden with self-producing fruits but a land where honest work and efficient toil would reward them with decent homes, abundancy, and satisfaction in living. You see here about you the results of that work—and this valley became what it is without any handouts from the great white father in Washington.

We have a duty to our farmers to tell them exactly what policies we feel should be followed in our National, State, and local governments and the manner in which those policies will affect them. Then we should be honest enough to do what we have said we would. Remember, back in 1945, when the Democrats told farmers to sell their wheat at one price on the promise it would go no higher? Then they turned around and offered a 30-cent bonus to the hoarders who held off until the next January. That was plain dishonesty and it's just one of the many examples I could cite where farmers have been told one thing and given another.

The second thing we owe to our farmers—as we owe it to everyone else in these United States—is consistency of policy. During the past several years there has been no such thing in the Federal Government except, of course, the tax bill and tax spending. There are so many planners running so many directions at once, back in the hodgepodge on the Potomac, that their glorious schemes frequently fall over one another. Take just one commodity, for instance, hogs. Back in the early postwar years, when the Democrats were worrying more about the votes of labor than of farmers, the price controllers were screaming for a roll-back of meat and farm-commodity prices. But those prices were stimulating production of hogs until, in 1947, the scarcity was met and our producers were ready to export lard to European countries desperately in need of fats. The administration said "No," and in 1948 even opened up the United States to unrestricted imports of fats and oils. This glutted the domestic market and had its effect on all livestock prices. Because lard demands went down—and with it the price—packers had to recover their losses by increasing the price of meat to the consumer and penalizing the farmer for raising the heavy hogs the Government had said it wanted. Able economists consider this series of events to have been the prime mover in the commodity-price drop which quickly extended to all other products.

Another example of inconsistency which Republicans should avoid is found in the switch of the administration's over-all farm policy since the elections of last November. For 3 months last fall, Democrat farm politicians roved across the country preaching an economy of abundance. Apparently believing that the philosophies of Henry Wallace and his crowd really had been thrown out of Democrat thinking, a lot of farmers fell for that line. Now what do we have in this Eighty-first Congress but a resurrection of the most rigid possible restrictions on production, including acreage controls, unit production quotas, and a so-called farm program which would make the income of every farmer wholly dependent upon the vagaries of congressional appropriations and taxes, collected, and taxes expended. There is not one provision in the Democrat administration's new farm program directed at the basic problem of making an abundance of food available to the average city consumer at a cost which the consumer can afford to pay. Yet, under the new scheme, he would pay more than that cost, because his taxes would have to support both the farmer's income payments and the administrative set-up required to supervise the whole program.

Fortunately our farm leaders are realists and students of both political and economic history. The executive committee of the National Council of Farmer Cooperatives has objectively observed among other things:

1. That the new farm program proposal would unnecessarily shift to government decisions, actions, and functions the farmer could best perform for himself;

2. That it would increase the already large staff of Federal employees;

3. That no stable estimate of the ultimate costs has been made; and

4. That the proposed commodity priority list is discriminatory.

Theirs is but one observation that should hearten our free American farmer. The Farm Bureau and the National Grange have made sound contributions also.

Still another inconsistency in present Democrat policy is found in that party's double-crossing of American producers by flooding our markets with cheap foreign products. In a number of instances this year, notably with regard to perishable and preserved fruits and vegetables, fish, and similar products, the Democrats have reduced tariffs so low that American farmers and workers have been put out of work by competition from countries having lower labor standards. The Republican Party in the Eightieth Congress

tried to avoid such actions by institution of the "peril point" in international trade agreements. This provided that tariffs would not be reduced below the point at which foreign competition could undersell farm and other products produced by American workers paid American high wages.

The Republicans have been consistent in the past and must be consistent in the future in holding to farm policies which will not be made unworkable by adoption of conflicting policies regarding tariffs, labor, resource development, banking, or taxation.

The third responsibility of the Republican Party to the farmer is an appreciation of the role that agriculture plays in our overall American economy and the importance of a sound farm economy in maintaining our high standard of living. We like to boast about Americans being the best fed, best clothed people in the world. Much of that happy condition is due to the tremendous natural blessings with which Almighty God endowed this land of ours. But a very large part of it is due to the industry, ingenuity, and resourcefulness of our farm people who have met a million and one problems and solved them. All the vaunted wealth and complained-of taxes owned and paid by the cliff dwellers of New York City and lesser metropolitan areas would be worthless if our farmers, miners, and foresters, all of whom work with the land, did not create and send to the cities the foods, fibers, and minerals which made those things possible.

We must, therefore, see to it that our party's policies in all fields of Federal, State, and local activity are properly balanced by an appreciation of the absolute necessity of a sound farm economy as the basis of our prosperity.

In order to carry out that responsibility, we must maintain policies in all fields of endeavor which will make it worth while for the farmer to produce the things America needs to eat and wear. This means, basically, that we should stop talking about phony price systems based on high—and higher taxes, controls—and more controls, and devote our efforts toward reducing the excessive and mounting costs of processing and transportation and marketing which today are chiefly responsible for the high prices the consumer must pay for food in the market.

With the highest average wage earned by any people in the world, with the greatest per capita production of foods and fibers of any country in the world, it simply does not make sense to claim there are many Americans who cannot afford to pay the farmer—directly—a fair price for their daily needs. We do have some crops which have been overexpanded because of Government demands for foreign relief and which must be adjusted to a realistic peacetime level. The end of premium payments and obvious soil depletion will automatically care for much of this. For the rest, we should begin to explore immediately the realm of new uses for some of these products—a task in which private processors, marketers and farmer organizations should be taking the lead with such assistance as is necessary from the Government and educational institutions. Then we have another job to do, which most Americans have almost forgotten how to do in the years of wartime shortages. We've got to learn again how to sell what we produce. That is true not only of the farmer but of almost every kind of producer of goods—automobiles, furniture, clothing and everything else.

We've got to learn how to sell again, unless we decide we'd rather just have the Government take over all distribution of any product as soon as buyer resistance sets in.

If the Federal Government would only set and adhere to some policies toward business which would encourage continued activity and employment in industry, which would give reasonable fair protection to domestic products against foreign competition, and which would reduce the cost of government so that more tax money could remain in the consumers' pocket, we would have very little worry about whether the average city-dwelling consumer-taxpayer could afford to pay a fair price for his food and clothing.

In contrast to the program of controlled scarcity, higher taxes, and more controls, offered by the Democrat administration to the Eighty-first Congress, the Republican Party could, with consistency of principle, adopt an eight-point program for disposition of apparent surpluses of farm production:

1. Conversion of grains and other starches into alcohol for production of high-grade motor fuels.

2. Development of chemurgical industries, located in rural areas, to be owned and controlled largely by farmers themselves—we've made real starts on both of these; let's continue the good work.

3. Government stock-piling of storable foods, feeds, and fibers for national security and as a reserve to stabilize livestock production.

4. Adherence to the "peril point" in holding tariffs at domestic parity price levels—let's tell the farmers of America what the since-rescinded work of the Eightieth Congress really meant in terms of their protection.

5. Exports of surplus American farm products under Government subsidy to nations otherwise unable to finance such purchases.

6. Improvement of processing, storage, and distribution of farm products, to reduce the gap between the price the farmer receives and the price consumers pay for such goods. In the face of mounting transportation and handling costs, this is the most important single problem in agriculture today, and it is receiving scant attention from the Federal Government today. Facilities and personnel to achieve these results already exist in the Department of Agriculture; yet, the so-called Brannan plan ignores them.

7. Authorize special sales campaigns with assistance of Department of Agriculture when any perishable commodity becomes in temporary excess of demand. This could include special consideration in such diversion methods as the school-lunch program, local relief needs, and foreign relief. This has been successfully done in the past.

8. During the period of transition away from a regimented farm economy, under a program of full utilization of farm commodities, continue provisions of existing farm-aid laws.

Above all else, it should be the attitude and the policy of the Republican Party that any and all forms of Federal farm assistance, whether as price supports, subsidies, income payments, or whatever you may care to call them, shall be considered as available crutches, to be used when, as and if necessary, not as permanent strait-jackets to encumber and ultimately control our entire farm economy.

A Republican farm program must be one under which it will be profitable for farmers to produce and under which consumers will be able and willing to pay a fair price for farm products. There must be no ceiling on opportunity for farmers and no stifling of their ambition or enthusiasm for abundance.

The welfare of the American farmer is an economic—not a political problem. His security still depends upon shortening the distance between himself and the consumer. His dignity still lies in service to Americans through as free an American market as possible.

It is time that we looked twice at the proposals of the tax spenders—since there is a clear waste in merely respreading that which is collected in taxes. It is time we spoke out against these tax spending experiments.

It is our Republican responsibility to the American farmer, the American people—in truth it is also our responsibility to thousands of able men of ability and achievement in the Department of Agriculture itself—whose talents are currently ignored by the administration. It is our Republican responsibility to make use of all the time-tested means our American experience has developed. Now is the time—and this is the place.

The Freedom of the Past in America

EXTENSION OF REMARKS
OF
HON. HUGH D. SCOTT, JR.
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1949

Mr. HUGH D. SCOTT, JR. Mr. Speaker, all of us are aware of the valuable contributions made by Congresswoman FRANCES P. BOLTON, of Ohio, to discussions and debate on the important questions which come before us in Congress. I have followed her activities with unusual interest and upon many occasions sought her advice and help. When Mrs. BOLTON speaks all of us lend an attentive ear and are rewarded by clear, sound, and forthright presentation on the subject under consideration. I would like at this point to call attention to a thoughtful and interesting speech by our able colleague.

I was attracted by a three-column spread in the Sunday Cleveland Plain Dealer, reporting a speech delivered by Mrs. BOLTON before the national convention of Beta Sigma Phi, in Cleveland, Ohio, on Saturday last. Of especial interest was her statement:

> Ninety-one million citizens have no adult experience whatever with Republican administration of national affairs. * * * Then, the Federal Government, living within its annual income, balanced the budget. * * * There were no pay-roll tax reductions made by employers of labor. * * * The workers collected all they earned * * * and saved or spent it—as they chose.

It was truly a remarkable address. It highlighted the developments of our country during the last 100 years. It traced in detail the contributions which women have made to our economic and cultural, our social and political life. It exhibited and pictorialized the change that has slowly engulfed the administration of our national affairs, and particularly during the two last decades.

Mrs. BOLTON'S address made me realize that as Americans we have never before had such compelling reasons to analyze the operation of the Federal Government in order to insure and protect our private lives, privileges and property against further encroachments. She pointed up the proposition that as never before—the American people will have to deal with economic conflicts on a scale hitherto unknown.

Cautioning her audience that the role of Government activities should be determined by the people themselves rather than by their public officials, she indicated that the value of government should lie not in what the party in power does or

fails in doing—to satisfy some minority group or interest—but rather that the true value of government rests upon a rationalized program predicated upon the best interests of the Nation as a whole.

That all Members of this Congress may avail themselves of the knowledge and sagacity which FRANCES BOLTON addressed to this question, I ask unanimous consent to insert her speech in the RECORD, and by permission granted, I include it herewith:

Madame President, honored guests, members of the international executive council, members of the Cleveland council, and of the Ohio membership gathered here, you have done me a very great honor in asking me to join you this evening and I have come on from Washington with a very keen sense of the privilege you have given.

As the Congress was not in session yesterday I was able to take the afternoon plane rather than one of the later trains. It was a smooth flight—though there was a mist over the earth. Delightfully relaxed I let myself go into that delicious region that is neither sleep nor waking, wondering what I might say to you that you would want to hear.

Suddenly an idea intruded itself. How wonderful if you, who constitute such a splendid cross-cut of younger womanhood, would make an address to me. Then I would really know what is in your minds, and having learned, I could expend my energies more effectively to achieve for you and yours something nearer to your hearts' desire.

I realize, of course, that I represent only this great cosmopolitan Twenty-second District, but with only nine women in the Congress, each of us feels a responsibility toward all the women of America—and we need to know what they are thinking, feeling, and dreaming.

Suddenly another idea took its place—a delightfully gay one, I thought. Perhaps it would be more interesting for everyone if I made no formal talk at all, but just presented myself here before you and said: Ladies—your Congresswoman. What is there you would like to know about the much that has come under my observation in the 9 years since I was first given the great honor of going to Washington as the Representative of this great district?"

Just about then we bumped into Pittsburgh, and both ideas were left behind somewhere on that hilltop—and before I knew what was happening my blessed Cleveland was opening its arms to me.

I find myself in a delightfully gay mood, friends—more happy than I can tell, to run away from what is the most wearing session I have yet experienced, into this utterly delightful atmosphere. It is so good to sit down with you, to break bread with all of you—some of you the daughters of my girlhood friends. When your gray hairs spell out as many years as mine do, you will know just how delightful, how heart-warming, such an experience is.

Several letters I had from Miss Vormelker and Miss Spengler made me feel as though it would be quite in keeping with your mood if I came in blue jeans, with a bucket, pick, shovel, and sieve. Though perhaps my great grandmother's brown cotton-market dress would have been more seemly.

What days those were, friends—those and the days of our early Ohio towns. How much we women of today owe to those pioneer women whose courage never seemed to falter no matter what their privations, no matter what their trials.

The men were wonderful, of course, hewing their way westward from the coast, trekking out across the plains and over the mountains. But what courage it took just to go along; what courage and what love. Yes, they were empire builders, those old boys, but what of the women who left the newly achieved comfort and safety of the rocky New England coasts in ox carts and covered wagons, on horseback and afoot, adventuring with their men—out across the Alleghenies, the Ohio and Mississippi Valleys—out across the plains toward the land of the setting sun.

I'm glad I have some of their blood in my veins.

What a miracle this is—this America. Not in all the 5,000 years of recorded history has man built so great a Nation in so short a time. Why, it isn't 200 years yet since we were fighting the Indians.

It would be fascinatingly interesting, but impossible in one evening, to recapture even in part the changes that have taken place in the last 100 years. Can you imagine wolves chasing after your sleigh right on Euclid Avenue—where Trinity Cathedral stands today?

Alas, most of you are too young to have seen the Sunday cutter races under the arch of great elms between Perry Street (Twenty-first) and Case Avenue (Forty-sixth) on Euclid Avenue.

No, we can't recapture the past or evaluate the changes—even the changes of the last two decades. Everything moves so terribly fast these days. But believe it or not, it was less than 15 years ago that a Government order forbade the purchase or the construction of any military planes with a flying range of more than 300 miles. It was presumed there would be no need in time of war for a plane to travel more than that distance from its carrier or its land-based terminal.

Just 300 miles—the distance from Cleveland to Cincinnati. And today our planes make nonstop flights around the world. Today the brawn and brain of our own Cleveland people make possible a speed of something a little more or less than 1,000 miles an hour. And thousands of women work in those factories.

What fantastic changes there have been since that Sunday afternoon at Seneca Falls in 1848 when a group of women were unable to unlock the little church where they were to hold the first meeting to discuss the rights of women and a gallant husband climbed through a transom and opened wide the doors.

I would like to spend time on some of the achievements of American women in the 100 years that have passed since then—but time does not permit.

Suffice it to say that none of us are unmindful of the unremitting toil women have put in to rectify inequalities, to balance inequities and to make right the injustices that seem to have been the lot of women even in the Western World. Surely woman has come of age in America today. She has taken her place in every form of gainful employment, and stands in the front ranks of the professions—as doctors, lawyers, scientists, journalists, businesswomen. In such professions as nursing, teaching, home economics and merchandising she has truly pioneered the way.

That 100 years is over, another has begun, one in which women must assume a far more responsible role, moving out into the creative work that awaits their doing—shoulder to shoulder with men.

These are momentous days we are living, friends—days when I sometimes feel I have forgotten how to laugh—days when the thought of the almost terrible privilege this great Twenty-second District has given me is never out of my mind.

There is still so much that needs doing, so infinitely much that must be done. What of our wee ones—and our children—our youth? What of the men and women in our factories and mines and fields? What of our aged, our disabled, our indigent; what of all of these?

There is so much that must be done in education, health, medication, nursing, old age.

Then turn to the terrible problem of Federal taxes, Government spending, Government regulations, Government regimentation.

We are squarely up against the question of how to manage the public debt, how to reduce the amount of money which each day is taken out of the earnings of our people for the support of the Gargantua of governments which has been built up.

I know, as you do, that taxes are paid in the sweat and toil of all who labor—in the mines, mills, and factories, on the farms, in the countinghouses, and the marts of trade.

But even these problems shrink when one thinks of the horrors of the two World Wars through which many of us have lived. Surely peace is all that matters. Yet how to build peace? With what material and what tools? I ask you in deep earnestness, may not the peace and security of the world, yes, the very future of mankind on earth, rest upon the ability of this, our America, to remain solvent?

What of the human problems we have not yet solved, such as labor and management, unemployment, and housing?

What of our relations with other nations, what of our foreign trade, and the reciprocal trade agreements? What of the Economic Cooperation Administration, the Atlantic Pact, the military-assistance agreement?

These are the problems continually before me—these and more are my constant, deep concern as the late hours of the evening burn into the early hours of morning as I read and study and ask for guidance, that I may not fail those who have sent me, one of nine women, to the Congress of these glorious, eager, valiant United States.

Yes, it is a hundred years since that eventful meeting at Seneca Falls, a hundred years since that day in 1849 when a workingman out in California—out beyond the wilderness—rode into Sutters Fort with a handful of shiny dust particles—and all the country went wild with the news of gold.

One hundred years, but what stupendous changes have come to pass in that short span—a century which has witnessed the growth of our simple economy into a vast and powerful nation and the coming into being of the American way of life.

As we can't go into the details of the swift process of our growth as a nation, and as fundamental principles have more than usual importance in these days, I want to take a few minutes on some of these fundamentals and relate them a little to the problems that we face today.

Go back with me for a glance at our amazing founding fathers who, after much mental pulling and tugging among themselves, finally agreed on the principle that a people to remain free must be free from the tyranny of an overpowering central authority. To this end our Constitution was written to provide that the Central Government should have only such powers as were specifically granted to it by "We, the people."

Moreover, the Constitutional Convention, by working out the principle of dividing the very power of power, gave us the protection of freedom on which our country was built. That principle recognized that if the same man or men make the laws, execute them, and interpret them, despotism results. So they gave us a three-in-one formula: the legislative, the executive, and the judicial branches of government, our well-known system of checks and balances, and clearly set it forth.

Now let us think for a minute of the two seemingly conflicting philosophies,

theories, or doctrines adhered to by the various founding fathers, which brought into being the two great political parties of our country.

I say "seemingly conflicting" because I believe that they do not really conflict at all but merely act upon each other as two opposing teams in a tug of war. They are good for each other. They allow for a flexing of our mental muscles.

The first of these doctrines was held by the Federalists and Alexander Hamilton, the other was advocated by Thomas Jefferson and his followers.

The Hamiltonian theory held that: By and large the great mass of people cannot be trusted to govern themselves benevolently; that in the absence of a strong, enlightened leadership, a pure democracy or the so-called democratic spirit, gets out of hand and degenerates into mob rule.

It was held that because our country had seemingly unlimited space and resources within which to grow and expand, that the States must more and more prepare themselves, through a strong but not dominating central power, to become a united group of sovereign entities, speaking (to a skeptical, doubting world) as a strong union of free States.

It was through the wisdom and dogged determination of Alexander Hamilton, you will remember, that our national banking system came into being.

Despite the fact that this doctrine spoke out in favor of a strong, enlightened central authority, it was a doctrine which held that "That country is best governed, which is least governed," a doctrine that allowed for unlimited activity on the part of the individual to push forward in any chosen venture as hard and as fast as he was capable of doing—to the end of satisfying his thirst or his passion for individual expression in invention, time-saving devices, industry, the arts, and the sciences—yes, even to his own destruction, sometimes. (How that untempered human zeal is finally checked by the people themselves and by laws, makes another story.)

This was the doctrine which invoked the principle of the delegation of power, wherein the community selected one out of its number, sent him to the national legislature, as they had sent their elected representatives to the local and State governments, there to exercise his God-given will and conscience in making law for the country.

This was the Republican form of government, but we see that in truth we have a democracy within a Republic; it is the will of the majority expressing its preference for individual delegates. And what must those delegates to the Central Government do: Compromise with one another in the making of laws, because collectively the delegates represent all the minority groups and all the special-interest groups of all the people throughout the land.

The second and seemingly opposing doctrine was advanced by the beloved Thomas Jefferson—a doctrine known as Jeffersonian democracy—often referred to today as "states-rightism."

Here was the great genius behind much of the wording of the Constitution and the Bill of Rights, speaking out loudly for the reservation of power from the central authority, speaking out in defense of the majority within a community, which constituted the individuality or the character of that community or State.

From the pen of Thomas Jefferson came these dynamic words: "The sum total of the common sense of the common people is the greatest force on earth."

His was the philosophy that demanded protection for the great vocal majority of the people—with special warning against a powerful minority that might exert itself through the Central Government • • • it was a doctrine of yielding to the will of the majority with little or no concern for the minority group, even though the sum total of all the minorities might well constitute a great plurality of the whole.

Here, seemingly, in the name of protecting the majority within the individual sovereign States, was the great deterrent to expansion of the central power.

Can we not see that these opposing philosophies are indeed check mates one to the other—that instead of regarding them as irreconcilable conflict in our minds, they should be looked upon as necessary correctives to the unbridled will of man.

Does not our history show that both of these doctrines can be used rightly to our advantage, or wrongly to our disadvantage? We might sum up by saying that adherence to the first doctrine could be called the great motiviating force to invention and science and vast property development, while the other is a protection to the human rights and individual freedoms.

Can we say that either one should take priority over the other? Can we grow without either? First and foremost we are fellow humans struggling with existence itself; next we are Americans, heirs to the most sacred Constitution ever penned by human hand; next we are partisans, advocates of this doctrine or that, not competing with each other, but pulling against each other so as to steer the middle course.

It was under the principles of rugged individualism as enunciated by Alexander Hamilton that those who built this Nation pushed back its horizons, dragged in its foothills and the oceans, built roads, highways, waterways from the Atlantic to the Pacific, and from Canada to the Gulf. They knew that this continent comprehended all the goodness of life—and out of the fullness thereof gave birth to what we now call the American way of life in these United States.

I am afraid, friends, that with considerable unwisdom we have departed both politically and economically from the form of government laid down by those who founded this Nation.

The great current phase of Government spending, of bureaucracy, of regulations, licenses, and controls, of the enormity of taxation which so heavily burdens our people today—all seem to have emerged during the years following the world-wide economic depression in the late 20's.

It was in the year 1933 that the leadership abandoned the long historically established principle of making our Federal Government live within its income.

It is a long time since members of a majority party in Congress have heard themselves bluntly admonished by the Speaker of the House as they were in the days of Republican Speaker Joe Cannon, who in candor frankly said:

"If you fellows want these appropriations—this pork barrel, this fat frying—and you want that battleship to defend the country at the same time—then you will have to give up the log-rolling and these appropriations for post offices.

"You cannot have both! This Nation has got to live within its budget!"

A Republican pay-as-you-go method of conducting our Federal economy is actually something which 62.3 percent—or more than 91,000,000 of our taxpaying citizens know nothing about. Their adult experience began after the Republicans were put out of office, and the tax-tax, spend-spend deficit financing methods of the New Deal took over. Let me say right here that in the matter of adult experience, I will yield to no one in my respect for the power, the strength, the will, and the ambition of youth. But I am one who believes that if we are to keep our feet on the ground as individuals and as a Nation we need to temper enthusiasm and inexperience with the judgment that comes from years of experience.

Think with me of the profound significance of this one fact:

Today in the Senate of the United States of America, there is but one Republican Member of that great body who has any first-hand knowledge or experience whatsoever under a "stay within the budget" Republican administration. That lone Republican, Senator VANDENBERG, is but one of the 8 United States Senators out of a total of 96 whose service antedated the coming into power of the Democratic Party and its New Deal orgy of deficit spending.

As for the House of Representatives today, there are but 35 Representatives who have had any experience in the economy of Republican governmental administration—all the remaining 400 having come to Congress at some time during the administration of Franklin D. Roosevelt or Harry S. Truman.

Many of our new Members of the House were mere children when the Honorable Franklin D. Roosevelt succeeded to the Presidency and they know no other, at first-hand, as the Chief Executive of the Nation.

Out of the total of 435 members, there are today 174 with but 2½ years of congressional legislative experience, and 95 of these have but 5 months' experience to their credit.

It is always well to remember that throughout the early thirties the Congress was concerning itself almost entirely with the enactment of emergency measures—PWA's, CWA's, WPA's, REA, FERA, and a veritable multitude of alphabetical administrations that were concerned with abating the effects of the so-called depression days.

The congressional acts of that day which were then written into public laws were all supposedly temporary measures, but I have noted for years past that in the main the Congress has concerned itself not with the restoration of those principles and those policies that made this country great, but with the extension and the perpetuation of the administrations and the services that were allegedly set up merely to combat the depression.

It has been conservatively estimated, and by competent authorities, that 1 out of every 12 persons in the country today in some manner or other derives all or a large part of his income from the Federal Government.

(NOTE.—The total sum of people receiving Government aid, all or in part, is 12,000,000. This includes besides the 2,500,000 people on the Federal pay roll, at home and abroad, those in the armed services, the millions of farmers who receive soil-conservation-payment checks and subsidy payments, veterans, civil-service pensioners, those on the rolls of Social Security, and the old-age pensioners in the various States.)

Just look at what this means to the American farmer who is charged with the responsibility of raising the fat, the food, and the fiber to feed and clothe our 143,000,000 people. There are in round numbers 6,000,000 farmers in the country. So by some simple arithmetic it seems to mean that every farmer in America is being called upon to furnish food for two of these pay rollers.

Let me put it this way. If there are 25 people living in your block, or vicinity, or apartment house, those 25 people are supporting two people who are either on the Federal pay roll or are in some degree deriving their income from the Federal Government.

Now I can understand that in time of economic depression—or when there is a great overproduction of goods—that it is wise to

take people out of the production lines and put them into service work—so as not to maintain too high a production.

(NOTE.—Anything nonproductive, such as beauty shops or dry-cleaning establishments or Government projects.)

By the same token, however, isn't it equally true that in times of underproduction such as we have been experiencing in these past years, it would be sanity to take people out of Government service and off the Federal pay rolls? By so doing we could lower taxes, increase production, and thereby reduce the cost of living to our people.

But instead of lowering governmental costs and the cost of living to our people, just the opposite is even now taking place. The senior Senator from the great Commonwealth of Virginia, the Honorable HARRY F. BYRD, chairman of the Joint Committee on the Reduction of Nonessential Federal Expenditures, within the last 72 hours advised me that from 135 to 140 persons per day are additionally being saddled on the back of our taxpayers.

No government ever set up in this world has any source of income whatever except the income which is collected in taxes from its people.

You may not be conscious of the fact that during the past year more than 30 cents of every dollar that was earned by all of you within the sound of my voice was either directly or indirectly collected and spent by the Federal, State, and local governments.

Thirty cents out of every dollar is far too heavy a tax for the upkeep of any government—certainly of a government under which a people can be free—and that is what we pay.

Although I have heard it spoken in the cloakrooms of the House that we of this generation have seen the last reduction made in Federal taxes in our lifetime—I am happy to be able to say to you that this Congress, at long last, is also becoming more economy-minded. This would suggest the possibility that once again we may see this Nation living within its income. Let us all work together in harmony to speed that day.

To this end let us hope the House and Senate leadership is really frightened by the unsoundness of our economic situation and really means to cut down on the demands of every bureau, every department of this great octopus of the present Federal picture. Let us hope so, friends, because from my vantage point on Capitol Hill the situation looks pretty problematical. So let us hope this is true.

We are such a great nation—we have such a wonderful country—our responsibilities are so much greater than we are prepared to meet. But, as General Washington said to his troops at Valley Forge in one of the darkest moments of the war for freedom:

"We must not despair, the game is yet in our own hands, to play it well is all we have to do. And I trust the experience of error will enable us to act better in the future. A cloud may yet pass over us, individuals may be ruined, and the country at large, or particular States undergo temporary distress; but certain I am, that it is in our power to bring these matters to a happy conclusion." (George Washington in 1781.)

We stand upon the threshold of a new day—a day of atom fission, of pioneering into the realms of the eternal forces of the universe—a day when a new age is being born. Undreamed of possibilities lie ahead on the uncharted paths of atomic energy. What marvels in living and working and playing spread themselves before us. Always it is upon women that the responsibility lies to find direction.

Members of Beta Sigma Phi: It is for us as women at this truly solemn moment in man's life upon the earth to accept the challenge of the new age with a profound humility asking Him who maketh all things new to give us the courage and the wisdom and the selflessness of true leadership that we may fulfill our destiny as women in a destined land.

Statements of Guido Jacobacci and Perguido Marzoli Before the Rotary Club of Little Rock, Ark.

EXTENSION OF REMARKS
OF
HON. J. WILLIAM FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES

Monday, June 27 (legislative day of Thursday, June 2), 1949

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD two short statements by two Italian boys, Mr. Guido Jacobacci and Mr. Perguido Marzoli—two boys who were brought to this country by the Rotary Club of Little Rock, Ark., earlier this year. All their expenses were paid by the Rotary Club. Last year the Rotary Club of Little Rock in the same way brought two French boys to this country. I think these statements are the best evidence I know of the validity of the exchange-of-students program and are very persuasive regarding an extension of the cultural exchange program of the Department of State. I congratulate the Rotary Club of Little Rock for their contribution to better international relations. I hope the Senate will do as well in supporting the exchange-of-students program.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

STATEMENT OF GUIDO JACOBACCI

President Jones, Rotarians, and guests; at the end of my stay in Little Rock as your visitor, I can tell you that your club has sponsored a wonderful treat, such as goes far beyond the range of imaginative power of any European mind. Hospitality has become a serious problem in Europe. We have not yet forgotten the time when it was a hard problem to meet the wants of one's own self, and outsiders were an undesirable burden on the distressed mind and scarce supplies.

I have started here a new life again. You have transferred me through the skies to a world which was unknown to me. I longed to visit the United States and my dream suddenly became true. I still consider it a wonder, and it reminds me of Peter Pan's tale.

During and after the war, there has been much talking in Italy about America and Americans, but chiefly about the big modern cities. Italian students have been admitted to courses at leading American universities, and many tours have been organized for professional men or businessmen to visit works, factories, associations in the main cities of the northern States, but it has been our luck to be received as friends for 2 months in one of the States which still retains the charms of the early America, while it acquired the highest degree of culture and modern development of industries and agriculture work, and we are deeply thankful for this to the Rotarians of Little Rock.

I have been trying to deserve the opportunity you have afforded me by intensely watching your methods of thought and life in order that I may fulfill the purpose for which I have come here, which is to understand your spiritual, social and economic structure, penetrate your soul, and give a true report of this experience to my countrypeople, encouraging them to cooperate under the ideals of freedom and justice.

You could not have made my stay among you more pleasant and, I venture to say, profitable, for I have been able to watch you at home, at work, at school, at social meetings, in and out of the city in private and in public life, in church. You have shown me lavishly all aspects of American life and country, and I have been delighted by its up-to-date technique combined with the genuity of American feelings and habits in this charming city of Little Rock.

Conditions are different in Europe, and I am afraid I shall have to use magnifying glasses for some time when I get back until I get accustomed again to the smaller size of everything. Europe is not only small, it is too old, too, and old age is, as everyone knows, accompanied by frailness in both limbs and mind. Now, I think my great problem is, how shall I apply any wisdom I may have gained here to a patient suffering from this ailment? Obviously, the younger European generation must be helped to recover the confidence and faith it has lost as a state of things arose, in which none cared any longer what would become in the future of himself and his belongings or, if he did care, he could not help feeling that everything was very unreal and unreliable. Coming from such a scared world, it was marvelous to watch your self-confidence and the unreserved freshness in your feelings.

I am going back to Italy with the settled persuasion that democracy does not exist only on the paper, but also in the heart and in the mind of the American people. We talked to workers, housewives, and businessmen, poor and rich people, and everybody seemed to be aware of what they get from being part of this American Nation. I think that here stands the difference with the so-called democracy which flourished in Europe: It existed only in their written constitution, not in their people.

When I go back to my old world of prejudice and pride, I will never forget your straightforwardness and open-heartedness and the memory of them may help me to win my country people and myself back to a world more real and conscious of the need for reciprocal understanding and cooperation. Old European countries have behind them traditions that are centuries old. If these traditions have something infinitely fascinating in them, they have become in time, over a long series of generations, very heavy and troublesome to drag along. This has resulted in weariness in part of the Europeans who look back downheartedly to glories of the past and are incapable to face new events and defeat dangers—and in rebellion in others, who believe in an utopian freedom and see their way to it through destruction. So, Europe as a whole has lost self-balance and hope and above all, it is torn by opposite trends, which seriously endanger our effort toward reconstruction.

Americans afford a splendid example of self-balance and reasonable cooperation, and I have enjoyed this much more than I can say and you can imagine. It has done me a lot of good, it has opened new prospects and it may be very helpful to me and my own circle in the future. I feel now that I have something to say and that I can give a small contribution to a better world understanding and to the reconstruction of my own country.

We very much enjoyed what has been offered to us with a generosity and cordiality that we shall never forget, and highly appre-

ciated the principles that inspire your social life, your enterprise, and should it be our destiny to serve our country in any public task in our care, the thought of Little Rock and its people will assist us.

We are returning to a country which is recovering from a terrible adventure. We are perhaps too young now to do a profitable work, but we assure you that we will always do our best to foster principles of true democracy and cooperation as we learned it here, and Little Rock will always be in our mind and in our heart.

Thank you.

STATEMENT OF PERGUIDO MARZOLI

President Jones, Rotarians, and guests, it is with great sorrow that I must tell you good-by. Tonight I'm leaving Little Rock for Washington and New York, and from there I will fly back to Italy on the 21st.

I'm going back rich of new experiences and with the feeling of knowing a little bit about your country. What I knew about it before was very poor and maybe wrong; in Italy we see a lot of American moving pictures and so it was not my fault if I had the idea that the United States of America was a big Hollywood. But soon after the war, I had the occasion of visiting some American GI's and I had the joy of inviting them several times to my house for parties and week ends. Since then, through their speeches, I began to feel that America was a great country and my curiosity about it increased more and more. Seeing America, knowing its people and understanding you became the principal desire of my life.

So, I happened to receive, one beautiful morning, a nice letter from Little Rock's Rotary Club saying that I had been asked for a visit of 2 months to America. Here I am, after 45 days of my staying in your country, wishing you good-by, but with no will of going back. The reason is that I not only knew your country, but loved it. There's nothing that I disliked—the impression that I'm bringing back with me is of a young people, conscious of his duties, that's working hard for his better future; of a people who know what a private initiative means for the good of himself and of the others.

I was amazed by the lot of opportunities that are given the individual. Let's take for example a man who has been born a workman; he has not to be a workman all his life, but he can become a banker, an owner of a factory or something else, if he has the capacity. And that is one of the first things that impressed me.

The Communist propaganda says in Italy that the Americans are a people of slaves of a minority of capitalists. I tell you now, as well as I shall tell in Italy, that it's not true because, in a few words, everybody has a home for himself, his own garden, his car, and money enough to eat enough. And I'm sure that not only Italian Communists, but also those people who live at the Kremlin would be glad to accept this kind of capitalism, as they call it and which they fight with such an ignorance.

I'm happy that I shall be able to tell all that in Italy too, as an aunt of mine wrote me she has been elected president of the Royalist Party, that's playing now an important part in the anti-Communist propaganda. And my aunt told me that she needs me to tell in public speeches what I've seen in the United States of America—and that will be what I'm telling you now.

Many other things have impressed me: The greatness of your factories, the new veterans' hospital that you're building, your bridges, your schools, and your colleges at Fayetteville. Another thing that I will try to teach the Italians is the cordiality between pupils and teachers. But, I guess you all are curious to know what I like most of all in America and I'll simply answer to you: The Americans. The friendship, the kindness, the humanity, and the Christian feelings that you not only showed toward us but that you also show day by day to one another, are things I shall never forget.

The same way, I shall never forget Little Rock, your pleasant town, where we learned so many things that we couldn't learn by the books. We saw you here in all the occasions of your life, and I can tell you that Hollywood means to me now only a little spot in the United States of America. My thoughts of Little Rock will always be strictly close to thoughts of hospitality and of gentle life.

I want you to know also that we never felt homesick because we never had the occasion.

Well, I must come to an end now; but before, I want to thank you all for the wonderful opportunity that you gave us. Heartily, thank you. Don't forget us and—arrivederci, that in Italian means "see you again."

Address by A. F. Whitney Before the Midwest Democratic Conference of States

---

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, June 27 (legislative day of Thursday, June 2), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Mr. A. F. Whitney, president of the Brotherhood of Railroad Trainmen, before the Midwest Democratic Conference of States, at Des Moines, Iowa, June 13–14, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am happy to return to my native State, and join with you on this auspicious occasion. Centuries of wildness and four glacial epochs prepared the richness of the soil of Iowa, which was admitted as the first free State of the West in 1846. The first railroad was built across Iowa in 1867—6 years before I was born—and that was of considerable importance.

Sidney A. Foster said: "In all that is good Iowa affords the best."

An inscription by Enoch W. Eastman on the Washington Monument reads, "Iowa, her affections like the rivers of her borders, flow to an inseparable union." And Iowa's beautiful motto is, "Our liberties we prize and our rights we will maintain."

I am therefore proud of the fact that I was born in this great agricultural State, in the city of Cedar Falls, where the Iowa State Teachers' College has educated thousands of her young men and young women.

As a man who has represented railroad workers for more than half a century, I can testify that the economic welfare of farmers and workers is interdependent. Turn to any period in American economic history and you will find that the incomes of both go down and rise together. The incomes of farmers and workers have always lagged behind price increases and, therefore, could not cause them. Yet our political enemies try to make us believe the absurdity that effect precedes cause. The corporations have spent millions to lure the farmers into believing that their cost of living is high because of high industrial wages and to tell workers that their cost of living is high because of high farm prices. That is why the financial angels of the Republican Party, such as the Pew Sun Oil interests, spend huge sums to place in the hands of farmers such publications as the Farm Journal and other propaganda literature.

Therefore, the Wall Street operators have been able to win some elections because they have been successful in keeping farmers and workers apart politically. These nabobs of finance who support the Republican Party are made very uncomfortable by this inspirational meeting in this great agricultural State of Iowa. Since the 1920's, the American farmer has learned to his sorrow that the Wall Street banker-dominated Republican Party is not his friend.

The farmers realize that the banker is the fellow who will loan one of them an umbrella when the sun is shining, demand its return at the first fall of rain, and who did not own the umbrella in the first place.

The farmers of America have never had a fair share of the national income. Even if they received 100 percent parity prices, they still would not receive a fair and proportionate share of the national income. Yet the Republican Eightieth Congress thought 60 percent parity prices were good enough for the farmers and Republican Senator ROBERT A. TAFT, of Ohio, told a Nebraska audience that farm parity prices were too high, and that very hopeful Republican, Harold Stassen, advocates abolishing farm subsidies, while Gov. Thomas E. Dewey offered the farmers nothing but thin "unity."

Newspaper columnist John C. Davis, who had Governor Dewey elected months before November 2, 1948, writing in the Cleveland Plain Dealer of October 21, 1948, declared that the farm program presented by Dewey in St. Paul last October would "cinch him the support of the farmers from the Atlantic north of the Ohio River to the western boundaries of Kansas, Nebraska, and the Dakotas." He then quoted Dewey as presenting the following farm program:

"I am unalterably opposed to any Government policy which tries to run the lives of our farmers or any of the rest of our people. I promise to decentralize control of farm programs from Washington and to return it to the farmers themselves in their own home communities. We will soon see the last of administration policies that try to ram theories down farmer throats."

But Governor Dewey overlooked the fact that those Democratic "theories" lifted farmers from bankruptcy into which they were plunged under the last Republican administration to a fairer share of the national income and a larger restored farmer ownership under the Democratic administrations of the last 16 years.

What a program. Yet it is about as specific as anything the Republican Presidential candidate offered during the 1948 campaign. The Republican leaders learned on November 2, 1948, that American farmers prefer Democratic programs of farm price stability, farm security, soil conservation, rural electrification, guaranty on bank deposits, development of our natural resources to having Republican generalities thrust upon them while the Insurance Trust and Wall Street financiers liquidate farm owners and send millions of family-type farmers back to tenancy.

But all is not well either on the farm or the labor front. There are dangerous trends in our economy. The Republican Eightieth Congress refused to do anything for the farmer or the industrial worker, while passing the Bulwinkle-Reed bill to legalize the railroad monopoly and enacting tax laws to benefit corporations and the wealthy at the expense of the lower-income groups. Corporate profits have become so tremendous and monopoly power so great that the security of our free-enterprise economy is threatened. Farmers are getting a smaller share of the national income today than heretofore: In 1929 they received 76 percent, in

1939, 75 percent; in 1947, 81 percent; and in 1948, 70 percent. Yet, in the face of this dangerous trend, big business and Republican leaders demand greater profits and a larger share of the national income for investors.

The National Association of Manufacturers and their Republican representatives in Congress assured us that if price control was destroyed prices would decline, production would increase, and there would be plenty for all. We have experienced the destructive effects of this philosophy. The $208,000,000,000 personal income of the American people in 1948 bought less goods and services than the $178,000,000,000 received in 1946. Even with recent price declines prices are about 26 percent higher than in June 1946, when price control was ended. Under the reckless rule of big business that manifested itself in the Republican Eightieth Congress, industrialists gave labor $1 increase in wages and took $2 to $3 increases in prices, with the result that the real purchasing power of the wage earner declined. Today unemployment is raising its ugly head. The situation is the same for the farmers. In March of this year farm prices were 15 percent lower than they were at the beginning of last year, while prices paid by the farmers were down but 2 percent from the peak reached last summer. These very obvious trends in our economy are alarming and prove the economic destiny of farmers and workers.

The American people are threatened more seriously today than ever before with two evils that have plagued our entire national economic life—inequitable wealth concentration and monopoly power. The Federal Trade Commission has warned that we are in danger of losing our free-enterprise system unless the monopoly problem of this Nation is promptly solved. The Republican Eightieth Congress did much to strengthen monopolies and weaken the democratic organizations of the people. Farmer and consumer cooperatives and labor unions are the most effective counterforces to monopolies. The Republican Party has shown its hostility to both. The opposition to cooperatives by former Congressman Harold Knutson, of Minnesota, caused his defeat, and he joined approximately 113 other Members of the Eightieth Congress who suffered the wrath of an undiscriminating electorate. He who does not understand that the primary purpose of the Taft-Hartley Act is to weaken labor unions and thereby strengthen monopolies is blind to the serious problem of monopoly in this Nation and ignorant of the wicked provisions of the Taft-Hartley law.

As an indication of the seriousness of the monopoly problem, a mere 2 percent of American corporations employ 60 percent of our industrial workers. The insidious economic disease has reached down to agriculture. One-third of our farms provide us with 8 percent of our agricultural goods. In 1900, the average-sized farm was 146 acres; in 1915, 195 acres, or an increase of 33 percent. Farm tenancy rose from 26 percent in 1880 to 42 percent in 1935. As a result of the wisdom of the Democratic Party and its farm program, farm tenancy dropped to the present level of 32 percent, and farmers are being restored to the ownership of their farms, and that trend should continue.

It is the Democratic Party that has restored the welfare of the family-type farmer. A farmer who praises the Republican Party is most likely a plantation farmer. In 1932, under a Republican administration, though farmers comprised 25 percent of the total population, they received but 7.5 percent of the national income. Under such conditions, bankers and insurance companies became farm owners and the working farmers became tenant slaves. Those conditions should never be permitted to return. In the dark days of 1933, when our Nation was ill-fed, ill-housed, and ill-clothed, and 14,000,000 workers were in the bread lines, city workers suffered with their brothers on the farms.

I am confident the organized workers of America realize that the farmers are their best friends and their best customers. The Brotherhood of Railroad Trainmen has always supported legislative proposals that have advanced the welfare and prosperity of the American farmers. We believe that this great group of patriotic Americans, who bounteously produce food and fiber for our people, and supply food to millions of starving people throughout the world, are deserving of the best of everything.

The farmers understand that prosperity of industrial workers is essential to their prosperity. The workers are the best customers of the farmers because much of their income is spent on the produce of the farms.

For more than 16 years, the Democratic Party has proven that it is the friend of those who toil. Its handicaps have been due to Republican interference and reaction in the National Congress and in the State legislatures.

We have a tremendous job to do in 1950. The renegades must be run out of Congress. We must see to it that the "eat less" Taft program of scarcity does not return to plague the millions of Americans from whose labor the world lives and progresses.

Resources Board Stymied

EXTENSION OF REMARKS
OF
HON. HARRY P. CAIN
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES

Monday, June 27 (legislative day of Thursday, June 2), 1949

Mr. CAIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article bearing the title "Resources Board Stymied," written by Francis P. Douglas, which appeared in the Washington (D. C.) Evening Star of Thursday, June 23, 1949. The article gives rise to an important national question, When and where will there appear the leadership to prepare America adequately for any unforeseen or national emergency?

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RESOURCES BOARD STYMIED—DEPRIVED OF CHAIRMAN FOR 3 MONTHS, SECURITY RESOURCES BOARD'S VITAL PROGRAM IS LAGGING

(By Francis P. Douglas)

The National Security Resources Board has been without a permanent chairman for almost 6 months. In that period, it was learned, this has taken place:

1. The Board's staff has declined from 300 at the first of the year to about 250. In some instances replacement of staff members is being left until a new chairman is appointed.

2. Work has been carried forward, but not at the pace which would be maintained were there a permanent chairman to set deadlines and check accomplishments. Only on major matters, it was said, does Acting Chairman John R. Steelman insist on completion of tasks by a set time.

3. No civilian and industrial mobilization plan has been put together in its entirety. The Board has not passed on any plans for economic warfare nor has it approved a program for standby emergency legislation.

Mr. Steelman, with other duties as Presidential assistant, was named Acting Chairman of the Board by President Truman when Arthur M. Hill, the Board's first Chairman, resigned December 14 to return to private business.

NOMINATION WITHDRAWN

Last February, Mr. Truman nominated Mon C. Wallgren, former Governor of Washington, to be Chairman. The Senate Armed Services Committee voted to table the nomination and it never reached the Senate for a vote. The nomination was withdrawn by Mr. Truman on May 17 and no other nomination has yet been submitted.

In naming Mr. Steelman as Acting Chairman, Mr. Truman issued a statement which indicated the importance of the Board's work.

He said almost half of the Federal budget "is directly devoted to national defense and international programs and the work of nearly all the major units of our Government bears an intimate relation to mobilization problems."

The Board was established under the National Security Act of 1947 and assigned the function of advising the President concerning military, industrial, and civilian mobilization. The Board is composed of the chairman and the secretaries of these departments: State, Treasury, Defense, Interior, Agriculture, Commerce, and Labor.

Despite Dr. Steelman's other duties, it is stressed at the Board that he spends considerable time at the Board's office in the old State Department Building, across the street from the White House. It was explained also that he has opportunity to meet with the other members of the Board, when such meetings appear necessary following Cabinet meetings.

HOOVER GROUP'S CRITICISMS

Criticisms of the Board's progress made by a Hoover Commission task force last fall were taken as a basis for checking the Board's operations in the period it has been without a permanent head. The criticisms and the answers to them given at the Board follow:

1. The Board has not yet been able to complete an adequate staff.

The Hoover Commission task force survey on which this statement was based was made in August 1948. The condition was said to have been eliminated before Mr. Hill resigned. But since then the staff has declined from 300 to 250 in number.

Some of this decline has been due to what is called normal attrition. In general it was denied that it was due to the absence of a permanent head, but it was admitted that is the reason some vacancies have not been filled. Divisions have been told to "wait until we get a new chairman" before filling vacancies.

There are four top staff places to be filled. The vice chairman formerly was R. E. Gillmore. He resigned to return to private business. Others who resigned to return to civilian pursuits were Kenneth D. Johnson, general counsel, who accepted a position as a Columbia University dean; Ewald T. Grether, director of the office of economic management, who returned to the University of California, and George E. Felton, director of the office of production, who returned to private business.

Associate General Counsel Charles Kendall was named acting general counsel, and Edward V. Hickey, Mr. Felton's assistant, was made acting director of the production office. The appointment of a vice chairman was described as an administrative matter to be decided by the chairman.

2. There is danger that an outbreak of war would once again find the United States without a sound mobilization plan.

The answer to this is that there are emergency plans in practically all fields in which the law assigned the Board to work. These fields include economic controls, manpower, housing, mobilization of key indus-

tries, control of materials and others. In most of them at least first drafts have been drawn up.

A plan for the mobilization of medical facilities and personnel, with recommendations on how best to divide physicians, dentists, and nurses between civilians and the military, is being worked on now.

But not even a guess could be elicited as to when the various parts of the plan would be put together.

3. Neither definite plans for economic warfare nor any organization to handle it were available for examination by the Hoover Commission's survey group.

There now are plans and programs, but they have not yet been presented to the Board.

4. The Board has issued one report on industrial relocation. A further study of dispersion and underground installations is needed.

The further study is being made. There will be more reports on those subjects before long.

5. There are inadequate plans for moving centers of command although the board has explored this with the military services.

While this fits into the whole mobilization problem the decisions are up to the military.

6. The stockpiling condition is deplorable. It was stressed, however, that the responsibility for this was split between the National Security Resources Board and the Munitions Board.

This was answered with the statement that contracts for stock-pile purchases have been made to the extent of the money available and that the opinion in the Board is that the program is "going on pretty well."

LEGISLATION NOT SUBMITTED

The Hoover Commission task force complimented the board on its excellent job in preparing stand-by war control legislation. It said this legislation was to be submitted to the current session of Congress. This has not been done. It was explained that the legislative program was presented to the Board last December, at which time the President had a preview. But the Board has not yet approved the program.

The Board and its staffs have been aware of certain shortcomings as was demonstrated by the appointment of a committee within the organization to study its set-up and to make recommendations. The report was submitted and now is being revised.

One significant recommendation was that there should be a firmer line of command from top to bottom.

Prepaid Health Care

EXTENSION OF REMARKS

OF

HON. RAYMOND E. BALDWIN

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Monday, June 27 (legislative day of Thursday, June 2), 1949

Mr. BALDWIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter signed by both the labor leadership and the management of the Bridgeport Brass Co., of Bridgeport, Conn. This letter demonstrates such a splendid spirit of cooperation in connection with a vitally important matter—that is, the matter of dealing with health—that I thought it worthy of being recorded permanently. It demonstrates that 90 percent of those employed at the Bridgeport Brass Co. have joined the hospital and surgical programs under the Blue Cross and the Connecticut Medical Service, which have to date 880,000 members in the State of Connecticut.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

BRIDGEPORT BRASS CO.,
Bridgeport, Conn.

A Letter to Our Fellow Workers in Connecticut Industry:

We believe we have again proved something important at Bridgeport Brass. We have proved that labor and management can accomplish wonders if they work together for the good of all. And we have proved that self-help through teamwork and free choice pays off in self-respect as well as in cash.

We refer to the fact that we at Bridgeport Brass, both labor and management, have long felt the need for a health program of insurance which would enable our people and their families to obtain proper and adequate hospital and surgical care without financial hardship.

We looked over many hospital-surgical programs and picked Connecticut Blue Cross and Connecticut Medical Service as best fitted to our needs. We liked the broad coverage these nonprofit plans provide. We liked their low-cost administration—and the fact that you can take your membership along with you if you change jobs, move or retire.

When the applications were counted last week, we found that 90 percent of us had agreed to trade a small part of our earnings for membership in these great community organizations which now bring prepaid health care to 880,000 Connecticut people.

We hope you feel the same way about this problem of health care. We believe it is the American way of doing things. There's no better system anywhere.

HERMAN W. STEINKRAUS,
President.
LEONARD A. SMISSAERT,
Director of Industrial Relations.
JAMES TAIT,
President, Brass Workers, Local 24411, AFL.
JAMES L. HOLMES,
Chairman for Union Insurance Committee.

Why Democracy Works

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, June 27 (legislative day of Thursday, June 2), 1949

Mr. HUMPHREY. Mr. President, the Benevolent and Protective Order of Elks, Bemidji (Minn.) Lodge, No. 1052, has sponsored a notable citizenship project. This program was entitled "Why Democracy Works," and was made available to all school children in Minnesota. The prize-winning essay was written by Miss Luella Silverthorn, of Bemidji, Minn. I ask unanimous consent to have Miss Silverthorn's prize-winning essay printed in the Appendix of the RECORD.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

WHY DEMOCRACY WORKS

(By Luella Silverthorn)

I watched my sisters playing with their dolls one day and with the big question, "Why does democracy work?" milling around in my mind I think that I began to understand.

One doll was told she was sleepy so she slept, another was told she was hungry so she was fed, another was designated as a dancer so she danced. Two boy dolls had a fierce battle of tiny clay fists and fierce words because Irene said, "Come, Virginia, let's make our dolls fight."

Thus it continued. The dolls cried, slept, ate, danced, fought, and played in a truly human way, but all the time they were guided and manipulated by the busy hands and minds of two very active little girls.

Soon the little sisters tired of their play and left to seek new adventure. All that was left were the sawdust-filled dolls with silly, grinning faces. Their masters were gone and so was their animation. They neither moved, cried, danced, nor fought. Their will had been the will of their masters and without their masters' will they were lifeless.

Suddenly I knew why democracy works. Half the world today is made up of just such sawdust-filled dolls. They walk the path their leaders tell them to walk, say the things their leaders tell them to say, do as they are told to do, think as they are told to think, and respond only as puppets on a string respond.

A child born into a dictatorship is looked upon as some raw material to be fashioned in a way that will find him most useful to his leader's purpose. He is trained to believe in, to care about, and to do only those things which will benefit his state. His loyalties are learned by rote. If he fails in his duty to his state, he pays with his life.

In a democracy a child is guided and trained to become a person and not a tool of some half-crazed individual. He is taught to think for himself, and to make his own decisions. When he says, "I'm proud that I live where there's a democracy," he's speaking from his head, heart, and soul. All parts of him have been allowed to develop into a free, thinking whole.

A democracy works, too, because we learn to know that we can be leaders as well as followers. We become leaders when we can call people's attention to matters that ought to be considered. This is apparent in our everyday living. We practice it in our class rooms, in our club meetings, in our families, in business, and in our play. Everyone from grandfather to preschool Johnny has his say and is, at one time or another, a leader if only in his family group.

In a dictatorship there is only one recognized leader. One way or another each individual is convinced that he can only be a follower.

Several hundred years ago a down-trodden people sought freedom of religion in America. They wanted to think as they liked, write what they liked, and worship God as they saw fit. Their ideas and ideals became part of a democracy. Free people today bow their heads to God alone.

If one man in a democracy should rise and say, "I am your leader and, therefore, your God. Come worship me," we'd laugh and say, "Not all the insane are confined, I see." Yet that same thing is going on in countries all over the world, and people have left their God to humble themselves at the feet of a mortal with his feet in the slime. Why? Because the people are not allowed to think or learn. Those who might teach are rendered speechless and so the people grope in darkness.

Democracy works and will continue to work just so long as the people realize that they have an ideal worth living or dying for. Our ancestors gave us the Magna Carta, the Declaration of Independence, and our Constitution. Through documents like these and by bloodshed we have built the wonderful edifice of democracy with its foundations built upon such solid ideas as the right of every individual to choose his way of life, the right of private property, freedom of speech, freedom to seek the truth, and freedom of the press.

In Italy everything was done to glorify the nation. In Germany they tried to glorify the race. In Russia the worker is glorified. In a democracy we glorify freedom and liberty. Everything is done to help the individual no matter from what race he may come.

I say three cheers for liberty, and three cheers for democracy. It has worked, it does work, and it will continue to work as long as there are free thinkers in a free world.

The Pick-Sloan Plan for Missouri Basin Improvement

EXTENSION OF REMARKS

OF

HON. CLYDE M. REED

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Monday, June 27 (legislative day of Thursday, June 2), 1949

Mr. REED. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a very timely discussion of the Pick-Sloan plan for Missouri Basin improvement, by Raymond A. McConnell, Jr., editor of the Nebraska State Journal.

Mr. McConnell is an outstanding newspaperman and was awarded the 1949 Pulitzer prize for disinterested and meritorious public service. He makes some suggestions for reducing the propaganda which has confused the people of the Missouri Basin.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEBRASKA EDITOR DEPLORES PICK-SLOAN PLAN CONFUSION—MCCONNELL DETECTS VAST GRASS ROOTS DISTRUST AIMED AT CURRENT PROPAGANDA GROUPS

(By Raymond A. McConnell, Jr., editor, Nebraska State Journal)

From an out-State organization of irrigation farmers recently came a request to go out to a meeting they were planning, to discuss with them, from as impartial a standpoint as possible, the place of a particular Nebraska reclamation project in the over-all resource development picture. Parts of the letter are interesting because they hint at something rather significant that is happening to public opinion throughout Nebraska, at the grass roots, wherever water use or soil conservation are matters of local concern.

"The ——— association," the letter begins, "instructed me to secure some well-informed person who would really say what he believed, to discuss the ——— project and its effect on Nebraska. * * * We feel that this is one of the most vital problems confronting Nebraska agriculture because what is done now will affect it for all time to come. We also feel that we should have as much unbiased information for our guidance as possible."

BUREAU PROPAGANDA

"At the present, we are thoroughly confused by information put out by the Bureau of Reclamation and those opposed to the Bureau. We are not too certain that a considerable part of both is not propaganda instead of information. We have also discovered that there are entirely too few people in the State who have the over-all picture or the inclination to analyze this, for the impact it might have on the future of Nebraska.

"We know that eventually the people are going to be called upon to make a decision, and we do want them to have as much information as possible. * * * Our own project will make it more difficult for our people to decide, and we want to help them all we can."

The interesting points about this letter, I noted, are that, although to some extent between the lines, it suggests:

1. A distrust, at the farm level, of what the Federal bureaus directly concerned with the Pick-Sloan plan (Army engineers, Pick; Bureau of Reclamation, Sloan) have been putting out about it for public consumption.

2. A distrust of what Missouri Valley Authority advocates and others have been putting out in criticism of the Pick-Sloan plan.

3. An underlying confusion, at the grass roots, as to the objectives of the over-all basin development currently under way as to the place of particular current projects in that development.

4. A desire for more unbiased information about over-all development than the interested Federal bureaus and affiliated organizations, such as the Nebraska Reclamation Association, are providing.

5. A reluctance of some well-informed people to speak their real minds in the matter, possibly because they are on the Government pay roll, or are grinding some local ax.

In the meantime, while from the grass roots were coming such expressions of doubt as to what the shouting is all about, a Nebraska State official was busy propagandizing against the Missouri Valley Authority bill now in Congress.

EMOTIONAL TALK

At a meeting of the Holdrege Chamber of Commerce, Allen Dowling, head of the State resources division, charged that the MVA program would violate the water-access rights of every Nebraska farmer and annihilate the well-launched program for placing 1,600,000 acres of Nebraska land under irrigation. He said enactment of the MVA bill as it now stands would prove "a short-sighted folly" for the Missouri Basin, because it "wholly ignores the principal economic problems of our area and treats us as misguided Dogpatchers." He said he doesn't care what they call the plan for basin development—MVA or Pick-Sloan plan—so long as "it recognizes the basic State water laws and the fundamental rule that water's natural purpose is to nourish the land."

Which is popular enough talk, perhaps, for a chamber of commerce gathering. But it doesn't answer the questions the farmers themselves in the Holdrege and other areas are asking nor settle the doubts they are raising, there and elsewhere, as to the aims and effectiveness of the present Pick-Sloan developments from the over-all standpoint. On the contrary, it merely feeds, at State expense, the propaganda mills which the confused farmers are beginning to complain about.

WHICH IS BETTER?

What Nebraska people need to know—and this is a vital necessity for chambers of commerce as well as for the irrigation farmers whose questions and doubts are quoted above—is whether the Pick-Sloan plans for Missouri Basin development really will accomplish what their proponents in both bureaus claim and whether under the proposed MVA there is any better prospect of truly over-all development.

The test in either case is whether the effort begins at the beginning—when the water falls on the land—or merely tries to cork up the rivers after both water and soil have been lost from the land.

The spokesman for Nebraska's resources development agency would do better to be asking such questions than to be giving out as fact one-sided answers about which the interested Federal bureaus to date themselves have been vague and evasive.

Experience Proves That the Construction of Public Housing Does Not Hinder or Impede Private Residential Construction

EXTENSION OF REMARKS

OF

HON. FRANK BUCHANAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1949

Mr. BUCHANAN. Mr. Speaker, it has repeatedly been charged by the opponents of this bill that the construction of public housing will impede the work of private builders—indeed, that it will so discourage them that they will greatly curtail, if not indeed stop, the production of needed private homes.

No proof has ever been advanced for this contention for the simple reason that there is no such proof.

The fact is that all the experience in cities where low-rent housing was built under the original program proves exactly the opposite. The construction of public housing has had no influence whatsoever in stopping or even decreasing the amount of private housing that was being built during the same period. Indeed, in the cities where public housing was built, private enterprise showed a tendency to increase rather than to decrease its rate of activity in relation to the rate of Nation-wide building activity.

This is well illustrated in the case of San Francisco. In 1937, private builders started 1,946 new dwellings, and in 1938 started 2,724 dwellings. In the next year 1,359 units of public housing were put under construction. In this same year, the number of units started by private enterprise increased to a total of 3,133. Nor did the construction of the public housing units started in 1939 impede the activities of private enterprise in the following year, for in 1940 private builders started the construction of 4,430 units.

If the construction of public housing could possibly discourage private enterprise, it should have discouraged it in San Francisco in the years 1939 and 1940. Yet, as these figures show, the total of private construction in these 2 years was 62 percent higher than it had been in the two preceding years. In these same 2 years, private home building in all cities in the country increased by only 36 percent. It is thus evident that San Francisco, far from lagging behind because of the construction of public housing, actually forged ahead in private construction in the very 2 years in which public housing was also being built in that city.

This experience is typical in city after city—even in cities where the public-housing program was relatively large. In Omaha, Nebr., for example, private enterprise which started the construction of 713 dwellings in the years 1937 and 1938 increased its starts to a total of 1,147 in the years 1939 and 1940. Yet in these same years, 1939 and 1940, the local housing authority of Omaha started work on a relatively large program of 794 units of public housing. Did this impede private enterprise? No. The record is clear because in these 2 years private enterprise in Omaha increased its activity by 61 percent, as against a Nation-wide increase of 36 percent.

To make abundantly sure that this experience is typical, a number of cities have been selected in which the public-housing program was relatively large in relation to the size of the city and in relation to the amount of private construction. The public-housing units in all these cities were started in the years 1939 to 1940. What was the record of the private builders in these 2 years when public housing was being developed, in relation to their record in the two preceding years? In Atlanta, Ga., private enterprise increased its activity by 60 percent; in Birmingham, Ala., private enterprise increased its production by 127 percent; in Charlotte, N. C., by 66 percent; in Huntington, W. Va., by 51 percent; in San Antonio, Tex., by 54 percent, and in Springfield, Ill., by 91 percent. These increases in private construction during the very period when public housing was being developed in these cities compares with a Nation-wide increase averaging only 36 percent. These cities are places where the public-housing programs were relatively large. Here, if anywhere, the alleged discouragement of private enterprise by public housing should have been apparent. These facts reveal that there is no scintilla of evidence pointing to any such discouragement of private enterprise.

These figures prove only what is apparent to any reasonable person who takes the trouble to understand the purposes of the public-housing program. The families which public housing serves have such meager incomes that they can be provided with decent housing only with the aid of some public assistance. Private builders never have catered to these families, nor have they any intention of doing so. These figures demonstrate once more that the market for public housing is utterly separate and distinct from that of private building. The extension of the public-housing program can therefore have no conceivable effect in retarding or discouraging the needed production of homes by private builders, and the opposition of the realtors' lobby to public housing is shown up as nothing more nor less than that of a "dog in the manger."

This Nation needs a large additional supply of decent housing to take care of the families now living in the slums. The existing supply of private housing which meets decent standards is already being used to its utmost capacity, and private enterprise admittedly cannot build new housing for families of very low incomes. There is no other way of getting decent homes for families now living in the slums except through the public-housing program. This low-rent public-housing program should be expanded as provided in H. R. 4009. And it should be expanded now, for every day's delay prolongs by just so much the date when families now living in the slums may commence to move into decent housing fit for American citizens.

Should We Tell How Many Atom Bombs?

EXTENSION OF REMARKS

OF

HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Monday, June 27 (legislative day of Thursday, June 2), 1949

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an article appearing in the New York Times magazine of June 19, 1949, by the distinguished senior Senator from Connecticut [Mr. MCMAHON], entitled "Should We Tell How Many Atom Bombs?"

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SHOULD WE TELL HOW MANY ATOM BOMBS?

(By BRIEN MCMAHON)

WASHINGTON.—Our Atomic Energy Commissioners have the disagreeable job of making atom bombs. That, under the law, is their chief assignment. They are currently being investigated on charges of "incredible mismanagement." But the 18 investigators—members of the Senate-House Committee on Atomic Energy—face a dilemma; for they do not know how many bombs the Commission has succeeded in producing. How can Congress fairly judge the accused Commissioners without facts and figures on how well they have discharged their most vital responsibility.

This question leads inevitably to another of great importance: Should we now change our policy and reveal to the joint congressional committee the number of atom bombs that have been produced, or go further and give these same figures general publication. At present the information is believed to be known only to some 24 men—the President, 5 members of the Atomic Energy Commission, 4 chiefs of the defense department, 11 military officers, and 3 heads of the production plants.

Are not Congress and the American people, as stockholders in the Nation's atomic energy enterprise, also entitled to share this knowledge? The basic question is whether or not the Atomic Energy Commissioners have delivered the goods, whether or not they have manufactured weapons in proper quantity.

According to the law, bomb figures may be published if the Commission determines that this step would not adversely affect the common defense and security. However, the Military Liaison Committee—which connects the armed forces with the Commission—has a right of protest. It could, if it chose, oppose revelation of bomb figures and might even carry an appeal to the President for final decision.

In the investigation to date the Commission has been specifically accused of granting too many emergency clearances to people not completely investigated by the FBI. David Lilienthal, Chairman of the Commission, has replied that without these clearances we would not possess as many atomic weapons as we do today. This presents the basic issue that is now before the investigating committee. If the Commission has failed to manufacture as many bombs as it could and should under all the circumstances, we doubtless need a brand-new set of Commissioners. On the other hand, if everyone agreed that a few more emergency clearances have been granted than is necessary and that some mistakes have been made in the field of personnel security, we would probably not for those reasons alone discharge Mr. Lilienthal and the other Commissioners—provided that their record in bomb production is excellent.

The current investigation brings to a head an issue of constitutionality and congressional responsibility. If the Joint Committee on Atomic Energy publishes a report without knowing bomb figures, the atom will have gained a kind of triumph over Congress; for the report will show that Congress can no longer completely fulfill its constitutional duty of appraising the work of executive agencies.

Associated with any revelation of bomb figures to the committee is the matter of general publication. On this question I have not yet reached a conclusion. The decision is a tremendously hard one, but I feel that no member of the Joint Committee on Atomic Energy will want to avoid the responsibility of a definite choice. As chairman of the joint committee, therefore, I believe it desirable to present the arguments for and against divulging to the world how many bombs America now owns.

At this point I must emphasize that I am not talking about bomb design or the method of manufacturing fissionable material or any of the production and fabrication secrets belonging to our country. No patriotic American would so much as dream of divulging this information any more than he would dream of divulging the exact specifications of a B–36 bomber or the blueprints of our new-type submarines or the workings of a turbo-jet engine. I am merely talking about numbers—how many atomic weapons we have—just as we already know how many B–36's and submarines and jet fighters are on hand.

The arguments in favor of Congress and the public receiving this information may be summarized as follows:

Congress needs to know in order to pass atomic energy appropriations.

Congress has been asked for money to build an important new addition to the great atomic plants at Oak Ridge, Tenn. How can I feel genuinely confident that this request is a sensible one unless I know the number of bombs we already possess? How can Congress and the public form a wise opinion?

We need the information to evaluate the power of our atomic weapons.

A hot debate is now raging on the question of whether or not the military threat of atomic energy has been overrated. One side says the bomb is "unique"; the other side says the bomb is "just another weapon." One side asserts that we live in "desperate peril"; the other side deplores what it calls "apocalyptic spasms." The arguments pro and con simply have no meaning apart from concrete knowledge as to the number of bombs already produced and current rates of production.

If, with our tremendous and expensive atomic energy project, we only make the tiniest number of bombs per annum, then indeed atomic explosives are "just another weapon"—in the sense that a whole year's output could do no more damage than several hundred B–29 superfortresses carrying TNT. But if we produce a large number of bombs annually, then atomic explosives are

"unique"—since a stock pile accumulated over a period of years might accomplish more in a few air raids than thousands of B–29's loaded with TNT would accomplish in a decade.

Our own bomb-production figures are the best guide to how great is the danger of atomic attack from Russia.

If Russia could not possibly construct more than a handful of bombs by 1960, we face little immediate danger and the threat of atomic energy has unquestionably been exaggerated. However, if Russia could construct an immense number by 1960, then we do live in "desperate peril," and "apocalyptic spasms" are grounded solidly upon reality.

Today the only halfway valid yardstick which we might use to estimate Soviet bomb production over the coming years is our own past, present, and anticipated future production. This yardstick would be crude and tentative. But it is at least pertinent evidence. If we know that America can manufacture a huge atomic stock pile in 10 years we have no certain proof that Russia will do likewise after she begins producing. Yet we must prudently assume that what the United States can accomplish Russia may also accomplish.

The other nations of the world need the information to pass upon the control proposal presented by the United States.

We have gone before the United Nations and solemnly proposed an atomic control plan which requires each country to accept curtailment of sovereignty. We say that the alternative may be annihilation. But if atom bombs are exceedingly hard to manufacture and if no country could acquire more than a few, our control proposal is not a survival-or-suicide issue. We call the Soviet counter-plan a "fraud upon the peoples of the world"—as indeed it is if bombs may become plentiful. But if our production rate is extremely low, have we not ourselves misled the peoples of the world? Can we reasonably expect the world to take the atomic menace seriously unless our production rate is high and unless that fact is illuminated for all to see?

Congress needs the information in order to pass upon the national defense program.

Under the United States Constitution Congress is required to provide for the common defense and to raise armies and navies. When we debate the necessity of a $15,000,000,000 military budget, we quite literally do not know what we are talking about. When we attempt to decide whether we need selective service or a radar network or a fleet of B–36 airplanes, we are in about the same position as a judge who must write an opinion without knowing the key facts of his case. The threat to democratic principles of government is evident.

There is also a threat—though a less obvious one—to our military security. Our professional soldiers are, with few exceptions, capable and devoted servants of democracy. But they are not superhuman, and in making their plans they need the benefit of widespread public discussion. How can civilian experts counsel intelligently unless informed of atomic production data? How can they help mobilize popular support for sound defense measures unless everyone has knowledge of the broad facts?

The Atomic Energy Commission has revealed the preposterous fact that until mid-1946 top American military men did not themselves know how many bombs we had and how fast we were manufacturing new ones. It may be that even today many of the professionals who help prepare our defense budget, who formulate strategy, and who make public speeches are ignorant of the essential data.

The bomb-production figure is not the type of military secret considered most vital to conceal in the past.

The most precious kind of military secret is the fact that a new weapon exists at all. Germany never suspected, for example, that the Allies had perfected a proximity fuse. A second and less valuable military secret is the design and specifications of a weapon whose existence has become known. Aside from secrecy as to war plans, the disposition of forces, the results of proving-ground tests, and like matters, the traditional kinds of peacetime secret in America are the two just mentioned: the fact that a weapon exists and the details of a weapon's design. Concealment of atomic production data is completely divorced from these accepted and time-tested categories.

Armament is a matter which has always been regarded as of such vital public concern that considerations of secrecy have had to yield. The debate on the proposal for 70-air groups—certainly a most revealing bit of information—was carried on in public. The whole world knows that about 1,600,000 Americans serve in our armed forces, that we possess about 20 aircraft carriers ready for active service, and that we have ordered 90 or more B–36 bombers.

Let us turn to the other side of the question. It is easy to see arguments against public disclosure of bomb figures.

The information would guide Russia in her atom bomb production efforts.

If Russia knew the size of our bomb stock pile, she would gain a clearer idea of the men and resources which must be assigned to her own atomic project in order to rival our progress; and she might be stimulated to work harder than before. The Kremlin would also gain a clearer idea of American war potential, present and future.

The information would make it impossible, in event of war with Russia, for us to exaggerate the threat of atom bombing, as we successfully did with Japan.

In case the tragedy of another war should occur, we could not stage a ruse—that is, we could not drop all our bombs in a few terrible raids and then, pretending we had many more held in reserve, threaten to use them unless the opponent surrendered. After the shock of Hiroshima and Nagasaki, the Japanese believed that unless they yielded their cities would soon receive further atomic bombing. Actually, to quote former Secretary of War Henry L. Stimson, "the two atomic bombs which we had dropped were the only ones we had ready, and our rate of production at that time was very small."

Since Soviet leaders witnessed the ruse played upon Japan, they would scarcely fall victim to a similar ruse played upon themselves. At the same time, if Russia knew just how much devastation to expect, she would undeniably enjoy a psychological advantage. A known quantity, however terrifying, is easier to confront than an unknown quantity

PUBLISHING OF THE REVELATION WOULD SEEM LIKE SABER RATTLING

It is possible to argue that disclosure of our atomic production figures would create an unfavorable impression throughout the world, that we would be accused of a saber-rattling attempt to intimidate Russia. But here the same objection applies to all the military data we have long since revealed: the size of our Air Force, the size of our fleet, the size of our defense budget, and so on. Moreover, those who believe in the deterring power of American armed strength may reason that Russia is less likely to start a war if our stock pile is large and if she definitely knows this fact. Once informed of the true situation, Moscow could not miscalculate and undertake war in the mistaken belief that our stock pile remains smaller than is actually the case.

To be sure, the Kremlin might not choose to believe an American announcement describing the number of bombs we ot i. Yet this possibility should please those who fear lest disclosure benefit Russia too much. Far from benefiting her rulers, an announcement which they did not believe would merely create confusion in their minds. We would have outwitted them by the clever technique of telling the truth.

Publication might create a Maginot-line complex in the American public.

It is also possible to argue that disclosure of production figures (if they are high) would generate a Maginot-line complex in the American people—cause them to rely excessively on atomic weapons and to underrate the need for planes, ships, paratroops, submarines, carriers, bases, allied, and kindred safeguards. However, this argument is antidemocratic in its implications. It assumes that the people cannot wisely shape their own destiny and that only a few Government officials have brains enough to sense what is good for the country.

It might be disclosed that we have few bombs.

The most serious objection to revealing production data is based on the hypothesis that we possess very few bombs, that we are staging a colossal bluff and that we are really pathetically weak in atomic armaments while pretending to be strong. If such a hypothesis is correct, we would need expanded armed forces to compensate for poverty in atomic weapons. Perhaps the only way to supply these needs, assuming we have very few bombs, is to tell our people the facts. On the other hand, Russia might well feel that she could afford to increase pressure upon western Europe and to pursue a flagrantly aggressive policy throughout the world.

It might be an inducement for the Russians to attack before our bomb supply became decisively large.

It may be that the present American stock pile is large, but not large enough to secure a military decision against a continental power. In that event, if we disclosed the figures, Moscow might conceivably decide to attack before our stock pile climbs to a level where it would prove militarily decisive. Of course, this same logic must have seemed much more appealing to Soviet leaders in 1947 and 1948, when we had fewer bombs than we do today.

Clearly much can be said on both sides of this issue. Clearly, too, the issue is a momentous one for our democracy. If it turns out that the present world situation is so tense and so unprecedented as to justify the present tense and unprecedented secrecy, we must recognize frankly that the United States Constitution has been partly repealed.

Naturally, it will be said that the Joint Committee on Atomic Energy should be informed of bomb figures, but that the information should not be circulated outside this committee. Yet such a solution is really no solution at all. True, the joint committee is indisputably entitled to know stock-pile data under the law. But how would it materially help committee members to have the information unless they could use it in reporting to Congress as a whole and to the people?

If the information means that we need smaller armed forces or bigger armed forces; if the information means that we can afford to leave taxes as they are or that we must raise taxes; if the information means that the Atomic Energy Commission has done a good job or a bad job on production; if the information means any of these things, could Congress as a whole and could the American people rely solely on the judgment of a few committee members entrusted with actual figures?

Furthermore, if we assume that this information must be kept a supreme secret,

should even the 18 members of the joint committee ask to be told? Obviously the chance that production figures would become publicly known increases with each additional individual who is given the facts, no matter how careful such individual may be.

In all candor I should note, too, that the committee membership has so far deliberately chosen not to receive the figures. As I said last January 31, "There is a natural inclination in all of us, in Congress as well as out, to shy away from the implications of this problem. No individual willingly assumes the responsibility which it entails. But no matter how awesome the responsibility, we are not justified in evading it."

In conclusion, let me recall that shortly after my address of January 31, the Soviet delegate to the United Nations demanded that America publicly announce bomb figures. The same Soviet demand had been made many times before, but because I had recently raised the same issue, some editorial writers concluded that my position was identical with the Russian viewpoint and that therefore both must be bad. I submit that if we always do precisely the opposite of what Russia asks, the Kremlin will determine American policy. The Kremlin need only advocate the reverse of what it wants us to do and we would then docilely comply with its true desires.

The question of revealing atomic stockpile figures is one for the Joint Committee on Atomic Energy to pass upon without regard for any statement emanating from Moscow. The prime objective and overriding interest of the joint committee is the security of our country, and that principle will control whatever decision may be made.

Better Late Than Never

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 7, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, even some New Deal spenders are becoming disturbed, not to say frightened, by the realization that someone sometime must pay. Pointing to the late repentance—or should I say change of views—of a rather prominent statesman is the following editorial by Leo W. Hoffman from the Allegan Gazette of June 23, 1949, published at Allegan, Mich.:

CHARACTER

Retired Secretary of State Byrnes, in a recent speech, came out strongly in opposition to Truman's program and labeled it the beginning of the welfare state.

Ever since Roosevelt turned his back on compaign promises made in 1931 and embarked upon his policy of tax, spend, and elect, there were a few men who continuously, courageously, and persistently pointed out to the New Dealers and the people the danger signs and the path this country was following.

Byrnes, a Senator when the New Deal first became powerful, was one of Roosevelt's strong men in the Senate. Whenever there appeared to be a revolt in the Senate over one of Roosevelt's proposed socialistic laws, Byrnes—acting on Roosevelt's orders—persuaded his colleagues to vote for the measure, for political reasons.

As a reward for his faithful services, Byrnes was appointed to the Supreme Court and then later was made Secretary of State. He continued to serve as Secretary of State under Truman.

Byrnes is an intelligent, well-informed man, but he isn't any more intelligent now than when he was in the Senate, or while he was serving as Justice of the Supreme Court or Secretary of State. He knew then, just as he knows now, that the New Deal was leading the people along the path toward socialism and bankruptcy. During the period of time that he was in office, however, he placed party loyalty above loyalty to his country. He remained silent while Roosevelt, Truman, and other New Dealers were attempting to smear the few who dared to accuse the New Deal of deliberately attempting to change our democracy into a socialistic state.

Now, however, as a private citizen, he openly comes out and states that we are in danger of becoming a welfare state.

The point that we are trying to make is, Byrnes is merely one of many, both in and out of Government service, who for political or personal reasons are willing to salve their conscience while accepting either political or personal benefits.

The farmers who voted for Truman in the expectation of being rewarded by farm benefits, the school organizations which voted for Truman in the hope of Federal aid for education, all of the other minority organizations that wanted Federal aid and were persuaded by greed to cast their lot with the New Deal belong in the same class with Byrnes. Some of them have since repudiated the New Deal, usually because they didn't receive as much as they thought they were going to or because they were taxed to pay for aid to someone else.

The Gazette compliments Byrnes for his stand now, but we wish that he had taken the same position when he was serving in the Senate. Then perhaps we wouldn't be so far along the path toward socialism.—L. W. H.

Montana Smoke Jumpers To Give Demonstration in Washington

EXTENSION OF REMARKS
OF
HON. WESLEY A. D'EWART
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1949

Mr. D'EWART. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Great Falls Tribune of June 23, 1949:

MONTANA SMOKE JUMPERS TO GIVE DEMONSTRATION IN WASHINGTON

MISSOULA, June 23.—Washington, D. C., will see how forest fires of the West are fought from the sky when four forest service smoke jumpers from region 1 headquarters in Missoula make an exhibition jump over the Nation's Capital Tuesday.

The air-minded fire fighters will parachute onto the Ellipse at Constitution Avenue between the White House and the Washington Monument.

The exhibition, marking the first time smoke jumpers will have been dropped east of the Mississippi, was announced by C. S. Crocker, chief of the region 1 fire-control division in Missoula.

The smoke jumper exhibition will be part of a salute to American business for its support in the cooperative forest fire prevention campaign sponsored by the department of agriculture.

Smoke signals, Crocker said, will simulate a forest fire in the center of the Ellipse. The jumpers will hurtle out of a C-47 in their men-from-Mars uniforms. After landing they will be greeted by city dignitaries and be given a police escort to the National Press Club.

There the smoke jumpers will take part in presenting awards to six industrialists in recognition of the advertising support American business has contributed to the fight against forest fires. American industry, Crocker said, has contributed an average of more than $3,000,000 a year for the last several years to this cause.

The smoke jumpers and two other forestry officials will leave Missoula Thursday for Washington aboard a C-47. Crocker said it is one of the same planes that are used in actual smoke-jumping operations.

The men will be dropped from the plane piloted by Bob Johnson, pioneer Montana pilot.

Fred Stilling, of Missoula, superintendent of the parachute division, already has left for Washington to prepare for the jump. Chief Parachute Technician Jim Waite, of Missoula, will accompany the jumpers by plane. Waite in 1940 was the third man ever to jump on a fire for the forest service.

Acting as jumpmaster on the flight will be Al Cramer, of Missoula, a veteran smoke jumper who has bailed onto fires 46 times since 1941. The four jumpers are Edward J. Eggen, formerly of Colfax, Wis.; William J. Hellman, Kalispell; Homer Stratton and William Dratz, both of Missoula.

Statement in Opposition to H. R. 853

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1949

Mr. BUCHANAN. Mr. Speaker, this bill would authorize the Federal Housing Commissioner to provide for the establishment of "home owners' leagues," consisting of 10 or more persons, and to make loans to such persons to finance the purchase or construction of single-family houses for their occupancy. A loan could amount to $15,000, but could not exceed 90 percent of the appraised value of the land and dwelling, thus permitting a loan for a house having a value of $16,666. Interest would be 2 percent per annum on the unpaid balance. The "home owners' league" would guarantee payment of the interest and principal on all loans made to members and would acquire title to all the property upon which loans would be made. Each member would be jointly and severally liable for the obligations of the league in an amount equal to 5 percent of the value of the property involved in his loan. Payments on loans would be deductible for Federal income-tax purposes. The property upon which loans would be made would be exempt from Federal, State, and local taxes.

H. R. 853 is neither a slum-clearance bill nor a bill to provide housing for families of low income. On the contrary, it is a bill to subsidize higher cost housing through local and Federal tax exemption and Federal loans with low interest rates

below the cost of money to the Government. This would tend to increase rather than reduce housing costs, and make housing more unavailable for families of low income. The bill would assist only those who could make a 10-percent down payment on the total cost of the house, which could be $16,666.

The bill would not assist rental housing, which is generally more urgently needed than other housing, and the aids in the bill, if workable, for other housing would cause less rental housing to be built.

An essential feature of the bill, exemption from local real-estate taxes, is entirely unworkable and impractical. In almost every State, such property would not only be subject to taxation under State laws, but a constitutional amendment would be required to grant such tax exemption. This would generally take several years under required constitutional proceedings. Also, there is no basis in reason or equity for granting tax exemption to the housing under this bill and not all other housing.

Also, the requirement of the bill that each member of the league be partly liable for the obligations of other members would, in all probability, make the bill unworkable. This requirement would be extremely unattractive to any reasonably prudent person who can make a 10 percent down payment on a house which may cost up to $16,666.

Dividends on National Service Life Insurance

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1949

Mr. PATTERSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Torrington (Conn.) Register of June 25, 1949, relative to the delay in payment of dividends on national service life insurance.

The editorial provokes the thought that politics may be the paramount consideration for nonpayment of dividends accrued until next year.

I am pleased to note that my name is appended to the resolution calling for immediate payment of this money which belongs to the veterans who have overpaid their premiums for past years. It would be simple justice to speed up payments so that this money might be distributed now when the need is great. Let me assure all responsible for delay that the veteran will not be grateful for holding his money from him this additional time.

REFUNDS DUE NOW

Although the Supreme Court ruled more than a year ago that refunds on GI life insurance were lawful, it is only now that the Veterans' Administration is getting down seriously to the business of preparing to pay them. This should not be surprising. That's the way bureaucracy customarily operates.

The veterans, however, have a legitimate complaint and the Republicans in Congress would be derelict in their duty if they did not give voice to it. The money belongs to the soldiers, not the Government, and it ought to be distributed at the earliest possible moment. Such consideration as political advantage or impact on the economy have no place in the picture.

It has been charged that the administration would like to withhold payment of refunds until next spring. That course would give it the equivalent of a $2,800,000,000 campaign fund and the opportunity to address itself directly to the 16,000,000 voters who would be receiving checks from the Government.

And such is the nature of many people that they would think they were getting something for nothing and that they ought to be correspondingly grateful to the party in power in Washington.

For the sake of honesty and integrity in politics, the Republicans in Congress should continue, first, to insist on payment of refunds now and, second, to keep hammering home the point that what the veterans will be receiving is due them not out of charity but as a matter of simple justice and fair financial dealing.

Federal Aid for Education

EXTENSION OF REMARKS
OF
HON. SAMUEL K. McCONNELL, JR.
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1949

Mr. McCONNELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Hon. Herbert Hoover:

NEW YORK, N. Y., *June 22, 1949.*
Hon. SAMUEL K. McCONNELL, Jr.,
Committee on Education and Labor,
House of Representatives,
Washington, D. C.

MY DEAR MR. CONGRESSMAN: I have your request that I should give you my views on Senate bill 246, which is before your committee. This bill provides for Federal grants-in-aid for primary and secondary education to the States under certain restrictions. It calls for an initial annual Federal expenditure of about $300,000,000 in addition to more than $2,000,000,000 annually, which is already being spent directly by the Federal Treasury for other educational purposes, for veterans, special schools, research work, scholarships, etc.

At the outset let me say that I doubt if anyone in the country is more devoted to the upbuilding of the educational system than myself. Also, I realize the economic limitations which produce backwardness of education in certain sections and the necessity of remedies in the broad national interest. The whole problem is how to remedy the situation without great injury to the entire social and political fabric of the Nation, including education.

One question immediately arises which came vividly to my attention in the recent investigation of the organization of the executive branch of the Government. The views which I express are, however, my own.

THE SYSTEM OF GRANTS-IN-AID

Before we consider this special bill, I believe we should first face certain broad questions involved in the whole method of the Federal Government's grants-in-aid to the States. The amount of these grants-in-aid has risen from $100,000,000 to $1,200,000,000 in 20 years. This does not include the billions being expended by the Federal Government by other methods for social and economic objectives. These grants-in-aid are, no doubt, all intended to do good, but the method of grants-in-aid contains grave dangers.

First. In all cases of grants-in-aid, same are given to economically strong and self-sufficient States, well able to take care of themselves, as well as to those States which are economically unable to provide such necessary services and are thus backward in their educational work. The most appealing argument for such grants is based on situations in a small minority of backward States, yet by a sort of pork-barrel arrangement, the strong States are always also participating in grants-in-aid.

Second. Any such grants-in-aid require the erection or expansion of Federal bureaucracy. But beyond this, they also require the erection or expansion of State bureaucracies. One of the consequences of all grants-in-aid is the organization of pressure groups, with branches in every State, constantly trying to expand and to get more grants-in-aid from the Federal Treasury.

Third. The economically strong or self-sufficient States, which are in a large majority, pay for their own grants-in-aid (and more) by Federal taxes, and whatever they receive back comes only after the cost of Federal bureaucratic middlemen is deducted.

Fourth. The grants-in-aid to economically self-sufficient States add just that much to the cost of the Federal Government, and the practice of requiring some sort of definite expenditure by the States often results in internal pressures to wasteful State expenditures.

Fifth. The inevitable effect of grants-in-aid is to place a Federal bureaucracy into dictatorship over the State or local administrations of these services. No matter what provision is made in the law to prevent such practices, it becomes inevitable that every such grant puts the camel's head of Federal control either under the tent of local self-government, or close to it. With all this we are steadily undermining the sense of responsibility and the fundamental basis of local self-government.

Finally, we may as well face the fact that the grants-in-aid system has become a prime instrument in centralizing the Government of the people in Washington.

So much for observations on grants-in-aid in general.

If we are to attempt to cure education ills by the Federal grants-in-aid method, then the problem is how to do it with the least evil consequences. Therefore, after a review of the weaknesses in this bill in the above lights, I will make some suggestions for their remedy.

1. This particular bill (S. 246), in section 2, makes drastic provisions against Federal bureaucratic dictations in the conduct of State educational facilities; but in sections 7 and 8, it makes requirements of the States and their facilities which would almost immediately bring about the beginnings of Federal bureaucratic control. Even were this latter possibility not expected, we may be sure from past experience that complaints of State waste, inefficiency, or pressure groups will, sooner or later, result in drastic Federal controls. Moreover, the impelling forces within any Federal bureau will, sooner or later, break down any such limitations.

2. This bill, by a complicated economic formula involving also the expenditures on education, endeavors to direct the major aid to backward States which presumably have not the economic strength to care for their children.

3. But it also has the pork-barrel appendage of $5 for every child in the economically strong States as well. It thus tends to spread bureaucratic controls over the school systems of the whole Nation.

4. Aside from dependencies, there are apparently 19 States indicated in the backward category under this bill, although 7 of those on that list should be able to care for their own children. The 36 remaining, with the District of Columbia, include roughly 80 percent of the children in the Nation.

5. Based on the economic formula, the extra grants-in-aid are not based upon the essentials of proper educational standards but certainly, in some cases, upon whether the citizens of the State desire to spend its revenues on education or on something else.

SUGGESTIONS

In order not to deny to children of the real backward States the opportunity they need, and also at the same time to avoid as many as possible of the evils of grants-in-aid and to produce economy which the Nation badly needs, I suggest the following for consideration in this legislation:

(a) There should be no general grants-in-aid to all States. All grants-in-aid should be limited in each case to the real backward States.

(b) While the bill gives special attention to the backward States, to make the discrimination between them and the strong States, it is based upon involved economic calculations instead of upon certain specific standards of education which should be established.

Such specific standards could be based upon the average educational performance of, say, 30 of the most forward States. These standards should include teachers' fitness and salaries, the hours of attendance, and facilities. An additional standard should be that of nondiscrimination with reference to race or religion. And these standards applied to the backward States will need include another requirement. Some of the so-called educationally backward States are spending large sums on improvements such as highways, etc., which should be subordinated to the education of their children. These standards should not be difficult to determine through an appropriate independent commission. I use the term "average," as above, as a base, because it represents at any one time the real progress of the Nation in this field.

The effect of such recommendations would be fivefold:

1. It would reduce the proposed appropriation of $300,000,000 by some $150,000,000 by eliminating the nonbackward States.

2. It would limit both Federal and State costs of government through unnecessary bureaucratic expansion.

3. By eliminating the nonbackward States, it would keep the camel's head out of probably 80 percent of the Nation's educational tents, and it would confine its entry into the States with insufficient economic resources.

4. By the focusing of public opinion, it would stimulate some of the backward States who have resources to meet the national standards.

5. By limiting its operation to the backward States, it would curb Nation-wide drives upon the Congress for new and increasing grants-in-aid by special groups and interests, which are inevitable from any general grants-in-aid method of Government operation.

And let me add that of all the accomplishments of our Republic, the greatest has been our educational system in the strong States. It ranks above that of all other nations. It is the product of private effort, of local and State government. To place a Federal bureaucracy over the whole national system will be, in my mind, a disaster to educational progress—no matter what legal limits are put on it or what advantages are painted.

I agree wholeheartedly with some of General Eisenhower's recent observations in which he pointed out that this act will become another vehicle for the believers in paternalism, additional national centralization of power, and that the very attempts at safeguards are admission of the dangers inherent in it.

What we need in the national interest is to bring the backward States up to the national level of educational care for children and preserve the Nation from the evils inherent in the grants-in-aid system.

I am, with deep respect,

Yours truly,

HERBERT HOOVER.

Dr. Douglas Southall Freeman

EXTENSION OF REMARKS

OF

HON. J. VAUGHAN GARY

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1949

Mr. GARY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of Monday, June 27, 1949, entitled "Dr. Freeman 'Retires'."

Dr. Douglas Southall Freeman, who has announced his retirement as editor of the Richmond News Leader on June 30, is a brilliant journalist, a profound scholar, a renowned historian, and a distinguished citizen of whom my district and State are justly proud.

DR. FREEMAN "RETIRES"

Word comes from Richmond, Va., that Dr. Douglas Southall Freeman has decided to retire from his post as editor of the Richmond News Leader. Virginians have known Dr. Freeman since 1915 as a brilliant and courageous journalist—one of the major voices of the New South. A wider audience has valued him as a biographer and historian. His definitive four-volume life of Robert E. Lee won him a Pulitzer prize; he followed this with three volumes on Lee's Lieutenants; and at present, at the age of 63, he is in midcareer with a six-volume biography of Washington.

Early in his working life Dr. Freeman decided that being an editor wasn't enough. He thereupon assigned himself to do 14 hours of historical work each week, and in later years has exceeded that schedule. His extraordinary, self-imposed discipline hauls him out of bed at 2:30 a. m. As an editor, it has been his habit to write two or three columns by 8:30, to do the first of two daily radio broadcasts at noon, and to spend the afternoon and early evening at his beloved historical research and writing. He is also a lecturer, sometimes delivering as many as 100 speeches a year.

Now he is "retiring." All he means to do, apparently, is to broadcast the news once a day (he has a news service teletypewriter in his home), work on the Washington biography from 10 to 14 hours a day, and perhaps do some lecturing. His Virginia public and his national public will wish him well. Few of us can emulate so heroic a character, in which genius and an almost appalling energy seem to have been combined, but we can all admire it.

Senate Bill 1008

EXTENSION OF REMARKS

OF

HON. RAYMOND W. KARST

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1949

Mr. KARST. Mr. Speaker, there is now pending in the Rules Committee a bill, S. 1008, for consideration by the House which, incredible as it may seem, proposes:

First. To impair existing antitrust laws so that monopoly will be put beyond effective reach of the law.

Second. To make it legally possible to restore Pittsburgh plus with resulting price discriminations by big business in the East against the trade interests of the South and West.

Third. To provide big business whose plants are concentrated in the East with the power through price discrimination to destroy the growth of independent industrial enterprise in the South and West which occurred during the late war, and to prevent such a growth in the future.

Fourth. To permit big business through price discrimination to destroy the property of small-business men throughout the Nation, or to force them to sell out for a song, and thereby to destroy the Robinson-Patman Act.

Every Member of this body who is against monopoly, who believes that the South and West have a just right to expand industrially—a right for which these regions have been struggling to obtain for half a century—who is a friend of small business, must be against this bill.

My attention to this disastrous bill was called by the National Congress of Petroleum Retailers through its president, Mr. Rankin Peck. Prior to a few years ago one of the most exploited of all small-business men was the filling-station proprietor or lessee. Through the genius of Mr. Peck, these unorganized and defenseless small-business men were organized for effective action to protect their just interests. Today the national congress is organized in some 37 States of the Union and has already rendered yeoman service in defending the interests of its small-business members.

I asked Mr. Peck to have his organization submit a complete analysis of the bill now pending in the Rules Committee and he has done so. At the end of my remarks I am putting this analysis into the RECORD and it is my sincere hope that every Member of the House will carefully read it. From all sections of the Nation opposition to the pending bill is mounting hourly as small-business men are awakened to its real purpose. Already other powerful organizations of small business are opposing the bill such as the National Association of Retail Grocers, the National Association of Retail Druggists, the Motor Equipment Wholesalers, the independent tire dealers, the National Federation of Independent Business and many more. Small business is hourly grasping the

fact that if this bill becomes law the bell will toll for the corpse of small business. At the same time other organizations whose members realize what the bill will do to the trade interests of the South and West are bestirring themselves. In view of the powerful opposition that is steadily growing against this bill, I urge my colleagues to give it their closest scrutiny, and to that end they will find the analysis of the bill submitted by the National Congress of Petroleum Retailers most helpful:

NATIONAL CONGRESS OF
PETROLEUM RETAILERS, INC.,
Detroit, Mich., June 24, 1949.

Hon. RAYMOND W. KARST,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN KARST: I am glad to comply with your request that I furnish you with a complete analysis of Senate bill 1008, and we appreciate your efforts to see to it that this bill does not do great injury to small business in the United States. We know that you rank high among the Members of Congress who have the interests of small business at heart and who have already won the esteem and respect of not only the National Congress of Petroleum Retailers, but also many other organizations that are laboring for the welfare of small business in the Nation.

Senate bill 1008 has now been reported out of the Judiciary Committee of the House without the Kefauver amendments. It has been a great shock to me to witness the unfair procedural tactics by which this disastrous piece of legislation has finally been maneuvered out of the Judiciary Committee. The bill was first received by a subcommittee of the House Judiciary, whose chairman was Congressman FRANCIS E. WALTER, of Pennsylvania. Congressman WALTER refused to permit any representative of the interests of small business to appear before his subcommittee. Instead, he permitted only two witnesses to appear on the bill and both of these were representatives of Government. His subcommittee then reported the bill to the full Committee on the Judiciary minus the Kefauver amendments. The exclusion of these amendments makes the bill a complete betrayal of the interests of small business and yet before the full committee, Chairman CELLER, of New York State, refused to allow any representative of the interests of small business to appear in protest against this betrayal. Chairman CELLER had this bill considered in executive session of the Judiciary Committee. Thus the bill was apparently railroaded through both the subcommittee and the full Committee of the House Judiciary so as to prevent opposition to it from small business being heard, and yet in many years of the Congress there has not been a measure more calculated to wreck small business and the economy than this bill.

Senate bill 1008, minus the Kefauver amendments, Congressman KARST, is an incredible measure in view of the numerous statements of President Truman upholding the antitrust laws and promising that such laws would be vigorously enforced, and other statements by the President expressing his interest and the interest of his party in the problems of small business. It is an incredible measure from the standpoint of the platform of the Democratic Party, which last fall proclaimed unswerving allegiance to the antitrust laws, their effective enforcement and solemn pledges that the interests of small business would be safeguarded. If this bill in its present form is enacted into law, the Eighty-first Congress will have set the stage for the crucifixion of small business through a crippling of the antitrust laws.

In this letter the National Congress of Petroleum Retailers submits an analysis of Senate bill 1008 as it now stands without the Kefauver amendments—the bill which the House Judiciary has just voted out for consideration on the floor of the House. We make this analysis section by section in the hope that a sufficient number of Representatives may perceive clearly just how this bill betrays the antitrust laws and the interests of small business and act to prevent it from accomplishing these tragic ends.

The first section of the bill, now pending before the House reads:

"That the Federal Trade Commission Act is amended by adding at the end of section 5 (a) the following: 'It shall not be an unfair method of competition or an unfair or deceptive act or practice for a seller, acting independently, to quote or sell at delivered prices or to absorb freight: *Provided*, That this shall not make lawful any combination, conspiracy, or collusive agreement; or any monopolistic, oppressive, deceptive, or fraudulent practice, carried out by or involving the use of delivered prices or freight absorption.'"

This section is designed to make it difficult, if not impossible, for the Federal Trade Commission to prevent the price-leader type of monopoly.

Delivered prices can be used in either of two ways to achieve monopoly. One way is for a group of producers to agree among themselves to maintain identical delivered prices in such a way that proof of the collusion is obtainable by the Government. This type of monopoly involves the element of ascertainable collusion or conspiracy by the Government. An example of this type of monopoly functioning through identical delivered prices is found in the cement industry, recently convicted by the Supreme Court of collusively using delivered prices to eliminate competition. But in this case the Government was able to present definite and abundant proof to the Court that cement producers had entered into a collusive agreement to make their delivered prices identical so as to eliminate price competition among themselves.

The proviso in this section of the bill takes care of the situation where there is a collusive maintenance of identical delivered prices among producers and where the Government can find proof of such collusion.

But there is another type of monopoly—very prevalent—which can be effected through the medium of identical delivered prices but where collusion is either nonexistent or incapable of proof. This is the price-leader type of monopoly. In this situation one producer—generally the dominant producer—in an industry leads off with its system of delivered prices to any point in the market, and the remaining producers simply match those prices or "follow the leader." The leader, of course, puts its prices sufficiently high to insure that both it and those who follow its prices will reap profits in excess of what would be secured under competitive conditions (i. e., monopoly profits). In the price-leader type of monopoly it is often impossible to obtain evidence of collusion. In reaching this type of monopoly, the Federal Trade Commission for some 30 years has relied on section 5 of the Federal Trade Commission Act. It has proceeded against producers on the ground that they are guilty of monopolistic behavior and by monopolistic behavior the Commission has contended that the producers have acted in such a way as to substantially lessen competition among themselves.

Now Senator O'MAHONEY, the author of the bill pending before the House, has admitted that this first section will cancel count 2 of the Federal Trade Commission's case against the rigid-conduit industry for using delivered prices to eliminate competition. Count 2 is a charge of monopolistic behavior resulting in a substantial lessening of competition among producers. By Senator O'MAHONEY's own admission, the section will nullify the present power of the Federal Trade Commission to proceed against the price-leader type of monopoly, even where the practice used may result in a substantial lessening of competition or tend to create a monopoly in a line of commerce.

How will the Federal Trade Commission get at the price-leader type of monopoly if this section is enacted into law? The proviso in the section forbids the use of delivered prices or freight absorption which result in a monopolistic or oppressive practice. Complete monopoly is the complete extinction of competition among producers or sellers. Effective monopoly, however, is generally a substantial lessening of competition among producers or sellers. Complete monopoly generally takes the form of an effective lessening of competition among producers or sellers stopping short of its complete extinction over a period of time. Hence, in the absence of proof of a collusive agreement among sellers to maintain identical delivered prices, the price-leader type of monopoly can only be attacked on the ground that such sellers are manifesting monopolistic behavior, i. e., are acting to substantially lessen competition among themselves.

But since the section cancels count 2 of the Commission's case against the rigid-conduit industry—a fact admitted by Senator O'MAHONEY—what legal significance can be given to the words of the proviso "monopolistic or oppressive practice"? They are precluded from meaning a substantial lessening of competition by the admission of Senator O'MAHONEY. If they cannot be construed to mean a substantial lessening of competition, how can they be interpreted to give the Commission power to proceed against the price-leader type of monopoly under section 5 of the Federal Trade Commission Act? If they can't be so interpreted—and we feel confident that they can't—the Federal Trade Commission will be deprived of its existing power to reach the price-leader type of monopoly, and left without any power to do so in the future. This will mean that the price-leader type of monopoly will flourish and existing antitrust laws will have been disastrously weakened.

Section 2 of the bill now pending before the House is divided into two subsections—subsection A and subsection B.

Subsection A is apparently intended to strengthen section I of the bill just discussed.

It cancels another existing power of the Federal Trade Commission for reaching the price-leader type of monopoly. In the historic case of the Commission against the United States Steel Corp. known as "Pittsburgh plus," the Commission attacked the price leadership of the corporation in the steel industry on two counts. The first count invoked section 5 of the Federal Trade Commission Act and charged the corporation with monopolistic behavior resulting in a substantial lessening of competition among producers of steel. The second count, however, charged the corporation with using delivered prices and freight absorption so as to discriminate in price among its purchasers of steel, a practice prohibited by section 2 of the Clayton Act.

Under Pittsburgh plus the United States Steel Corp. had a base price for each steel product at Pittsburgh. This base price was made sufficiently high to insure a fine profit for the mills of the corporation in and near Pittsburgh, many of which were obsolete in comparison with the newer mills of the corporation at Gary, Ind. The price of a steel product at any other place in the Nation was its Pittsburgh base price plus freight from Pittsburgh to the point of delivery; an exception to this general formula was the occasional practice of quoting delivered prices in certain areas, which included the amount of the Pittsburgh base price plus $7.60 a ton plus freight from Chicago.

Under this pricing system the purchasers of steel in Chicago were supplied with their steel from the Gary mills of the corporation located some 30 miles from Chicago. But these mills added to the base price at Pittsburgh imaginary or phantom freight from Pittsburgh to Chicago. The fictitious freight collected by the Gary mills for delivery of steel to Chicago amounted to from a minimum of 12 percent to as high as 30 percent of the Pittsburgh base price. This Pittsburgh plus resulted in giving preferential steel prices to purchasers at or near Pittsburgh as against purchasers in Chicago. Purchasers in Chicago had to pay from 12 to 30 percent higher prices for steel than purchasers in Pittsburgh. Pittsburgh purchasers of steel were, therefore, able to compete in the Chicago market while purchasers of steel in Chicago were unable to compete in the Pittsburgh area. Such price discrimination added great strength to the Commission's case against Pittsburgh plus.

If section I of the pending bill, as we have contended, seeks to put the price-leader type of monopoly beyond reach of the law, then an additional aid in doing that is necessary which section 2 (A) supplies. The existing power of the Federal Trade Commission to attack a price-leader monopoly on the ground that the use of delivered prices and freight absorption has resulted in discriminatory prices in violation of section 2 of the Clayton Act—count two of the Commission's case against Pittsburgh plus as far back as 1921 and invoked in subsequent cases against other price leaders—must be withdrawn. This is exactly what section 2 (A) of the pending bill does.

According to the report which the Subcommittee of the House Judiciary submitted, this section exempts sellers from any charge of price discrimination if they use either a single zone pricing system or a multiple zone pricing system if all delivered prices of a single zone pricing system are identical at different delivery points, and if all delivered prices within each zone of a multiple zone pricing system are identical at different delivery points.

Now a single zone pricing system (i. e., one which charges the same delivered price to all delivery points throughout the Nation), of course, involves price discriminations just as did Pittsburgh plus.

To charge every purchaser in a zone the same delivered price is to force purchasers located near to plants from which the product is shipped to pay a higher net price than purchasers located at more distant points, delivery to which involves substantial freight cost. There is thus price discrimination in favor of less favorably located purchasers against those more favorably located in relation to the plant making shipment. Geographical efficiency is eliminated so that a purchaser a thousand miles from a mill gets a product at a lower net price than one located only a mile away. The result is to discourage the location of new producing plants at the more distant points which would efficiently decentralize industries. The status quo in industry is preserved and this status quo has operated to prevent needed industrial growth in the South and West for many years. Such growth would greatly increase the prosperity of both these regions and at the same time, in an age of atom warfare, would contribute immeasurably to the military security of the United States.

In a multiple zone pricing system there are price discriminations within each zone. Purchasers located near to the plant making shipment are discriminated against in favor of purchasers located much farther away. The desired advantages of efficient location are canceled out so as to equalize competition among the efficiently located buyer and the less efficiently located buyer. But the multiple zone pricing system makes possible another type of price discrimination—regional price discrimination—which can be effectively used to prevent industrial growth in the South and West. Under a multiple zone pricing system provided for in section 2–A of the pending bill there is no prohibition preventing differences between zone prices. On the contrary this section as it is drawn and interpreted by the report of the Subcommittee of the House Judiciary sanctions such differences in prices between zones. A multiple zone pricing system can in consequence be used to set up powerful price discriminations between regions of the United States, the effect of which will be to give purchasers of products in the East a great competitive advantage in penetrating markets in the South and West while greatly handicapping purchasers of products in the South and West, either in defending themselves from such eastern competition in their local markets or in penetrating markets in the East.

Under section 2 (A), as it now stands, the price discrimination which existed against Chicago in favor of Pittsburgh under Pittsburgh plus could be restored and made entirely legal. The steel corporation could establish a multiple-zone pricing system. One zone of this system could embrace the Pittsburgh area and be a zone of low prices, while another zone in which Chicago would be located would be a zone in which steel prices were materially higher. The difference in prices for steel products between Pittsburgh and Chicago could vary from 12 to 30 percent, just as they did under Pittsburgh plus, or the discrimination against Chicago could be made greater.

Let us not forget that in the Pittsburgh-plus case 32 States of the Union, through their legislatures or Governors, fought the price discrimination against the South and West which existed under this system. Do the Representatives of these States today want to put on the statute books a law legalizing regional price discrimination against the South and West and after 28 years find merit in Pittsburgh plus?

Section 2 (B) of the pending bill is a further step in what appears to be a plainly cumulative purpose in the bill to legalize the price-leader type of monopoly and thus to drive such a hole through the existing antitrust laws that they will be in effect badly crippled.

In section I of the bill the Federal Trade Commission is deprived of existing power in the Federal Trade Commission Act to attack the price-leader type of monopoly on the ground of "monopolistic behavior" which results in a substantial lessening of competition between producers or sellers.

In section 2 (A) of the bill the Federal Trade Commission is deprived of the power to attack the price-leader type of monopoly by showing that the use of delivered prices and freight absorption has resulted in discriminatory prices prohibited by section 2 of the existing Clayton Act. Subsection 2 (A) also provides a legal method for preserving the status quo in industry and retarding the more efficient location of new plants or facilities in the South or West.

Section 2 (B) supplies the finishing touches in the bill to putting the price-leader type of monopoly out of reach of the law and preventing industrial growth in the South and West.

1. This section makes the price-leader type of monopoly effective. The success of this kind of monopoly depends on the degree to which sellers in an industry follow the prices of the leader or dominant corporation. Sellers generally follow the prices of the leader because if any seller doesn't he exposes himself to a price war initiated by the leader against him. But under existing law a leader corporation is limited in attacking one who wishes to compete pricewise to meeting in good faith the equally low price of a competitor, and even meeting the price of a competitor is not allowed if the price of the leader is discriminatory among his other customers and may thereby injure competition. Under section 2 (B) of the pending bill, a price leader can sell below the price of a competitor even though his price is discriminatory and injures competition. All he has to do is to find another producer who will make an offer below the price of the competitor. That will not be difficult (because in the price-leader type of monopoly a majority of the producers are generally in favor of maintaining prices and it is only from the minority that competitively-minded rebels arise), and the chances of the Government producing evidence that the price leader induced another producer to make such an offer so precarious that section 2 (B) will give to the price leader such power of retaliation that the success of the price-leader type of monopoly will be assured.

2. Section 2 (B) will also operate to powerfully restrict industrial expansion in the West and South. For many years prior to the war, big business in the United States had been able to protect its concentration of producing plants in the East from new competitors in the South and West by a system of freight rates which discriminated against manufacturing in the South and West. During the war, however, a considerable growth of manufacturing in these regions took place. Though the system of discriminatory freight rates continued, they could not stop this development because Government paid for the products at prices which insured a profit. Now, with the return of peace, this old system of freight discrimination is by itself threatening the existence of this new manufacturing in the South and West. Part of this new enterprise in these regions represents plants which are subsidiaries of big business whose main plants are located in the East. But a substantial part represents independent business. Under these circumstances it is not far fetched to imagine that big business is interested in forcing this independent business to sell out for a song or be liquidated and to put an end to the further industrial growth of the South and West.

Under existing law, the seller whose alleged purpose is to meet competition in good faith but whose real purpose is to force a competitor more efficiently located either to sell out or go bankrupt, is restrainable. Such a seller has not an unlimited right to absorb freight. If his absorption of freight results in discriminatory prices the effect of which may be to destroy competitors more efficiently located, he can not get away with with his purpose to destroy such competitors. A seller under existing law may penetrate distant markets through the use of freight absorption, but he must take care not to push his right of freight absorption to a point where its purpose is to kill off competition from sellers located more efficiently at distant points of delivery. At the same time, existing law puts a definite limit on the prices that sellers can charge at such distant points. They are limited to meeting in good faith the equally low price of a competitor and this price must meet the test that, if discriminatory, it does not injure competition. Existing law thus protects sellers located efficiently from the efforts of sellers located less efficiently to threaten their existence by price discrimination.

Section 2 (B) of the pending bill withdraws this protection. Under it a seller with his plants located principally in the East can reach out through freight absorption and immediately challenge the prices of a seller more efficiently located even though his meeting of the price of this distant competitor is a discriminatory price, the effect of which may be to put the distant competitor ultimately out of business. And he can go further than this. He can cut below the price of the distant competitor, make his price so low that the smaller resources of the distant competitor cannot withstand the attack and such seller will be glad to

sell his facilities cheap rather than be liquidated. All the eastern seller has to do to make legal the slashing of his price below that of his distant competitor is to find in effect "a dancing partner"—another eastern seller—who will make an offer to sell at that price. That will not be difficult to do, since in any industry there are a number of sellers in the East who would be interested in driving independent manufacturers in the South and West out of the picture and the chances that the Government could find proof that the offer was "rigged" so as to make legal violent price cutting by an eastern seller against independent rivals in the South and West would be slight. If section 2 (B) is, therefore, enacted into law one may reasonably expect to witness the destruction of the growth of independent manufacturers in the South and West which occurred during the war, a capture of their plants by big business, whose producing facilities are predominantly in the East, and a thoroughgoing prevention of any further industrial expansion of these regions.

Section 2 (B) has also another injurious effect other than holding back the industrial development of the South and West. This section, together with section 3 of the bill, exposes small business, particularly in the field of distribution, to ruthless and unfair exploitation by big business. As if the bill did not provide a sufficient feast for monopolists in its legalizing of the price leader type of monopoly and protecting eastern plants from industrial growth in the South and West, these parts of the bill make the property of small-business men easy pickings for the big fellows.

Monopolists not only grow rich through raising prices above their competitive levels. They also grow rich by putting smaller competitors out of business and by capturing their property and customers through various unfair methods of competition. By far the most powerful weapon for gathering this kind of riches is that of price discrimination. The Clayton Act was passed by Congress to specifically protect small business from this kind of attack. But the law developed a fatal weakness. This weakness was that under the original Clayton Act the meeting of competition in good faith was made a complete defense to a charge of price discrimination. Because this weakness made the original Clayton Act ineffective from the standpoint of protecting small business from price discrimination, the Robinson-Patman Act was intended to remedy the situation. Under this Act the meeting of competition in good faith could not be a defense to a charge of price discrimination where the effect of such discrimination may be to substantially lessen competition or to injure, destroy, or prevent competition. In the recent case of the Federal Trade Commission against Standard Oil Co. of Indiana the Court of Appeals for the Seventh Circuit specifically upheld the contention that the meeting of competition in good faith was not a defense to a charge of price discrimination where competition was injured. This decision of the court saved the business lives of many small distributors of petroleum products in the State of Michigan and small-business men everywhere were naturally jubilant that the court had refused to go back to the weakness of the original Clayton Act.

But in section 2 (B) and section 3 of the pending bill the meeting of competition in good faith whether achieved by freight absorption or without is made a complete defense to a charge of price discrimination even though the effect of such price discrimination may be to destroy, injure, or prevent competition or tend to a monopoly in a line of commerce. The identical loophole in the original Clayton Act which made it impossible to protect small business from price discrimination, is restored and small business is once more out in the cold.

Mr. Herbert Bergson, Assistant Attorney General in charge of antitrust enforcement for the Department of Justice, has admitted before the subcommittee of the House Judiciary headed by Congressman WALTER that as the bill now stands it would wipe out the decision of the Circuit Court of Appeals for the Seventh Circuit in the case of the *Federal Trade Commission* v. *Standard Oil Co. of Indiana*. Mr. Bergson thus corroborates the plain meaning of sections 2 (B) and 3 of the pending bill which make the meeting of competition in good faith an absolute defense to any charge of price discrimination. His admission also makes it clear that one of the main charges of the Department of Justice in its case against the Great Atlantic & Pacific Tea Co. for violating the antitrust laws will have to be abandoned in the future, leaving powerful chain stores free to put little merchants out of business by the unfair method of price discrimination. In this case sellers furnished A & P with products at discriminatory discounts which violated the Robinson-Patman Act as it now stands. If sections 2 (B) and 3 of the pending bill are enacted into law such discriminatory discounts will be put beyond reach of the law in the future, because there are undoubtedly other sellers who will be willing to grant the same discriminatory discounts to A & P to get the large orders of this giant concern.

Strange to say, this subjection of small business to the terrors of price discrimination made legal is actually endorsed by the Commissioners of the Federal Trade Commission. In a letter to Congressman WALTER, signed by Commissioner Ewin Davis, Acting Chairman of the Commission, the viewpoint is advanced:

"To make the good faith meeting of competition a complete defense (to a charge of price discrimination under the Robinson-Patman Act) involves, therefore, a risk of injury to competition among the seller's customers. On the other hand, if good faith in meeting competition is not to be a complete defense, a seller who competes vigorously by reducing his prices where he encounters lower prices is exposed to the risk that he may thereby be violating the law, and he can avoid such risk only by caution and hesitancy in making price reductions. To refuse to make the good faith meeting of competition a complete defense necessarily involves the risk of impairing the vigor of competition among sellers. The Council of Economic Advisers apparently had this risk in mind in its report to the President in December 1948, in which it referred to the tendency of the law of price discrimination to lead to 'soft' competition.

"On June 7 representatives of the Commission informed you that all of the commissioners believe that on balance it would be preferable to make the good faith meeting of competition a complete defense."

Here is a pretty use of language to becloud an issue. Unfair competition (i. e., price discrimination), which destroys competition, is called "hard" competition by the Commission, while fair competition (i. e., without price discrimination), which protects and preserves competition, is branded "soft" competition.

This is exactly, incidentally, the same kind of argument that defense counsel in the case of the Federal Government against the notorious old Standard Oil Trust (1912) made before the Supreme Court in endeavoring to justify the acts of the trust. The trust had engaged in a number of forms of unfair competition including that of ruthless price discrimination to put independent operators out of business. Counsel for the trust told the Court that competition was competition and that no distinction should be drawn between fair and unfair competition, which was saying in effect that "hard" competition which unfairly destroys competition was desirable competition. The highest tribunal, however, refused to accept such specious reasoning. It was because of the unfair competitive methods employed by the trust that Congress passed the Federal Trade Commission Act which gave the Commission the power to distinguish between fair and unfair competition, to make the one lawful and the other unlawful. Yet today the Commission is willing to sacrifice fair competition to unfair competition by condemning the one as "soft" competition and praising the other as "hard" competition. The defense counsel of the old Oil Trust must be smiling approval in their graves.

But just why should fair competition make sellers cautious and hesitant in making price reductions and impair the vigor of competition among sellers? Any seller can meet a lower price offer to one of his customers at once and without any hesitancy and without any impairment whatsoever of his competitive energies provided he will give his other customers in the same market area the same lower price which he accords to the one customer. This is not "soft" competition. It is the essence of fair competition and it is fair competition—not unfair competition praised as "hard" competition—that the antitrust laws were intended by the Congress to maintain.

If, Congressman KARST, the Congress should feel that the antitrust laws need clarification on the point of whether a seller has the legal right to sell f. o. b. his factory or f. o. b. destination at his discretion, and in that connection to absorb freight to meet competition in good faith, the Congress may act to do that without weakening the antitrust laws. It is respectfully suggested that the Congress could express its intentions in this direction in the words of a short and simple bill which would provide "that nothing in the antitrust laws or the Federal Trade Commission Act shall be construed as making it unlawful for a seller, acting independently in good faith, to quote or sell at delivered prices and to absorb freight except where the effect of such delivered prices and absorption of freight may be to substantially lessen competition or to injure, destroy, or prevent competition or tend to create a monopoly in a line of commerce; or except where such delivered prices and absorption of freight are achieved under combination, conspiracy, agreement, or collusion."

It is, of course, the position of the National Congress of Petroleum Retailers that the existing anti-trust laws are sufficiently clear. It is also our position that if the pending bill is passed by the Congress it would not only weaken the antitrust laws in the respects outlined above but would also create a confusion in the law instead of clarifying it. If, however, the Congress should decide to enact the pending bill in some form we are submitting herewith amendments which will reduce as far as possible the harmful effects of the pending bill on the antitrust laws and small business.

In the following copy of the pending bill we have included in italicized words our suggestions for amendments with footnotes to explain their purpose.

SENATE BILL 1008

"That the Federal Trade Commission Act (38 Stat. 717, as amended; 15 U. S. C. 45) is amended by adding at the end of section 5 (a) the following: 'It shall not be an unfair method of competition or an unfair or deceptive act or practice for a seller, acting independently, to quote or sell at delivered prices or to absorb freight: *Provided*, That this shall not make lawful any combination, conspiracy, or collusive agreement; or any monopolistic, oppressive, deceptive, or fraudulent practice, carried out by or involving the use of delivered prices or freight absorption, *or any practice carried out by or involving the use of delivered prices or freight absorption where the effect may be to sub-*

stantially lessen competition, to restrain commerce in any section or community to tend to create a monopoly of any line of commerce.'[1]

"SEC. 2. Section 2 (a) of an act entitled 'An act to supplement existing laws against unlawful restraints and monopolies and for other purposes,' approved October 15, 1914 (38 Stat. 730, as amended; 15 U. S. C. 13), is amended by substituting for the period at the end thereof a colon and adding thereto the following: *'And provided further,* That it shall not be an unlawful discrimination in price for a seller, acting independently—

"'A. To quote or sell at delivered prices if such prices are indentical at different delivery points, *provided that such identical delivery prices at different delivery points do not result in price discriminations, the effect of which may be to substantially lessen competition, or injure, destroy or prevent competition or tend to create a monopoly of any line of commerce,*[2] or if differences between such prices are not such that their effect upon competition may be that prohibited by this section; or

"'B. To absorb freight to meet the equally low price of a competitor in good faith (*except where the effect of such absorption of freight may be to substantially lessen competition or injure, destroy or prevent competition or tend to create a monopoly of any lien of commerce*),[3] and this may include the maintenance, above or below the price of such competitor, of a differential in price which such seller customarily maintains.'

"SEC. 3. Section 2 (b) of an act entitled 'An act to supplement existing laws against unlawful restraints and monopolies and for other purposes,' approved October 15, 1914 (38 Stat. 730, as amended; 15 U. S. C. 13), is amended to read as follows:

"'(b) Upon proof being made, at any hearing on a complaint under this section, that there has been discrimination in price the effect of which upon competition may be that prohibited by the preceding subsection, or discrimination in services or facilities furnished, the burden of showing justification shall be upon the person charged with a violation of this section, and unless justification shall be affirmatively shown, the Commission is authorized to issue an order terminating the discrimination: *Provided further,* That a seller may justify a discrimination (*other than a discrimination, the effect of which may be to substantially lessen competition or injure, destroy or prevent competition or tend to create a monopoly in any line of commerce*)[4] by showing that his lower price or the furnishing of services or facilities to any purchaser or purchasers was made in good faith to meet an equally low price of a competitor or the services or facilities furnished by a competitor.'

"SEC. 4. As used in this act—

"A. The word 'price' shall have the meaning which it has under the commercial law applicable to the transaction."

(We have no objection to this section.)

"B. The term 'delivered price' shall mean a price at which a seller makes or offers to make delivery of a commodity to a buyer at any delivery point other than the seller's own place of business."

(We recommend that this section be stricken out entirely. What a seller's delivered price is, should be left to determination by the Federal Trade Commission and a seller should not be given statutory power to say what his delivered price is.)

"C. The term 'absorb freight' shall mean to establish for any commodity at any delivery point a delivered price which, although as high as or higher than the seller's price for the same commodity at the point from which such commodity is shipped, is lower than the sum of the seller's price for such commodity at such point of shipment plus the actual cost to the seller for transportation of such commodity from such point of shipment to the delivery point or the average cost of transportation to the seller."

(We recommend that this section also be eliminated.)

"D. The term 'the effect may be' shall mean that there is substantial and probative evidence of the specified effect."

(This section is particularly bad. It changes the existing language of the Clayton Act, as amended by the Robinson-Patman Act, to impose on the Government such an onerous burden of proof as to reduce the Act to practically impotency.)
